PRICE, 10 CENTS.

More U. M. C. Records

Made During May and June.

C. W. Budd defended the Hazard cup by killing 100 live birds straight. In contests for this cup he has killed 225 out of 230 live birds.

H. Waters made high average at Charleston, breaking 161 out of 175 targets at 20 yds.

J. W. Hoffmann won the New Jersey Live Bird Championship.

W. E. Parker broke 92 per cent. at Williamsport, making high average.

R. O. Heikes captured high average at Cleveland, also at Memphis, breaking in these two shoots 907 out of 960 targets.

J. M. Hughes secured the amateur average at Sioux City, score 385 out of 400 targets.

313 Broadway, New York. BRIDGEPORT, CONN.

THE .32 CALIBER WINCHESTER SPECIAL

A New Smokeless or Black Powder Cartridge And Rifle

The .32 Winchester Special Cartridge, which we have just perfected, is offered to meet the demand of many sportsmen for a Smokeless powder cartridge of larger caliber than the .30 Winchester and yet not so powerful as the .30 U. S. Army, and which could be reloaded with black powder and give satisfactory results. The .32 Winchester Special Cartridge meets all these requirements. Loaded with Smokeless powder and a 165-grain bullet, it has a muzzle velocity of 2,057 foot-seconds, generating a muzzle energy of 1,550 foot-pounds. At the standard testing distance of 15 feet from muzzle, this cartridge, with a full metal-patched bullet, will give a penetration of 37 7/8-inch pine boards. Its trajectory is as follows: 100 yards, 1.23 inches; 200 yards, 5.5 inches; 300 yards, 16.38 inches. From these figures it will be readily seen that the advantages of this cartridge are its great striking energy, penetration, high velocity and consequent flat trajectory. Next to the .30 U. S. Army and .303 British, it is the most powerful small-bore cartridge of to-day. With a charge of 40 grains of black powder, the .32 Winchester Special develops a velocity of 1,385 foot-seconds, which makes it a powerful black powder cartridge.

We have adapted the popular Winchester, Model 1894, rifle, to handle the .32 Winchester Special Cartridge, and are prepared to furnish it in either solid-frame or take-down style, with 26-inch octagon nickel-steel barrel, the list price being $23.00 for the solid frame and $28.00 for the take down style. Rifles for the .32 Winchester Special Cartridge are fitted with a new and specially designed rear sight, which is graduated for both Smokeless and Black powder cartridges.

ROWLAND E. ROBINSON'S
Danvis Books.

These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

FORGED TOBIN BRONZE TURNBUCKLES.

With Cast Manganese Bronze Sleeve.

Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

"THE CHALLENGE."

This spirited picture of the American Elk has been engraved as an artotype in size and style companion to "Alert," The plate is 13 x 19 inches on 22 x 28. Price (mailed in a tube, postpaid), $3.00

FOREST AND STREAM PUBLISHING CO. NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1902, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 5, 1902.

VOL. LIX.—No. 1. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

A PICTURE OF THE PAST.

OUR illustration supplement this week presents a picture of the past. It is one which cannot be duplicated. The plain still stretches away in billowy waves; the everlasting mountains rear their snow-clad pinnacles to the skies; but the buffalo host has long since vanished from the land. The photograph, of which the engraving is a reproduction, was made years ago, and the negative has been destroyed. The picture is an unique memento of the West of another age.

MONTANA'S BUFFALO.

IN Montana, or on its borders, are to be found to-day the largest number of buffalo in any State of the Union, and yet in all, these number only 350 or 400 head. Most of them are under domestication, though a few are wild.

Twenty-five years ago the Southern herd of buffalo had practically disappeared, but twenty-five years ago fat cow, bosse ribs, dépouillé and marrow guts, together with newly dressed robes, were still, as they always had been since the first coming of the white men, familiar objects in Montana.

It may be surmised that there never were shipped from any Territory in the West so many robes as from the old Montana Territory, of which Fort Benton was so long the most important center of the fur trade. Other States or Territories in the south may have shipped out greater numbers of hides, but northern Montana, owing to its great Indian population and the late coming to it of the railroads, was always the great country for robes.

To-day in the Yellowstone National Park there are a very few wild buffalo. These are variously estimated at from twenty-two to thirty-two head, but the animals are so shy that for years it has not been practicable to count them, and their numbers can be only guessed at from the tracks found in the winter's snow.

The United States National Museum and the American Museum of Natural History more than a dozen years ago, sent out expeditions to collect a few specimens of the last remaining buffalo. A small number were found in the heads of Dry Fork and Porcupine rivers north of the Yellowstone, and a number of specimens secured. All seen were exceedingly wild. A very few individuals of this herd escaped destruction, and these—for years almost free from molestation—increased until, according to report, they numbered about sixty head. But the bunch had grown too large. A few years ago a concerted attack was made on them by the Red River half-breeds, and thirty-two were killed. Other people say that the whole bunch was wiped out. Certainly its numbers were so reduced—if any survived—that many years must elapse, even under the most favorable conditions, before these buffalo can again be counted. Montana has a law protecting the buffalo, but game wardens are scarce on the plains where these buffalo range.

The largest bunch of buffalo in the world is that owned by Michel Pablo and the heirs of Charles Allard, which ranges on the Flathead reservation in Montana. Stories concerning it float about through the newspapers, but definite information concerning the bunch is not easily had. Where it came from, how it started, what are its present condition and its future prospects are matters of interest alike to historian, naturalist and sportsman. It has seemed to the FOREST AND STREAM that the setting down of the essential facts about this herd was something well worth doing, and in order to obtain information, at once intelligent and accurate, Mr. J. B. Monroe, of Teton County, Montana, was recently dispatched to the Flathead country to learn everything possible about this herd. Nor did he limit himself to inquiry concerning the herd as it exists to-day. From Mr. Chas. Aubrey, of Browning, Montana, he received a full and most interesting account of the origin of this herd from calves born just twenty-five years ago on the plains, and the next spring taken over the mountain.

Mr. Aubrey and Mr. Monroe offer in this account contributions to the history of the buffalo which will be read with the greatest interest. We print to-day the story of the origin of the herd, and this will be followed next week with its development and present condition.

THE TUNA IN ATLANTIC WATERS.

ANGLING history has been made in the fishing columns of FOREST AND STREAM. There is in them a perfect mine of angling lore, to which must repair the chronicler who shall record the rise and development of the several branches of the art in American waters. The history here covered goes back to a remote and primitive age when there was heated discussion of the question—how odd it sounds now—"Will the black bass take a fly?" Later came the doubtful speculations on the possibility of killing tarpon with rod and reel. The discovery of the qualities of the leaping tuna and its exploitation as the great game fish of the Pacific, make another chapter of the history.

And now comes a communication from Mr. J. A. L. Waddell which may prove the opening page of a new record. Mr. Waddell, who is known by his writings in our pages as an enthusiastic, successful and well-informed tarpon fisherman, has been investigating the tuna fishing possibilities of the Atlantic side of the continent, and believes that he has discovered an opening for the sport in the waters of Nova Scotia. The information given by Mr. Waddell is so full and specific that it should induce salt-water fishermen to make a thorough test of the waters designated; and the fame which will surely attend the capture of the first Atlantic tuna with rod and reel should be a sufficient stimulus to provoke ambition and enterprise. We trust that the pioneer tuna fishing in Atlantic waters may have place among our fishing chronicles of 1902.

In this connection it may not be amiss to say that last summer there came to us intelligence of tuna fishing investigations conducted in certain of the Atlantic waters of the United States, the particulars of which have not been made public, pending their possible successful result.

THE DAY OF THE SMALL BOY.

INDEPENDENCE DAY, Friday of this week, has brought with it greater than ordinary cause for gladness of heart to all, for many of the great employers of labor have added Saturday to it as a holiday, thus conferring three consecutive days of liberty in fact upon thousands of working people, who, under the Constitution, are in theory free always.

The commercial signs of the times indicate that the American boy—and, on July 4, in a patriotic sense, said boy may be big or little, old or young, smooth-faced or bewhiskered—will be better equipped for giving vent to his annual surcharge of patriotic hullabaloo than he ever was before.

For the making of noises and smokes and flames, all kinds of devices, new and old, are offered for sale in abundance at prices to please the individual or the masses, hence it is safe to predict that on Friday Young America will be abroad early, present to himself the keys of the city and the freedom of the country, and make a blending of the noises of earth and Bedlam, as becomes the day and his opportunity. For has he not hoarded his pennies to insure the wherewithal to purchase noise makers? Has he not for weeks and weeks been in a fever of impatience for July 4, a day so drearily slow in its coming? Now that it has arrived, why should he not in his own way, with bray of horn, explosions big, little and often, whoops and yells, struts, quirps, marchings and countermarchings, express his veneration for the day's historical significance while revelling personally in an ecstacy of delightful pleasure? Give him liberty.

And yet, while as one in sentiment concerning the day's significance, the great American people will be divided into two distinct classes, those who emphatically object to the din and uproar as disturbing and unnecessary, and those who cannot conceive of disturbance enough. The anti-noisers journey to the country till the disturbance ceases, or bear it with such resignation as they can muster. The pro-noisers are zealous and active in promoting the general tumult. In the light of past experience, July 4 is consecrated to hullabaloo, lost thumbs, singed eyebrows, lockjaw and dismemberment. It is an established institution, hence if one is disturbed by it, he should take the disturbance philosophically.

It is the one day on which the American boy can riot legally. He is giving expression to certain emotions, under certain conditions, which in a way do not differ from the manner of his elders under certain other conditions. Aged men sometimes whoop and cheer for candidates at election time; young collegians utter college yells apropos of nothing, at any time or place; groups of men sing "For he's a jolly good fellow" when their bosoms swell with friendly feeling; thousands become idiotically ecstatic in their demonstrations over the winner at a horse race; so that, if we disapprove of what has ceased to be novel to us, we may in turn be disapproved if enthusiastic over what has ceased to be novel to some one else.

Let Young America have his freedom for one day in the year, July 4, as in keeping with the declaration of the day. Let him make all the noise possible if no physical injury is done thereby. If he does not understand in his youth what it is all about, in his mature years, when he does understand it, there will be appreciation of its national beneficence, blended with happy accentuated associations.

Remember that all men were boys once, and that it is an ill stage in the life of any man wherein he forgets that he was once a boy himself. When the Declaration of Independence caused cannons to fight for years in war, we surely should be able to endure the roar for a day in time of peace.

The bill for the creation of a Southern Appalachian Forest Preserve was passed by the Senate last week, after having been amended to provide that the measure shall not take effect until the Secretary of Agriculture shall have reported to Congress the plots of each reservation. The bill authorizes the purchase by the Secretary of Agriculture, at a cost not to exceed $10,000,000, of not more than 4,500,000 acres of land to be selected in the forest regions of Virginia, West Virginia, North and South Carolina, Georgia, Alabama and Tennessee. The bill has not passed the House; but on recommendation of committee will be carried over to the December session as unfinished business.

The commission authorized by the New York Legislature to select lands for a State park on Long Island, have had several tenders of available properties. The tracts offered include one lying between Manor and Yaphank, another on the Quogue Plains, and one in the Ronkonkoma section. Several thousand acres are said to be available on Peconic Bay, but the price asked would be prohibitive. The commission is reported to be favorably inclined to a Wading River tract of 6,500 acres, lying between Manor and Yaphank, and having a frontage on the Sound.

Mr. Charles Hallock tells in a very charming manner of the early days in the Massachusetts hills, where he first learned the art of casting the fly. We are all creatures of circumstance, our whole lives influenced by happenings which in themselves are as slight and trivial as they are in consequences powerful and lasting. The chance visit of a fly-fisherman to the trout streams of Hampshire county gave angling bent to a youth whose whole life was affected thereby.

The Visalia, Cali., Times charges that the United States troops detailed to the protection of the Sequoia National Park have been poachers, killing deer out of season and dynamiting the trout streams; and it calls on the Secretary of the Interior, in whose charge the Park is, to put an end to this lawlessness on the part of the troops. To state the abuse should be to find its quick remedy.

An international agreement for the uniform protection of certain migratory birds, has been entered into by Belgium, France, Greece, Lichtenstein, Luxemburg, Monaco, Austria-Hungary, Portugal, Sweden, Switzerland and Spain. Absolute protection is assured for birds useful to agriculture. It is extremely unfortunate that Italy should not have joined in the compact, for the migrating birds cross that country in immense hosts, and the industry of capturing them results in an enormous destruction.

The Sportsman Tourist.

Old Plainfield Days.

"On revient toujours a le premier amour." This proverb is as true in English as in French. How we superannuated old people do inevitably hark back in our waning years to the old haunts and the old homes! And every old memory stands out as a beacon to light the way.

It is this homing instinct which leads me back every year, nowadays, to this delectable corner of northwestern Massachusetts, where I was baptized in the living waters of the Plainfield Mill Stream. Its alder-shaded pools and sparkling riffles were then alive with speckled trout, and we boys basketed everything that came to the hook; but at present there are few fish in it legally worth the taking. Fingerlings under the six-inch limit are tired of being caught, and put back over and over again, while larger fish keep shy. Consequently my rods are hung up under the baby act, like Jewish harps by the waters of Babylon. But, *satis superque!* I shall go to Sunapee Lake ere long, where I am told there are eight varieties of entertaining fish, including the much-discussed saibling, or Sunapee Lake trout, so signally exploited by Dr. John D. Quackenbos, of New York, some twelve years ago. No person has done so much as the good doctor to bring this delightful summer resort to public notice, and to make it attractive.

As to Plainfield now. I wish that your readers could realize the sylvan charms of these terminal hills of the Green Mountain range. The venerated Bryant knew them of old, and weaved his dulcet rhythms over all the pleasant places, like summer cobwebs in the morning lights. From every summit there is a sweeping view, and in every valley there is a sparkling stream, a grateful shade and a winding drive. Ice-cold springs gush from every hillside and are caught in great log troughs at the roadside for the comfort of panting beasts which climb the steeps. The very hilltops are saturated with the limpid waters which percolate through the stubble of the hay fields and find their way to noisy brooks that clatter through the woods and stony ravines in their haste to join the main streams in the valley below. Rocks and spreading ferns are distributed with charming effect all over the pasture lands, while wayside and woodland flowers—Solomon's seal, Jack-in-the-pulpit, Indian pipe, pitcher plants and moccasin flowers—are in number and variety sufficient to cram an herbarium. The whole country is like a park. Since it was first cleared it has been in great part reforested, but there is no primitive forest. Every acre of land has been cut over and cropped over during the past century, and whatever woods there are have sprung into a luxuriant and sturdy growth from old clearings long since tilled and run to waste. There is everywhere a continuous interchange of rounded eminences and abrupt slopes, crossed in all directions by stone walls and interspersed with big boulders, granite outcroppings, apple orchards, cornfields and potato patches, with here and there a farmhouse, too often destitute of paint, and frequently abandoned and left to decay. Some elevations exceed 2,100 feet in height, and look into five States. Prof. Charles Lyman Shaw, who died last month at Astoria, L. I., was a famous mountain climber, and knew the altitudes of all the hills and knobs and higher elevations in this region. It was through him that Bryant Hill, Mt. Warner, and several other eminences received their present names. At the date of his death he was engaged on a descriptive and topographical chart of them.

In early geological times a big squeeze took place right here, while the earth's crust was cooling off, which upended large areas of laminated schists and gave to some parts of these slopes quite a graveyard aspect. Ledges of sedimentary rocks crop out from the hillsides in all directions; great dykes cross the lines of upheaval, and huge boulders are grounded on summits furrowed with glacial striæ, which will be legible to the end of time. When I was a boy I used to climb these crags to salt sheep whose matutinal bleating resounded from near to far. On these altitudes there is always a vitalizing atmosphere, so that the summer temperature is never too warm at night. One point in particular is called the "Bellows' Nose," where it is said one can always get a breeze, even if he has to blow it himself.

But in winter! Well, I do not see why even the New England winters should not be charming in their boreal aspects, with every one snugly housed and little to do, the winter supply of wood cut, and no one compelled to go out into the inclemency of the weather except the doctor and the stage driver. But my! to think of these heroes of the hills turning out every morning before dawn and returning with the mails three hours after dark, dodging snowdrifts and following the uncertain trail over stone walls and across wind-swept pasture lots under blizzard conditions, for such are the hyemal diversions of rural delivery! The bare thought provokes a shiver, suggests an ugh-ugh-ulster!

And just to think of a location so charming in summer and winter having no hotel, no typical boarding house, no hospice for the fagged and bilious men of business who eagerly scan the advertising columns for summer elysiums which they fail to find; for retreats umbrageous and cool, where charges are not unconscionable, where pullets never mature, and the matutinal toast is enriched with genuine cream instead of watered milk. There is not even a stage coach here—only mountain wagons—to ply to nearest railroad points, which are respectively eleven, fifteen and seventeen miles away. But the roads are fair, and portions of them are "State roads," costing $10,000 per mile, which vie with the "vias" of old Rome. I have long inclined to the opinion that a well-kept hostelry here in Plainfield could be crammed for ten weeks in the summer season at prices 50 per cent. higher than are asked now, and give satisfaction.

It is now fifty-six years since I cast my maiden fly into these primitive trout streams. I was a stripling then, city born and bred, and fairly reveled in my rural environment, like a colt turned out to grass. My whole time was passed out of doors, and I grew hardy and tough. I scorned a bed in summer months, and slept in a bunk in a rough board shanty hidden in a grove which crowned a knoll, under whose base wound a small rivulet. In this rustic kindergarten I learned the rudiments of woodcraft. In time I came to know every woodchuck hole in the township, and almost every red squirrel and chipmunk by sight; every log where an old cock partridge drummed; every crow's nest, and every hollow tree where a 'coon hid away. I heard Bob White whistle to his mate in May, and listened to the roundelay of the bobolink in June. I had no passion for collecting birds' eggs, but I knew where many a robin foregathered, and where to find the incubating ledge of the night hawk. My elder cousin and I had pets of all kinds—tame squirrels, foxes and crows. All the live stock on the farm were our friends. The old bay mare which once tossed my uncle across the stable with its teeth, would let us crawl between her legs. We rode the cows home from pasture, drove a cosset four-in-hand, trained two Maltese cats to wagon, and even got the little heifer so tame that I could rest my shotgun between her budding horns and fire without alarming her. We learned where to gather all the berries, roots, barks, "yarbs" and luminous fungi which grew in the woods, and so unconsciously became lovers of botany and natural objects. As to fishing, we fished whenever we got a day off. There were sequestered ponds cinctured by spruce belts, at whose outlets the hum and buzz of busy saw mills were heard, and whose waters were filled with pickerel and perch. In the solitude of the woods the bark-peelers stripped the hemlocks for the tannery. Of birch bark we fabricated no end of useful and dainty things. But most glorious of all, as I have said, were the mountain streams, foaming, purling, rippling and leaping, with a life and a dash and a joyousness which made our lives merry and filled our hearts to overflowing with pleasure.

Fly-fishing was in its infancy then. It was an art scarcely known in New England, and little practiced in Canada. We boys had no conception of the curious devices of feather and tinsel which we afterward learned to use, as I will tell you presently. To the angling fraternity at large the artifices of Thorndike, Stickler and Bethune were as mysterious as the occult sciences themselves. We used simply a wattle and a worm, and whipped the trout out of the water *vi et armis*. We did not understand "playing" a trout. Our sport was derived from our environment, from the size of count, and the sense of freedom in a day off. And yet we were the best anglers in the village. We caught bigger fish and more of them. We knew every good place in the Mill Stream. There was the old log just at the edge of the woods, the big hole where we used to bathe, the bridge that crossed the road, the rocky ledge at the pond where there was a small type foundry, the crossing log in the ten-acre pasture, the eddy at the lower falls, and so on from point to point through devious windings and turnings, away down stream three miles or more to the grist mill, the same which the old Mountain Miller used to tend in years gone by.

Ah! those were halcyon days. No bikes nor automobiles disturbed the quiet seclusion of this mountain nook. The scream of the locomotive was not heard within twenty-two miles of it. Twice a week an old-fashioned stage coach dragged heavily up the hill into the hamlet and halted in front of the house which was at once post office, tavern and miscellaneous store, and is now. So little has Plainfield changed! One day it brought a genteel passenger. A well-knit, wiry frame he had, with features denoting quick wit and kindred qualities. He carried a hand bag and a fascine of rods in a leathern case. Some thought it was a telescope, but the village quidnuncs said he was a surveyor. I have forgotten his name, except that it was of two syllables and began with D. He allowed he was from Troy, and had "come to go a-fishing."

From that stranger I took my first lesson in fly-fishing. As he stood upon the tavern steps he gazed across the barren waste of ground to the meeting house opposite—the same meeting house where my reverend grandfather ministered with grace for forty years—a meeting house quaint and ancient, rooster-crowned, with its horse block and rows of horse sheds at hand, and its square pews inside, its lofty galleries and crimson-cushioned pulpit, its deacon seats and its sounding board, long since things of the past. He gazed and seemed to meditate, then shook his head and remarked: "To-morrow will be Sunday. I shall have to wait a day. Sonny, can you tell me if there is any good trout fishing about here?" Trout fishing! To me there was magic in the sound. Yes; and I would take him to the brook. "All right; it's a go!" Of course my Sunday school lesson lapsed next day. Appetite deserted me. I even refused the "hunk" of gingerbread which my aunt supplied at the nooning from the family lunch basket. But you should have seen that stranger fish on Monday! It was not that he took so very many fish, but the cute way in which he did it. In the first place, his rod was so constructed in different pieces that he could separate or joint them together, and it was nicely varnished, too, and stiffer and more supple than our long hickory poles. I did not notice what kind of bait he used—I didn't see him use any—but he just gave a quiet twist of his arm and tossed his line every time, far, far beyond the most ambitious attempts of ours; and nearly every time a fish took his hook; then he let them dart about for a while, as if he didn't care to save them. At first I thought he was just fooling, but I soon discovered that he had some system about him, and I watched carefully. I always knew that there were big fish out there in that deep water under the alders, for we had seen them break there often. Yet we never tried to fish there, because we could not reach them from this side, and upon the other the bushes were so thick it was useless to attempt it. And it was too deep to wade. All day long while fishing with him, I employed my nicest art. I sought out my best holes, and crept up carefully. I took many fish, but only a few big ones. Any dozen of his would have outweighed my whole string. It aggravated me awfully. He said I was an excellent bait-fisher, but thought I would learn to prefer flies. Before he went away he gave me some instructions in casting and a few samples. Since then I have always used flies in fly-time wherever practicable.

CHARLES HALLOCK.

PLAINFIELD, Mass., June 26.

The Demon Bear of Tarantula Ridge.

RECENT press dispatches, with brief but stirring detail, set forth that our beloved President of the United States has been invited by some brave bear hunters, who are coincidentally brave and chivalrous Mississippians, to fill the office of guest in a bear hunt to take place in some place in the South as yet unnamed.

This national event in its significance recalls a bear-hunting episode of my own life which took place some years ago. I carried enormous pressures of sportsmen's egotism. As a side phase of it, I wanted some fame as a brave man, and to this end, concerning it, I wanted to establish some daring deed as of record. There then was no cheaper, nor quicker, nor safer way to achieve it than to invade the wilderness, kill something in some way or other, and forthwith portray the deed in proper flame of color, pitch of key and volume of detail, all properly spread before the public eye.

I have intimated that I was egotistical. I know that I was so, but I also know that it was all in a wholesome way. This wholesomeness certain narrow minds could not perceive or concede. A thirst for fame is not a novelty in the character of every well-organized man and woman. In every man's life there is a stage in which he aspires to distinguish himself favorably and preeminently in the eyes of his fellows. If the opportunity does not present itself naturally, he, if properly ingenious, presents it to himself. One sensational deed accomplished in the limelight and the trick is eternally done. A few moments of such well-chosen forwardness are sufficient to color one's whole life with heroic diffusiveness. It does not matter much in what the heroic deed consists, so that it is either of bloody novelty or bloodless superlative. In most instances, the public must necessarily take the hero's word as proof of his heroic deeds, and thus his private fancies may become the public's facts.

In civilized society, the law is an obstacle to heroic opportunities when the same are premeditated, and therefore it checks the proper advancement of that commendable infant industry called heroism.

The field of heroism perforce is narrow. The chance to save a beautiful, wealthy, married or unmarried woman from the thundering hoofs of a foaming runaway horse comes not to one man in a million. Only to the extremely fortunate few is vouchsafed the glorious good fortune to kill a riotous baby-biting mad dog; an act above heroism, for it more properly belongs in the domains of the saints.

The demand for heroic veneering is thus far greater than the supply. Peaceful society is a barren field from which to extract the raw material for the making of heroes. Hie thee, then, to the wilderness! There the man-eaters roam at large. In silence and secrecy the heroic chrysalis may be wrought, thence transferred to the public gaze for the emergence of its beautiful hero-butterfly.

There being ever a close season on man himself within the precincts of civilization, he is not available as raw material for bloody deeds; that is to say, he is not safely available, as he is dangerous in himself and still more dangerous from the mantle of safety within which the law enfolds him. Therefore, most of us, bent on securing data for bloody literary deeds, have to hunt the wild animals of the wilderness. After we have succeeded in killing one of them—bear, wildcat or rabbit—note that it is in keeping with the vainglorious consonance of the theme to depict the dreadful beast's gigantic size, irresistible power, boundless ferocity, lumpy skull, dagger teeth and scimiter claws; for by so much as these terrible attributes are magnified, by so much are the bravery and the glory of the vanquisher exalted.

My ambition was to conquer a bear. At first this ambition was merely an idea which in time developed into an imaginary exploit, but which I impressed upon my friends as a well-established fact. I wanted the bear's skin; not a mere bear skin, for a skin of the commercial world, known to be such, was not up to my standards or my requirements. I wanted this skin to be a personal matter exclusively; that is to say, I, myself, wanted to be the bear's slayer first, and next to be the one who denuded him of his covering. At least, if I did not actually do all this, circumstances required that as a matter pertinent to the record, I should be somewhere adjacent to my proxy at the time of the battle, thereby establishing the conventional associations so dear to the brave ones who do and dare, so useful in proving the validity of the herioc act, and so necessary in successfully calling attention to one's self when perched on the tip of the heroic pinnacle. On that tip, innumerable heroes, mighty hunters before the public, have perched throughout a lifetime merely by a tactful observance of the dramatic unities.

As I said before, I wanted a bear skin. The more I talked and thought of it, the more firmly I believed that a bear skin, drawn from life by me, was an essential to my home and reputation. Home was less a home without one. Reputation minus a bear skin of my own flaying was a reputation, but it was one flawy and moth-eaten. Yet talking and thinking of it were not without many profound constitutional disturbances to me. I confess to varieties of spinal creepiness and cold waves at times when imagining a face-to-face encounter with the ferocious possessor of the skin which I coveted, the bear whose skull had the resistance of steel plate, whose teeth and claws were like chisels; whose skin—my skin—had a thousand lives in storage, each of which required an individual bullet to take it, and even when pierced by a thousand bullets, the bear would remain vigorously alive for days after he should have been dead. A bear pierced lengthwise and crosswise with one thousand bullets, raging, roaring, bounding, fighting, glaring, gnashing, foaming, charging, blood-spurting, immortal, is a garnishment to a pen picture which is beyond price.

From a mere verbal want in the first place, circumstances at length made it a real want. I had achieved a reputation which I was forced to live up to. I had committed myself to a bear skin beyond power of recall. From it I derived much equivocal prestige, for, as a result of my friends' innumerable confabs and criticisms, which being sacred exchanges of confidences between them,

were by each told in turn to me at the very first opportunity, I was rated as a bluffing pretender. Some said that if ever I got near enough to a bear to be chased by it, it would not catch me in a hundred years. There were others who thought differently, holding that my condition of body would be so paralytical that I would be caught without any chase at all. A few exchanged winks and said nothing. All agreed upon the point that I was properly built for sprinting or tree climbing, when in the right mood, which would be at its best consequent to a certain incentive. I had some staunch friends who averred that a singed cat is better than it looks; that no one can tell how far a toad can jump by its mere shape.

A train of circumstances brought about an opportunity to capture the bear's fleece. I at that time was a traveling salseman for a St. Louis firm. We had a customer in eastern Louisiana. He had defaulted three times in the payment of a note which had been twice liberally extended. The firm thought that I could promote their interests by calling on him in their behalf. I journeyed thitherto. He proved to be the very pink of courtesy and chivalrous hospitality, which adornments I have found to be a trait of all true gentlemen everywhere.

I presented to him my letter of introduction, which read as follows:

ST. LOUIS, Jan. 5.—M. Jean Menteur, Tarantula Ridge, La. Honored Sir: This will serve to introduce to you our Major Reuben Ursussen, who, owing to delicate health, is visiting your section of country to sniff its fragrant air and taste its limpid waters as the best of restoratives. We requested him to favor you with a call for the purpose of talking over the trifle, $5,000, which we have the honor to carry on our books to your debit. Any attentions which you may extend to our Major Ursussen we will consider as being extended to us. Hoping that you will continue to esteem us as worthy of your consideration, we are, dear sir,

Your humble servants,

HARRY, WILLIE, EDDIE & Co.

I arrived at the domicile of M. Menteur in the middle of a pleasant afternoon, and was fortunate to find him at home; or rather he was sitting on the gallery of his Southern home, where the shade was thickest and the balmy breezes oftenest fanned his calm brow and tossed his long locks.

He read my letter with polite attention, rose, extended his hand in confirmation of his first welcome, and insisted that I must be his guest during my stay in that region. He observed that my disease must be grave, since there were no external signs of it; it was therefore of the insidious and alarming kind.

The more I protested my appreciation of, and reluctance to, impose on his hospitality, the more I was assured that it was I who was conferring a favor. Finally, I accepted with pleasure.

"Now," said M. Menteur, "we might as well discuss and settle this little incident so tactfully mentioned by your firm. I know that, being now my guest, you would feel some embarrassment in reverting again to the subject. Will you be so good as to present your case to me at once?"

"Why," I replied, "my firm advises me that you owe them $5,000, and that I am to collect it if you will deign to settle. It will take only a minute, as I plan it, to close the whole indebtedness."

"Major Rube," he rejoined, "I see that you are entirely ignorant of the time-honored traditions of this country. Do you know that the note, referring to what you are pleased to term an indebtedness, has been twice renewed. In this country, that circumstance is considered as being fully equal to a receipt in full. You are now in this section of country, and whatever prejudices you may have, if any you have, against its customs or its traditions, while you are in our midst your own delicacy of judgment will prompt you to respect them. The incident is closed."

We shook hands cordially, for we found that our hearts beat in unison as sportsmen, and from that moment began a friendship which time has not cured nor death ended. By such adventitious circumstances are warm friendships made among your true cosmopolites, sportsmen.

"To-morrow, if your delicate state of health will permit," continued M. Menteur, "we will go forth on a bear hunt. We will seek bruin (*Ursus americanus lepus*) in the fastnesses of his lair. I am the champion bear hunter of the world. I have killed more bears than all the rest of the hunters added together. Last year I killed over four thousand, and in my lifetime I have killed bears enough to cover the pyramids of Egypt as a bushel of wheat would cover a hen's egg. After all, it is not any fun to kill the bear. The sport lies in chasing him."

"Pardon me," I ventured, "you do not mean to say that you chase bear. I have always been led to believe that the bear did the chasing. I cannot imagine a picture of a bear scudding across country with a man afoot in hot pursuit. However, it may be merely a ruse of the bear to get the man away from a tree or cave, so that he can turn on him at a proper time and place to devour him at his leisure."

My host laughed in a politely modulated key, but there were several verses to his merriment. "Major Rube," said he, as he viewed me compassionately, "if bears acted in the way you thought, there would be very few bear hunters, for one of the chief charms of a modern bear hunt lies in its entire safety. When I bragged so frankly of having killed so many bears, I was simply bragging of my industry in sport, as one might brag of chasing more foxes in a year than any one else had chased. One bear hunter of long ago, facing a grizzly after the old-time methods, incurred more danger than all the bear hunters of the Mississippi and Atchafalaya bottoms individually and collectively ever did from the beginning of the world to the present time. There are differences in bears and bear hunting as there are in everything else. Bear hunting as the public knows it is of the old-time variety. The *mise en scene* is composed of a bear which weighs a ton; a lithe, plucky hunter armed with rifle and knife; a forest of giant growth interspersed with fallen logs and dense thickets. It is a duel in which rifle and knife and craft are pitted against giant strength and devilish courage. It is a man, one man, against a bear. One stroke of the mammoth's forepaw, one hug, one disemboweling scrape with the hind foot, and the man is dead. On the other hand, the grizzly may be shot or stabbed and he lives on indefinitely. Shot through the head and heart, he may die in a short time or a long time, according to the exigencies of the story, the amount of space to be filled, or the avidity of the readers in swallowing hook, line and sinker. Those were bear fights. Ours are bear chases. Our bears are cowardly little black bears which weigh from 200 to 400 pounds, so timorous of nature that they seek the densest covers of the river bottoms for purposes of safety. The miles of switchcane, almost impenetrable to man, is their favorite haunt. Of man they have an agonizing dread. Only at night will they invade the sections which he most frequents. They are impelled to do so then only by the need of food.

"To the public, however, a bear chase is a bear fight; all bears are bears, and all bears are grizzlies; and also to the public, whose knowledge is fiction, a bear fight is about the most dangerous scrimmage known to mortal man.

"To-morrow, early, before the sun pops up at the eastern edge of the world, you will have an opportunity to learn the difference between a bear hunt and a bear fight; between an ancient bear fight and a modern case wherein a bear could not fight even if it so desired; and between a modern champion bear killer and a champion potato grower, concerning which there is only a very slight difference, since in each instance the principals are largely indebted to the work of menials. Do you ever get thirsty?" he suddenly asked.

I nodded feelingly in reply.

"Come within where the sideboard stands," he suavely said, and I came. When the time for retiring had long passed, we were something more than friends; we were as two long-lost brothers who had met. Poets have sung of many things, but of the lot not one has ever sung in full the praises justly due to corn, vehicle of joys and headaches.

When I gazed around my chamber the next morning by the rays of a lamp put in action by a sloppy-looking negro boy, I had a feeling of comfort and contentment. The room was large enough for four rooms. The bedstead was a work of quantity and of art. The posts were high and rotund; an immense canopy projected from front to foot close to the ceiling, and there were ornamentations in the way of carving and satin linings so marvelous in their beauty as to almost distract one from sleeping. Shortly afterward the negro boy brought to me a cup of hot, strong coffee, and told me that the horses and dogs were all ready, and the boss in waiting to start on the bear hunt.

Hurriedly joining my host, I found a number of young men with him, whom he introduced to me as his sons, Christian, Felix, Victor, Pierre, Jaques and Louis. Each was armed either with a 10-bore shotgun, loaded with heavy loads of buckshot, or a short rifle of .44 caliber.

My host asked me if I was a good shot with the rifle, and on my not answering strictly in the affirmative, without more ado he handed me a shotgun and a half-dozen cartridges, which were to be kept in pocket till such times as they were needed.

Three negro men, who I learned later were famous hunters of bear, wildcat, rabbits, birds' nests, hogs of slightly indefinite ownership, or anything which savored not of manual labor, were of the party, and actually participated in the hunt, though subject to service for the party if needed, and under orders always. They were respectively named Mose, Pete and Henry.

M. Menteur was mounted on an American horse, about sixteen hands high, which was famous for his speed and sureness of foot; his rider in turn was famous as the most daring horseman even in that country of desperate riders, so that it was a byword of praise when one was said to ride like a Menteur. The rest of the party were mounted on Creole ponies.

My host blew his horn, and immediately there was a tumult of dogs such as no man, to the manor unborn, could conceive. Some stood stolidly and bayed deep and long. Some reared and barked, up and down, furiously. Some stood uttering sharply yip, yip, yip, holding their forelegs stiffly and rising a half-inch from the ground with each yip. Some put their noses to the ground and gave tongue while galloping in a short circle, as if on a true trail. Each had a different note; each gave the loudest note he had, and all together they made a babel of dog voices which would have driven me distracted but for the fact that I was enjoying true sport.

We at length sallied forth, a troop eleven strong in men, and about 100 dogs—about 111 all told, men and dogs, powerful enough to subdue a small insurrection, yet peacefully bent on sport with a little bear.

I noticed that each of our party had a horn slung by his side, which on examination I found to be a common cow horn with the small end scooped out after the manner of the mouthpiece of a cornet or trumpet, and which on trial I found I could not blow at all, though all the others could do so with ease.

After riding on tortuous long paths through the switch cane, through tangles of vines, sheets of water and fording bayous, I was given a stand with Felix and cautioned to be alert and hold it with unfaltering fidelity till the party returned for us later, as it was the best stand in that whole region of Tarantula Ridge, and there was almost a certainty that I would get a shot and a bear skin.

The patter of voices grew fainter and fainter. The babble of the dogs soon was out of earshot. I was in the country where the bears roamed at will. Suppose that one should roam my way of his own volition? Would that be sport for me, or would it be sport for the bear?

Every little voice of the forest sounded very loud to me. Earth, air and time seemed to me to be full of grave portend. I wondered what the loved ones at home were doing and whether they missed me much, me, Major Ursussen!

I had M. Menteur's word that this was a bear chase and not a bear fight; I also had his note of hand that he would pay a certain sum on a certain day. It was possible that he might be mistaken in this, or any other matter. It might be a bear chase, too, but which would be the chaser and the chased?

The silence of the forest had in it for me nothing of reassurance. From any part of it a dreadful bear might pop out.

But hark! Is that a whispering whimper far away in the distance? I strained my ears and listened. A clear, faint note this time. In a few moments the tones have multiplied into the distinguishable cry of the full pack.

Felix seemed to be dormant, so imperturbable was his pose. Nevertheless, I felt that he was furtively scrutinizing me at times, and seemed to be politely amused at something.

The faint babble of dog voices grew apace into a frantic chorus of the pack in full cry. The long, bugle note of the hound blended with the staccato yip, yip of the cur; for the pack was of all kinds and degrees of mongrels, with a few full-blooded hounds to do the guiding truly as trailers. I was told that a dog which would charge in on the bear and stand his ground was sure of death, so that the best bear dog was one which would keep close to the bear, yet always out of reach of his forepaws and teeth, thus holding him at bay while the champions came up and riddled him with buckshot and bullets.

The chase came nearer and nearer in full cry. I began to have a most unaccountable feeling of trepidation, and I lost confidence in myself. My feeling, as near as I can define it, was a combination of stage fright, buck fever and nervous prostration. My companion, nevertheless, was as nonchalant as if seated in a flower garden on a June morning. This, if anything, added to my nerveless condition. I wished the bear elsewhere.

Out of a narrow opening, about 200 yards away from us, the bear broke cover. He seemed to be much in the same psychical and physical condition that I was myself. In the cane and timber further away, the dogs were following in fierce cry, and the voices of the riders supported them in yet fiercer though distant encouragement. My companion gave me a nudge and a signal to get ready, for so enthralled was I with the beauties of the chase that I had forgotten that I had a gun. I quaked violently. I rose as the bear was passing about thirty yards away, aimed quickly, and fired, bang, bang. The bear spurted still more swiftly, and quickly disappeared in a wilderness of switch cane.

"He's hit hard," I exclaimed to Felix.

"Monsieur is jesting," he replied. "Monsieur did not care to end the sport so early. There is where your first barrel tore up the ground, and there is where the other cut off the high limb of a tree."

Looking in the direction he pointed, I saw that the earth and tree marks bore silent witness to the truth of his statement. At this moment the pack of nondescript dogs burst by, hot in their galloping fury for gore.

"We might as well mount now and follow," Felix remarked, without the slightest show of vexation.

After riding after the pack a few minutes, the cry of pursuit changed to one of baying.

"They have the bear treed," said Felix. He spurred toward them. Following him with the greatest difficulty, though out of courtesy he restrained his speed to accommodate mine, we came to the closing scene of the bear's life, and the commencement of my fame as a bear fighter.

The bear had taken refuge in the fork of a tree about thirty feet from the ground. He seemed to be very restless at our appearance, and I thought that he meditated a jump and a run as a means to escape.

Soon we were joined by the rest of our party, and we had the bear so surrounded that he could not then flee without meeting one or the other of them. M. Menteur looked at me, and I confess that I was fairly quaking again. "I think that we will all shoot together," he said, "and then we will not know exactly who did or didn't kill the bear, so that under these circumstances any one then can claim the honor who cares for it. When I say 'Ready, fire,' all fire in a volley at once. Now, Ready, fire."

There were flashes and roars of guns. The bear fell from the tree stone dead. It required the most vigorous exertions of father and sons to save the skin from the fangs of the infuriated dogs.

The bear looked almost as large as a steamboat when he ran by me at the stand, and I feel that my impressions then are sufficient grounds to warrant my solemn averment that the bear was a monster of his kind.

"Eheu!" exclaimed Pierre, who was skinning the bear. "This is the Demon Bear of Tarantula Ridge." All the party gathered around him excitedly as he held up to view one of the bear's forepaws. One of the outer toes was gone.

"That foot was caught in a trap years ago," Pierre continued. "We have hunted him many, many times, yet such was his almost human craft that never before to-day have we been able to capture him. I think that Monsieur Ursussen is the mascot and hunter of the party, and to him we owe all for our great success."

"Three cheers for Major Ursussen!" exclaimed Victor, and three cheers were given with a hearty good will.

I scrutinized the bear closely. He seemed to have shrunken into an insignificant size as compared with the size I had in mind when I first saw him galloping near me, and I felt that the honors were conferred on estimates made ante mortem.

"Major Ursussen," said M. Menteur, "you have been in a modern bear fight, and have acquitted yourself with average valor. Rest assured that being my guest I feel proud in the belief that at some future time I may have the honor to testify to your coolness of nerve and steadfastness of behavior in this terrible bear fight. Of course you will not fail to proclaim that I am champion, for you have been a witness to it. We will now return to the house, and there while away an hour or two in libant dalliance."

In the parlor of my home is a stuffed bear skin, life size, so realistic in outline and pose that one has to reason one's self out of the belief that it is a real bear. My friends admire it much and often. Close examination reveals many perforations in the skin. On the stand on which it is mounted is a silver tablet, bearing the following legend:

"The Demon Bear of Tarantula Ridge, a trophy of Major Reuben Ursussen's bear hunt in Louisiana, Jan. 6, ——. Sixty bullet holes in the skin were put there before the bear died, and they testify to his frightful vitality. The skin in drying shrank to a much less size than when it was green on the bear."

At home I am accepted as a bear hunter who has been tried by fire and proven true. When discussing me privately, my male friends say: "Ursussen was dead game

after all. He delivered the goods. I never thought that he had so much pluck, or his whole family."

The ladies, bless them, consider me a lion in a gentleman's clothing. I note that at all social functions the tips of fans are pointed at me, bright eyes follow me, and voices of sweetest music, women's voices, sound my praises.

As I pass the children at play, one of them is sure to exclaim, "That man kills bears My pa told ma that he was not afraid of a buzz saw. He's got a whole lot of skins and stuffed bears at home that he killed all alone with a knife. I'm going to be a bear hunter."

I do not need to hunt bears again, for I am a hero of record, having both a trophy and a reference. But I intend to add some moose heads, mountain sheep and a few big fish to my collections of trophies.

REUBEN URSUSSEN.

ST. LOUIS, MO.

"A Walk Down South."

A FEW days ago I had occasion to "walk" down South and I took a Mississippi River steamboat.

Unlike our good and interesting friend Spears, I had no business with the mate, and yet, when on deck I was a close observer of things going on aboard and ashore, and, inasmuch as the boat poked her nose into every bend and crook in the river to put off or take on freight and passengers, there were few moments when something was not going on.

I naturally watched the rousters at their work and found the study interesting. The men were uniformly young "niggers," there being not a single gray-headed man in the lot. I wondered if a gray-headed negro roustabout is as rarely seen as the proverbial dead mule. Perhaps a roustabout never survives to the gray-haired stage any more than a mule ever dies. What a life! As Spears' quondam fellow laborer exclaimed, "Work! work! nothin' but work!"

I wonder if the eight-hour work day will ever reach these poor devils! Except between landings, day and night and night and day they are everlastingly at it.

Those upon our boat were a young, strong, husky lot, yet after a landing and discharging of freight they seemed perfectly reconciled to a pile of boxes, a row of barrels or a collection of meal bags upon which to throw themselves and snatch the briefest kind of a cat nap, only to be aroused by the bellowing of the whistle as the boat blew for the next approaching landing.

I once read a squib about a Mississippi River captain who suddenly "got religion" and issued positive orders to the mate that the niggers must be "swore at" no more. And in twenty-four hours how the niggers sent a delegation to the captain and begged for the old conditions, "cause it didn't feel natural not to be cussed." On our boat we heard no profanity. The mate was a thin, wiry Southerner, with an acclimated complexion. He gave few orders, but there was a razor-like note in his voice that seemed to stir the niggers like the lash of a scientifically wielded blacksnake whip. His "come along there," "what are you doing," "get out of there," "now! now! now!" was sufficient to keep those roustabouts moving at a pace that was astonishing. Let the long line of toilers heavily laden and crawling up the steep bank like ants show the slightest sign of lagging, "What are you about?" shot like an arrow from between the mate's teeth, was sufficient to jump the whole line into a quickened pace.

What a diversity in the way of burdens! One piece at a time seemed to be the rule, and in the line and following the man straining under a 150-pound roll of belting would come a husky darky carrying a two-pound yeast box upon his broad shoulders. This single parcel idea went with no protest from the observant mate.

Heavy dry goods cases, barrels of salt and weighty and bulky packages generally were carried on a sort of stretcher consisting of two heavy poles connected together with cross lacing of chains. Four men manned these stretchers.

We picked up a flat coal-laden barge and fastening it to our boat moved down the river as the roustabouts, between landings, shoveled coal into barrows and wheeled them into the steamer's bunkers. The sun beat down unmercifully, yet for hours this unloading of freight and loading of coal alternately kept up.

There was "some" powder aboard and this had to be landed on the line of a new railroad under grading construction. The point selected for the landing was where the river had eaten tons of earth away from the steep bank as a hungry boy would bite into cake. To reach the deserted house in which the canisters of powder were to be temporarily stored, the steepest imaginary path up the slippery gravel had to be walked.

The single parcel rule was laid aside here and the darkies carried under each arm a 25-pound canister of blasting powder. There seemed to be no end of that powder, and when we had roughly counted about 1,000 canisters we came to the conclusion that we had slept last night over a veritable powder mine.

It was painful almost to see those poor devils grind their toes into the bank going up and coming down on a jog trot, slide and slip most of the way. There was no shouting or singing, and yet was there a broad grin on the countenances of the majority of them. And when the last keg had been landed and the boat's whistle and bell had sounded "all aboard," the men were again shoveling coal before the boat had gotten her nose a hundred feet from the bank.

And as I watched that reeking crowd of blacks, dripping with sweat and panting from their late exertion, buckling to under the broiling, blistering sun in their work of coal shoveling, I worked out in my own mind the solution of the problem of the gray-headed darkey roustabout.

CHARLES CRISTADORO.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and and not any individual connected with the paper.

Second Annual of the Uneasy Club.

(Concluded from last week.)

FOR two days I loafed about the river waiting for rough weather, picking up a few teal and reading the latest issue of the FOREST AND STREAM, which an obliging friend had sent me. While poking about with the canoe I found a coon in a trap, the picture of injured innocence. The foxy rascal, sitting there at the edge of the flags with a cruel steel trap fast to a foot, was a pitiful sight, and I was glad to see the owner of the trap coming up the river, who soon dispatched the unlucky animal with a blow from his paddle. He had three others in his dugout he had taken below. This trapper said it was not unusual to catch a fine otter in these swamps.

That evening at dinner Steve V., manager of the club, mentioned the fact that a flock of turkeys had been reported that day at a point down the river, and that he had a notion to interview them, but to do so properly involved being on the ground at daylight, as they would call better then than at any other time. I suggested that we start out that night, locate the place, build a fire in the woods near by and be on hand at daybreak, and upon counting noses we found that there were five of us game enough for this sort of a hunt; so at 10:30, as dark a night as could be imagined, found Steve in the lead with a large lunch basket. We crossed the railroad bridge, a happy expectant party of hunters, bound for a night of it in the woods at least. Upon striking the corduroy road the procession swung off the railroad and Steve collided with the dog Kiser, who evidently did not understand the order, "Column right, march!" Kiser howled as Steve's shoes pounded his ribs, but soon recovered and got in line, and the hunters were soon crossing the cotton field, where a year before the "3 Bs" were covered with cockle-burrs and cotton and filled with disgust. The going was good through the field, but in climbing the rail fence which surrounds it, there was an accident to the lunch basket, and when the wreck was gathered up the butter was liberally sprinkled with sand and chips, the sugar and salt had got together, and in fact the whole outfit was "pi," except a piece of bacon and several loaves of bread. Then for two hours we plodded and stumbled through the woods and underbrush barking our shins on fallen limbs and stumps, dodging under vines and climbing over logs. The climax came during this tortuous tramp when Steve, who was pilot, brushed a small springy sapling so that it sprung back and caught me a stinging blow in the face, which made me suddenly stop and duck. Mr. B., who was following me closely, caught the muzzle of my gun in his eye, and I was afraid he had been seriously hurt, until he assured me otherwise and insisted that it was his fault and not my awkwardness that caused the accident. In the mix-up the lantern was nearly put out of business, and as we sat down to fix it, the whole crowd agreed that a little rest would not be amiss, so we filled our pipes and Steve got reminiscent about moonlight nights and woods full of turkeys, and we spent a pleasant half hour in spite of our tiresome tramp.

As we started on Steve opined that another hour would put us in the vicinity of the coveted game. I thought that this trip reminded me of something I had read, but whether it was Stanley's Darkest Africa or a story of a snipe hunt with the attendant bag and candle, I had no time to decide, for we were again bumping our shins on every convenient cypress-knee, and in a moment more Steve stopped at the edge of a slough. Then came the order to back up and go around the bog, which added another half mile to this horrible walking. I was about deciding that turkey hunting in a swampy jungle was mighty good exercise, and was wishing some one would suggest that we "go way back and sit down," when Steve stopped at a tree and proceeded to hang up the basket and lantern. I had my suspicions that a "snipe" game with the turkeys might be on the programme, but was reassured when he gave us our bearings, explaining that we now were in a narrow strip of timber with a large lake bed on the right and a cleared farm on the left and that the turkeys might be anywhere in this neck of the woods, and that we must flush one or more at once so as to be able to be near their roost when they came off at daylight. We then struck out without the lantern, and if it was a task before, it was painful indeed now, for the woods were black as ink, except where one looked up at the sky, which was fast clouding over. I had zigzagged about for a quarter of a mile when I was startled by a heavy roar of wings in a tree just over me, and the falling of a lot of twigs about me, and as I looked up saw two large turkeys sailing away through an open space among the tops of some tall cypress trees. I could not resist, and pointing the gun as nearly as possible at the flying birds in the uncertain light, I fired both barrels with no effect, at least nothing dropped. The others of the party came up quickly, Steve cautioning no talking, and we then beat a silent retreat and struck out for the clearing, which was on high ground and promised a better camping place than the woods.

While we made a cheerful fire beside a large oak log, Steve went further into the clearing and shortly returned and said, "Gentlemen, I am going to bed, when you are ready you will find your beds ready for you about a hundred yards to the right, just over the fence." With that he and Mr. B. left the boys and myself broiling slices of bacon held to the fire on long sticks, which, with a slice of bread, was the next thing to a club sandwich and highly appreciated after our long walk. Then filling our pipes and lighting them with a glowing coal, we were supremely happy, sitting there in the bright firelight until about 1:00 A. M., when we decided to see the color of the bed Steve had mentioned, which I opined must be a haystack. On going to the fence, as Steve had directed, we there found a shed, the floor of which was covered to a depth of three feet with newly plucked cotton, and in this soft nest we found Steve and Mr. B. sound asleep. We piled in and were soon in the same condition.

At 4:30 I awoke to find myself nearly buried in the cotton. I crawled out and routed the others, and after poking up the fire we again took the trail for the turkey roost. We moved slowly and with as little noise as possible, until our party was formed in a half circle, surrounding the place where we had flushed the birds, facing the lake bed. I, on the extreme left, was backed up against a tree where the view was as clear as possible, waiting patiently for daylight.

Just at dawn I heard several birds fly down from their roosts, and was wondering if I had not got too far to the left, when I heard the flutter of wings and turned just in time to see one fly out of the top of a lone cypress that was 500 yards or more from the strip of timber we were in. The bird sailed in and lit in a tree about 150 yards from me, in plain sight. Then a veritable game of "rubbernecking" began on the part of the turkey as well as my own. Here was a situation I had not counted upon, as I had expected to get a shot at a turkey either running or flying, but here was a shining mark up a tree, but out of gunshot. Knowing the reputation a wild turkey has for locating a hunter, I never dreamed I could make a sneak on him. However, the bird was getting uneasy and seemed about to fly to the ground, giving a slight cluck occasionally, and I decided I must do something at once, as a gun might crack at any moment and spoil my chance. I decided to "sneak," and, if I do say it, no Indian was ever more stealthy. I first got a tree between me and the bird's head, and then walked on the air, I think, for over a hundred yards, and found that I was in range, but that was all, for the bird had changed position and the body of the tree obstructed the view, so that the head and a few inches of the neck showed, and I was unwilling to risk a load of BBs at so small a target. While standing there trying to control my increasing excitement and thinking of some way to outwit the wily bird, he hopped to another limb, and there stood against the eastern sky as big as a barn. I shall not try to describe the sensations of the following moment, just as day was breaking. My nerve stayed by me, however, and with my gun well braced and a careful aim I pressed the trigger. There was not a flutter or a sound after the gun cracked, except the thud of the falling body, and I rushed up to the tree and found him limp and bleeding, stone dead.

Daylight found the birds anxious to get together to feed, and as I stood there admiring my bird I could hear Steve calling keak-e keak-e; and in a moment, not fifty yards from me, a bird answered. Again I was thrilled with excitement, and was peering through the underbrush for a glimpse of the bird, when bang-bang went a gun in the timber back of me, and in a moment I saw a gobbler sailing off across the lake bed. The shots evidently startled my bird, for after five minutes I heard him call at a long distance. Then two more shots from the timber. I waited long and patiently for further developments, but saw no more signs of turkeys, although another shot from the timber assured me that someone was still among them, and after convincing myself there were no more birds in my vicinity, I picked up the dead bird and headed for the camp, thoroughly well pleased with myself as a turkey stalker. I soon came upon Steve, who was sitting on a log looking thoroughly disappointed, for he had called a pair of birds nearly up to him, when Kiser took an insane notion to see what was doing in another part of the woods, and bounding away frightened the birds Steve had all but counted dead and bagged. The boys and Mr. B. soon came up, and how their faces broadened and their eyes opened at the sight of the turkey which hung from my shoulder, its head nearly touching the ground. Mr. B. had not seen a bird or fired a shot, and the boys, who were still thoroughly rattled, admitted having done the shooting, but were not sure whether they had seen six or sixteen of the great birds.

Returning to our camp-fire we met a farmer boy, who for the promise of a quarter for a pail of hot coffee, brought it to us from the house a half mile distant. We went at the lunch basket and were soon broiling liberal slices of bacon, toasting bread and separating a dozen or more biscuits from a pint or so of apple butter which had swamped them in the wreck in the woods. In due time the boy returned with a large tin pail full of steaming coffee. We settled with him and reminded him that he was a gentleman and a scholar, and then proceeded with breakfast, which was soon reduced to an empty basket and coffee pail. Kiser refused to touch a large sandwich I had prepared for him, and from his manner I shall he obliged to think he was doing penance and was in deep disgrace for having ruined Steve's chance for a pair of fine turkeys.

Our breakfast settled and our pipes puffing, we were soon on the back track through the woods, which was not half bad going in daylight.

We had arranged to meet the guides with the boats, fishing tackle, etc., at a point on the river about half way home, and arriving found them waiting for us. Steve was to go on to the club house and we were to finish up the day with the bass, which we proceeded to do.

Having seen a number of ducks flying over and having all the fish I cared for by 3 o'clock, I decided to go back on the river for the evening. While on the way up to the opening where we were to wait for the ducks, a pair of mergansers came along and I fired both barrels and never got a feather, excusing my poor shooting to my guide on account of the unsteady boat. In another moment came a teal, with the wind, and he was badly frightened, only, after two loads were fired in his direction, and I was too disgusted to even want an excuse. In less than two minutes, while rounding a bend, we flushed a dozen mallards, and while they swung around in a wide circle we had time to partially hide the boat in the flags. Back they came, and I was chuckling to myself as they swung in to about forty yards, flying easily, and was thinking I would now redeem myself and lined up on the leader and fired. He just tilted a little and some feathers dropped off him and he began to climb with the balance of the flock and I gave him another barrel, but he still went with the flock. I said nothing, but was calling myself several kinds of lobsters and things equally expressive, when my guide said, rather sarcastically, I thought, "Your gun shoots pretty close, don't it?" To write down my reply, which I snapped out, might not look well. I was thoroughly nettled. In reloading I happened to catch a glimpse of the shell I was about to place in the gun, when the trouble dawned on me; I had forgotten that the pocket

had been emptying had nothing but BBs in it. I said othing, but promised myself I would fool the next ick that came within range, and the guide also, who, r that time, must have wondered how in the world happened to hit that turkey. I threw all the BB shells in the bow of the boat where they would do no more ischief, and opened up a box of sixes and loaded the n. Directly down the river came a lone mallard, hich passed too far to one side for a shot; then turng suddenly he came back without seeming to notice e boat and flew directly over us, and just as he passed gave him the proper lead and fired.

"Blankity-blank-blank!! You shore did soak him good d plenty!" said the guide.

"Yes, if I get the shots you will get good and busy fore dark," I replied. He took the hint and began to sh on in the smartweed and soon had as fine a greenad as one would care to see. Arriving at the blind, hid our boat and were waiting for the evening flight hen a hunter came down the river with a bunch of e decoys, and I was glad when he anchored them in e channel and took a stand on the opposite side. I d the extreme pleasure of "wiping his eye" later, on fast mallard, after he had fired four shots from his mp gun at him, which did me nearly as much good as lling the turkey. Out of a dozen or more shots that ening I think I missed but two birds; bagging eight e mallards. Then having convinced the guide I could ot a little, we pushed out for the club house thorghly satisfied with the fine day's sport.

In the language of Fra Elburtus, of the "Philistine," se "little journeys" are "hot stuff," but all too short the fellow who only has ten days' vacation and a comssion from the "Uneasy Club," which is just as imtant in a way as "A message to Garcia."

In summing up the result of the club's second outing, ind one member has developed a huge appetite and a e of honest tan which will not wear off before Christs, to say nothing of pleasant memories to store up that time when "The frost is on the pumpkin" and cannot chase the ducks or the turkeys except at the le, and then without the aforesaid appetite.

At the annual business meeting this winter, in all obability it will be decided that the club must get a r next season, and if my motion prevails, your read- may run with some of us after the bear is sighted. may also increase the membership. The only ques- to be settled will be the proof that the applicant a sportsman, not a "sport," mind you.

BILL.

o the Snow Line of the Himalayas

(*Concluded from page 506.*)

E were told of a bear at a place some miles distant, lost a whole day by going in search of him. On iving at the place we found two native hunters who shot him the same morning and had just finished ing off the skin, which they showed us.

n order to have a better foothold in going over bad ound than could be obtained with English shooting ts, we had bought some native-made shoes at one of villages. These had their upper parts formed of ting made with strong cord, a leather band across toes and a stiff piece of leather at the heel helping keep the feet in position. The soles were of leather ched across with strong hide thongs. These shoes e a great grip on rocky ground, and I found it easy run without slipping, even over water-worn boulders the banks of streams, but in the pine forests they were good. On steep slopes covered with the dead needles troo and the coolies frequently slipped down when and I were walking securely with our English boots. he native shoes assisted in walking without noise n stalking game, but ordinary shooting boots are d for this purpose if made with very low heel and soles studded with brads instead of hob-nails. I e frequently, when wearing such boots, walked ough thick bushes to within ten or fifteen yards of r, in places where the ground was gravel or clay ed hard by the sun. Perhaps the easiest of all shoes walking silently with are those made for lawn tenwith fluted soles of vulcanized India rubber.

We would have been more successful in killing large e if we had remained a week or two in some likely , so as to become acquainted with the surrounding ntains, but then we would not have had time to go he snow-line, and that was of more consequence than ing a large bag. The scenery repaid for all. There e mountainsides covered with miles of forests, bathed he brilliant sunshine and glittering with a million ts of light and color that, merely to gaze at, caused lls of ecstasy along the nerves to the ends of one's ers.

here were valleys miles in width and many thouds of feet in depth, and so long that neither of the emities could be seen; their sides and bottoms cov- with forests or large patches of grassland.

he sides of the mountains below our paths often ed to such an immense depth that large pieces of , rolled down them, could be heard bounding from e to ledge for two or three minutes before they rested he torrent at the bottom. Jahtroo sometimes tried plan to startle any game that might be hidden ng the trees and rocks.

e succeeded only once, when an antelope called w (of the chamois tribe) rushed away, giving me a momentary glimpse of him.

was strolling alone one day along the edge of a y the sides of which were so steep that it looked like ncient bed of an enormous river. Far in the dis- a lammergeyer (*Gypaetos barbatus*) was sailing the side in my direction. Thinking there would be ance of obtaining his skin for stuffing, I quickly drew the charge of No. 5 shot from one barrel of my and substituted an ounce of BB. When gliding past the bird appeared so large and distinct in the clear ntain air that I though he was only 40 yards away. passed calmly by, without a flap of the wings, and ng no notice whatever of the shot. There is no t but that the immense depth of the valley under and the clearness of the atmosphere, had deceived me as to the distance. He was probably more than 70 yards away, so that the charge of shot had dropped below him.

As we approached near the snow line, the way became more difficult, and in one part I narrowly escaped being killed. The path sloped up the side of a mountain to a sharp corner, and there, for a length of 50 or 60 yards, it had broken away and fallen into the valley below. We managed to pass around with the help of our alpenstocks, by stepping on projecting pieces of rock, and grasping with our left hands the plants or rocks that were level with our shoulders. At the extreme point of the corner there was a rocky shelf about 18 inches wide, where I stopped to say something to S., and carelessly let go my hold with the left hand.

All at once I lost my balance and felt myself falling backward. On the impulse of the moment I twisted round, and seeing a little piece of rock jutting out a few inches below that on which I stood, jammed the point of the alpenstock in it and gripped the upper end with both hands. The bamboo bent for a moment like a bow, and then sprang straight. Had it not done so, I must have dropped about 200 feet on to the rocks below, for there was nothing to break the fall.

On the road back to one of our camps when looking for game, I saw a gooral on the side of the mountain above me, only 70 yards away, and presenting an easy shot. I was carrying the Purdey rifle, which could be depended upon to hit anything as small as the palm of a man's hand at 100 yards. I took a careful, steady aim and missed altogether. It seemed that I was fated never to kill a gooral. I did so once, and only once, during an excursion into another part of the mountains five years afterward.

Our path went for some days through great forests of fir and pine, until we reached the mountains immediately below the snow line, and from which the snow had melted not long before. The ground was covered with short, rich grass, and here and there patches of rhododendron bushes, with blossoms white or of a light rose color. None of them was large enough to be called a tree—like those at a lower altitude. There were shepherds with flocks of sheep, brought for the summer season from the villages below. They had several large dogs with long hair, of the Thibetan breed, for protecting the sheep from leopards and other wild animals.

We pitched our tents on some level ground close to the steep side of an immense valley which sloped down abruptly several thousand feet below us. Its end could not be seen, and the opposite ridge was four of five miles distant. The bottom and sides were covered with great forests. From the side, about half a mile to the left of our tents, an immense spur of dark rocks jutted out into the valley, so that its extremity was exactly opposite where we stood. It rose like a wall from a depth of at least 1,000 feet, with its top some hundreds of eet above our level and not more than 400 yards away in a straight line. From the valley behind the base of this spur, rose the snow-covered peak of Mount Kedarnath, soaring to a height of more than 24,000 feet above the sea.

While we were reclining on the grass near our tents shortly before sunset, we saw a tiger walking along the top of the rocky spur, exactly opposite us, his body showing clearly against the sky. There was barely time to examine him with the binocular glass before he disappeared. The next morning we sent Jahtroo and some of the men to look for his tracks, but they failed to discover any. The rocks over which he had gone were higher than some of the places where the snow was still unmelted.

There is a general idea that tigers are inhabitants of hot countries only. This is an error, for they are found in Tartary, a long way north of the Himalayas, where the winters are extremely cold. There their fur is much longer than that of Indian tigers. Atkinson, an English artist who traveled through Kirghis Tartary about fifty years ago, mentions the tigers there, and relates an instance where one of them killed a Tartar girl. We remained three days in the new camp, strolling over the neighboring hills without meeting any except small game. I found a beautiful flower like an orchid, having green petals with purple spots on them, and returned to the place on the following day with drawing materials in order to make a water color sketch of it, but I failed to find it or another specimen. The most common flower met with during our journey was the forget-me-not (*Myosotis*) which was growing in masses along the banks of the rivulets and bearing blossoms much larger than those of the European variety.

S. was very anxious to obtain a skin of the cock monal, the largest pheasant of the Himalayas. (The hens were leading broods of young about the hills, so of course we would not shoot one of them.) As Jahtroo insisted that No. 5 shot was useless for bagging so large a bird, I loaded my 16-bore with BB, and sent him out on two different days to search for a cock monal. He failed to find one, but returned each day with a musk deer, the flesh of which we found very palatable. This queer little animal (*Moschus moschiferus*), whose native name is kustoora, is not more than two feet high. Its weight, as well as I could judge without scales, is about 40 pounds. The color is a dark gray, with a brown tint, which becomes much lighter on the throat, abdomen and inside of the thighs and arms. The coat close to the skin is almost like wool, and outside this the hairs are two or three inches long. Each hair is so large that its tube-like structure can be seen with the naked eye, if it be cut across. They are very brittle, and it is impossible to take off the skin without breaking many of them. The tail is about one inch long. The deer has no horns, but the canine teeth of the male form sharp tusks, curving downward and backward, and three inches long. The musk, which is only found in the full-grown male, is secreted by a kind of hollow gland, having an external opening, and situated inside the skin behind the navel. The deer inhabit the forests close to the snow-line, and often sleep upon the snow.

Our camp being at a height of 16,000 feet above the sea, the rarity of the air had a great effect upon our breathing. Walking quietly up a gentle slope made me faint. We had only been affected in this way during about the last 3,000 feet of the ascent, and one day when I descended 3,000 or 4,000 feet into the great valley in front of our tents I found myself able to run up a sharp hill without the least distress. While in the valley I came across the tracks of a bear, and followed them for a long distance up the side of a wooded hill, but eventually lost them.

Each morning of our stay at the camp a curious phenomenon occurred. At sunrise the sky was perfectly clear. When the sun had been shining a few hours the vapor from the snow on the summit of Kedarnath condensed so as to form a cylindrical column of enormous height, with its base resting on the peak. Gradually the vapor from the top of the column spread out horizontally until it assumed the appearance of a gigantic dark gray mushroom. Lightning flashed in various directions through this, and thunder rolled for an hour or two, when the whole cloud melted away; but whether it turned into rain, hail or snow could not be seen from where we stood.

I have often regretted that I did not attempt to make some sketches of the scenery, yet the landscapes all around were so unspeakably grand, so gloriously beautiful, that even a great artist would have despaired of giving more than a faint idea of their splendor.

I know of nothing which draws the heart of man toward the Creator more than the sight of mountains covered with pure white snow, pointing upward into a sky of clear, deep blue. It fills the soul with emotions which cannot be expressed.

During our march back S. killed a gooral and a barking deer. I also killed one barking deer and lost another that was wounded. While walking over a mountain not far from the tent, I saw him in a deep valley 150 yards distant, and fired with the Purdey rifle. The bullet appeared to hit the top of the shoulder, and after staggering a little he ran away under the trees. I had forgotten, when raising the sight, to allow for his being very much down hill. Jahtroo and I followed the tracks for some distance, when we found that the bleeding had ceased, and gave up the search, as evening was coming on.

We marched steadily every day, being unable to wait in any camp and search for game, for the time at which the monsoon might be expected was very near and we did not want to be drenched all day with torrents of rain. It burst two days after we reached Mussourie, with the most terrific thunderstorm I ever saw, lasting a great part of the night. For hours there were incessant flashes of vivid lightning so close overhead that the crashes of thunder were simultaneous. The station club house was on the side of the mountain about 80 yards above that in which I was staying, and an Englishman sleeping there had a narrow escape from being killed. A large dog was lying under his bed when a flash of lightning ran down the wall, passed through and killed the dog without touching his owner.

The heavy rains caused a rapid growth of ferns, and in a few days the trunks and branches of the rhododendron trees were covered with them, chiefly with heartstongue.

The views of the plains below us were unutterably grand. From the crest of a mountain 7,000 feet high, we could look down its steep sides into a valley called the Doon, 500 square miles in area, bounded at its northwest end by the Jumna, and at its southeast by the Ganges, the Sewalik hills forming its southwest border. Sometimes, when the sky above was clear, the whole valley was covered with masses of dense clouds thousands of feet below us, and glistening in the sunshine like a plain of the most brilliant snow. A large opening would form in them, through which the forests and rivers could be seen like a painting framed with silver.

In stormy weather troops of great dark clouds rolled from the Sewalik hills across the valley, the lightning flashing from one to the other until they struck the mountain and climbed up its side to where we stood, then passed on over the higher peaks behind us.

The time of my leave was drawing to a close, and I was obliged to return to the hot, steaming plains. When descending the mountain, I noticed that there was little difference in the temperature for the first 4,000 feet, so that the stratum of heated air with which the plains were covered was only about 3,000 feet thick.

Forest and Stream Day in St. Louis

MERCANTILE LIBRARY, St. Louis, Mo., June 24.—*To Forest and Stream:* This is FOREST AND STREAM day at the Mercantile Library. I was just thinking of answering a pleasant letter from our friend E. Hough, of the-West-and-the-rest-of-Chicago, when who should drop in but Coahoma. I had noticed in the papers that the Mississippi River Commission was in session here, and that the levee associations of the lower river had their representatives before it, but I did not recognize in Col. T. G. Dabney, of the Upper Yazoo, the kind-featured gentleman who stepped in this noon and introduced himself as Coahoma. It was not his every-day name, but his FOREST AND STREAM name that had sunk into my memory.

We talked of snakes, of course, and of other things, of course; but not of half the things that we will talk about when he comes again. I wish the Commission would run the Yazoo up-hill and bring Coahoma and his country gently with it.

Well, I settled back when he had gone, to think of old-time talks with Coahoma and others around your weekly camp-fire, and—it was not five minutes before in came another contributor to FOREST AND STREAM, Captain Flynn of the Eighth Cavalry. His salutation was: "I don't want to talk business, but to talk FOREST AND STREAM." And we did. He said: "I like FOREST AND STREAM because it tells the truth about things that are good to know." That puts it in a nutshell. Captain Flynn has been serving in Cuba, but was recently ordered with his command to Jefferson Barracks. I hope that he may stay with us a long time.

FOREST AND STREAM, I thank you. Certainly I have never met more pleasant gentlemen than through your introduction. Through you I became acquainted with E. Hough, and with that charming rascal, George Kennedy, and with many another good fellow who loves the clean

woods and clean sport. "Here's to you and all your family; may you live long and prosper!"

HORACE KEPHART.

[Prettily said; but meager consolation for the New York contingent, to whom the annual meeting of the Mississippi River Commission means by virtue of established precedent the coming of Coahoma to the Borough of Manhattan.]

Natural History.

Montana's Buffalo.

The Pablo-Allard Herd.

The Origin of the Herd.

BROWNING, Mont., April 30.—*Editor Forest and Stream:* In the year 1877 I was located on the Marias River and engaged in the Indian trade.

A few miles above me, at Willow Rounds, Col. Culbertson, of the American Fur Company, had a winter trading post; below me a wandering trader was located.

This part of the river was a favorite winter hunting ground for the Blackfeet. There was good grass and a variety of weeds for buffalo horses. The river bottom was well timbered, which furnished plenty of fuel and shelter. The high, level prairie to the north was a favorite winter range of the buffalo. The Marias was the main watering ground for all game between it and Milk River, one hundred miles to the northward.

Close by, and on the north side of the river, some three miles below me, was the great medicine rock of the Blackfeet. All war parties paid tribute to it as they passed. They placed articles of value upon it, and painted it, praying that they might be successful in war. The mothers of families here made offerings of valuables, with prayers to this medicine rock for the recovery of their children in case of sickness, or asked that the unborn child might be a man. Here, in the spring after the winter's hunt was over, was the general point of gathering; here passed the summer route of travel. At that time the soldier lodge was held, and laws and rules laid down for governing the summer's hunt, for friendly visits, and for war also; to protect their range and country from invasion by other tribes. Here they journeyed on their way to the summer hunting ground in the Cypress Hill far to the north. The historian of the future, when writing of the Blackfeet, with an abler pen than mine, will find interesting material in this country.

There were three trading posts in this favorably located country. I was called by the Indians The Man in the Middle, for the reason that I was between the other two. My post was called Ft. Custer. All foreign Indians gave me the preference in trade, for the reason I gave them the same tail and trade I gave my own people.

Among the Indians who traded with me that winter were the Sarcees and Stonies, from the far north; the Blackfeet proper, the Kootenais and Klamaths, from toward the Coast; the Nez Percés, Gros Ventres, Assinaboines, Pend d'Oreilles and one family of Crows. All tribes were in sympathy with each other, through the effects of the Nez Percé war. This was what brought these strange trade conditions about. I sold one Klamath twelve dozen buffalo tongues at $4 per dozen, as well as a number of fine robes. In his country there were no buffalo.

Among the Pend d'Oreille Indians who made up the hunting party from across the mountains, was an ambitious, bright, middle-aged man—of the warrior class, but not a chief—whose Christian name was Sam. He was known to the Blackfeet as Short Coyote. He was a typical Pend d'Oreille, with the economical turn of those Indians as gathered from their early Christian instructors, Fathers De Smet and Ravalli. I often met Sam in the way of trade, and he indicated more than ordinary friendship for me, caused perhaps by my fairness in trade. My interpreter for the Blackfeet was a three-quarter blood Blackfoot, Baptiste Champaigne. His father was the noted Michel Champaigne, trader and interpreter for the American Fur Company.

Baptiste's wife was a sister of Yellow Wolf, a Blackfoot warrior, still living here. She had a niece whose name was Mi-sum-mi-mo-na, and who being rather a comely girl, had attracted the attention of Sam. The Pend d'Oreille Sam made propositions to her kinsfolk, Yellow Wolf, Champaigne and his wife that he be permitted to marry Mi-sum-mi-mo-na, and offered for her sixteen head of good horses. The offer being very tempting, she became his wife. A short time afterward Baptiste gave me the story of the affair. I told him very frankly that he had made a mistake. He asked my reasons. I said to him: "You are a strong Catholic and your Church does not permit polygamous marriages."

By the rules and laws regulating marriage among the Pend d'Oreilles, Sam was punishable by both fine and flogging. This punishment is carried out by the soldier band of the Pend d'Oreilles. Baptiste was worried over my view of the marriage. Sam's Pend d'Oreille wife was very much opposed to his second marriage, and appealed to me to talk with him and tell him that he must not go crazy, that the Pend d'Oreilles were taught to have but one wife, while the Blackfeet could have any number they could buy and support.

In course of time Sam's first wife made so many objections, and so continually quarreled with him over his second marriage, that there was no peace in the family. By early spring (1878) feeling had risen to such a condition that Sam shot and wounded his first wife. It was a flesh wound in the shoulder. She was still asserting the rights of Christian marriage. She showed great love and affection for Sam, which he did not appreciate or reciprocate. Conditions were such that the Blackfoot wife, though fond of excitement and war, could not endure the continual strife, and found life in Sam's lodge unbearable.

When Baptiste spoke to me about his niece's troubles, I informed him that from an Indian point of view she was simply a piece of merchandise, sold for value received, and his interference would not be permitted. To Baptiste affairs now assumed a serious turn, as he feared for the life of his niece.

In the course of a few days, Sam, whom I had not seen for some time, called on me. I found him in the condition called by the Indians, "my heart is bad." He had his gun out of its cover and his blanket off. This in an Indian means war. I noted at once that there was a crisis in his affairs, and I signed him to sit down. I sat down beside him, knowing that if he wanted to make a gun play, which I apprehended from his actions, I would be close to him, and could close with him and give him an even showdown for the gun. I reasoned with him in the sign language, reminding him that he was alone among the Blackfeet, his people all having gone back home across the mountains. I told him he had made a mistake, but there was time yet for him to make it right, and advised him to come back in two days and I would tell him what I thought best. What I wanted was time, for a wild Indian in his war paint, mad and wanting to kill some one, is a bad customer to argue with. Sam departed without ceremony. He was faithful to my request and returned in two days' time.

In the meantime I had a talk with my interpreter, Champaigne. I found he had counseled with his wife and had advocated a separation of his niece and Sam. This fact had been communicated to Sam, and led him, in his now desperate frame of mind, to desire to kill Champaigne, and this was the object of his visit to my store.

When Sam returned I found him in a somewhat better frame of mind. I said to him, "When do you cross the mountains to your people?" He informed me that he was lonesome, and wanted to go, but he feared he would be punished by the fathers of St. Ignatius Mission. He had been married at this mission in the Flathead Valley. I carefully went over his affairs and impressed on him the fact that he had violated the law of his people. Now he must be careful and keep out of further trouble. I thought there was still a chance to make peace with the soldier band of his tribe by getting a pardon through the fathers. To that end I would assist him by giving him a letter to Father Ravalli, stating that he (Sam) was not a drunken or lazy Indian. I also suggested that in connection with my letter he make a peace offering to the fathers, in the hope it would lighten the punishment for marrying the Blackfoot woman. He told me he had nothing to give, and he could not stop the punishment, which I found he dreaded very much. I then suggested that as he was a good hunter, an expert horseman, and could handle a lasso well, he rope some buffalo calves—now nearly a year old—hobble them and keep them with my milch cows. He could use my corrals until they were gentle, he could then drive them across the mountains by the Cadotte Pass, and give them as a peace offering to the fathers at the mission. He looked at me in surprise and doubt. I then showed him that as there were no buffalo in the Flathead country, I thought the fathers would appreciate the gift. He at once said he would try my plan. I encouraged him to go to work at once, and soon saw him arranging for a hunting trip.

Next day I made a visit to his lodge and found him and his Pend d'Oreille wife hard at work, and both in a very pleasant humor. I asked in the sign language of the wife, "Where is the Blackfoot woman?" She informed me in a very serious manner that when the Blackfeet had broken camp, her people had taken her away. I then asked her to help Sam all she could. She smiled and said she would. I asked Sam, "When will you be ready for your trip?" He answered, "In two sleeps."

In answer to my inquiries as to how he proposed to handle the buffalo, he told me he would catch the young buffalo; he would then picket each by one leg at the place where he caught it. He would then take a blanket, peg it down at the ground at the outer limit of the picket line. I asked him why he did this. He replied it would attract the buffalo's attention and keep him quiet; by smelling the blanket it would become accustomed to the smell of man, and would not be alarmed at his approach. He would catch and handle two at one time on the prairie. They would then be driven in and kept with the milch cows.

Sam was successful on his first hunt and soon drove in two fine calves, then, April, 1878, nearly yearling buffalo—a heifer and a bull. The heifer was loose, the bull side-hobbled. The milch cows did not take kindly to the buffalo, but the buffalo persisted in being friendly. They finally made friends, for after a while the cows ceased to regard them as a curiosity, and seemed to enjoy their presence. Sam rested a few days after his first trip, his wife joining him in telling me the story of the wild chase and the fierce struggles with their captives. The hunt was far away, as the buffalo were already working to the summer range on the Saskatchewan. This would now cause some change in his plans. Being alone, he was afraid of the enemy—the Indians of the North. He would only risk one more hunt, and informed me I could look for him in eight sleeps. If he did not return then, he had been attacked by some war party. In that event he hoped I would make some effort to look him up. When I got up the next morning Sam was gone.

True to his promise, he returned at the end of eight days with five young buffalo—two bulls and three heifers. Each buffalo was head and foot hobbled; the head and front foot tied together, with a skin strap two feet long. Each bull was dragging a long lariat, so as to be easily caught for night picketing. Sam was well pleased to find the first two buffalo so contented with the domestic cows. The milch cows objected as before, but the new arrivals took kindly to their new-found friends. Sam told me they had met with no accident. He had worked hard—like a white man, as he expressed it—the rope skinning his hands many times. One could never tell when a buffalo would jump for liberty. He told me of killing one heifer, which he would have liked to save. She had a very fine, bright coat. In a hard chase along the side of a steep coulée, he singled her out of a bunch of cows. He threw his rope, and the noose settled on her neck. His horse, a powerful roan, settled for the shock. In snubbing, he gave her too much rope, and in the fall, which came an instant later, this fine heifer's neck was broken.

His wife advised him to quit now. They already had five on the last hunt, and she did not like the signs brought out by the death of this fine animal. She said to him, "This means we must stop."

Sam herded his buffalo with the milk stock for five days, resting and making arrangements for his trip across the mountains. He was feeling satisfied with his work, and hopeful that his peace offering would be accepted. He told me of his route of travel, and that he would be fifteen sleeps on the way home. Taking a small memorandum book from a parfleche, he showed me where he had six straight marks and then a cross for Sunday. He told me he did not want to start on his trip home on Sunday, and wished to know the day of the week, as he had lost his reckoning. I put him right, and he said he would start on the following Monday.

His buffalo were doing well, and were becoming quite docile. All preparations were made for his departure, and he talked hopefully of getting safely across the mountains. He always impressed me as being an Indian of marked determination, and at no time did it occur to me that he would not succeed in his effort.

On Monday he bade me a cordial good-bye, passing out, his wife and pack horses in the lead. They had discarded the travois with which they usually traveled, saying they could handle the buffalo better with her as a rider. Sam brought up the rear, the buffalo following the pack horses. The three bulls were head and foot hobbled, the four heifers loose; seven head in all is my recollection of the bunch.

Of the trip to the Teton River, to the Sun River, to the Dearborn and up that stream to the Cadotte Pass I have heard no word; of the crossing of these streams at this season, of the trip over the main range, down the Blackfoot River, all trace is probably forever lost. Through Indian sources I afterward learned that on the way over by some accident one bull became disabled and died. Sam arrived safely in the Flathead without further accident to the other buffalo. I also afterward learned, through Indian sources, that immediately upon his arrival upon the reservation he was arrested and severely flogged, by order of the soldier band of his own tribe of Indians. As I understand the story, Sam had no time or opportunity to meet the fathers and tender his peace offering.

In course of time I heard of Sam's death, not in battle as a warrior, but passing away peacefully in his lodge or cabin. His wife followed him some time after.

CHAS. AUBREY.

Samuel, the Pend d'Oreille.

From Pablo and his wife I learned that Sam returned to the Flathead about 1878. He brought with him five or six buffalo. They knew nothing of the flogging that Mr. Aubrey tells of, or perhaps had not noticed it in those busy times, as they have always been workers, rather than gossipers and visitors.

Sam ranged his buffalo ten miles below the St. Ignatius Mission, between Crow and Post Creek. Little is known of his life by Pablo.

In 1882 or '83 Michel Pablo and Chas. Allard bought the buffalo of Sam. There were fourteen head, but the number of bulls and females could not be remembered. There was still a considerable number of buffalo on the plains, and they did not possess the interest they now have. Sam lived on Crow Creek until 1886, and died in that year. He left a few head of horses and very little property. His wife, who made so much trouble on the plains, afterward married a mixed blood named Alex Finlay. Sam died a good Christian, and his regard for Christian teachings saved the buffalo. The widow died last year. If she had been living I should have found her at all cost.

It is to be hoped that some one else may find out something about Sam's life. I am done.

J. B. MONROE.

Dick's Fatal Fourth.

THIS same Dick has already been honored with considerable space in FOREST AND STREAM on three separate occasions, namely—May 9, 1896; Jan. 22, 1898, and July 7, 1900; a final word regarding him seems, therefore, not out of place, after a brief allusion to his career.

While yet a fledgling, this sparrow was saved from a cat's maw, carried to a place of safety and "brought up by hand." He soon manifested interesting traits and became a source of study and amusement. Among other accomplishments he learned to sing from hearing a guitar; he also used a vocabulary of his own tribe, comprising about a dozen distinct sounds, each having a different meaning. When Dick was rather more than a year old, his Loulou appeared upon the scene, she being nearly a year younger than he was. Thenceforth the two shared a very spacious cage provided with three apartments, also having the freedom of a good-sized room.

Loulou became a better singer than Dick, who courted her assiduously for two years before she condescended to reciprocate. During four springs Loulou made an attempt at having a family, but Dick broke the first three eggs, laid on consecutive mornings, and all the others lacked hard shells. Loulou's final endeavor to raise a family resulted in her death, over which Dick grieved immoderately for more than a year, in spite of a change of cage and other measures adopted to enable him to forget. Every day he grew worse and worse in temper, until his presence became a trial, and it was impossible to make him happy or even good-natured. At last this feathered foundling met his fate on the, for him, disastrous July 4, 1901; and it was partly due to fire-crackers; not that these set his feathers ablaze, for he was nowhere near them, but because the noise of the fireworks brought his friends to the verge of frenzy, which made them less tolerant with the bird and resulted in his being set at liberty, and, it is supposed, perishing in consequence, he having had no experience in earning a living out in the wide world. A dozen sparrow pensioners were playing about Dick's cage, and as he ceaselessly repeated his monotone of discontent, the cage was opened for him to come forth and join the other birds, the hope being that he might feel happier; but he did not even come out. I therefore took him in my hand and talked to him, telling him he might go if he liked to do so. He pecked my finger very spitefully and I set him down on the window-sill. Instead of going among the birds who were always around his cage and with whom he was familiar, he flew upward and to the northwest, and was out of

our sight in a moment. His cage was kept open by the window day and night for a week, but he never returned and, all things considered, he probably perished that very day of his flight. At any rate, he had ceased to be happy in captivity, if this word could be applied to the condition under which he lived—and so here is the foundling's epitaph: To the memory of Disconsolate Dick; Born 1892—departed July 4, 1901.

ALICE D. LE PLONGEON.

Cats as Eclectic Hunters.

IN the household where I am domiciled there are four fine hunting cats, which range afield and bring in much small game. One of the four is devoted to rabbits of assorted sizes and ages; another takes to squirrels and chipmunks; another to birds, and the fourth to moles and mice. Each has its specialty, and neither seems to encroach upon the prerogatives of the others. A fifth cat, which is a fine black and white animal weighing fourteen pounds, pays some attention to frogs and grass snakes. He allows the little farm chicks to play about him, and there is one small black one which climbs all over him. His natural instinct seems to have been eliminated by force of persistent discipline, or self-restraint.

Plainfield was once a noted place for Manx, or "rabbit cats," and pure white Angoras, but of these there are only a few cross breeds here now. They all have great spread of tail, say six inches in width, when in full plume.

C. H.

Do Squirrels Eat Birds?

THE other morning two mated robins were making a great fuss in and about a large maple, darting to and fro and screaming. It took some time before observers could discover the cause of the trouble, when at last a red squirrel was discovered in a crotch with a young robin in his mouth. An effective shower of missiles made him drop it, when it was discovered that the bird's head was eaten off. And this incident suggests that much of the birds' nest robbery which is attributed to jays and crows, may be due to the Sciurus tribe, for I have several times found egg shells on the ground beneath trees containing nests, and wondered that the points of the eggs were smoothly bored out instead of the large ends being roughly fractured, as when the chick breaks through into life and being. I thought at the time that the youngsters had managed to crawl out of a very small hole. The shell looked as if it had been blown by an oologist collector.

C. H.

Tripod's Snake.

CLARKSDALE, Miss., June 28.—*Editor Forest and Stream:* I had hoped to inclose a rude picture of Tripod's snake supper from a St. Louis paper, but have failed to secure one. The snake is represented as coiled on a table, with head erect and mouth open, while, presumably, Tripod is poking food into his mouth on the end of a stick, to an accompaniment with the rattles. Another table shows the snake at full length, apparently in a cooked state, with the revelers seated around the board.

The snake still declines to eat. Six young rats were placed in the box, two of which were killed from time to time, but not eaten. The remaining ones snuggle up against the snake, under some hay, and all repose together.

Last week I attended a meeting of the Mississippi River Commission at St. Louis, and had the pleasure of meeting Horace Kephart, and found him a very agreeable personage.

COAHOMA.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Moose.—III.

An Expedition to New Brunswick.

(*Continued from page* 509.)

ABOUT 2 o'clock Ben proposed that we go over to Lynch's Depot on Clearwater, nine miles west, for a few days. We met John Hayes and Ed Moon coming out; they had taken two hunters from Philadelphia over beyond Clearwater to Burnt Brook. We reached the depot in three hours from our cabin, found a hunter there by the name of Quackenbush from New York city, and his guide, John Scott. They had been out three weeks and had not seen a moose. Scott could not call. They got some birch bark and Ben made a horn and tooted it for their instruction. A moose answered it and came close to the house. We saw his tracks next morning down toward the river.

After dinner, while watching a little barren of about two acres beside Lake Brook, two men carrying a long canoe came out of the brush. One was an Indian guide from Moosehead Lake region in Maine, the other, Donald McKay. Presently Mr. Rosengarten, of the Philadelphia drug house of that name, came up. He and his partner had been moose hunting over in Maine, and not having success there, had come into the province and had brought their guides along, and then had to get Donald to guide the guides. This is what I referred to in my other letter. Ben thought there were white men enough in the province to do all of this work without importing Indians from the States, and I quite agreed with him. Their Guides' Association will probably look after this matter before another season opens.

Late in the evening we had a bull coming toward the little barren, but somebody began to swing an ax quite vigorously down at Rosengarten's camp near the dam and it frightened him away.

The next morning Ben said there were too many hunters coming in for that territory and that we were outside of our side lines anyhow, and had better go back to Camp Norrad. We learned afterward from Donald that Rosengarten killed a moose that day just east of where we had been calling, and three had been killed over on Burnt Brook the week before. On Wednesday morning, the 25th, the wind was so high that it was not only not safe to be out in the woods, but calling was out of the question. We fixed up our clothes and shoe packs, sharpened knives and axes, had an early dinner, and when the wind died down Ed. Wilfred and I started for Tehoe Lake, King and Ed had come up from there the day before and reported having seen more signs than at any place they had been, but the wind had been so high that calling was done with great difficulty; in fact, the high winds interfered greatly with us during all of our hunt.

On Thursday we drew blanks both morning and evening. It looked sometimes as if the wind would blow the water out of the lake, and the horn could not be heard any distance against it, the only direction from which one can hope to have a moose come close.

The next morning we were up at 5 o'clock, went to the barren at the north end of the lake and sat down in a trail in the high grass. At the second sound of the horn the welcome grunt of a bull came from the lower end of the lake, he came up the ridge on the west side and came out into the barren about 100 yards from where I sat. He made lots of noise, horned the bushes and came out into the open. We kept concealed, expecting him to come to the horn, but no amount of coaxing could lure him within close range. After he had gone we found that he was only 102 steps away, and there was not a tree between us. The experience with the bull the week before had made me too cautious. I had lost a shot at the first one by getting on my feet and looking for him, and now failed to get a shot at this one because I did not get up and look. It's a case where you are damned if you do and damned if you don't. Guides are not slow about offering criticims on what you do or do not do, and ours were no exception to the rule, and one should not blame them, their reputation is at stake and it is their stock in trade. No one wants to go out with a poor guide, one that has not been successful in piloting the hunter in his charge into good territory and getting shots for him. The next thing to a good guide is a good caller; if the two things can be found in the same person, it is well, but if not, give me the caller and I'll take chances on getting lost if he does not know the country, which is not likely to be the case.

The next day was Saturday, the 28th. We had decided the evening before that by daylight we would be up at the end of the barren where we had had the bull out the morning before, and try to see if we could not induce him to repeat his part of the performance. It was, of course, assumed that I would not repeat my part. But Ed failed to get an answer. After breakfast we packed up and started for the cabin and got there in time for dinner. A mile before reaching the cabin we saw the tracks of two men, one had on boots or shoes with hobnails in the soles. We knew that none of our party had any such foot gear. Ed said "The German count must have gotten out before I expected him and had gone out to prospect a little." When we got to the cabin we found that his surmise was right. The Count had had an engagement with the Norrads from early summer for Sept. 28. Our dropping down in Fredericton and being disappointed in not getting in with Braithwaite's party, had led to our arrangement with them, as recited in my first letter, we found them open for the first two weeks of the hunting season, or until the 28th. Before leaving with us for the woods, however, Ed arranged with his cousin, Alex McKay, to meet the count at Boiestown and pilot him through to the cabin and guide him during our stay. We found Count Von Armin, who is an attaché of the German Legation at Washington, a very pleasant and agreeable gentleman, and a thorough sportsman, and Alex was a prince of good fellows.

The count had been hunting in the Flathead Mountains in Montana with M. P. Dunham, and had stopped off here to round out his trip with a moose head. He already had elk, sheep and good mounts. We were greatly interested in the account of his mountain hunt, but were more interested in the arrival of his grub train. Our cupboard was not exactly in the deplorable condition that Mother Hubbard is said to have found hers in; but the addition of three more men who had brought their appetites with them for twenty-four hours to our already good-sized family, reduced our stock of some things rapidly. The next evening, when John Hayes' and Ed Moon's sled trains with the count's small amount of baggage and large amount of provisions stopped in front of the cabin door, everybody was happy, as visions of hot wieners flitted before our eyes. These were much in evidence, and were thoroughly enjoyed as a great change from bacon, which had been our chief article in the meat line, except the few times that trout had been substituted as an entree.

The count and Alex were very fortunate in calling. Scarcely a day passed that they did not have an answer; but they were not so fortunate in getting shots. They had come in just at the right time. There were more moose in our territory in the last week than in the two preceding weeks. The days had been quite warm, while the nights were generally cool; but we were told that it took both cool days and nights to start the game on the warpath.

After dinner on Sunday, Ben and I decided to chance our luck over at our favorite ground around the Sister Lakes. King and Ed packed up and went down to Tehoe. Our parting was quite pathetic; each wished the other success on the morrow and reminded him that this was the last week of grace, and that something must be done or we would leave the woods empty handed, and could hardly hope to survive the jeers and gibes of our friends at home.

I had a good rest after our tramp was over. Ben got wood ready for the night. I dressed a pheasant for supper, and got water from the spring. Ben said some trout would go well with the bird. He shouldered the big .45-90 and started off. I followed behind. The wind was so high and the lake so rough that we did not try for trout, but went down to the outlet behind a sheltered point hoping to find quiet water, but the fates were against us; we were not to have any fish for supper. About this time the dark lowering clouds began to gather faster and thicker, and away in the north sheet lightning played hide and seek across the heavens. The roar of distant thunder told us what was coming.

A blast from the horn went volting down the lake, and was echoed back from the hills on the north and west. Almost instantly the old familiar grunt of a bull greeted our ears. It came from the thick woods a little to our left between the lakes and sounded as if the vocalist might be a half mile or so away. We quickly hid and awaited his coming. A deaf man could have heard him come crashing through the woods. He did not stop until he came to the opposite side of the outlet, where a deeply worn trail led out through the brush to the open water. About sixty yards from us he stood in six inches of mud, and the trail had been worn to a depth of over two feet. We were facing west and the sun was getting low and a storm coming, so that it was impossible to see into the dark recesses of the woods. I knew just where the last sound came from, and was certain that he was there, but could not see him. Quietly laying my hat off and getting upon my feet slowly, with only the top of my head above the brush, I still could not see him, but he was not so slow, he saw me, and what a time he had getting his feet out of the mud and vaulting out of that trail. It was all over in an instant. There was time enough for a snap-shot, but my faith in such shots with small calibered guns had been weakened by what I had heard of their failure to stop bull moose, unless the shot was well placed. I only saw his flanks and rump, so I thought it better not to shoot at all than only to wound him. The rain, which was rapidly coming on, would obliterate all traces of blood, and we could not hope to find him before it would be too dark in the woods to see. When it was all over, Ben sat on a log sad and dejected, his face buried in his hands. The moose was gone, we might not see another, and his reputation would suffer, and it was all my fault that the victors were not at that moment rejoicing over the vanquished. I knew that an explosion was coming. The last view that I had had of him he was lying flat on the ground fifteen feet away and urging me to keep concealed. Presently I thought he said "get up." What he really said was, "I'll tell you when to get up." My over anxiety added another thousand years to the time required to get a moose, in Ben's opinion. I tried to console him with the assurance that we would get him tomorrow, but he had entirely lost faith in me.

Night was rapidly coming on, and having secured a supply of birch bark for torches, we made our way to the tent. After supper Ben said he was sorry that he had said so much to me. Of course I was sorry so much had been said on my part; but as this was our second row, we were getting used to complimenting each other. My assurance that the next moose that came my way would be mine, brought forth no response, save a smile of pity at my credulity. For four evenings in succession the count and Alex had had answers over in this section, but from contrary winds, thick woods and brush and darkness coming on had failed to get a shot.

We were down at the lake early next morning and called until 9 o'clock, but no answer came save the howling of the wind.

After breakfast Ben went over to the cabin for bread after directing me where to go and watch down at the lake until his return. I did as directed; but a short experience sufficed. The wind howled, the trees swayed to and fro, the top of one that had served its usefulness came crashing to the ground uncomfortably near, and even when I would sit down there would be a movement underneath, synchronous with the swaying of the trees. All the roots of the evergreen trees, except the center or heart root, which goes directly down into the earth, run on top of the ground, covered only with moss and leaves of ages past, which make a sort of soil and fills the interstices between the nigger heads.

The next morning, Oct. 1, we were late getting up. The wind and rain had played havoc with our tent, and we had not had much sleep. Ben had gotten a thorough wetting the night before, and could hardly speak when he got up. He was coughing so much that it did not seem possible for him to call. We were late getting down to the outlet of the lake, but were rewarded by the sight of a fine bull and cow feeding out in the lake at the upper end, a half-mile away.

They were about through feeding and were working in toward shore when we saw them, and soon disappeared in the woods. Crossing over the outlet we were soon at the little barren. A bull answered the horn from the south side and not far away, but the answer was not repeated, and we did not hear him again.

Working on over to the outlet of the big Sister Lake, I left the trail and went a few rods east, where a good view could be had. Hastily casting my eyes over it and seeing nothing, I was about to retrace my steps when I heard Ben just behind me say, "I see one." I looked and looked and looked, but could see nothing that looked like a moose. Finally Ben whispered, "Where are your eyes? Don't look so far away. Keep down and be quiet. There must be a bull near by." The wind was against us; and we could not expect this seance to continue indefinitely, but there stood a beautiful cow not over seventy-five yards away. I had been looking over her into the woods beyond expecting to see a bull step out. She tossed her head nervously from side to side a few times, finally looked directly toward us, and turned her mule-like ears to catch the least sound of danger, but there was none, unless the sound of my heart beatings was wafted to her by the favoring breeze, but she had her nose with her when sight and hearing fail, and it can always be depended upon to give notice of danger. Her immense upper lip moved nervously a few times to open wide her distended nostrils. She turned and disappeared in the brush and woods so quietly that it was as if the earth had swallowed her up.

About 200 yards from there I sat down on a stone beside a moose trail on the bank of the lake. Ben said he would go further up to where a rocky point jutted out into the lake; he and Ed had had a Mr. Eric, of New York city, out the year before, and he had knocked down a fine bull at this rocky point with a Mannlicher, but he would not stay down, the bullet was not well placed, as our .30 caliber friends insist they must be. He would not shoot again, and the moose staggered off into the woods and bled so little that they could not

trail it, and it probably died a slow, lingering death and furnished plenty of bear food.

I was just comfortably seated when a grunt from a bull, to my right and down along the lake, gave notice that he had heard and was coming as fast as his legs could bring him to the love song Ben was sending forth from the horn. The wind was blowing almost directly from us toward him. He came tolerably close, stopped and was not heard afterward. About this time another bull came crashing through the woods, further out from the lake, grunting every few steps. He was not just in line for the wind, so he came very close before his powerful olfactory organs warned him of the presence of danger. He stopped, turned and stole away so quietly that I did not hear him go. At this time Ben was having fun of his own. Sitting with his back to the lake, he heard another answer behind him across the lake and up on the hardwood ridge, which ran parallel with the southwest shore. Presently he saw the bull emerge from the bushes and start directly across toward him. When he reached deep water so that he had to swim, he turned and went back and disappeared. In a few minutes he crossed over to our side at the upper end of the lake, where the water was shallow, and came slowly and cautiously in a semi-circle toward the horn. It was a standoff as to which made the most noise, the moose or the caller; but on he came so slowly and might not come any further. It was a ground-hog case, we had to get him. I was tempted to go up to Ben to try for a shot, but it was not possible to get through without making so much noise that the moose was likely to be frightened away, and then he had the big .45-90. I had played in such hard luck from the begininng that I was willing to shift the responsibility of getting a moose to some one else. It so happened that my position put me at one end of the semi-circle, which the moose was describing. He had been quiet for a few minutes, and I began to fear that he had gone like the rest and left us to meditate on what might have been, when suddenly there was a great crashing of brush and limbs in front and to my left. The next instant through the thick undergrowth the dim outline of a large animal was seen. A few steps further on he stepped upon a large boulder with his front feet and stopped to listen. A glance had shown that he carried a pair of horns. Only a spot of hair could be seen; a glance along the rifle and I was looking under the Lyman rear sight. Quickly adjusting my head, the front bead came into the center of the ring, the finger pressed the trigger, and there was a sharp, wicked crack. Quickly throwing a cartridge into the barrel I jumped to my feet, ready for whatever might happen. The moose was nowhere to be seen. Carefully picking my way through the brush toward where he had stood, I was within ten feet of the spot before the tip of his left antler came into view over a large log, which was elevated some distance above the ground. Another glance under the log and his head, with a stream of blood gushing from each nostril, was seen. Ben soon knew what had happened, and came shouting at every step, "Give him another! Give him another! That little popgun won't kill a moose with one shot! Shoot as long as you can see hair, but don't shoot this way!" He was about out of talk when he reached the scene of the carnage. But there lay the moose as dead as the proverbial door nail, and he had to admit that he did not need another shot, and that the Mannlicher had done good execution, and from the way the blood was coming had wrought great havoc in his internal arrangements somewhere, for we did not then know where the bullet had taken effect. I forgave Ben for all the uncomplimentary things he had said about my hunting and shooting. We buried the hatchet, that is, I gave him one of the Marbles best, and we were soon at peace with ourselves and all the world. It is seldom, indeed, that the consummation of an event equals the anticipation of it, but at that moment the fond dream of a lifetime was a reality. I had killed a moose.

Ben hung his coat on a bush near by, and we started for help to handle the big brute. I stopped at the tent and got dinner and rested, while Ben went on to the cabin.

After a while he returned with the count, Alex and Wilfred, with cameras, meat sacks, sharp axes and knives, and we were soon at work. I was foolish enough to say that the bullet had gone through his lungs; this seemed evident from the way he had blown blood from his nostrils. As the skinning progressed and no bullet wound came into view in the chest or shoulder region, I assumed then that we would find it in his neck, and we skinned on to his ears and disarticulated his neck and head. My embarrassment was becoming painful. In the language of a coroner's verdict, we had not found a wound sufficient to have caused death, much less did we find the one that did actually cause it. The count suggested that it was his deliberate judgment that the animal died from fright, and they all agreed with him. My only consolation was in the fact that there was an amount of mobility and looseness of the lower jaw that indicated some trouble in the region of its articulation with the upper. This proved to be the fact. The bullet had entered about three inches below the ear and four back of the eye, had passed clear through and had fractured the jaw on both sides, and had cut off the large blood vessels and nerves at the base of the skull, completely paralyzing him.

Wilfred took all the meat he could carry and we started for the cabin via the tent, where we gathered up my sleeping bag and toiled on with our heavy load. Ben and Alex had remained behind to try to get a shot for the count toward evening and to bring the head and hide over with them. About a mile or more on our way we stopped to rest after a tramp up a long hill on a hard wood ridge, where there was not much undergrowth and one could see a hundred yards or more. Taking up the horn I gave the moose call as best I could. It had scarcely been finished and the sound died away, when Wilfred whispered, "Get ready, Doctor, I hear one coming." Instantly the horn came to my lips to coax him on, as I had seen and heard Ben and Ed do. But he was coming too fast. Before the horn sounded it was evident that a gun was needed to stop him rather than a horn to coax him on. The next instant there came into view a fine bull caribou, an animal I had never seen before. We had remarked as he came that he did not grunt like a moose, and certainly did not look like one, and came on a run, which a moose seldom or never does. Having run by the source of the sound and taken his bearings, he turned and came directly toward us, and when twenty steps away stopped. The Mannlicher spoke, the bullet entered a little to the right of the center of his head almost three inches below the eyes, passed through the skull, neck, chest and abdominal cavities, and came out near the root of the tail. It did not mushroon much, and the wound of exit was not much larger than that of entrance.

Considerable damage was done to the bones of the head, but the track of the wound through the neck, chest and abdominal cavities was not what I expected to see. It seems that it is necessary to have great resistance on impact in order to get the so-called explosive force of high-power metal-patched ammunition, which is only another name for mushrooming and its effects. Army medical officers tell us that the best illustration of this is found in the adult human skull; here the bones are very hard and the contents very soft and pultaceous. The explosive effects are terrible, but in animals the brain cavity is relatively very small and the whole head is given up to the organs of special sense, particularly those of the sense of smell, so that the explosive effects of this kind of ammunition are not so well marked in head shots.

Nature, in providing for the survival of the fittest among animals, is lavish in her gifts of hair, hide, cartilege, muscle, periosteum and bone. The forehead of an average bull moose will resist the penetration of any high-power soft-nose bullet if it strikes above the eyes and the head is up. I have not had the opportunity of seeing what effect a full mantled bullet would have under the same conditions, but assume it would reach the brain if the head was in the right position, but if it should strike high in the heavy bony ridge from which the antlers spring, it would probably do great local damage and might kill the animal from concussion of the brain, but that the bullet would enter very far into the ivory-like bone I do not believe. We began to skin the caribou, and as night came on made a fire so as to see how to do it, and, beside, we knew that the count, Ben and Alex were likely to come along at any time, and we preferred that they should see rather than hear us in the dark woods. The count only had a 7mm. rifle, not much of a gun for moose, but we did not care to try to stop any of his bullets. After a while they came threading their way along by the dim light of a lantern, which some one had been thoughtful enough to take along. They were glad to see the caribou and congratulated me on my success, but had a hard protest because the shot that killed the caribou had frightened away a moose which Ben and Alex had called for him.

The roads away from the settlement lack a whole lot of being boulevards; stumps are never taken out of the way, it is easier to pull around them, and no attention is ever paid to logs, roots and rocks; if the horses can get over them the sled will follow. But woes innumerable betide the hunter who tries to hit such a trail in the dark, and he only is wise who takes a lantern along. From Boiestown out to the end of the settlement at the crossing of the Miramichi there is a good graveled road. A team of horses can trot right along with a wagon and a fair load; but after that there are no roads worthy of the name. The old Indian trails have simply been widened out so that a team with a sled can go through. We went over the road to Lynch's depot on Clearwater, and the only evidence of any work ever having been done on it was that some low wet places had been filled in with logs (corduroyed) and were told that the rest of the road through to Perth was just as good. While this has been for more than sixty years the main highway into the woods around the headwaters of the southwest Miramichi and through to the St. John and the mouth of the Tobique, it is little used. During the winter when the heavy snows come and sledding is good, the supply depots and lumber and hunting camps too are stocked with supplies for man and beast for the year, but during the summer only an occasional sled team and a tramping lumber man may be met once in a while.

When we reached the cabin a light came through the west window, and Jim Moore opened the door. He had come up from Tehoe for bread. We were in high glee over my success—a moose and a caribou the same day. This does not often happen, especially in that part of the country where there are not many caribou. Our hearts sank within us when we heard that King had not had a shot. Only four days were left for hunting and his case was getting desperate.

D. W. GREEN, M. D.

DAYTON, O.

The Diamond Hitch.

NEW HAVEN, Conn., June 5.—*Editor Forest and Stream:* In the current number of FOREST AND STREAM I notice a request from Mr. Hough for information concerning the diamond hitch. In the U. S. Cavalry Drill Regulations, pars. 1,111 to 1,118 inclusive, there are full and explicit directions for lashing cargoes on a pack saddle, with six illustrations showing the hitch in different stages of completion. I have been under the impression that the form of lashing there shown was the true diamond hitch. If I have been mistaken in this I would be glad to learn of it.

W. G. VAN NAME.

CHICAGO, Ill., June 14.—Referring to the request of an army officer of the Dutch army in Java, in regard to information on the subject of the diamond hitch, I trust that should these lines ever come to his notice, he will feel that he now has the question as well solved as may be by any correspondence school. I was unable to obtain the excellent articles on the diamond hitch published in the FOREST AND STREAM years ago under the signature of Yo, but I have gotten at the matter from another angle through the kindness of divers FOREST AND STREAM friends.

Mr. F. F. Frisbee, of Detroit, Mich., states that some years ago he wrote an article on packing and pack horses which described the method of throwing the diamond hitch. He refers me to this book, for what he takes to be an easy course of instruction in throwing the hitch for my friend in Java. Still more specific is the following letter from Capt. Wm. F. Flynn, of Jefferson Barracks, Mo., who writes me in a letter which I take the liberty of quoting below, since it may prove of service to yet others who may be in search of information on the diamond hitch. Capt. Flynn says:

"If one wishes real information on any subject all he need do is say so in the FOREST AND STREAM! I can cite you a book prepared by one of the best packers (probably the best packer) in the U. S. Army, which will, I believe, give Lieut. de Waal all the information on the diamond hitch and packing in general that can be obtained from a book. The book to which I refer is 'Manual of Instruction in Pack Transportation—Daly.' It is for sale by the Adjutant, West Point, N. Y., and costs 50 cents. 'The U. S. Cavalry Drill Regulations,' pages 455 to 461 (for sale by Montgomery Ward for $1), shows how the hitch is thrown very clearly; but Daly's book is far the better. I will forward you under separate cover both these works, so you may examine them. Trust you will find the information you desire and also trust that you may find an opportunity of visiting me at this station and observing the two beautiful pack trains under my direction."

I have sent for the books above noted, which I will forward to Lieut. De Waal at his post in the Dutch East Indies, and believe he has now had the best service obtainable in this matter. If he does not learn to throw the diamond hitch now, he will at least be able to feel that he lost his mind in a good cause.

E. HOUGH.

We quote the chapter on "Packing" from the "Cavalry Drill Regulations" of the United States Army:

Pack Trains.

1122. Active, short-coupled, short-legged, "blocky" mules, weighing from 800 to 1,000 pounds, are considered the best for pack animals.

Under favorable conditions each animal can carry a load of about 30 per cent. of his own weight; the load should not be much in excess of 200 pounds when long or hard marches are to be made.

With 50 packs there should be 12 packers.

Each troop should have four mess boxes, ⅞-inch lumber, dovetailed, 11 x 18 x 26 inches; and, when packed in pack cover, without lids.

In camp or garrison, logs of wood, 26 inches long, and sacks of corn, double-sacked and lashed to avoid breaking sacks, having the weight it is intended the mules should carry, are kept on hand for drill purposes.

Each pack should be provided with two coils of ⅜-inch rope, 18 to 28 feet long for lashing side packs.

The pack saddle consists of the saddle proper; two pads; crupper; corona; manta or pack cover; two pieces of canvas, each 84 x 22 inches, stitched together on the long edges; halter and strap; canvas cincha, 10 inches wide; sling rope, ½-inch best hand-laid manila whale line, 20 to 32 feet long; and leather cincha, with lash rope ⅝-inch whale line 42 feet long. There should be one blind for every five packs.

The size of rope is given by the measurement of its diameter.

A "full-rigged" saddle has sling straps and cargo cincha; the sling and lash ropes are then dispensed with.

While saddling, loading, or readjusting the packs, the animals should be blinded. The mules should be trained to stand perfectly quiet while the blind is on; they should never be fed or forced to move without first removing the blind.

To Fit the Saddle.

1123. The pack saddle is fitted to the animal in a manner similar to that of the riding saddle; it is so constructed that it can be placed one and one-half inches farther forward than the riding saddle.

If the pads are not square, draw the screws, unlace the pads from the skirts, then square and fit them to the animal by placing the canvas cincha immediately around the animal's girth, the front edge touching the breastbone (cartilages of true ribs), the middle of the cincha being exactly in the middle of the lower edges of the pads; then screw the pads to the saddle bars, keeping the cincha in place till the adjustment is made; then remove the cincha and relace the pads.

Adjust the canvas cincha so as to be long enough to go nearly around the girth of the mule, over the saddle.

Adjust the crupper by lengthening or shortening the lace strings that attach it to the saddle, taking care not to make it too tight.

To Saddle.

1124. Place the corona on the mule's back, about two to two and one-half inches in front of where the pommel end of the saddle is to rest; place the folded saddle blanket over the corona; take the saddle by both yokes and place it squarely in position, a little in rear of its proper place; place the crupper under the dock and gently move the saddle forward to position; pass the ring end of the canvas cincha over the saddle from left to right and under the belly; pass the latigo through the ring and tighten the cincha; when cinched, the ring end of the cincha should be above the lower edge of the near pad.

Cargoes.

1125. The rations should be carefully put up in 100-pound packs lashed solidly, and carried on the best pack mules; each pack is plainly marked with its contents and weighed.

Salt, sugar, coffee and beans are double-sacked and lashed in 100-pound packages. Bacon, in 100-pound packages, is packed in from five to eight pounds of clean straw or hay, double-sacked, and lashed firmly.

The yeast-powder cases should be opened and hay or straw stuffed closely around the boxes to prevent shaking, and, with other articles, lashed in 100-pound packages.

Each cargo is in two side packs of about 100 to 125 pounds each, and should match in size, shape, and weight, as nearly as practicable, each side pack having, as nearly as may be, the following proportions; width one-half more than the thickness, length nearly one-half more than width; e.g., 12 x 18 x 35 inches.

All the salt, sugar, coffee and beans should not be placed in one cargo. Ammunition should be in cargoes.

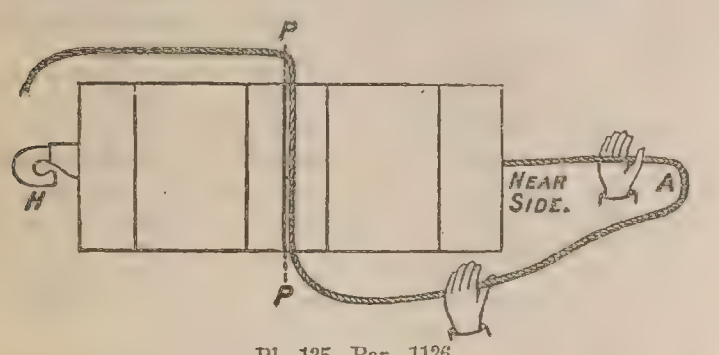
Pads or cushions of hay 26 x 44 inches may be placed under the cincha to keep long and rough packs from the animal's hips and shoulders.

To Load Cargo.

1126. The packers should work by threes, designated Nos. 1, 2, and 3. No. 1 is on the near side, No. 2 on the off side of the mule; when No. 3 works with No. 1, he is nearest the croup; when with No. 2, he is opposite the mule's shoulders.

The mule is placed near to, and with its left side next to the cargo by No. 2, who then puts on the blind.

No. 1, on the near side, passes the center of the sling rope over the saddle to the off side far enough to allow the rope to pass over the off-side pack and come back within his reach, the parts of the rope separated by six to twelve inches. Nos. 2 and 3 take the off-side pack,

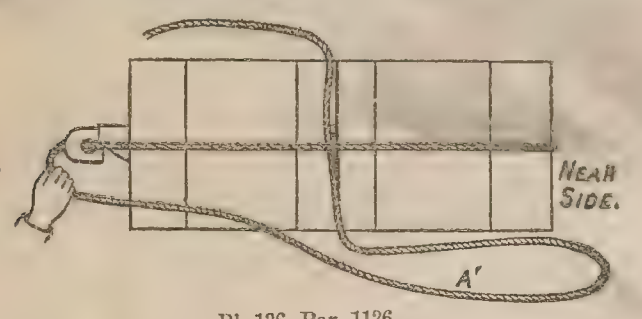


Pl. 135, Par. 1126.

place it well up on the saddle; No. 2 grasps the loop of the sling rope with his right hand, brings the rope up against the pack and lets the loop drop over his right shoulder, in readiness to pass it over the pack; No. 2 holds the pack in place. No. 3 passes to the near side and with No. 1 takes the near side pack and places it, flat side next the mule, well up on the saddle, lapping the upper edge well over the upper edge of the off-side pack. No. 1, with his back to the mule's shoulder, takes the end of the front part of the sling rope, passes it from the outside through the loop, and pulls it down with the right hand; he now grasps the rear end of the sling rope with the left hand, and ties the ends together in a square bowknot, the packs high up.

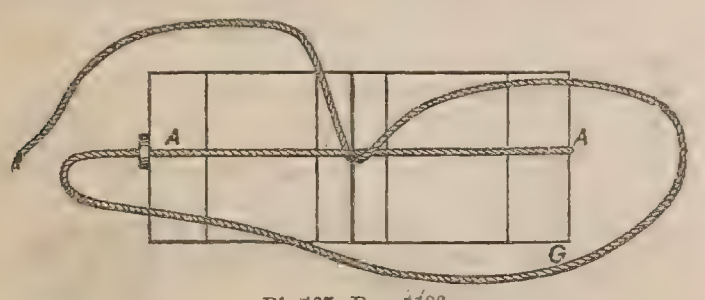
No. 1 calls out: Settle; Nos. 1 and 2 each grasps his side of the cargo by the lower corners, lifts upward and outward, settling the upper edges well together and balancing the load. If the packs are tied too high, they are easily lowered, but if tied too low they must be lifted and placed as in the first trial.

While Nos. 1 and 2 are tying and placing the cargo, No. 3 takes the lash rope, throws the free end to the rear of the mule, convenient to No. 2, and places the cincha end in front of No. 1. No. 1 grasps the rope with the right hand, three feet from the cincha, and passes the hook end of the cincha under the mule to No. 2, who takes the hook (H, Pl. 135) in the left hand; No. 1, with the left hand, grasps the rope three feet above



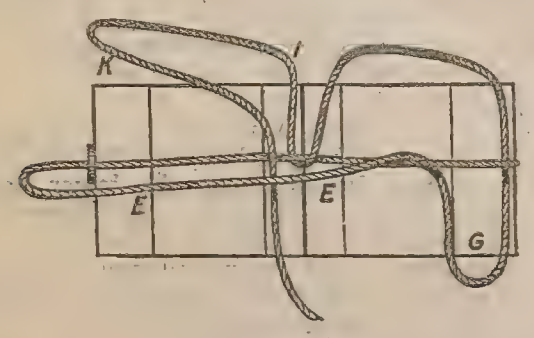
Pl. 136, Par. 1126.

the right, raises the rope, and lays it between the side packs from rear to front (PP), pulling it to the front, until a long enough loop (A) is formed to pass over the cargo and fasten in the cincha hook (H, Pl. 135). The right hand, back down, holds the cincha end of the rope, the loop (A) falling outward over the right forearm; the left hand, back up, holding the other part of the rope between the loop and the middle of the packs; No. 1 now throws the loop (A) over the pack, then lets the part in the left hand drop on the mule's neck, thus forming another loop (A', Pl. 136); No. 2 passes the



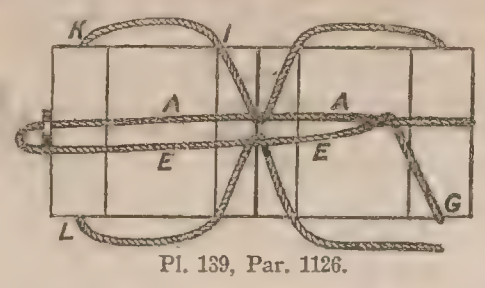
Pl. 137, Par. 1126.

rope through the hook, pulls the cincha end of rope till the hook is drawn up so that, when tightened, the hook shall be near the lower edge of the off pad; No. 1 now grasps the rope at G, Pl. 137, and tucks a loop, from rear to front, under the part AA, Pl. 137, over the cen-



Pl. 138, Par. 1126.

ter of the near side pack (G, Pl. 138); No. 2 passes the free end of the rope under the part EE, Pl. 138, and throws it over on the near side of the mule's neck; No. 1 draws the tucked loop forward and forces the rope under the corners and lower edge of the near pad and hauls it taut from above the rear corner; No. 2 grasps the rope at I, Pl. 138, with the left hand, and at K, Pl. 138, with the right, passes the rope under the corners and lower edge of off pad (K, L, Pl. 139), and hauls taut at the



Pl. 139, Par. 1126.

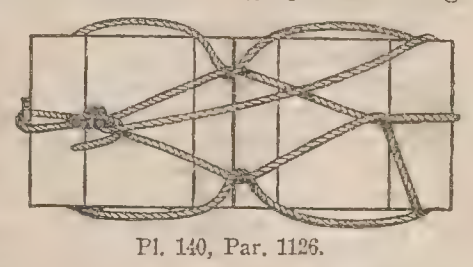
front corner, No. 1 taking in the slack at the free end of rope.

The lash rope is now ready for final tightening.

No. 2 removes the blind, leads the mule forward a few steps, No. 1, in rear, at the same time looking to see if the packs are properly adjusted. The mule is again blinded.

The object of the final tightening is to lash the load firmly to the saddle; pulling all the parts of the lash rope taut, and taking up the slack, commencing at the cincha, and continuing the process from part to part, until the slack is taken up at the free end of the lash rope. While No. 2 is pulling the parts taut, No. 1 takes up the slack or steadies the cargo, and vice versa; the pulling is done in such manner as not to shake the cargo out of position.

No. 2 grasps the lash rope above where it leaves the hook and below the edge of the pad, right hand below left, places the left knee against the rear corner of pad; No. 1 grasps with the right hand the same part of the rope where it comes over the pack on the near side, and with the left hand at G, Pl. 139, places his right shoulder



Pl. 140, Par. 1126.

against the pack to steady it; he then says, "Pull." No. 2 tightens by steady pulls, and, without letting the rope slip back through the hook, gives the slack to No. 1, who takes it up by steady pulls. When No. 2 thinks the cincha is sufficiently drawn, he says, "Enough." No. 1 holds solid with the right hand, slips the left down to where the rope passes over the front edge of pad, and holds solid; the right hand then grasps the continuation of the rope at rear corner of pad and pulls taut; then, with both hands, placing his right knee against rear corner of pad, pulls the rope well home, No. 2 taking up the slack by grasping the rope (I, Pl. 139) where it comes over the rear end of off-side pack, with both hands. No. 1 steps to the front and steadies the pack. No. 2 then pulls taut the parts on his side, taking up the slack; this draws the part of the lash rope AA, Pl. 139, well back at the middle of the pack; he then with the left hand at the rear corner of pad (K) pulls taut, and holds solid, while with right hand at front corner of pad (L), he takes up slack; he then with both hands at, and placing his knee against, the front corner of the pad, pulls well taut, No. 1 taking up the slack on his side, and then pulls solid, drawing the part EE, Pl. 139, of the rope coming out from the hook well forward at the middle of pack, then carries the free end under the corners and end of pad, draws taut and ties the end fast by a half-hitch near cincha end of lash rope. If the rope should be long enough to reach over the load, after passing under the corners, it is passed over and made fast on the off side by tying around both parts of the lash rope above the hook and drawing them well together.

1127. To tighten the lash rope on the load it is necessary to take up and pass the slack as in the final tightening.

To slacken the rope on the load it is necessary to begin to slacken from the free end, and carry the slack by reversing the process of tightening.

When the pack cover is used, it is placed over the cargo before putting on the lash rope.

When the side packs are of unequal bulk or weight, the larger or heavier should be placed on the near side; it should then lap over the off side pack until the packs balance.

Top packs, i. e., small packages placed in the middle between the side packs, should be avoided. When the sling rope is half-hitched into the saddle yokes, the load is made more secure, but there is great danger of injury to the mule's back.

On the full-rigged saddle, the canvas cincha is attached to the saddle by the "spider"; the side packs are laid on the saddle as before, held by the sling straps and secured by the cargo cincha. The lash and sling rope are then dispensed with; but use of the lash and sling rope gives greater security to the cargo and greater comfort to the mule.

To Unload Cargo.

1128. Only two men, Nos. 1 and 2, are necessary; they work as when loading.

The mule is placed with head toward the center of where the cargoes are piled. No. 1 puts on the blind; No. 2 unfastens the free end of the lash rope; then Nos. 1 and 2 slacken the rope; No. 2 with the left hand removes the part under the end and corners of the pad on the off side, and unhooks the cincha with the right hand; No. 1 removes the part under the end and corners of the pad on the near side, gathers the parts of the rope together on his side with both hands, coiling it, and lays the rope on the ground where he intends to place the cargo, the cincha and free end exposed on the side opposite where the rigging is to be placed. No. 1 unties the sling rope, casts it loose, takes his side pack and places it on the lash rope across the line of cargo; No. 2, at the same time, takes his side pack and lays it on top of near side pack, and then, holding the sling rope at center loop, doubles it and places it on top of load, loop exposed, for convenience when required.

The second load is placed end to end with the first and on the side next to where the rigging is to be placed; the end of the lash rope is coiled and placed on top of the last sling rope, and is used for tying the mule when reloading.

The saddle cinchas should be slackened and the mules allowed to cool before removing the saddles.

To Unsaddle.

1129. Unfasten the latigo and throw the end across the top of saddle; fold the cincha with latigo inside and place across top of saddle; push the saddle back, remove crupper from under dock, double it forward, with crupper above cincha on top of saddle, and remove saddle; the saddles are placed in line, resting on the ends of pads.

Game Notes from the Hampshire Hills.

THE weather has been cold and cloudy in this northwestern corner of Massachusetts for the past fortnight, though there have been warm sunny intervals, so that grass is rank and the hay crop very promising. Other crops are late, and crows are taking toll wherever they can. The trout fishing is poor, and the samples small. Those under six inches, which is the regulation length, are growing tired of being thrown back after being many times caught, and complain of unnatural selection. At the same time, the larger ones, if there are any, lie perdu. I have seen but two stream fishermen this month. The ponds yield some pickerel and ring perch.

Partridges, or timber grouse, are in evidence all along the stage lines, hence to West Hawley, Ashfield and Savoy. Some of the old birds are flushed near occupied buildings as we drive by, exhibiting much fluttering and roughness of plumage, while the chicks make for convenient cover. Quail are increasing perceptibly. One farmer acquaintance of mine put up four bevies on his own premises last fall, shooting four out of one bunch of eight, but considerately sparing the rest. I dare say a "true sportsman" would have bagged the entire lot, or tried to. A few quail have "used" in this section for half a century to my knowledge. Woodcock are in fair number, a dozen or more brace being shot every July by one of our experts, though I don't know of a dozen guns being owned in town. It is not uncommon to see wild deer running with the sheep and cattle, or looking over the stone pasture walls. Of the three kinds of animals the deer are much the tamest. They often bed in the brakes (fens) between the roadside and the edge of the woods. Of course, they are nobody's property, because the game law forbids their being "had in possession," but it will not be long, I opine, under existing signs, before the farmers will be seeking "protection" for their crops, as they have done in other sections, and suing the State for damages. Oh, deer! Oh, deer!

Blackberries are very plenty, or will be this fall if the present luxuriance of blossoms be indicative. Such masses of whiteness I never saw, except on the seashore. The roads are lined with them. CHARLES HALLOCK.

PLAINFIELD, June 24.

Bear and Cow.

CURRITUCK, N. C., June 20.—*Editor Forest and Stream.* Bears are becoming too numerous and saucy at Coinjock (this county) that the farmers are losing nearly all their hogs, and last week a very large one killed a milk cow in open daylight for Mr. John Spry. The cow was heard to bellow, and seven men, armed with as many kinds of implements of destruction, were soon in pursuit. When they caught up with him, the bear was sitting on the cow's back eating his breakfast out of the back of her neck, at the same time driving the cow further into the swamp. He guided her in "the way she should go" by a tap on the jaw with his forefeet when she tried to turn to the right or left. Some of the men had good shots at the bear, but were afraid of killing the cow, and Bruin escaped, but not until he had finished the cow, so that she died shortly after. Many hogs, some of them large ones, have been killed during the past few days, but this is the only true case of a cow being killed that I can vouch for.

While crossing about the center of Currituck Sound yesterday, I saw between 300 and 500 ruddy ducks and blackheads. I have never seen anything like this before in June at Currituck, and account for it by the gunners having stopped shooting a month earlier than usual this spring. I think they intend spending the summer with us, and if so, it will be the first time in fifty years.

MORE ANON.

Towser.

By Edwin L. Sabin in Lippincott's Magazine.

HERE'S to that dear old, trusty pard,
Comrade of woodland, street, and yard,
Who ne'er was wanting in time of need,
And never swerved from his loyal creed;
With his eager tail and his loving eyes,
His ears up-cocked in attention wise,
His ringing bark and his spirit bold,
His clever ways and his heart of gold.

Little it matters how goes his name:
Towser or Rover, 'tis quite the same;
Be sure that in boyhood's catalogue
His figure is blazoned as dog—true dog:
Ready to frolic, to fetch, to fight,
To run all day and to guard all night;
To follow his lord to the world's far end—
Servant and warder and faithful friend.

Where were the odds that he would not face,
Where the path that he did not trace,
Where the stream that he could not swim
If a well-known whistle had summoned him?
Snowy or rainy, cold or hot,
Light or darkness, he faltered not;
Weary his limb or torn his paw,
His master's wish was his highest law.

Oh, stanch companion of by-gone days,
Who asked for naught but a word of praise;
Whose purest bliss, and contentment sweet—
To lie outstretched at his master's feet!
The squirrel chatters adown the grove,
The grouse drums loud from the mossy log—
But deep are thy slumbers, boyhood's dog.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Adirondack Trout.

THE ability to capture big trout where the average fisherman can not do so is an art of itself, and may be termed a sort of side degree which the angler sometimes takes after he has been thoroughly initiated into the mysteries of the regulation style of fishing, or in other words a kind of post-graduate course. The amateur fisherman will rarely make much of a success in angling exclusively for large trout, although it occasionally happens that at the outset he has phenomenal luck. In order to work intelligently, however, and be able to capture the big fellows where any are to be found, the angler must have a thorough knowledge of the ways of the trout, including their likes and dislikes, their habits, strong points and weaknesses. He should also understand some of their whims and eccentricities. He cannot hope to comprehend them all, but he can at least be prepared for their doing the most improbable and entirely unexpected thing, and thereby often times save himself from sore disappointment by the losing of a splendid fish. Many of these points can be read about in books, but the only way in which the angler can acquire a practical knowledge of them is by actual experience and personal observation. Of course in ordinary fishing almost any angler may once in a great while take a big trout, but in order to become more expert than the average fisherman in this particular branch of the sport, one must exercise his wits, and use caution, patience, perseverance, ingenuity and good judgment.

There are certain lakes in the Adirondack region abounding in big speckled trout, on which a party of four or five amateur anglers might fish all day without catching enough for a respectable mess. In fact, anglers who have had some experience and been fairly successful in catching small trout in other waters might also encounter the same difficulty, for they would find that they were face to face with an entirely different proposition when undertaking to bring these fellows to creel. Under certain conditions these big trout are capable of making a man feel very miserable and thoroughly disgusted because of his lack of success in capturing them. It is extremely aggravating to sit in a boat on a lake and see speckled beauties weighing from half a pound to two pounds flopping out of the water all around you and be unable to get enough for supper, but such things will happen unless a person is resourceful, observant and ingenious. The tantalizing chaps can usually be made to succumb, provided the angler is sufficiently determined in his efforts, but it is only the post-graduate, as a rule, whose persistence and skill are equal to the occasion. If the trout refuse every kind of artificial fly, which the angler has in his book and decline angleworms, spoons and imitation bugs with equal impartiality, the situation becomes somewhat involved, it must be admitted, but the expert will not be wholly discouraged. Of course one of his first efforts when he found the trout reluctant to take his lure was to endeavor to ascertain what they were feeding on, but having failed in this or in his subsequent trials to tempt them with something resembling what he believed them to be preying upon, he resorts to other measures. If there are no minnows obtainable to be used for bait, he will search in rotten logs and stumps for whitewood grubs or go in quest of young mice and moles, or bugs and beetles of some kind, anything which he thinks might tempt the appetites of the trout. If he can not induce the speckled beauties to come to the surface of the water, he will sink his hooks. In case he should fail after going to all this trouble, and the trout are still showing themselves occasionally, he may conclude to give them a rest for a while. Perhaps he will go ashore and smoke his pipe for a time or possibly he may take a walk and be gone one, two or three hours, but he will not give up beaten without at least one more trial. There is a possibility of failure once in a while, of course, notwithstanding all that can be done by the best of fishermen, but in such cases the post-graduate will simply suspend hostilities and renew them early on the following morning.

On some of the larger Adirondack streams it is possible for the amateur angler to fish for miles without so much as having a glimpse of a trout weighing over half a pound, even when it is a good day for fishing, while the man who has taken the side degree aforementioned in subsequently going over the same ground may place several weighing from half a pound to two pounds in his creel.

Several anglers with whom I am acquainted who meet with excellent success in capturing big speckled trout, commonly use minnows or small shiners for bait in preference to any other lure. Some of them use what is termed "a chub's tail," being the rear portion of a small fish including not only the tail, but a small section, perhaps half an inch long, of the fish itself. This they impale on a good-sized hook, having a double snood, passing the point of the hook through near the tail, out again and then into the thicker portion of the bait sufficiently deep to conceal both that and the barb. This lure is often very effective when the big speckled fellows decline to take a fly or worm. Good results are frequently obtained by using a whole shiner impaled on a small gang of hooks, and also with artificial minnows. For trolling purposes, the Archer spinner is excellent. Ordinarily, where angleworms are used for bait in fishing for big trout, it is advisable to loop several of them on the hook at one time, so as to make a good-sized squirming bunch. The hook should be kept well baited, and some anglers insist that the barb should always be kept covered. The ventral fin of a small trout, with a small piece of the meat attached, is a favorite lure with a number of successful fishermen whom I know, and in certain waters under certain conditions it works exceedingly well. When impaled on a hook and drawn on top of the water, the fin bears a striking resemblance to some of the artificial flies.

Some fishermen relate interesting tales about capturing big trout by using young mice for bait, and I have no doubt as to their truthfulness, although I have never resorted to such measures myself. I have known quite a number of anglers who have been very successful in taking large trout with the use of whitewood grubs, and others who claimed to have had good luck with crickets, but, judging from what others say, as well as from my own observation, I am inclined to the opinion that one of the most tempting morsels which can be presented to the speckled beauties is a big, fat grasshopper.

Of course grasshoppers are not always to be had, but when they can be found the pleasure of trout fishing is materially enhanced by the exciting sport incident to collecting the bait. If you are an old hand at fishing, the probabilities are that away back in boyhood's happy hours you used grasshoppers to tempt the trout. You remember as though it were but yesterday those good old times when a limb cut from a tree by the wayside, a cotton line and a bent pin or ringed hook, constituted the amateur outfit with which more trout were captured than are taken with the split bamboo rod, braided silk line and artificial flies of to-day, and bigger ones, too, if fish stories are to be relied upon. But if you used grasshoppers for bait you first had to catch them, and you remember perhaps how anxious you were to do so when the big trout that was in hiding in the deep pool under the roots of the maple tree where the rail fence crossed the stream was slapping the surface of the water with his tail at intervals, but would not look at a worm-baited hook. You remember, also, when you laid down your pole and started out into the open field, how the grasshoppers got up in front of you like a bevy of frightened quail. Then when you began the hunt in earnest and marked down a particularly large and fat fellow which you felt was just the one you wanted, what an exciting chase followed. You did not calculate on a chase to start with, as the big, lazy-looking grasshopper had apparently settled on a spire of timothy to spend the day, but when you reached out to take him up with the idea of putting him in your bait box, he unexpectedly jumped from under your hand and alighted on another grass stalk two feet away. Next time you were a little more cautious and approached the grasshopper slowly until your hand was almost over him, when you made a sudden grab. But again he jumps just in time, and now is sitting on the leaf of a big bull thistle, six feet distant, nervously moving his legs and looking around to see if you are coming. You conclude to make one more trial, although the grasshopper has exhibited such astonishing energy and activity that you begin to have more respect for him. Taking your straw hat in your right hand, for use in case of emergency, you draw near to the thistle and carefully reach out with your left hand to grasp the big fellow who now seems to be enjoying another cat nap. But you only succeed in getting near enough to warrant a faint-hearted sort of grab before he is off once more, and although you strike at him spitefully with your hat, it only makes matters worse. When you get on your feet again after a poorly managed wrestling bout with the bull thistle, and have picked the prickers out of your hands and legs, and donned the remnant of the straw hat, you go and look for another grasshopper. But they are all pretty much alike, and if you are really anxious to catch one, he is morally certain to keep you busy awhile before you get him where you can force him to give up his "molasses" and become bait for the big trout.

W. E. WOLCOTT.

UTICA, N. Y., June 26.

Inexpensive Salmon Fishing.

Editor Forest and Stream:

How much does it cost to kill a salmon?

Well, that depends. If you are a member of the Ristigouche Club your bill may run up a thousand or more, but ordinary mortals can do it for a good deal less.

I dropped off at Campbellton, N. B., on a mid-June morning, and looked up Billy Sproul, of the Royal Hotel, and got a pointer or two. At 6 o'clock I took an accommodation train a few miles west to Flat Lands, hailed a fatherly old fellow, William Delaney, caretaker of the Montgomery and Suction Water, and stated the case. William had a canoe, but no other man was presently available, so we two went out alone. The water was practically free, a nominal rental of $1.00 a day being charged per rod. There was perhaps half a mile of it altogether, and the Ristigouche River been unusually high, no pools were in sight. We pulled out a few yards from shore, and dropping a stone for an anchor, cast to right and left, choosing a Durham-ranger fly of rather large pattern. The second or third cast brought a nice fellow to the top, a little short, however, and a few minutes later another, short, likewise.

"Black salmon," said William, "and no good anyway." These kelts or black salmon are fish that have wintered in the river, and are lean, lanky fellows, not fit for food, but liable to give you as good a run as any other. Our first victims may or may not have been kelts; the guides are good-natured fellows as a rule, and sympathetic, and William may have been letting me down easy.

The stone is pulled up, and we drop down a few yards further, and after a while, with a moderately short cast, a good-sized fish takes the fly, turns over, and then trouble begins. Right out into the river he goes, the reel screaming with delight, one could almost imagine then an eruption in the water, and three or four feet of glittering silver is in the air for a second or two. Another run and then a sulk at the bottom, with a steady chug, chug, as if the fish was trying to get rid of the hook that was interfering with his freedom of motion.

"Keep the strain on him," said William, "and look out when he goes again." A few minutes of suspense, then another rush and another jump, and away he races up the center of the river.

"A Metapedia salmon bound for the club house for sure." But towing a canoe was a pretty heavy drag, and soon there were signs of distress. The fish led somewhat more easily, he was reeled up, and ran out several times, each rush a little less vigorous. All the time the canoe was being worked nearer shore, till at last I was able to get out on the gravel. Fifty feet out the fish was lying almost exhausted on the top of the water and was coaxed in till a stroke of the gaff impaled him and he was kicking himself on the gravel, when a blow from a stick straightened him out. A Metapedia salmon he was, deep and chunky, only a day or two from salt water, bright and shining, and on the scales a few hours later weighed 22 pounds.

They were not specially keen in the afternoon, one or two short rises, a run for a few minutes and a lost fish, and just as we were preparing to suspend operations a good stiff strike. This fish did not jump, but sulked for perhaps half a hour, then a wild rush or two. In vain we tried to guide him to a snug harbor, he would make for the south shore where there was no chance to land. A rather stiff rapid intervened, and in the trouble of navigating it with one man, the fish said good-bye, taking with him the fly and half the leader. It was nearly train-time again, and reluctantly we wound up operations for the day.

Going up on the train next morning I found that two other parties had arranged to fish the Montgomery and Suction waters, so Delaney and I betook ourselves elsewhere, on water of his own, with fair success.

One of the men had only a trout outfit and a shaky one at that, a weak reel with worn-out mechanism, and a line that broke easily between the fingers. He had never seen a salmon in the water, but with the proverbial luck of a tenderfoot, hooked one early in the day, and being blessed with two good guides—Micmac Indians—humored and nursed him for an hour and a quarter, never daring to trust the line, but allowing the fish to have his own way till he was practically dead and offered no resistance to the gaff. Forty pounds and a little over, the scales said, and the record fish of the season.

A heavy wind prevented casting the third day, and there being no signs of any let up after dinner, the two Indians whom I had engaged ran down the river to get a few trout. It was between the seasons, yet by dint of hard fishing we got a dozen or so, several of four pounds or over. At times the river is alive with trout of large size. The smelts come up from the sea in immense shoals and the trout follow them, afterward going away up the river to the spawning grounds at the headwaters.

Now for figures. There were three days' good fishing. Leaving the railway transportation out of the question the account stood thus:

Hotel, three days	$4.50
One man two days and two men one day	8.50
Incidentals	2.00
Total	$15.00

For tackle, one can please himself. A good strong salmon rod can be bought for $10 to $15; mine is 15 feet long, a Scribner of St. John, N. B., that cost $13, but I have had it sixteen years, used it for all kinds of fishing, and it is still good for a life time. A good salmon reel costs from $3 up, mine cost $4, it has a click but does not multiply, has also been used sixteen years. A good waterproof silk line costs $4 for 100 yards, but this year I used an Abbey and Imbrie, and No. 6 hard linen braid cost $1.10 per 100 yards—a little light, perhaps, but answering the purpose. In flies one can be as extravagant as he pleases—there is something wonderfully tempting in a tackle shop—but as good as we need can be got in any city for 25 cents each. Forrests at 75 cents are prettier and neater, but no better. You must have four kinds anyway, Durham-ranger, silver-doctor, Jock-Scott and black-dose, and can add anything else you like—fairy and silver-gray will not come amiss. You want three sizes, I prefer double hooks for the smaller sizes, but that is a matter of taste. Leaders cost from 25 cents to $2.50. I have used good cheap ones and bad dear ones—75 cents is a fair price. They should test 7 to 9 pounds dry. Your guides will likely have a gaff, but it is just as well to own one in case of accident, a large gaff is necessary, with a spread of 5 or 6 inches.

Practically all the salmon fishing in Canada is reached by the Intercolonial Railway. The Ristigouche, with its tributaries the Metapedia, Causapscal and Upsalquitch, are the nearest to Montreal. The I. C. R. follows the Metapedia for almost 50 miles, to where it empties into the Ristigouche at Metapedia Station, 8 miles above tidewater. The Causapscal joins the Metapedia 35 miles above Metapedia Station.

The Causapscal is owned entirely by the Ristigouche Club, who also control most of the Metapedia, and a good deal of the Ristigouche.

The Upsalquitch has been reserved by the New Brunswick Government, and is leased at $2.00 per day per rod. There is a great deal of good water and a dozen or more fishermen would not be in each other's way. Fishing in the Ristigouche and Metapedia is good from May until August, the Upsalquitch is at its best in July. The salmon in each river are entirely distinct and can be told at a glance by the guides; those in the Upsalquitch are a trifle smaller than the others.

Campbellton, N. B., at the mouth of the river, is the only considerable town in the Ristigouche country, and is a good place for headquarters. The Royal aforesaid, is a good friendly place to stop, cheap withal, and Billy Sproul is its prophet—good sportsman, with an intimate knowledge of all the water. Decidedly a good man to write to. The agent of the I. C. R. at Flat Lands, will also answer any questions addressed to him. Good board may be had at Flat Lands, and at farmhouses in the neighborhood.

In the early season, May and up to middle of June, there is considerable good water that is also entirely free for salmon fishing—from the lower limits of the Ristigouche Club, a mile below the Metapedia bridge, to tidewater—say seven miles in all—there is no restriction on catching trout anywhere you are likely to get them. During my three days' stay this year some thirty salmon—many over 30 pounds each—were killed in the water I have mentioned. Good stretches of water can be had below Metapedia at $1 to $2 per day, and still better water on the Metapedia and Ristigouche up to $10 a day. Mr. Alexander Mowat, Campbellton, N. B., has several excellent stretches very accessible, good all through the season, at varying prices. W. A. Mott, M. P. P. Campbellton, N. B., president of the Bay Chaleur Tourists' Association, can be consulted about the Upsalquitch.

Random Notes of an Angler.

More About Reels.

In my last paper I stated, in describing my reel, that the resistance furnished by the click is only sufficient to withstand a tension of six or seven ounces.

One of my correspondents has taken me to task for this statement, declaring that I have placed the figures altogether too low, and that from eight to ten ounces would be nearer the mark.

Now I dare say there may be reels which require a tension as high as he names, but mine does not, and I do not believe it is necessary.

However, to make the matter absolutely beyond doubt, I have just made a number of trials, and find that the click yields at a six-ounce pull if the reel is free from the rod; and if it is placed on the rod and the line is passed through all the guides, thus causing considerable friction, a straight pull, i. e., one through the guides, the rod being held horizontally, but unbent, a tension of eight ounces is required. This is a small matter, it is true, but when one states facts he must try to be accurate.

In describing the reel in a former paper I intended to say that the reel click is inside the spool, but inadvertently I dropped the "click," which made my meaning rather vague.

Care for Your Reel.

One cannot be too particular in caring for his reel, no matter how nicely the parts may be adjusted. Minute particles of sand and dust will find an entrance, and on this account I give mine a thorough overhauling every season, taking it apart and cleaning it and lightly oiling it with fine machine oil.

Tricks of Salmon to Escape.

In addition to those I have already named, the salmon is gifted with many artifices by which he strives to rid himself of the hook which is fastened in his mouth. Diving through a mass of submerged drift wood is a common trick with him, and it very often proves a successful one.

Running out of fifty or more yards and then quickly returning so as to get a bight in the line by which he gets sufficient slack to enable him to shake out the hook is another, and darting here and there with a corkscrew movement, by which the hook often gets twisted out is an expedient that is also often practiced. In fact, there is no end to the devices by which he seeks to obtain his freedom, and the angler must constantly be on the qui vive to meet and baffle them.

A thirty-pound fish is not so active as is one of half that weight, but his strength is more than proportionately greater. While the fight with a twelve or fifteen pound salmon is often "short, sharp and decisive," that with a large one is a "battle royal," in which strength, endurance and consummate skill on the part of the angler are called for; it is a battle in which no chances may be taken, and every possible expedient known to the craft must be availed of.

Expediency of Changing Flies.

I have already treated of the importance of changing flies for different stages and colors of waters, and have perhaps said all that is necessary; but I find something on this topic in the book "Salmonia," which I have already referred to that is well worth reprinting here. The author says: "I will mention a circumstance which every accomplished fly-fisher ought to know. You changed your flies with the change of weather, putting the dark flies on for the bright gleams of the sun, and the gaudy flies when the dark clouds appeared; now, I will tell you another principle, which it is as necessary to know as the change of flies for change of weather. I allude to the different kinds of fly to be used in particular pools, and even for particular parts of pools. You have fished in this deep pool, and if you were to change it for a shallower one, such as that above, it would be proper to use smaller flies of the same color; and in a pool still deeper, larger flies; likewise in the rough rapid at the top, a larger fly may be used than below at the tail of the water. I have often changed my flies thrice in the same pool, and sometimes with success, using three different flies for the top, middle and bottom. I remember that when I first saw Lord Somerville adopt this fashion, I thought there was fancy in it, but I adopted the lesson he taught me, and with good results in all bright waters."

As to Hooks.

Every salmon angler has had "troubles of his own" in consequence of barbs breaking from hooks, or the hooks breaking by the severe strain to which they are subjected, and those troubles will be repeated until only the very highest grades are used in tying the flies; these cost a little more than inferior ones, but the difference is so small it is an outrage on the angler to sell him the cheaper ones. What can be more maddening than to lose a good fish by the breaking or straightening out of a hook? Yet how often does such an accident occur?

Many anglers before using their flies test the hooks thoroughly by springing them against a piece of wood. If they are defective in any way it can thus be quickly proved, and it is vastly better to suffer the loss of a number of such hooks than it would be to have a salmon break one and escape.

Another source of annoyance and loss is found in the imperfect tying of the flies on the hook. If proper care is not given to this work, the hook often pulls out, leaving only a bunch of feathers and tinsel dangling on the end of the leader as it comes back to the angler.

To guard against such a calamity, one should carefully examine his flies, and if he finds any which feel at all loose on the shank of the hook, he had better reject them. If properly tied, the body of the fly is as rigid as if it were welded to the steel. There should be no movement whatever even with quite a severe test.

The gut loop, also, should be perfectly immovable, for if it is not securely fastened, the chances for its being pulled out are very great.

The Shape of Hooks.

I confess I have never been able to see any great advantages which one kind has over others, although most anglers have, I know, very decided preferences. I have a well-stocked book which on examination shows that my flies are tied on almost all kinds of hooks, and it is not strange that this is the case, for they have at various times been bought in at least a dozen tackle stores in the States and in the Provinces. I once pinned my faith on the O'Shaughnessy or Limerick hooks, but found that the steel was tempered a trifle too highly, and after several accidents, I lost faith in them. I am told that the genuine Limericks are quite different and more reliable than those which are tempered in England, but the latter seem to be the only kind which reach this country; probably they cost less. The Kirby hook has also been a favorite with me, but now as I again examine my stock of flies, I believe that, if I were to be restricted to a single form, I should choose the Sproat, and in this probably most salmon anglers will agree with me.

Genio C. Scott, in his "Fishing in American Waters," devotes considerable space to this matter, and also quotes a communication which had been printed in the Field, which is of no little interest and importance. My limited space will permit me to offer only a short extract from it.

The writer says: "In seven consecutive days' fishing I hooked thirty-six fish, and of them landed twenty-seven. I was broken four times. Once my single gut, with which I always fish, was frayed by a heavy fish against sharp boulders, and three times the hooks were traitors—two were Limericks, and one was a Sproat. Three out of thirty-six is too large a proportion, and it is very desirable to reduce it. Even in fishing with single gut, the heaviest fish, if properly handled, barring the circumstances of snags or boulders, seldom succeed in breaking the line. But what handling will save a hook?"

"The only Sproat hook which has broken with me went at a point just below the barb. I think it is an admirable form of hook. It is less apt to break than the Limerick, both from its form, and because the pull is nearly in the direction of the point, whereas in the other line of pull forms an obtuse angle at the point."

Sea Trout Destroy Salmon Flies.

Good salmon flies are expensive, and one cannot be too careful in using them. I venture to say that sea trout ruin many more flies than do all the salmon one kills in an entire season.

They are constantly on the alert, and the moment one casts his fly they are after it. Now, the angler does not wish to stir up the pool by bothering with these small fry. They are good fighters, and when they weigh a pound or two they do not come to the landing net without a good deal of struggling and splashing—and one must acquire the knack of shaking them off the hook quickly in the water. This is an accomplishment which requires a little study and practice to obtain, but it is one that is quite essential.

If the trout is not hooked too badly, it may be freed by this method, and the water still remain undisturbed, but if it cannot be thus disposed of, the better plan is to quietly lead it away to the further edge of the pool and lift it out before it becomes very boisterous.

The numerous fine, sharp teeth of the sea trout work sad havoc with the flies, and after two or three have had one in their jaws, it is practically ruined, for the fibers of the feathers, in fact all the materials used in making the fly, are cut to pieces.

Varieties of Feathers, etc., Used in Making Salmon Flies.

All the regions of the earth are ransacked for materials for salmon flies; in fact, there is no other industry which derives its materials from such varied and widespread sources.

In addition to flosses, silks, mohairs, various wools, the hairs of seals, various bears, foxes, otters, hog's down, the hairs of different kinds of squirrels and many other animals, the feathers of such familiar birds as the domestic fowl, land rail, ducks of various kinds, bittern, snipe, woodcock, golden and other pheasants, grouse, etc., are used. A vast number of birds are also obtained in India—in fact, in all the countries of the East and in the tropics of both hemispheres, for making the deceitful lures.

I find in an old copy of the Field, which I have kept on file for many years, an exceedingly interesting communication on this subject from a correspondent in Bungalore, India. In describing the manner in which many of the rare birds are obtained, he says:

"Sometimes these jungle people offer for sale birds of brilliant plumage, as paroquets, golden orioles, honey birds, hoopoes, the blue thrush, kingfishers, florican, painted snipe, sand grouse, etc., and then is my time for securing a stock of feathers for fly-tying.

"A friend in India, a Scotchman, enlightened me a little on the subject of feathers. He resided in a very jungly station, and I wondered one evening to see him baiting his compound with strychnine. I wondered still more next morning to see two or three jackals and half a dozen of the common Indian brown vultures stretched on the ground. And he then explained that the brown-black back feathers of these great, ugly birds were held in the highest estimation by salmon fishers in Norway; that, in fact, there was no fly so killing as one made from their dingy feathers. Another friend sets great store on the brilliant blue feathers in the Indian roller's wing. But that is not surprising, because, when blue is required in the tying of a salmon fly, there is no feather brighter than this, not even the cerulean tint of the much-persecuted kingfisher himself."

Tenderfoot Luck.

While it is usually the most experienced and accomplished angler who is most successful, one who is familiar with not only every device known to the art, but is also up to all the tricks that the salmon has acquired, and there are many of them, the merest tyro is sometimes "high line" in a day's fishing. I once invited a friend to visit a salmon river of which I was one of the lessees. He had had considerable experience in the gentle art, particularly in trout and black bass fishing, and had once or twice enjoyed the early fishing at the Rangeleys. He joined me on the train, and as we sped along to our destination we discussed salmon fishing in all its bearings, and, of course, built some very high castles in the air.

On arriving at the farmhouse which was to be our headquarters, and unpacking our rods and things, I found, greatly to my surprise, that he had brought his heavy trolling rod along, and the multiplying reel that he used in trolling. I had supposed that he knew what to bring, and therefore had not given him any advice.

Well, to make a short story of it, we had the big canoe hauled up the river early on the next morning and the sun had hardly begun to shine above the tree tops on the eastern shore when we had embarked and started on our day's run of twelve miles down the river.

The salmon pools were seven or eight in number, and the water was high enough to permit us to slide down in the canoe from one to another.

I showed my friend as well as I could how to proceed, and giving him the best chances I waited developments. They came thick and fast. He had hardly begun casting on the upper pool when he rose a salmon; it was slow in coming to the fly, and he missed it, but he soon rose another, which he hooked. It was a lively fish of only about eight pounds weight, but it gave my friend all he could attend to. Darting about on the rocky shore and uttering now and then a yell of wild excitement, he played the fish to a finish. He was harsh with it, of course, for he had never been fast to such a fish before, and I expected every minute to see his old trolling rod go to pieces or his line foul around the crank of his multiplier.

But good luck attended him, and the fish was gaffed inside of a ten minutes' play, and a happier man I never saw than he was when the salmon was laid out on the shore before him. We congratulated him, of course, and, entering the canoe again, we started down the river for the next pool. We worked diligently all day, and when the lower pool was reached, we found that we had five salmon, of which my friend had killed three, and about forty pounds of elegant sea trout. Yes, the tyro often has the best success, and "tenderfoot luck" has now become a recognized quantity.

EDWARD A. SAMUELS.

[TO BE CONTINUED.]

The Tuna in Nova Scotia.

SYDNEY, Cape Breton, Canada, June 25.—*Editor Forest and Stream:* I have just learned certain facts concerning the possibilities for fine tuna fishing in Nova Scotia, so hasten to send them to you, and thus give any of your readers, who may so desire, a chance to try here for that great fish this season.

This information was given me by an old resident of Cape Breton, who lives near the mouth of the Myra River, about fifteen miles from the city of Sydney. In his younger days he spent a great deal of time on the water, so had an excellent opportunity to study the habits of the tuna, or, as it is termed here, albicore, horse mackerel, herring hog or jumper.

He has killed a number of them by harpooning, and even landed one on a hand line. No one, as yet, has tried to take one in these waters with rod and reel; but my friend, Mr. A. C. Ross, of Sydney, is sending to New York for a tuna outfit, and will make the attempt this summer.

The tuna follow the schools of herring, which come here early in July and remain till about the first of October. When the herring fishermen make a haul with a net, the tuna play around, often so close to the boats as to be struck by the oars, waiting for an opportunity to seize a stray fish, and occasionally rushing into the mass of herrings by tearing great holes in the netting.

The tuna are not only very plentiful, but are extremely voracious, so there would be no trouble in getting strikes when trolling for them in the vicinity of the herring schools.

The fishermen often throw out a herring just to see the albicore take it. I have not the slightest doubt that great sport could be had here on these fish for three months in the year, which is as long a tuna season as they have at Catalina Island.

Careful inquiries enable me to state that boating on the large bays and harbors of this coast during July and August is perfectly safe, and generally so in September, although during the latter month there is likely to be some wind. The summer climate is said to be delightful, quite cool and bracing, but still warm enough to be comfortable.

Experienced oarsmen can be obtained for reasonable compensation, and there are plenty of sound, seaworthy skiffs.

For from fifteen to twenty dollars per day, or perhaps considerably less by the week or month, a steam tug or naphtha launch, with her crew, can be hired. This could take care of several fishing boats. In my opinion, it would be well to have two oarsmen per boat, and to fish in couples, so, if one boat comes to grief in fighting with a tuna, the other boat could go to the rescue.

I would use 1,000 feet of the strongest tarpon line manufactured, with a reel amply large to hold it, and furnished with the usual leather brake and with one of Mills & Sons' patent handles set for a tension of at least fifteen pounds. Again, I would double the line for about twenty-five feet, so as not to lose the fish by breakage thereof when fighting at close quarters. The snell should be of extra strong wire, fully six feet long and provided with three swivels. The bait, of course, should be herring, of which an ample supply would always be readily procurable.

Several times in the last two or three years I have heard the statement that the reason nobody fishes for tuna on the coasts of New Brunswick, Nova Scotia and Newfoundland, is because of the stormy weather, great waves and consequent danger; so I have taken special pains to make inquiries concerning the weather that one is likely to encounter here during the summer, and have learned that for days at a time the waters of the large bays are as calm as a pond, and that there is no danger whatever to be apprehended. The fishermen often go far out to sea for the herrings, and no accident befalls them.

In my opinion, tuna fishing here during July, August and the early part of September would be no more perilous than it is at Catalina Island, and no more so than is tarpon fishing on the Gulf of Mexico.

I have investigated concerning the probability of finding tuna every day during the season, and have been told that wherever there are herring there are sure to be also these great fish, which prey upon them; and that large schools of herring can be found almost any day during the season. The first run comes early in July, and there is

a very large run also in September, while between these dates smaller schools keep coming in.

They appear first in Myra Bay, some fifteen or twenty miles south of Sydney, then work their way into Sydney Harbor, with the tuna following. They are very plentiful near Scatterie in September, but the bay there is not quite so well protected as is Myra Bay; beside, at that time the weather is more uncertain; nevertheless, as far as I can learn, the conditions there are by no means too unfavorable for the tuna fishing. One would not, though, be able to fish continuously day after day as he could in Myra Bay and Sydney Harbor during July and August.

My informant advises that for the Myra Bay fishing, sportsmen go by train from Sydney to Myra Gut, and then by boat a couple of miles to Round Island, and stay at the house of Mr. Geo. Dillon, where good boats and experienced boatmen can be procured. This fishing ground is well protected from all winds except those which come from the east.

Scatterie, fourteen miles from Myra Gut, is reached by small sailboat or occasional tug. The bay there is open only to the east, but it is larger than Myra Bay. The herring spawn in September at this place. Good boats and boatmen can be had there also, and it is probable that the lighthouse keeper would be pleased to take care of several sportsmen.

I think that, if the tuna fishing here be given a fair trial by some of your readers, and if they will take the trouble to write up their experiences for your columns, it would not require many years to make these waters as fashionable a resort for tuna fishermen as are those around Catalina Island.

Unfortunately for me, my work will take me to British Columbia this summer, so I cannot start the ball rolling, much as I might desire to do so, but next year, and for several succeeding years, it is possible that business will bring me here during the summer months; and, if it does, you may be sure that I shall come provided with the best obtainable outfit for undertaking the capture of the great albicore.

J. A. L. WADDELL.

Fish and Fishing.

Death of Dean Sage.

THE recent death of Dean Sage, of Albany, from apoplexy, in his fishing lodge at Camp Harmony, on the Ristigouche, has caused deep regret among anglers and the lovers of angling literature everywhere, and serves to recall the decease of other prominent fishermen under very similar circumstances. Col. Walker, M. P. for London, Ont., died a few years ago on the Grand River of Gaspe, having been suddenly stricken down while playing a salmon. The sudden death of Governor Russell, of Massachusetts, in the fishing camp of Mr. Dutton, of Boston, whose guest he was at the time on the Little Pabos River of Gaspe, is a still more recent event, and it is only about three years ago that Mr. Charles Hope, of Montreal, died in camp on the Moisie.

Next to his own home, it is natural that the angler should hold his fishing lodge in higher estimation than any other earthly resting place, and if the summons which comes in time to all of us should find us away from home, I know of no other locality whence the angler would rather be called to cross the bar than the camp by the side of his favorite stream. I have before me at this moment, a letter written by the daughter of a dear old friend who died in his Canadian fishing lodge nearly two years ago. The writer of the letter says: "Was it not beautiful that his last days could be spent in the place dearer to him than any other spot on earth?" May not the same thought prove a consolation to others similarly bereaved?

Camp Harmony, where the late Dean Sage expired, is most picturesquely situated at the juncture of the Upsalquitch and the Ristigouche, and at the time of his decease he was accompanied by a number of his dearest friends. Not more beautiful, certainly, than many of the river stretches of the Ristigouche and its tributaries is "Coquet's Lovely Water," of which Thomas Westwood has so feelingly written in the following lines from his "Dying Angler":

"In the blest land of heaven, they say,
Are rivers fair beholden;
That by God's throne flow murmuring on
O'er opal sands and golden.
My lot may be those streams to see;
But, O dear son and daughter!
Shall I ne'er cast a backward glance
To Coquet's lovely water?"

It is a somewhat strange coincidence that Mr. Sage's death should have been almost contemporaneous with the appearance of his latest book. Like many another writer upon his favorite sport, the deceased was an enthusiastic collector of angling literature, his library of works on fish and fishing having been one of the most interesting of private collections, since the presentation of that of Mr. John Bartlett to Harvard University. His book plate, in which a salmon holds the place of honor, illustrates the estimation in which he held the king of fresh-water fishes. Many anglers have longed to see that masterpiece of piscatorial literature, issued by Mr. Sage in 1888, and entitled "The Ristigouche and Its Salmon Fisheries," and have never seen it. Nor is this a matter for much surprise when it is recalled that the edition of this richly illustrated folio was limited to 105 copies, of which five went to public libraries, fifty were for private presentation, twenty-five were for sale in the United States, and twenty-five in Great Britain. I learn that the lamented author has utilized much of the text of this beautiful book in his contribution to the newly issued volume.

Killing Doubles.

I had quite a novel experience the other day in the Grand Discharge, while fishing from a canoe with Johnny Lessard as guide. The ouananiche were rising so freely to the fly that Lessard more than once urged me to take one of the flies from my line and fish with one only. We had rises at both flies almost as often as single fish, and the time required to exhaust a double rendered the guide somewhat impatient, until he saw that it was sport and not a big score that I was after. The lightness of the rod and tackle, and the roughness of the water in which the fish were rising, immediately below the Grande Chute of the Discharge, necessitated our canoe being paddled into the still water of some quiet bay before Lessard could net the fish when two large ones were struck together. Lessard is one of the most expert netters that I have yet encountered. He never, as in the case of trout, attempted to net the two ouananiche together, or to secure the lower one first. With the net in one hand, ready to be slipped under the lower fish, he waited his chance to pass the fingers of the other hand under the gills of the upper one whenever I had so far drowned him that the line would hold his head out of the water. Of course it was often necessary to make several attempts before succeeding in lifting both fish into the canoe together. But not once was a fish lost during the process of netting, despite the usually very dangerous character of the tactics employed by the guide. Very often he had barely darted his hand upon the upper fish when the lower one started off with a wild rush to the depths of the bay. So agile and ready was Lessard, however, that the moment there was the slightest strain upon the line from the lower fish, his hold was relaxed, and the upper one was dragged down along with it. Out of five doubles hooked in one day, only a single fish escaped, and in this case the hook was torn from its mouth. Never before had I seen the landing net so deftly and so successfully handled.

A Thirty-Pounder.

I picked up a newspaper the other day and saw a picture of a fish being taken out of the water of a Newfoundland stream in a landing net. Below was the legend "Landing a thirty-pounder." The landing net was of the ordinary size, and might in case of necessity serve for the purpose of lifting out a five or six pound fish. The fish in the photograph from which the picture was produced was a grilse a little over three pounds in weight. The typographer or engraver had evidently mistaken three for thirty, but the blunder was a disagreeable one for the writer of the illustrated story, whose name was printed at its foot, and the author of the error was certainly not an angler.

E. T. D. CHAMBERS.

CHICAGO AND THE WEST.

LAKE MINNETONKA, Minn., June 26.—Extremely heavy rains have prevailed over the Northwest for the past week, the days being fairly alternated, bright weather and driving rainstorms, the summer being thus far what is known as a cool season in this region. Lake Minnetonka, great sheet of water as it is, has times of high and low water. This year it is high, and the fishing is perhaps on that account better than usual. While one would not call this a sporting water, there are bass here, and the local market-fishers—let not Sam Fullerton think there are no market-fishers on Minnetonka—nearly always manage to get good strings of bass when they go out for themselves. When they are taking out a "sport" they are not always so successful.

Mr. Albert Bruning, a friend of mine, who is spending his summer here, manages by diligent fishing to take enough bass to supply the wants of a table of four or five persons. He casts frog in the shallow waters along the rush beds. He does not seem to get any good bass—that is to say, good to catch—though the small ones, a pound or so in weight, are the best to eat. The market-fishers and boatmen tell me that the bass have already gone out to deep water, and that they get most of their fish on the reefs. Minnetonka does not average a deep water, but the lay of the bars is useful to an angler after June 1.

The Fish Commission plants a lot of bass and wall-eyed pike annually in these waters, but the results seem on the whole disappointing. A few wall-eyes have been taken here this spring, but not enough to call this an established pike water. Indeed, this seems to have been a water better suited to pickerel (great northern pike) than any other fish. Even yet we run across these things every once in a while. I have taken them up to eight or ten pounds weight, and must say they put up a bit of a fight; but they are not popular among the ladies of our camp, who say they taste too much like raw cotton.

Crane Rookery.

Yesterday, in the course of a tour of the upper bays of Minnetonka, we passed close to the timbered island known as Crane Island, and could see hundreds of birds already assembling for the night roost. The tops of some of the dead trees were covered with them. An enterprising boy of our acquaintance says that there were many hundreds of these birds which nested on this island this spring, as well as a great many cormorants. Both these birds nest in the trees, and an enterprising photographer, interested in what they nowadays call the new school of natural history, will no doubt get some interesting studies here. The cranes are big blue herons. We often see them standing here and there in the shallows, and there are enough of them to account for many a fish in course of a season. Once in a while we see a loon out in one of the bays or hear its wild laugh before a storm. We had never known of a loon nesting here, but it is very likely they do occasionally.

Mississippi High.

The falls of St. Anthony, where good father Hennepin and his boatmen stole the votive offerings, buffalo hides, etc., which they found left there by the native tribesmen, have long been cut and filed and bound down by the dams of the ruthless millers of the Twin Cities, so that their early beauty is evanished. To-day they show a lot of water going over the many-faced dams, for the Father of Waters is on a bit of a rampage, and is rolling a great volume of stained water down the old channel way. I fear we shall not get that fly-fishing trip for bass yet a while, for the water is too high and the fish are scattered. We intended, on the advice of a Chicago friend, to get Henry Henning, or Louis Le Bras, boatmen at Alma, to take us out. Alma is a small place below Lake Pepin on the river. One cannot very well hire boats there, so it is well to remember the names of the above boatmen and fishermen, who, of course, have boats of their own. The best hotel to remember for Alma is the Burlington House.

Prescott, earlier mentioned in these columns as being worth notice for its fly-fishing for bass, is above Lake Pepin. It is coming up as a bass point, for the best of the fishing used to be below that lake, or more properly speaking, that expansion of the Mississippi River. Can it be that the protective efforts of the Fish Commission around Lake Pepin have resulted in its increase of bass higher up the river near the haunts of the market-fishermen?

Wet Weather and Bees.

Thousands of stands of bees have been lost this spring in the West. The rain had the flowers and blossoms clean of their pollen and sweets, so that the bees have literally starved to death. They have eaten all their stored honey, killed their drones, even killed their queen to cut down increase, but even so the famine has caught them sadly. The wet spring has also been bad for nesting game birds in the West.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New England Waters.

BOSTON, June 21.—June 17 was a holiday in Boston and Charlestown, and some of the local lovers of rod and reel took the day for trips to nearby waters. Others went down the harbor on deep-sea fishing trips. The weather was favorable and the fishing for cod and haddock good. Mr. W. G. Harding and Mr. H. W. Brandenburg, of the Boston Herald composing room, went up the Sudbury. They tried for bass with several sorts of bait, without success, till Mr. Harding tried a green-professor in connection with a small spoon. With this lure he landed several small bass. But the success of the day came to Mr. Brandenburg's hook, baited with a live frog, on which he took a handsome bass of four pounds. An Arlington party is back from Moosehead—Edwin F. Farmer and his niece, Miss Locke, of Arlington, Mass.; T. X. Fitzpatrick, of Cambridge; F. Perkins, of Wakefield, and Mr. and Mrs. George Fales, of Boston. The fishing was fairly good. They caught a laker up to nine pounds, and another of six and three-quarter pounds. About 100 brook trout of good size were secured, most of them on the fly. No small fish were saved. A big laker was sent home to a friend in Arlington; one who professes to be a fisherman and to have caught about every sort of fish that is found in the Maine waters. Immediately the fish was received it was put on exhibition for his friends to see, with the admonition to "Look at the splendid landlocked salmon my friend has sent me!" There were doubters about the identity of the fish, but the recipient was so sure that they had nothing to say. Immediately on the arrival home of the party, one of the leaders was interviewed as to that fish being a landlocked salmon. Behold it was only a laker, after all, but the receiver begged that it still be termed a salmon, lest his friends get hold of his mistake.

There comes a shad story from Bowdoinham Me., a noted shad town on the Kennebec. The first was caught in a weir, by Moses Sedgley, of that town, and weighed 10½ pounds, just after being taken from the water. People acquainted with the shad trade say that this is one of the largest on record.

Late Megantic Club letters tell of a salmon weighing five pounds, just caught at Chain-of-Ponds. It is certain that the fish was less than six years of age, for the first salmon put into those waters was a little less than six years ago. The rapid growth of landlocked salmon in waters where they are well fed is a source of satisfaction to fishculturists. J. O. Davis, stopping at the Megantic preserve, has recently taken a "square-tail" weighing 3½ pounds. At a recent meeting of the directors of the Megantic Corporation, action was taken looking toward the building at once of a new and larger fish hatchery.

The Maine Fish and Game Commissioners have been holding numerous hearings. Their last decisions have been in the direction of restricting fishing. One of their last and most important is: "It shall be unlawful for any one person, in any one day, from July 1, 1902, to take, catch, kill or carry away more than twenty-five white perch in all from any one or all of the following ponds: Mayfield Pond, in Mayfield Plantation; Kingsbury Pond, partly in Mayfield and partly in Kingsbury Plantations, in the county of Piscataquis; South Pond in Brighton Plantation, and Tomlinson, or Wyman Pond, in Somerset county. On petition to close Adams Pond, in Somerset county, to all fishing for a term of four years, the Commissioners decided adversely. The petitioners for all the above restrictions set forth that fishing is excessive, especially by local fishermen, and that the ponds are rapidly being "utterly fished out."

June 30.—The dirty brown flies that settled on the Maine fishing waters in such numbers a year ago, have been seen to some extent this year, though coming later, and not nearly as numerous. They have been noted on the waters of the eastern part of the State within a couple of weeks, and have been something of a nuisance to fishermen, but their numbers are very small, compared with a year ago. It will be remembered that a year ago the Rangeley waters were literally covered with them, almost in windrows, the last days of May and first of June. This year but very few have been seen on those waters. There has been better fishing at the Bangor salmon pool within a week, with some good ones taken. One day last week Edward Buck caught four salmon, the largest weighing twenty pounds. Mr. J. H. Peavy, another expert angler at the pool, also caught three salmon, the largest weighing twenty-one pounds. The white perch season on Maine waters opens July 1, and great fishing is promised. Fly-fishing is at its prime on Moosehead Lake, with many good catches being made by Boston and New York parties. Fly-fishing is also improving at the Rangeleys. Mrs. W. W. Coolidge, of Salem, Mass., stopping at the Rangeley Lake House, has made a record of one salmon of 3¼ pounds, one of 6¾ pounds, and a trout of 6¾ pounds. Mrs. E. S. Crocker, of Pittsfield, has secured a salmon of 3½ pounds. At Haines' Landing some good catches continue to be made. Charles Taylor, of Washington, D. C., has landed five salmon within a few days weighing 3½ to 5 pounds. Fly-fishing is beginning on the Big Lake. Mr. E. E. Thomas, of Boston, caught forty-nine fish in one afternoon last week, all of which he returned alive to the water. Mr. S. C. Dizer, of Boston, has lately returned from a trip to Grand Lake Stream. He found

the salmon fishing good. He landed doubles once, and lots of singles. Mr. Felix Taussig and friend, of Boston, are also back from the same waters. Mr. H. A. Pratt, of Middleboro, Mass., has added a salmon of 5½ pounds to his record from the pool. Mrs. J. H. Parker has caught a salmon of 3 pounds, one of 4½ pounds and a trout of 2½ pounds, all in an hour's fishing. Mr. Fred S. Potter, of New Bedford, Mass., has caught a salmon of 5 pounds. At Lake Auburn, Me., the salmon fishing has been better lately. M. S. Robinson, of Auburn, has taken four salmon, three of them weighing over 4 pounds each. The fourth one weighed 6½ pounds. The bass fishing at Cobbosseecontee is good. E. B. Wood, W. H. Maxwell, Cyrus C. Kimball and Frank H. Jenkins, of Boston, have lately returned from a trip there. They stopped at J. W. Emery's. They captured a great many bass and a few trout. The trip is an easy one, and of no great cost from Boston.

BOSTON, June 28.—Local lovers of rod and reel frequently make good scores on the near-by trout streams. Then their fellows wonder "where they got them." Generally the fortunate fishermen are silent. A few days ago Mr. Howard Wade and Mr. James Ritchie, both expert trout fishermen, made a voyage by rail to a stream beyond Bedford and near Lincoln. Their expectations were not great, but they were most happily disappointed. The day was all that could be desired. They left their best clothes at a farmhouse, with an agreement from the farmer that he would "get them to the train some way." They made an "elegant day's fishing," with 34 handsome trout as the result. Both were satisfied that they might have gone on a long trip and fared worse. Was the brook posted? Ask the farmer. If it was posted, or if the farmer owned the land around it, Mr. Wade and Mr. Ritchie know just how to treat a farmer as he should be treated. They believe the farmers have some rights in the brooks they own and the land about them, and they never have the least trouble.

At the Megantic preserve the fishing has been unusually good in the waters near the club house. Many "big ones" for those waters have lately been taken; running from 2 to 4 pounds. The last good one was taken by Mr. O. H. Thrall, of Hartford, Conn., a trout of 3½ pounds, from Spider River.

SPECIAL.

Moosehead Lake Notes.

THE big dam built at the East Outlet a year ago is doing its work in a manner that must be highly satisfactory to the gentlemen who engineered the scheme to flood Moosehead. The lake has been higher this year than ever before known, and is still taking to the woods. Five years hence summer visitors will see thousands of dead trees lining the lake shores, the result of high water, and the beauty of many a spot will have "gone up higher."

Operations at the new State hatchery at Squaw Brook have been very successful for a beginning, and a fine lot of young salmon and trout for restocking Moosehead are now on hand. Much larger results will be possible next year, now that the plant is in smooth working order.

Two more steam yachts are building at Greenville, to go into commission this season. Mr. Benjamin Van Brunt, of Sea Bright, N. J., has a 78-foot boat nearly ready for her trial trip. She is named Marguerite, and will be used by Mr. Van Brunt and family in cruising about the lake on fishing and hunting trips. Capt. H. P. Sawyer, of Greenville, was the builder.

W. A. St. Germaine, of Greenville, is building a 75-foot boat for Mr. W. H. Wesson, of Springfield, Mass., who spends several weeks each year at his camp, Birchcroft, on Moody Islands. The yacht will be launched in August.

A new steamboat wharf is in course of construction at Northeast Carry. Every spring for years past the thing called a wharf at he Carry has meandered off into the lake when the ice went out, scarce leaving a tail behind it, and a very slippery and wet tail at that. The new company that has acquired the property now intend to build a wharf that will "stay put" and meet all the requirements of the constantly growing traffic at this gateway of the wilderness.

Drs. Hatch, Boston physicians, are to establish a sanitarium on the west shore of the lake, near Squaw Mountain. Ground is now being cleared and plans for the building are being perfected.

The Maine Sportsmen's Association big day at Kineo will be July 8. There will be races by white and Indian guides, in canoes, on logs, and bateaux, beside the alluring and seductive greased pole contest. It is rumored that some agile State politicians are training for this event.

ED. HARLOW, Registered Guide No. 92.

GREENVILLE, Me.

Bonny River Trout and Game.

BONNY RIVER, N. B., June 17.—*Editor Forest and Stream:* Mr. Sullivan received one of your two cards the other day to report, so I thought I would let you hear a word from this place. I have been here from New York State two months as log inspector for the St. George Pulp and Paper Co. I have been traveling for years in Illinois, Wisconsin, Michigan, Massachusetts, Vermont and the Adirondack Mountains, but this is the best for speckled trout I ever saw. I have caught a good many myself, beside my ten-hour work, from one to ten a day, just fooling, so to speak. Sporting parties that I could give names from New York, Winsted, Conn., Sandy Hill, N. Y.; Boston, St. John, etc., have taken out great catches, 30 to 150 pounds. The fish run from one-quarter to four pounds. Fly or bait.

We have seen moose, deer, bear, foxes, partridges, rabbits and squirrels. It must be a grand place in the fall.

CHAS. B. HOWE.

"Fingerling Pool."

THE two illustrations, "Fingerling Pool" and the "Bridge of Sighs," printed with the sketch signed Split Bamboo, in our last issue, were by our mistake credited as photographs made by the writer of the article. They were taken by Mr. A. V. Porter, of Ellenville, N. Y., and Split Bamboo is solicitous that Mr. Porter should have the credit due for them.

The Aquarium's Sea Serpent.

THE New York Aquarium has received from Bermuda a strange sea creature which was sent by Prof. Chas. L. Bristol, of the New York University, who is now at Bermuda collecting for the Aquarium. The specimen is described as six feet in length, as large around as the thick portion of a well-developed arm, and striped with yellowish bands, which are against a background of brownish tint. It has a snake-like head, terminating in a bill, much resembling that of a turtle, has neither scales nor fins, and its general boa constrictor appearance is only dissipated by an eel-like tail.

L. D. Spencer, superintendent of the Aquarium, received a letter from Prof. Bristol, in which the capture is described.

"While fishing for specimens, seven miles northeast of Bermuda, in eleven fathoms of water, and only a short distance away, the water deepened quickly to two hundred fathoms, and the unknown creature was caught by three negroes," says the letter. "They had been fishing lazily and imbibing freely of the rum to be obtained on the island, when suddenly one of the lines refused to come up, and they thought it caught on a projection on the coral reef below. All efforts to clear it were of no avail, so they buoyed it, and came to the shore for a big 'jack lead' to send down the line, and break it from the reef, and incidentally for more rum.

"In a somewhat maudlin condition they returned to the fishing ground and found that even the 'jack lead' would not do the work, and finally one fellow succumbed to the effects of his efforts and the spirit within him. The remaining two gave a strong pull and a long pull, and something gave way.

"Up to the top came the mighty struggling burden, until one of the negroes glanced over the side and saw the head of the monster. 'The debble!' he cried, and collapsed. The remaining fisherman hauled in the prize with trepidation and quickly put it in the well and made the hatch fast and tight.

"When his companions recovered they rowed to shore and delivered to me what I believe is the greatest marine mystery of the day. They told their strange story, and there is no one on the island who ever saw such a creature or can give any idea as to its nature. I respectfully submit it for any one's opinion."

Wall-Eyed Pike in the Susquehanna.

AFTON, N. Y., June 20.—Owing to the continued rains and a record as regards cloudy dark days, the black bass season has opened very poor. They have not as yet left their beds. But that they are herein abundance, and that promise for future fishing is very bright, there is no doubt. To the credit of our local anglers I wish to say that not a single instance has come to my knowledge of a fish that has been disturbed while watching the beds. While the bass have given but poor sport to the angler's patience, not so with that grand fish, the wall-eyed pike. Fishing this morning for two hours we captured seven very fine fish of that species, and one bass. Never have they been so plentiful, or more eager to take the hook. That this is possible, all thanks are due the Fish Commission of the State of New York. Let every sportsman "take off his hat" to the work the State is doing for the angler. Five years ago the wall-eyed pike were almost unknown, but to-day in the upper Susquehanna the fishing is all that the most exacting fisherman could ask. A few days ago in the sporting page of one of New York city's daily newspapers was an article, saying that the pike was a thoroughly worthless fish to catch in regard to its fighting qualities. Now that this may be true in the waters where the writer was fishing we will not question. But if he will take the trouble to come to this place, and after hooking a five-pound pike to the end of a 150-foot line, when at last the fish, exhausted, lies in the boat at his feet, if he has not had a battle royal, and is satisfied that he has fought with the Terry McGovern of his class, then we will take back all we have said in praise. True, the wall-eye will often run with the line (and this is a trick of the family) until the inexperienced fisherman will think him lost, and the larger the fish the oftener will this trick be played. But the shrewd old rascal knows that often has he succeeded in getting a little slack and then throwing out the hook. Or when least expected will he throw all of his mighty strength against the line, either tearing out the hook, or smashing the tackle. But that the pike of this section is a fighter there is no question. And as a fish for the table, none is better. Each year the Fish Commission has furnished for this one place 500,000 fry of the wall-eyed pike. The only item of any kind whatever has been a charge of 25 cents for a message to meet the fish when delivered here. And we ask that the anglers will apply for what fry they can use next year and so keep this a home so well suited for pike.

A. T. ENGLAND.

A Rowing Medal.

DAMARISCOTTA, Me., June 16.—A few weeks ago there was picked up at the railroad station in Newcastle, Me., a gold medal, evidently a valuable one. It is an eagle with an anchor suspended from his talons, with a gold disk backed by a pair of oars. It is inscribed in blue enamel, "First Prize, Single Scull, Hudson," and engraved "Aug., 1874, 3-mile race." It is of great value to some one without doubt. Have you any records which will enable you to tell who won that splendid race, and enable me to return the badge to the owner? I have advertised it in my paper, the Herald, but it was probably dropped by some traveler who never sees the Herald.

G. W. SINGER.

The Preservation of Gut.

IN July, 1854, a cousin of mine was killed by poachers on the Derbyshire Wye. We still have his fly-book, and I inclose you some of the gut out of it. After a good soaking I think you will find it still amply strong enough to fish with. It has been kept in the fly-book all these years just as it was when last used, and no steps taken for its preservation, which seems to show that the use of glycerine or any preservative is entirely unnecessary. We also have the cast which he used the day he was killed, and which was taken off his rod, put in an envelope, and signed by the late Sir Henry Halford, "July 18, 1854." This also is perfectly strong still. We are a family of fly-fishers, and take no steps at all for the preservation of gut other than to soak it for twenty-four hours some time between the end of one season and the beginning of the next, and always find it perfectly sound, even when many years old.—Correspondence London Field.

Canine Diseases of the Eyes.

WHILE dogs are very subject to affections of the eyes, they are in most instances of a simple kind, arising from exposure to those causes of irritation to which the dog is particularly liable from the circumstance of the head being so near the ground. Injuries from thorns, or from the introduction of dust and dirt and other foreign matters, will naturally be followed by a certain amount of irritation of the mucous membrane lining the eyelids, attended with discharge of a watery character in the first instance, but assuming a muco-purulent condition as the disease goes on. It was particularly noticed as a somewhat curious circumstance that the obvious symptoms of irritation or inflammation of the mucous lining of the eyelids only induces the owner of the animal to inquire for a remedy, never, or very rarely, to make any attempt to ascertain the cause of the irritation. It is perfectly well known that a small particle of grit may remain attached to the under surface of the upper lid in spite of fomentations and lotions, which, under such circumstances do little or no good, whereas an examination of the eye would lead to the discovery of the offending body and its prompt removal. Even when an examination fails to lead to the discovery of any recognizable foreign body, its presence may, nevertheless, be suspected, and it is desirable to use a small quantity of pure olive oil, which may be applied to the inside of the eyelids by means of a camel hair pencil. This remedy as a preliminary step in the treatment will often find out and clear away particles of dust or grit which are too minute to be recognized by the unaided eye of the examiner.

A more acute form of irritation of the membrane lining the lids and covering the eyeball sometimes occurs, and is attributed to a cold. The symptoms which indicate this active for mof disease are redness of the conjunctival membrane, which is, of course, most apparent in the white of the eye, and the inner surfaces of the eyelids, which are in many cases kept nearly closed owing to the stimulating effect which is produced by the entrance of light. The acute stage of the disease is always followed by discharge as in the more simple forms, and the eyelids are constantly found to be glued together owing to the drying of the discharge when the animal is asleep. At the outset this more acute form of disease, which is often, but wrongly, called ophthalmia, may be due to constitutional disorder as well as to mechanical injury; indeed, such cases are more commonly than not purely symptomatic, and the recognition of this fact is most important, because treatment by means of the ordinary astringent lotions will only add to the mischief by tending to arrest a discharge which is the natural method for relief of the overcharged vessels of the mucous membrane. Sympathetic irritation of the visible mucous membrane is a well-known indication of febrile disorders affecting internal organs, and at one time even the village cow doctor went through a regular form of inspection, in the course of which he would lift up the edge of the animal's nostril, separate the eyelids, and turn up one or both of them, and slightly open the animal's mouth, and to some extent the same form of examination is in use at the present time. The febrile disorders which are most likely to give rise to discharge from the eyes of the dog are common cold, which it is not at all improbable that they catch occasion-

ally from their owners, and doubtless return the compliment from time to time, and distemper in its various forms.

Dogs which are kept as pets, and which lead a pampered life, suffer from catarrh in its most severe forms from even a very slight exposure to inclement weather. Distemper presumably only occurs, as a rule, once in an animal's life, but there is no doubt that the severe forms of catarrh very often do duty for it. Different forms of indigestion may be associated with irritation of the mucous membranes throughout, and the eyes will suffer in common with other parts. Rheumatism is also one of the maladies which are attended with inflammation, more or less pronounced, of the eyes, the eyeball itself and the lids participating in the disorder. It must, therefore, be obvious that the common expression "a discharge from the eyes" may refer to a variety of morbid conditions which are not to be counteracted by an application of a lotion to the eye. Perhaps a safe guide for the tyro in medicine may be found in the duration of the discharge. In any case of simple irritation from the presence of dirt or grit it may be fairly expected that the symptoms will cease very quickly upon the application of simple remedies, that is to say, after it has been clearly ascertained that there is no offending body adherent to the underneath part of the eyelid. The continuance of the discharge week after week, or even month after month, as some of our correspondents describe it, may certainly be taken to mean that something more than ordinary irritation of a simple kind is present, and under such circumstances the chances are that the common eye water, for example, three or four grains of boracic acid in an ounce of rose water, is not likely to do any good, and may possibly do some harm by checking the discharge, which is really critical in its character. The proper course in such cases would be to consult an expert in diseases of the dog, who will most probably be able to find some constitutional cause to account for what has been looked upon as a local disorder.

There is one form of disease which is attended with considerable discharge from the eyes undoubtedly possessing contagious qualities. This affection is known as contagious ophthalmia. The oculist is perfectly well aware that an outbreak of such a malady in a school, for example, is likely to be attended with remarkable rapidity of its spreading; even the use of a towel which has been employed by a sufferer from the disorder is sufficient to convey the disease. Perhaps the most marked illustration of this variety of the affection in the dog is that which is associated with distemper, and it may be noted here that by the term ophthalmia is meant the disease which implicates the eyeball itself. More or less opacity of the cornea is one of the symptoms of ophthalmia either of the simple and contagious variety, and, in the case of the dog affected with the ophthalmia of distemper, the indications are of a most marked character. The conjunctival membrane is highly injected and reddened, the cornea becomes opaque early in the disease, and very frequently a small spot of ulceration appears in the center of it, which rapidly extends, and in many cases penetrates the cornea completely, allowing the fluid in the anterior chamber of the eye to escape. A profuse discharge of a purulent character continues during the whole course of the disease, and one of the annoying features of the complaint is the gluing together of the eyelids, which can only be separated by very careful and continued fomentations of warm water or, what is better, warm milk. One very remarkable feature of the ophthalmia of distemper is the tendency which it exhibits to rapid repair of the damaged structures. The eye, which to all appearances is utterly lost, gradually during the convalescent stage of distemper recovers its normal appearance even without the use of any local remedies; in fact, it was a maxim with the late Edward Mayhew, who was a great authority on the treatment of diseases of the dog, that the least interference with the eye, even the attempt to remove the adherent discharge by fomentation, was likely to do more harm than good, and that nature, left entirely unaided, would manage the restorative work quite perfectly. The modern veterinarian does not, as a rule, share this view, but applies fomentation and lotions during the course of the disease, apparently with average success.—London Field.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

JULY.

1-3. Bridgeport, trial races for selection of representative for Seawanhaka cup contest, Bridgeport, Long Island Sound.
4. City of Boston, M. Y. R., open, City Point, Boston Harbor.
4. Beverly, open sweepstakes, Monument Beach, Buzzard's Bay.
4. Larchmont, annual, Larchmont, Long Island Sound.
4. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
4. Seanwanhaka Corinthian, club, Oyster Bay, L. I. Sound.
4. Corinthian, open, Marblehead, Massachusetts Bay.
4. Columbia, annual open regatta, Chicago, Lake Michigan.
4. Milwaukee, club regatta, Milwaukee, Lake Michigan.
4. Duxbury, club, Duxbury, Massachusetts Bay
4. New Bedford, club, cruise, Buzzard's Bay.
4. Kennebec, club cruise, Bath, Maine.
4. Jamaica Bay Y. R. A., open, Jamaica Bay.
4-5. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
4-5. Eastern, open, Marblehead, Massachusetts Bay.
4-7. Manchester, Quincy Y. C. challenge cup races, West Manchester, Massachusetts Bay.
5. Winthrop, club, Winthrop, Boston Harbor.
5. Royal Canadian, 30ft. class, Toronto.
5. Penataquit-Corinthian, summer regatta, Lighthouse cup, Bay Shore.
5. Mosquito Fleet, M. Y. R. A., open, City Point, Boston Harbor.
5. Seawanhaka Corinthian, club race for Centre Island Cup, Oyster Bay, Long Island Sound.
5 Beverly, first Corinthian, Mon. Beach, Buzzard's Bay.
5. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
5. Hull-Massachusetts,, club, Hull, Boston Harbor.
5-11. Atlantic, annual cruise, rendezvous Larchmont, L. I. Sound.
10-12. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
10-12. New York, Newport series, Newport.
10-12-14. Newport Y. R. A., open, Newport.
12. Duxbury, club, Duxbury, Massachusetts Bay.
12. Winthrop, club, Winthrop, Boston Harbor.
12. Hull-Massachusetts, club, Hull, Boston Harbor.
12. Corinthian, club championship, Marblehead, Mass. Bay.
12. Beverly, second Corinthian, Mon. Beach, Buzzard's Bay.
12. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
12. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
12. Squantum, M. Y. R. A., open, Quincy Bay, Boston Harbor.
12. Royal Canadian, 25ft. class, Toronto.
12. Kennebec, club, Bath, Maine.
12. Canarsie, J. B. Y. R. A., open, Jamaica Bay.
12. South Boston, club handicap, City Point, Boston Harbor.
14-16. Newport Y. R. A., Newport.
19. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
19. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
19. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
19. South Boston, club handicap, City Point, Boston Harbor.
19. Stamford Corinthian, Y. R. A. of L. I. S., open. Stamford, Long Island Sound.
19. Duxbury, club, Duxbury, Massachusetts Bay.
19. Winthrop, club, Winthrop, Boston Harbor.
19. Corinthian, club championship, Marblehead, Mass. Bay.
19. Beverly, club, Monument Beach, Buzzard's Bay.
19. Manhasset Bay, club, Port Washington, Long Island Sound.
19-26. Larchmont, race week, Larchmont, Long Island Sound.
19-31. Royal Canadian, L. Y. R. A. circuit, Toronto.
21-26. Interlake Y. A., an. regatta, Put-in-Bay, Toledo, Lake Erie.
24-26. Hull-Massachusetts, midsummer series, Y. R. A., open, Hull, Boston Harbor.
26. Quincy, club, Quincy Bay, Boston Harbor.
26. Winthrop, club, Winthrop, Boston Harbor.
26. Duxbury, club, Duxbury, Massachusetts Bay,
26 to Aug. 2. Corinthian, annual cruise, from Delaware River to Long Island Sound.
26. Beverly, third Cor., Mon. Beach, Buzzard's Bay.
26. Manhasset Bay, club, Port Washington, Long Island Sound.
26. Beverly, third Corinthian, Monument Beach, Buzzard's Bay.
26. Mosquito Fleet, club, City Point, Boston Harbor.
26. Atlantic, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
26. Corinthian, club championship, Marblehead, Mass. Bay.
26. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
26. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
26. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
28. Wollaston, M. Y. R. A., open, Quincy Bay, Boston Harbor.
28-29. Boston Y. R. A., open, Marblehead, Massachusetts Bay.
29, 31 and Aug. 2. Kennebec, commodore's cup series, Bath, Me.
30-31. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.

AUGUST.

1. Manhasset Bay, race for 18ft. one-design classes, Port Washington, Long Island Sound.
1. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.
2. New Bedford, club, South Dartmouth.
2. Indian Harbor, club, Greenwich, L. I. Sound.
2. Royal Canadian, dinghy, 16ft. to 25ft. classes, Toronto.
2. Penataquit-Corinthian, open regatta, Bay Shore.
2. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Duxbury, club, Duxbury, Massachusetts Bay.
2. Winthrop, club, Winthrop, Boston Harbor.
2. Corinthian, annual, open, Marblehead, Massachusetts Bay.
2. Columbia, race to Macatawa Bay, Lake Michigan.
2. Manhassett, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
2. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
2 Brooklyn, Y. R. A. of Gravesend Bay, Sea Gate, N. Y. Bay.
4-5. Manchester, M. Y. R. A., open, West Manchester, Mass. Bay.
5. New York, cruise, rendezvous at New London.
6. New York, cruise, run to Newport.
5-6. Misery Island, open, Salem Bay, Massachusetts Bay.
7. New York, cruise, Astor cup races.
7. East Gloucester, M. Y. R. A., open, Gloucester, Mass. Bay.
7-9. Seawanhaka cup races, Dorval, Lake St. Louis, Canada, between representatives of Royal St. Lawrence Y. C. and Bridgeport Y. C.
7-9. Macatawa Bay, Lake Michigan, Y. A. open races.
8-9. Annisquam, M. Y. R. A., open, Annisquam, Mass. Bay.
9. Hempstead, Y. R. A. of L. I. S., open, Glen Cove, L. I. Sound.
9. Northport, Y. R. A. of L. I. S., open, Northport, L. I. Sound.
9. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
9. Knickerbocker, annual cruise, rendezvous College Point, L. I. Sound.
9. Kennebec, open, Bath, Maine.
9. New Bedford, club, South Dartmouth.
9. Quincy, club, Quincy Bay, Boston Harbor.
9. Royal Canadian, first class, Toronto.
9. South Boston, sailing tender race, City Point, Boston Harbor.
9. Duxbury, club, Duxbury, Massachusetts Bay.
9. Beverly-Van Rensselaer cup race, Marion, Buzzard's Bay.
9. Winthrop, club, Winthrop, Boston Harbor.
9. Wollaston, club, Quincy Bay, Boston Harbor.
11. American, M. Y. R. A., open, Newburyport, Massachusetts Bay.
15. Penataquit-Corinthian, annual cruise, Bay Shore.
16. Royal Canadian, 30ft. class, Toronto.
16. Shelter Island, open regatta, Shelter Island Heights.
16. Horseshoe Harbor, Y. R. A. of L. I. S., open, Larchmont, Long Island Sound.
16. Huntington, Y.R.A. of L. I. S., open, Huntington, L. I. Sound.
16. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
16. Hull-Massachusetts, club, Hull, Boston Harbor.
16. Seawanhaka Corinthian, club, race for Centre Island cup, Oyster Bay, Long Island Sound.
16. Duxbury, club, Duxbury, Massachusetts Bay.
16. Winthrop, club, Winthrop, Boston Harbor.
16. Beverly, fourth Corinthian, Monument Beach, Buzzard's Bay.
16. Corinthian, club championship, Marblehead, Mass. Bay.
21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound.
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor.
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

SEPTEMBER.

1. Indian Harbor, club, Greenwich, L. I. Sound.
1. Quincy, club, Quincy Bay, Boston Harbor.
1. Corinthian, club, Essington, Delaware River.
1. Corinthian, annual cruise, Marblehead, Massachusetts Bay.
1. Larchmont, fall regatta, Larchmont, Long Island Sound.
1. Sachem's Head, Y. R. A. of L. I. S., open, Guilford, L. I. Sound.
1. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
1. Lynn, M. Y. R. A., open, Nahant, Massachusetts Bay.
1. Beverly, open, Monument Beach, Buzzard's Bay.
1 Royal Canadian, first class, Lorne cup cruising race, Toronto.
1 Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Penataquit-Corinthian, fall regatta, Bay Shore
4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.
6. Beverly, open, Mattapoisett, Buzzard's Bay.
6. Wollaston, club, Quincy Bay, Boston Harbor.
6. Quincy, M. Y. R. A., open, Quincy, Boston Harbor.
6. South Boston, sailing tender race, City Point, Boston Harbor.
6. New York C. C., Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
6. Penataquit-Corinthian, Lighthouse cup, Bay shore.
8. Eastern, open, Marblehead, Massachusetts Bay.
11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
27. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

New York Y. C.

GLEN COVE CUPS.

Tuesday, June 24.

THE annual New York Y. C. races for the Glen Cove cups were sailed on Tuesday, June 24. Fifteen craft started, and the winners in the different classes were Vigilant, Elmina, Mineola, Hester, Humma and Dorwina. The schooner Amorita was not timed, and the class M sloop Cymbra did not finish.

Had there been as much breeze as sunshine, conditions would have been ideal. There was wind enough, however, to enable the larger craft to cover the fifteen-mile triangle twice. The smaller boats in classes L and M, which had to go over the journey but once, ended the race in good season.

The wind was fickle and shifting. At 11:40 A. M. the time of the starting signal for classes J, K, L and M, it was blowing from the northwest. This gave the craft a reach with booms to starboard to the first mark off Lloyd's Point, a distance of six miles from the start.

The yawls Ailsa and Vigilant and the 70-footers Mineola and Yankee, however, preferred to run close up into the wind and set spinnakers for the last part of the journey to the mark.

The starting signal for the yawls and 70-footers was sounded at 11:45. Ailsa slipped over the line 19s. ahead of Vigilant. The new hollow spar and rig of the latter appeared to like the light airs. Regardless of a soft spot just before the first mark, which greatly handicapped all of the starters, the old defender of 1893 rounded the mark 3m. and 50s. ahead of her rival.

With the wind gone for the moment, this lead was of uttermost advantage. Drifting over toward the end of her four-mile leg to a buoy off Great Captain's Island Light, the converted Herreshoff creation got the first of the breeze in its journey toward the south, while the other starters were almost becalmed off Lloyd's Point.

The wind gradually veered around into the westward and finally landed in the southwest, where it remained during the last half of the contest. The change to the extreme southern point came at an inopportune time for most of the boats.

Just as Vigilant rounded the home mark, at the end of the first round of the triangular course, the remainder of the fleet were making down from Great Captain's Island Light on the five-mile leg. Then the wind went into the southwest. This headed off all of the other boats and gave Vigilant a fair spinnaker run to Lloyd's Point buoy.

Vigilant simply walked away. She finished the race 24m. and 32s. ahead of Mineola, the second boat to complete the contest, and was 38m. and 1s. ahead of Ailsa. Counting the 19s. advantage Ailsa had on the start, and a time allowance of 2m. and 3s. conceded her by Vigilant,

the latter beat her Fife-built rival by 36m. and 17s. corrected time. Throughout the contest luck favored Vigilant and was against Ailsa.

In the schooner class, Amorita, now owned by T. M. McKee, of Pittsburg, Pa., made her first appearance of the year. From a good start nearly a minute ahead of Elmina and Muriel, she was left almost hull down before the race was over. In 7m. from start Elmina had luffed by her to windward and at no time thereafter was Amorita a contender.

Muriel did no luffing, but kept straight on her course, and was a minute ahead of Elmina around the first mark. Elmina forged to the front on the next two legs, and was 5m. in the lead at the home mark, ending the first round.

On the next tour of the course the sister schooners sailed a fine contest. Muriel picked up well and was beaten by only 1m. and 31s. There were no allowances except in the yawl class.

The 70-footer Yankee and Mineola had it nip and tuck all day. They crossed the starting line exactly abreast, though Barr had worked the Belmont boat into windward position. Mineola led around the first mark by 55s.

Over on the Connecticut shore, Yankee stood in further, got the first of the breeze and rounded the home mark leading by 1m. and 25s. Mineola again slipped by on the spinnaker run to the first mark, and rounded this buoy 28s. ahead. Gradually increasing the advantage, she won out by 3m. and 32s.

In class I, for imported sloops, Hester led Eelin by 9m. and 58s., and Isolde by 10m. and 55s. The latter two, it is said, had a match race on, and therefore paid but little attention to Hester.

In class J the Herreshoff flyer, Humma, gave Syce a bad beating, winning out by 8m. and 54s. Syce had trouble with her gaff topsail during the early stages of the contest.

In class L Dorwina handily defeated Effort by 8m. and 29s.

The new 60-raters, Weetamoe, George M. Pynchon, and Neola, Henry F. Lippitt, were entered in the Glen Cove cup races in hopes of being ready for the struggle. They were not in trim to start. The summaries follow:

Schooners—Class D.	Start.	Finish.	Elapsed.
Elmina, F. F. Brewster	11 52 00	5 26 44	5 34 44
Muriel, Charles Smithers	11 52 00	5 28 15	5 36 15
Amorita, T. M. McKee	Not timed.		
Yawls—Class G.			
Vigilant, Percy Chubb	11 45 39	4 53 22	5 07 43
*Ailsa, H. S. Redmond	11 45 20	5 31 23	5 46 03
Sloops—Class H.			
Mineola, August Belmont	11 46 15	5 17 54	5 31 39
Yankee, J. R. Maxwell	11 46 15	5 21 26	5 35 11
Sloops—Class I.			
Hester, C. H. Dodge	11 47 00	6 20 35	6 33 35
Isolde, F. M. Hoyt	11 45 18	6 29 48	6 44 30
Eelin, F. J. Rodewald	11 47 00	6 30 33	6 43 33
Sloops—Class J.			
Humma, H. B. Duryea	11 40 57	6 10 05	6 29 08
Syce, C. F. Judson	11 41 50	6 23 05	6 38 02
Sloops—Class L.			
Dorwina, C. V. Brokaw	11 41 36	3 16 33	3 34 55
Effort, F. M. Smith	11 41 37	3 25 21	3 43 44
Sloops—Class M.			
Cymbra, F. C. Henderson	Withdrew.		

*Vigilant concedes Ailsa 2m. 3s. time allowance. This makes the corrected time of Ailsa 5:44:00.

The winners were Elmina, Vigilant, Mineola, Hester, Humma and Dorwina.

Yacht Racing Association of Gravesend Bay.

Saturday, June 28.

THE third regatta of the Yacht Racing Association of Gravesend Bay, held on June 28, under the auspices of the New York C. C., was by far the best of the season. Twenty-five craft started; two were disqualified, and one withdrew. The winners in the different classes were Sunol, Caribou, Cockatoo, Wraith, Stinger and Martha M. Vivian scored a sail over.

The preparatory signal was sounded at 3 o'clock, and the different classes were sent away at three-minute intervals. The wind, at the start, was blowing a little east of south, but gradually worked into the southwest ere the race was ended. The craft were sent over the course in an opposite direction from usual, leaving all marks on the port hand.

Class M and N boats went out to West Bank Light and return, covering the course twice. They had but little windward work to do, close and broad reaches being in order.

The wind afforded the smaller boats, which sail the inside courses, a good run to the first mark of the Marine and Field Club, a reach to Fort Hamilton buoy, long and short windward legs to the Atlantic Y. C. mark, and a broad reach home.

Among the larger boats going out to West Bank Light the class N craft Gwendolin did well. She started the contest, however, on the wrong side of the line and was eventually disqualified. Sunol and Bonito came down for the home mark at the end of the first round almost as one boat, turning the buoy exactly abreast.

During the latter part of the second tour the wind veered into the southwest. At this time many of the smaller craft had stood over toward the southerly side of the bay in hopes of a long, close-hauled board to Atlantic Y. C. mark. Others had kept out more. As is often the case, the boats catching the first of the new breeze were put so much nearer the mark.

Class P craft sailed a grand race throughout. At the finish, with spinnakers set and everything drawing, they came down for the line separated only by seconds. Cockatoo slipped in ahead by 5s. Song and Dance was next leading Karma by 15s.

Wraith got a good start in class Q and was never headed. She was the first of the fleet to finish the race and beat out Trouble, her nearest class competitor, by 2m. 47s.

By a lucky shift in the breeze, the Marine and Field boat Stinger passed Kelpie on the second round and won out by 20s. Stinger scored a leg on a cup offered by President Theodore L. Cuyler, of the organization, from which the little fellows hail, to the winner of the best two out of three races. It was the first contest for the trophy.

FILIBUSTER—SEAWANHAKA CUP TRIAL BOAT.
Designed by W. Starling Burgess. Owned by Frank Crowninshield. Photo by Willard Jackson, Marblehead.

Catboat Martha M. led Rascal at the finish by 1m. and 4s. Class R boat, Opossum, was disqualified for starting out of her class, and the Marine and Field boat Vixen withdrew after the first round.

Among the larger craft, Sunol, well handled, headed Bonito by 2m. and 17s. Vivian and Gwendolin made a fine finish, the latter crossing the line by 2s. ahead.

Class N boat Caribou luffed by Squaw just off Sea Gate, on the last round, and won out by 40s. Indian, a newcomer in class N, started late. Bronco sailed the race without her centerboard.

The next Association regatta occurs on July 12, under the auspices of the Marine and Field Club. The summaries follow:

Sloops—Class M—Start, 3:03.	Finish.	Elapsed.
Sunol, John Abbey	6 12 45	3 09 45
Bonito, Haviland Brothers	6 15 02	3 12 02
Kangaroo, C. H. Humphreys	Not timed.	
Sloops—Class N—Start, 3:06.		
Caribou, J. E. Nickolson	6 22 25	3 16 25
Squaw, H. J. Heath	6 23 05	3 17 05
Indian, Menton Brothers	7 14 45	4 08 45
Class N—Special—Start, 3:06.		
Vivian, S. E. Vernon	6 07 52	3 01 52
Gwendolin, H. G. S. Nobles	Disqualified.	
Sloops—Class P—Start, 3:09.		
Cockatoo, Hendon Chubb	4 40 10	1 31 10
Song and Dance, E. F. Luckenbach	4 40 15	1 31 15
Karma, J. C. Erskine	4 40 30	1 31 30
*Streak, Spiedel Brothers	4 44 55	1 35 55

*Streak gets 28s. time allowance. This makes her corrected time 1.35.27.

Sloops—Class Q—Start, 3:12.		
Wraith, Calvin Tomkins	4 39 15	1 27 15
Trouble, W. H. Childs	4 42 02	1 30 02
Bronco, F. C. Moore	4 47 05	1 35 05
Wink, W. A. Barstow	4 51 20	1 48 20
Flying Fish, I. M. Dean	4 58 40	1 46 40
Sloops—Class R—Start, 3:15.		
Opossum, R. P. Doremus	Disqualified.	
Marine and Field Class—Start, 3:18.		
Stinger, A. P. Clapp	4 51 10	1 33 10
Kelpie, W. K. Brown	4 51 30	1 33 30
Jig-a-Jig, W. A. Hutcheson	4 57 50	1 39 50
Quinque, L. H. Smith	4 57 58	1 39 58
Vixen, Mahoney & Chandler	Withdrew.	
Catboats—Class V—Start, 3:24.		
Martha M., Richard Moore	4 57 52	1 33 52
Rascal, D. G. Whitlock	4 58 56	1 34 56

The winners were Sunol, Caribou, Cockatoo, Wraith, Stinger and Martha M. Vivian gets a sail over.

Points on Y. R. A. G. B. series to date—Mariquita, 5; Bonito, 18; Sunol, 18; Kangaroo, 12; Vivian, 10; Caribou, 25; Squaw, 16; Karma, 16; Song and Dance, 26; Cockatoo, 24; Opossum, 10; Trouble, 16; Wraith, 16; Bronco, 10; Wink, 4; Spots, 2; Flying Fish, 2; Streak, 4; Kelpie, 28; Stinger, 26; Quinque, 4; Jig-a-Jig, 6; Martha M., 20; Rascal, 16; Indian, 6.

YACHTING NEWS NOTES.

Mr. Chas. M. Hall's cutter yacht Chispa, 56ft. 6in. over all, and 13ft. 8in. beam, has been chartered through the agency of Gardner & Cox to Mr. H. Radclyffe Roberts, of Philadelphia.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, L. I.

June 26, 27, 28.

THE three days of racing at the Seawanhaka-Corinthian Y. C. began on Thursday, June 26. The event was marked by a strong wind blowing from the northwest which made reefs advisable and caused a number of accidents. Hobo, an American Y. C. 21-footer, belonging to Trenor L. Park, at the begining of the second round of the race, carried away her mast about two-thrids distance from the deck and had to be towed in. She was then leading her opponent, Howdy, Stuyvesant Wainwright, owner, by nearly half a minute.

In the class for Manhasset raceabout, Arizona, champion of the Yacht Association of Long Island Sountd for 1901, belonging to G. A. Corry, broke her gaff, and the race went to Lambkin, owned by S. V. Roach.

Nearly all of the star yachts were entered for the contest, but few of them came to the line. Vigilant and Ailsa were undergoing repairs at City Island, and the schooner Elmina had gone to New London. Barr sailed the Mineola to a walk-over, and did the 23½ miles in the fast time of 2h. 11m. and 35s. She went twice around a triangle of 11¾ miles, starting from a line near Center Island buoy.

Twelve craft in all started the contest. Alerion and Mimosa tried for honors in the class for 30-footers, and the former was victorious. Mimosa had a good lead at the end of the first round, but was eventually beaten out at the finish by 28 seconds.

Gowan, Marcia and Heron competed in the race for Seawanhaka knockabouts. Marcia led on the first round but Gowan passed her and won out.

Two of the New Rochelle one-design class started. Knave, belonging to W. N. Bavier, gave Deuce, the property of L. D. Huntington, Jr., a bad beating.

The 30-footers covered a course aggregating 16½ miles. The 21-footers and knockabouts had a 13½ course to travel, while the smaller classes were allotted a distance of 8¼ miles. The summaries follow:

Sloops—Class H—Start, 12:45.	Finish.	Elapsed.
Mineola, August Belmont	2 56 35	2 11 35
Sloops—ClassN—Start, 1:00.		
Alerion, A. H. Alker	3 50 57	2 50 57
Mimosa, Trenor L. Park	3 51 25	2 51 25
American Y. C. 21ft. Class—Start, 1:10.		
Howdy, Stuyvesant Wainwright	3 52 35	2 42 35
Hobo, Trenor L. Park	Disabled.	
Seawanhaka Knockabouts—Start, 1:15.		
Gowan, F. G. Stewart	3 57 55	2 42 55
Marcia, Johnston de Forest	3 58 21	2 43 21
Heron, F. R. Coudert, Jr.	3 58 36	2 43 36
Manhasset Bay Raceabouts—Start, 1:20.		
Lambkin, S. V. Roach	2 49 00	1 29 00
Arizona, G. A. Corry	Disabled.	
New Rochelle 18ft. Class—Start, 1:20.		
Knave, W. N. Bavier	2 50 15	1 30 15
Deuce, L. D. Huntington, Jr.	2 59 23	1 39 23

The winners were: Alerion, Howdy, Gowan, Lambkin and Knave. Mineola scored a sail over.

Conditions on Friday were a bit better. The breeze still hovered between north and west and blew at times as high as 18 miles an hour. Most of the craft were

reefed. The courses were covered in directly opposite way from that of the first day. This gave the boats a reach to the first mark, some little windward work on the second and a reach home.

Twenty-two craft went over the line for the start. The 70-footer, Mineola, and the schooner Muriel, covered the longer course of 23½ miles, and were credited with sail overs. Challenge, a new class L boat, started but did not finish. She belongs to Wallace T. Foote, Jr., of Port Henry, N. Y., and is 57ft. 6 in. over all and about 36ft. on the water line.

In the class for 30-footers, Mimosa reversed the decision of the Thursday and won out by 1m. and 27s. This advantage was gained on a run when both carried spinnakers, just before the finish.

Whistlewing, H. M. Crane's new one, was victorious in the raceabout class, just beating out Mavis, formerly Merry Wing, which led during the first round of the 6¾-mile triangular course. The American Y. C.'s 21-footer, Howdy, deprived of a competitor by the accident to Hobo on Thursday, entered this class.

Four Seawanhaka knockabouts started, the honors going to W. A. Stewart's Bobs, which led from start to finish. Chipmunk sailed the wrong course in the race for class R boats, and the contest went to Cricket.

Arizona, with her gaff repaired from the damage of Thursday, suffered defeat in the class for Manhasset Bay raceabouts—Lambkin winning. Three of the New Rochelle one-design class started, Knave scoring her second consecutive victory of the series.

Fidget, an 18-footer belonging to Edwin Gould, of the American Y. C., and Houri, J. H. Esser's 21-footer, scored sail overs. The summaries follow:

Sloops—Class H—Start, 12:10.

	Finish.	Elapsed.
Mineola, August Belmont	2 37 15	2 27 15

Schooners—Class D—Start, 12:15.

Muriel, Charles Smithers	3 09 48	2 54 48

Sloops—Class L—Start, 12:30.

Challenge, Wallace T. Foote	Withdrew.

Sloops—Class N—Start, 12:35.

Mimosa, Trenor L. Park	3 36 47	2 01 47
Alerion, A. H. Alker	3 38 14	2 03 14

Sloops—Class P—Start, 12:35.

Houri, J. H. Esser	2 34 00	1 59 00

Raceabouts—Start, 12:45.

Whistlewing, H. M. Crane	3 16 43	2 31 43
Mavis, G. L. Pirie	3 17 21	2 32 21
Howdy, Stuyvesant Wainwright	3 19 55	2 34 55
Scamp, A. H. Pirie		Withdrew.

Seawanhaka Knockabouts—Start, 12:50.

Bobs, W. A. W. Stewart	3 41 39	2 51 39
Lucille, H. H. Landon	3 42 50	2 52 50
Marcia, Johnston de Forest	3 42 12	2 52 12
Mistral, E. I. Low	3 46 36	2 56 36

Sloops—Class R—Start, 12:55.

Cricket, H. C. Pryer	2 57 34	2 02 34
Chipmunk, T. S. Young, Jr.		Mistook course.

American Y. C. 18ft. Class—Start, 1:00.

Fidget, Edwin Gould	3 24 45	2 24 45

Manhasset Bay Raceabouts—Start, 1:00.

Lambkin, S. V. Roach	2 54 14	1 54 14
Arizona, G. A. Corry	2 56 57	1 56 57

New Rochelle 18ft. Class—Start, 1:00.

Knave, W. N. Bavier	2 54 33	1 54 33
Deuce, L. D. Huntington, Jr.	3 02 42	2 02 42
Caper, P. L. Howard		Sailed wrong course.

The winners were the Mimosa, Whistlewing, Bobs, Cricket, Lambkin and Knave. Mineola, Muriel, Houri and Fidget won sailover prizes.

Forty craft started in the race of Saturday. It was the occasion of the thirty-second annual Corinthian contest and proved to be the best regatta held on Long Island Sound this year. The Leland Challenge Cup going to the first club knockabout finishing and a series prize for the boat of the same type scoring the greatest number of points in the three days' racing, was won by F. G. Stewart's Gowan.

A brilliant array of stellar racing lights competed. The winners in the different classes were: Vigilant, Elmina, Mineola, Dorwina, Empress, Mimosa, Adelaide, Jolly Roger, Gowan, Cricket, Lambkin, Knave and Esperanza. Neola, Gazabo and Syce scored sailovers.

Interest centered in the race between the 90ft. yawls, Vigilant and Ailsa. Both were fresh from the drydock, and it was rumored that some changes had been made on Ailsa which would be beneficial. The breeze was west by south and light. These conditions suited Vigilant and she gradually drew away from the imported craft, and won out by 11m. and 34s. It was a run to the first mark, a beat to the second and a reach home.

Mineola and Yankee met in the class for 70ft. sloops. Although the Belmont boat was again victorious by 1m. and 10s., it looked at times as if Barr would have to doff his cap to J. Rogers Maxwell, who held the tiller of Yankee. The latter boat crossed the starting line nearly half a minute later than did Mineola.

In the contest for class D schooners, Elmina beat Muriel by 6m. and 59s.

Dorwina beat out Effort and Challenge in class L. Effort was late in starting, crossing the line 13 minutes after the winner.

In the race for class N sloops, Mimosa scored over Alerion by 8m. and 23s., giving her two races out of the three sailed during the Seawanhaka series.

In the raceabout class the Crowninshield boat, Jolly Roger, defeated H. M. Crane's new Whistlewing by 1m. and 12s. Mavis finished third 7 seconds later. The struggle between Esperanza and Hera, Newport 30-footers, resulted in a victory for the former by 5m. and 45s. The courses sailed in the race were the same as used on the first two days of the series.

The new 60-rater, Neola, belonging to George M. Pynchon, went over the course on a time trial. She did the larger triangles in 11m. and 38. slower time than Vigilant and 11m. and 7s. slower than Mineola. She is a thoroughbred-looking craft with large sail spread.

The Manhasset Bay raceabout, Lambkin, scored her third victory of the series as did Knave, the New Rochelle 18-footer. The summaries follow:

Yawls—Class G—Start, 12:05.

	Finish.	Elapsed.
Vigilant, Percy Chubb	4 04 22	3 59 22
Ailsa, H. S. Redmond	4 15 56	4 10 56

Sloops—Class H—Start, 12:10.

Mineola, August Belmont	4 09 53	3 59 53
Yankee, J. Rogers Maxwell	4 11 03	4 01 03

Schooners—Class D—Start, 12:15.

Elmina, Fred F. Brewster	4 14 39	3 59 39
Muriel, Charles Smithers	4 21 38	4 06 38

Sloops—Class J—Start, 12:20.

Neola, G. M. Pynchon	4 31 00	4 11 00

Sloops—Class K—Start, 12:20.

Syce, C. F. Judson	5 03 06	4 43 06

Sloops—Class L—Start, 12:35.

Dorwina, Clifford V. Brokaw	3 24 34	2 59 34
Effort, F. M. Smith	3 36 00	3 11 00
Challenge, Wallace T. Foote, Jr.	3 35 31	3 10 31

Sloops—Class M—Start, 12:30.

Empress, G. M. Heckscher	4 06 00	3 36 00
Hanley	4 24 58	3 54 58

Sloops—Class N—Start, 12:35.

Mimosa, Trenor L. Park	4 04 23	3 29 23
Alerion, A. H. Alker	4 12 46	3 37 46

Sloops—Class P—Start, 12:45.

Adelaide, J. J. Dwyer	4 35 46	3 50 46
Houri, J. H. Esser	4 44 23	3 59 23

Raceabouts—Start, 12:50.

Whistlewing, H. M. Crane	4 26 00	3 36 00
Snapper, A. B. Alley	4 27 53	3 37 53
Mavis, G. L. Pirie	4 26 07	3 36 07
Indian, J. R. Maxwell, Jr.	4 27 41	3 37 41
Scamp, A. H. Pirie	4 36 27	3 46 27
Jolly Roger, T. B. Bleecker	4 24 48	3 34 48

Seawanhaka Knockabouts—Start, 12:55.

Marcia, Johnston de Forest	4 47 54	3 52 54
Gowan, F. G. Steward	4 38 05	3 43 05
Bobs, W. A. W. Stewart	4 49 19	3 54 19
Lucile, H. H. Landon	4 49 49	3 54 49
Vagrant, Brown & Lord	4 39 55	3 44 55

Sloops—Class Q—Start, 12:55.

Gazabo, W. P. Vulte	3 05 28	2 10 28

Sloops—Class R—Start, 1:00.

Cricket, H. C. Pryer, Jr.	3 14 34	2 14 34
Chipmunk, T. S. Young, Jr.	3 16 39	2 16 39

Manhasset Bay Raceabouts—Start, 1:05.

Lambkin, S. W. Roach	3 31 21	2 26 20
Mist, J. W. Alker	3 34 25	2 29 25
Bab, J. R. Hoyt	3 31 26	2 26 26
Arizona, G. A. Corry	3 32 55	2 27 55

New Rochelle 18-footers—Start, 1:05.

Caper, P. L. Howard	3 28 00	2 23 00
Knave, W. N. Bavier	3 17 08	2 12 08
Me Too, H. T. Foote	3 28 15	2 23 15

Newport 30-footers—Start, 1:20.

Esperanza, H. O. Havemeyer, Jr.	3 11 30	1 51 30
Hera, Ralph N. Ellis	3 17 15	1 57 15

The winners are: Vigilant, Elmina, Mineola, Dorwina, Empress, Mimosa, Adelaide, Jolly Roger, Gowan, Cricket, Lambkin, Knave and Esperanza. Gowan wins the Leland Challenge Cup, also the Series Cup for knockabouts. Neola, Gazabo and Syce had sail overs.

Yacht Racing Union of the Great Lakes.

Editor Forest and Stream:

Your report of the action of the Yacht Racing Union of the Great Lakes in the number of June 28 shows that at last we are likely to see something reasonable accomplished in the matter of yachting classification. For the first time an influential body of yachtsmen have placed themselves on record as in favor of restrictions instead of a formula for yachting classification. This is particularly gratifying to me because the general trend of these restrictions is in line with the suggestions made by me about five years ago for the first time, and constantly reiterated since then. I would like to, however, suggest that one fundamental error has been committed, namely, the use of the erect instead of the inclined load waterline. With yachts of various types the erect waterline is an inaccurate means of comparison, as every one knows. As I had the privilege of pointing out in your columns some time since the requirement of minimum area of immersed cross section is not the same as a displacement requirement, this relation of area of midship section to displacement varying with different types at least 15 per cent. As a consequence, all of the requirements of the Union can be complied with and a small-displacement racing machine be designed. If, on the contrary, the Schedule A had displacement substituted for immersed cross section and a column substituted, giving the limiting length of inclined waterline as I have already suggested, the four columns devoted to beam and freeboard could have been omitted and the Union would have been absolutely assured of boats of good accommodation, which it would be cheapest and best to build strongly, and all of the requirements in regard to cabin trunk, freeboard and scantlings could have been omitted as entirely unnecessary. Nevertheless the principle of the change is a most commendable one, and I have no doubt that in the course of a few years it will be found that all my suggestions are practical and they will be carried into effect when a new era of yacht racing in seaworthy, fast yachts will begin.

GEO. HILL.

NEW YORK, June 28.

Dorchester Y. C.

DORCHESTER, MASS.

Tuesday, June 17.

THE Dorchester Y. C. Y. R. A. open race for Association 15-footers and 18-footers, one-design dories and sailing tenders, was sailed in Dorchester Bay on Tuesday, June 17, in a strong northwest wind. The strong breeze affected several of the little fellows to such an extent as to put them out of it. No 15-footers showed up. Wawenock had an easy win in the 18-footers. Anita won a good race in the one-design dories. The Leach and Hewes S. H. Y. C. tenders sailed a close race, and E. E. Merrill took an easy win in the S. B. Y. C. tenders. The summary:

Class T—18-footers.

	Elapsed.
Wawenock, W. J. Coombs & Seymour	1 17 15
Zetes II., John A. McKee	1 30 15
Owaissa, Walter Kelly	1 30 30

One-Design D. Y. C. Dories.

Aurita, E. L. Cutler	1 28 45
Vera, Hjalmar Lundburg	1 29 45
San Toy, J. A. Hendrie	1 30 45
Boomerang, Cleary	Withdrew.
Hobo, T. W. King	Withdrew.
Lurline, John P. Meade	Withdrew.

One-Design S. H. Y. C. Tenders.

C. H. Leach	0 51 25
A. P. Hewes	0 51 50
R MacCurdy	1 01 00
E. Keepers	1 02 35
R. Loring	1 09 00
J. W. Will	1 10 25
J. Turner	Withdrew.
H. Skinner	Withdrew.

South Boston Sailing Tenders.

E. E. Merrill	0 56 35
W. D. Colson	0 58 35
Fred Borden	1 01 15
F O French	Withdrew.

Seawanhaka Trial Races.

LONG ISLAND SOUND—BRIDGEPORT, CONN.

Monday, June 30.

THE first of the series of trial races to select a challenger for the Seawanhaka Challenge cup, now held by the Royal St. Lawrence Y. C., was sailed on Monday, June 30. Eight boats started, as follows: Massasoit, Bridgeport Y. C.; Tecumseh, Bridgeport Y. C.; Nutmeg, Bridgeport Y. C.; Seeress, Manhasset Bay Y. C.; Frontenac, Penataquit Corinthian Y. C.; Crusader, White Bear Y. C.; Monsoon, Manchetser Y. C.; Filibuster, Eastern Y. C. Wampnissic, Shinnecock Y. C., was withdrawn. The wind was light throughout the race, varying from S.E. to S. The course was a triangular one of four miles, starting from the spar buoy off Black Rock Lighthouse, and was sailed over three times. The boats were stopped at the finish of each four miles, and their times taken, thus making the trials practically three races of four miles each. Of these, Massasoit, the Crowninshield boat, won two, and Tecumseh, the Western boat, finished first in one.

The starting gun was fired at 1:30, and the first leg was a beat, the wind blowing S.E. by E. very lightly. Nutmeg crossed the line first, followed in order by Monsoon, Seeress, Filibuster, Crusader, Frontenac, Tecumseh and Massasoit. Tecumseh took the lead in the first mile and rounded the first mark nearly three minutes ahead of Nutmeg, the second boat. Monsoon was third, followed by Massasoit, Filibuster, Crusader, Frontenac and Seeress in the order named. Spinnakers were set for the reach to the second mark. Tecumseh increased her lead to five minutes over the second boat on this leg. Nutmeg was still second, with Monsoon, Massasoit, Filibuster, Frontenac, Crusader and Seeress following. On the run home Nutmeg gained on Tecumseh, but not enough to win, and Tecumseh crossed the line winner by 3m. and 40s.

	First Leg.	Second Leg.	Third Leg.	Elapsed.
Tecumseh	0 41 45	0 11 21	0 17 22	1 10 28
Nutmeg	0 44 35	0 13 25	0 16 08	1 14 08
Monsoon	0 45 43	0 13 54	0 18 44	1 18 21
Massasoit	0 46 21	0 13 25	0 18 47	1 18 33
Filibuster	0 46 59	0 12 56	0 19 00	1 18 55
Frontenac	0 48 10	0 12 11	0 18 42	0 19 03
Crusader	0 48 05	0 13 06	0 17 32	0 18 43
Seeress	0 50 44	0 13 20	0 18 42	1 22 46

The boats were sent off over the same course at 3:05. The wind had freshened somewhat, but was still light. They crossed the line in the following order: Filibuster, Crusader, Seeress, Nutmeg, Massasoit, Monsoon, Tecumseh and Frontenac. Massasoit liked the weather and drew ahead at once, rounding the first mark at 3h. 28m. 33s. Crusader, the second boat, was 2m. 30s. behind, and Filibuster, the last boat, 7m. 27s. behind the leader. Massasoit retained her lead on the reach to the second mark, and on the run home and won by 2m. 23s. over Crusader:

	First Leg.	Second Leg.	Third Leg.	Elapsed.
Massasoit	0 23 33	0 15 31	0 13 33	0 52 37
Crusader	0 26 03	0 15 55	0 13 02	0 55 00
Tecumseh	0 26 23	0 15 26	0 13 13	0 55 02
Frontenac	0 25 14	0 17 46	0 14 12	0 57 12
Seeress	0 27 33	0 16 17	0 15 56	0 57 46
Nutmeg	0 28 24	0 17 01	0 14 49	1 00 14
Monsoon	0 29 15	0 17 37	0 14 36	1 01 28
Filibuster	0 31 00	0 16 41	0 14 12	1 01 53

In the third race the course was reversed, making the first leg a beat to windward. The breeze was improving, but was only fair. There was some confusion at the starting line, and Monsoon finally crossed first at 4:20. Massasoit was second, and was followed by Frontenac, Crusader, Filibuster, Nutmeg, Seeress and Tecumseh. Massasoit at once took the lead, and at the first mark was 1m. 29s. ahead of Crusader, the next to round the mark. The positions remained unchanged on the reaches to the second mark and to the finish, and Massasoit crossed the line 32s. ahead of Crusader, in the best-sailed race of the day:

	1st Leg.	2d and 3d Legs.	Elapsed.
Massasoit	0 23 37	0 25 29	0 49 06
Crusader	0 25 06	0 24 32	0 49 38
Frontenac	0 25 20	0 25 49	0 51 09
Seeress	0 28 42	0 23 23	0 52 05
Filibuster	0 28 10	0 24 22	0 52 32
Tecumseh	0 29 28	0 23 34	0 53 02
Nutmeg	0 29 13	0 24 22	0 53 35
Monsoon	0 29 06	0 25 17	0 54 23

Savin Hill Y. C.

DORCHESTER, MASS.

Saturday, June 28.

A CLUB race was held by the Savin Hill Y. C. on Saturday, June 28. The winners were Hesper and C. A. J. Smith's sailing tender. The summary:

Handicap Class.

	Elapsed.	Corrected.
Hesper, W. H. Christie	4 18 00	3 58 00
Harriette, C. C. Durgin	4 13 10	4 08 10
Wide Awake, J. H. Ricker	4 27 07	4 09 07
Icureasy, J. D. McBeath	4 32 25	4 12 25
Aikane, A. A. Swallow	4 38 40	4 13 40
Primrose, J. H. Spark	Disabled.	
Romance, Loring Sears	Capsized.	

Sailing Tenders.

C. A. J. Smith	3 39 00
A P Hawes	3 39 05
J D McBeath	3 40 30
C. H. Leach	3 41 00
H. Skinner	3 42 20
J. E. Robinson	Withdrew.

Cohasset Y. C.

COHASSET, MASS.

Tuesday, June 17.

THE opening race of the Cohasset Y. C. was sailed Tuesday, June 17, over the regular club course in a strong northwest breeze. The summary:

Knockabout Class.

	Finish.
Delta, R. B. Williams	2 10 12
Moonsoon, J. A. Knowles	2 25 10
Remora, G. E. Crocker	2 25 10
Heralda, Alanson Bigelow	2 25 15
Eleanor, F. H. Moors	Disabled.

Handicap Class.

Edith, A. Abbott Hastings	2 30 00
Undine, Gilbert Tower	2 35 10

18ft. Knockabout Class.

Kannaka, Hugh Montgomery	2 37 00

Beverly Y. C.

MONUMENT BEACH, MASS.

Tuesday, June 17.

IN a strong northwest wind the open sweepstakes race of the Beverly Y. C. was sailed off Monument Beach on Tuesday, June 17. There was a bit more wind than some of the skippers of the one-design 30-footers cared for, but it was an excellent chance in which to try them out. They were all sailed hard, and throughout most of the windward leg the water was up to their cabin windows. While some of the owners deem this an undesirable feature, enough of this kind of work was done to show that the boats are practically non-capsizable. Four of them were unfortunates. Gamecock's jport spreader was broken early in the race, and the mast of Young Miss was carried away. In shaking out a reef Mashnee's mainsail was split from top to bottom. Zingara parted a stay, but she kept on and made a good showing. Pontiac did not relish the strong breeze and withdrew. Praxilla established a lead early in the race and maintained it to the finish.

There were three starters in the 21ft. raceabout class—Barnacle, designed by Fred Lawley, and Terrapin and Arethusa, designed by Herreshoff. Barnacle defeated the two Herreshoff boats in the easiest manner possible, and thereon lies the tale of a scow, for Barnacle is a scow of the most pronounced type. She has the hardest of bilges in her forward overhang, which lies very close to the water, to give her the right entrance, and the bilges soften amidships. She has a fin with a bulb resembling a Whitehead torpedo, and through this runs a centerboard which runs straight up and down. Howard and Krieker broke down in the fourth class cats, and Maori had it all to herself. Go Bye and Spider had a close race in the 15-footers. The summary:

30-footers—One Design.

	Elapsed.
Praxilla, John Parkinson, Jr.	2 17 56
Mashnee, R. W. Emmons	2 18 31
Quakeress, W. F. Harrison	2 22 00
Zingara, E. N. Farnsworth	2 30 49
Anita, R. T. Crane, 2d	2 32 35
Notos, W. O. & C. H. Taylor, Jr.	2 37 14
Gamecock, Louis Bacon	Disabled.
Young Miss, D. L. Whittemore	Disabled.
Pontiac, J. A. Beeze	Withdrew.

21-footers.

Barnacle, W. E. C. Eustis	1 56 22
Terrapin, L. S. Dabney	2 07 08
Arethusa, C. M. Baker	2 14 57

Fourth Class Cats.

Maori, A. B. Hastings	2 15 45
Howard, H. O. Miller	Disabled.
Krieker, W. O. Jameson	Disabled.

15-footers.

Go Bye, L. S. Stockton	2 33 02
Spider, H. M. Stone	2 34 35
Ranzo, M. H. Richardson	2 36 56

Saturday, June 28.

A club race of the Beverly Y. C. was sailed off Monument Beach, Saturday, June 28, in a fluky breeze from the southeast. The 30-footers went over the line in a bunch, with Pontiac in the lead. After some short tacks Young Miss pulled away from the bunch and held her lead to the finish, Pontiac being second. In the 21-footers Terrapin won handily. Krieker had things all her own way in the fourth class cats. In the 15-footers Spider won a good race after starting long behind the time of gunfire. The summary:

30-footers—One Design.

	Elapsed.
Young Miss, D. L. Whittemore	2 04 20
Pontiac, J. A. Beebe	2 05 40
Mashnee, R. W. Emmons, 2d	2 06 54
Praxilla, John Parkinson, Jr.	2 07 10
Notos, C. H. and W. O. Taylor	2 07 52
Gamecock, Louis Bacon	2 08 49
Zingara, E. M. Farnsworth	2 09 23
Evelyn, John Hitchcock	2 11 29
Quakeress, W. F. Harrison	2 19 21

21-footers.

Terrapin, L. S. Dabney	2 13 16
Sylvia, S. D. Warren	2 17 13
Arethusa, C. M. Baker	2 17 19
Kestrel, G. B. Dabney	2 17 52

Fourth Class—Cats.

Krieker, W. S. Jameson	2 28 08
Howard, H. O. Miller	Withdrew.

15-footers.

Spider, H. M. Stone	1 38 54
Teazer, R. W. Emmons, 2d	1 39 34
Go-Bye, H. Stockton	1 39 42
Catspaw, S. D. Warren	1 46 52
Ranzo, M. H. Richardson	1 51 49

Duxbury Y. C.

DUXBURY, MASS.

Saturday, June 21.

THE first club race of the Duxbury Y. C. was sailed off the club house at Duxbury, Saturday, June 21. The breeze was light at the start, but later freshened to wholesail power. Miladi II. won handily in the 18ft. knockabouts. In the handicap class As You Like It finished first, but took third place on corrected time. In It finished second, but Dolphin, which finished third, took first on corrected time. The summary:

18ft. Knockabouts.

	Elapsed.	Corrected.
Miladi II., F. R. Adams	2 04 17	. . . .
Kittiwake, H. M. Jones	2 08 31	. . . .
Osprey, A. R. Train	2 09 43	. . . .
Aspinquid, C. R. Foster	2 12 40	. . . .

Handicap Class.

Dolphin, N. Morton	2 18 45	2 03 44

Kittawake, H. M. Jones	2 05 52
In It, Train	2 07 58
Aspenquid, C. Foster	2 09 12

Hull-Massachusetts Y. C.

HULL, MASS.

Tuesday, June 17.

IT was a keel boat day all around in the Y. R. A. open race of the Hull-Massachusetts Y. C., sailed over the outside courses, off Point Allerton, on Tuesday, June 17. In the 25-footers, Calypso walked out through the bunch on the two reaches and broke down on the windward leg of the first round. Before this happened, however, Seboomook, a Gloucester craft, designed and built by Archie Fenton, had the best of her, and Sally VI. was not far behind. Chewink passed Calypso while she was in trouble, and the three keel boats continued over the course, another accident to Calypso putting her out of it for good. It was Seboomook's first race, and she made a great showing, winning by a big margin. In the 21-footers Little Haste had things all her own way on the two reaches, but on the windward leg the Adams boat went up from sixth place to first. Chloris came through the bunch to second place and Tabasco III. moved up from fifth to third. The three keels finished in the above order. In the 18ft. knockabout class Question led down hill, but on the windward leg Biza, a keel, came to the front and won a good race. The breeze was west, northwest, strong and very puffy. All hands were reefed. The summary:

Class D—25-footers.

	Elapsed.
Seboomook, B. A. Smith	3 03 28
Sally VI., L. F. Percival	3 11 45
Chewink II., F. G. Macomber, Jr.	3 16 22
Marion, E. W. Gilvan	Withdrew.
Calypso, A. W. Chesterton	Withdrew.

Class S—21-footers.

Adams Brothers	1 43 05
Chloris, Cheney & Lanning	1 44 02
Tabasco III., H. H. Wiggin	1 45 10
Mildred II., S. P. Moses	1 45 20
Little Haste, T. K. Lothrop, Jr.	1 50 12
Perhaps II., J. E. Robinson	1 56 50
Rambler, W. L. Learned	Withdrew.

Class I—18-footers.

Biza, Alfred Douglas	1 50 20
Question, J. H. Hunt	1 51 30
Kittiwake, H. M. Jones	1 52 15
Malillian, P. S. Permar	1 53 03
Tokalon, R. J. Randolph, Jr.	1 54 52
Comforter, J. M. Whittemore	1 56 51
Nethla, C. W. Cole	1 59 24
Lollipop, H. B. Bailey	Disabled.
Marion C., J. J. Moebs	Disabled.

The judges were Foster Hooper, John T. Humphrey and Louis M. Clark. There were no protests.

Eastern Y. C.

MARBLEHEAD, MASS.

Monday, June 23.

THE first of the Eastern Y. C.'s special open races for Y. R. A. restricted classes was sailed off Marblehead Monday, June 23. The breeze was from the northwest, strong at first, with a soft spot in the middle and a perfect whole-sail breeze at the finish. Seboomook was over first at the start, with Chewink II. close by, Sally VI. astern and Calypso to leeward, but in a fine position. A shift in the wind hurt Calypso on the first leg, while the three keels were close together. Chewink turned the first mark in the lead, and at the second mark she and Sally VI. were right together. They started working short tacks. Seboomook took a long board inshore, followed by Calypso, and, in a single tack, they were first and second. Seboomook once more showed herself to be a great windward boat, and she increased her lead to the finish.

In the 21-footers Perhaps II. was first at the start, with the rest in a bunch, excepting Opitsah IV., which took the leeward end of the line. Pilot pulled out ahead and turned the first mark in the lead. Little Haste pulled up on her on the second leg, but Pilot held the weather berth and it was some time before Little Haste could get by. She did it just before raching the second mark, and at this point Chloris fouled Pilot and spoiled her chances. Little Haste, with nothing to bother her, kept her lead to the finish. Janet, a new Crowninshield boat, sailed her first race, and made a close finish with Malillian. The summary:

Class D—Y. R. A. 25-footers.

	Elapsed.
Seboomook, B. A. Smith	2 04 17
Calypso, A. W. Chesterton	2 09 04

Corinthian Y. C.

MARBLEHEAD, MASS.

Tuesday, June 17.

THE first race of the Corinthian Y. C. of the season was sailed off Marblehead on Tuesday, June 17, only one class filling and two boats crossing the finish line. The summary:

Class A.

	Elapsed.	Corrected.
Yerico, W. H. Rothwell	1 41 00	1 36 30
Virginia, R. L. Small	1 52 00	1 52 00
Chasca, D. H. Follett	Disabled.	

Class B.

Ruth, H. S. Wheelock	Withdrew.

Saturday, June 21.

The first championship race of the Corinthian Y. C. was sailed, off Marblehead, Saturday, June 21. The breeze was southeast, fairly strong outside, with quite a chop to the sea, and, withal, a trifle fluky. The finish was made in a drizzling rain. Sally VI. got the best of the start, and led to Archer's Rock, with Chewink II. in second place. On the leg to Halfway Rock, Calypso went by the two keels and held her lead to the finish. Little Haste led the 21-footers over the course, and when the breeze freshened, Opitsah IV. went up from last to second place. Two Burgess-designed 18-footers sailed a very close race in the 18ft. knockabout class. The summary:

Class D—25-footers.

	Elapsed.
Calypso, A. W. Chesterton	1 27 51
Chewink II., F. G. Macomber, Jr.	1 28 40
Sally VI., L. F. Percival	1 29 05

Class S—21-footers.

Little Haste, T. K. Lothrop, Jr.	1 29 11
Opitsah IV., S. H. Foster	1 33 00
Pilot, R. Boardman	1 35 05

Savage, John Lawrence	1 25 16
——, W. C. Lovering	1 25 22

Wollaston Y. C.

QUINCY, MASS.

Saturday, June 28.

A Y. R. A. open race, given by the Wollaston Y. C., was sailed in Quincy Bay, Saturday, June 28, in a whole-sail northwest breeze. Good starts were the order in all classes, and the races throughout were good. In the 25-footers Theodora got the start, but Thordis caught her on the first leg and led the rest of the course. The 21-footers were away in a bunch, but Chloris came into first place on the second leg and led to the finish. Wawenock was first at the start and kept there to the finish. Malillian and Biza had a most exciting finish in the 18ft. knockabout class, going over the line right abreast. Honors were divided on the rest of the course. There was a good race in the handicap class and the first four boats finished close. The summary:

Class C—25-footers.

	Elapsed.
Thordis, C. A. Henly	1 05 02
Theodora, Frank Burgess	1 11 10

Class S—21-footers.

Chloris, Cheney & Lanning	1 02 03
Adams Brothers	1 06 16
Opitsah IV., S. H. Foster	1 07 35
Micmac, Richard Hutchinson	1 07 40
Perhaps II., J. E. Robinson	1 07 47
Rambler, W. E. Learned	1 10 17

Class T—18-footers.

Wawenock, Coombs & Seymour	1 05 40
Owaissa, W. C. Kelley	1 07 29

Class I—18ft. Knockabouts.

Malillian, B. S. Permar	1 10 42
Biza, Alfred Douglas	1 10 48
Marion C., J. J. Moebs	1 12 14
Tokalon, R. J. Randolph, Jr.	1 12 49

West Wind, W. M. Chase	1 16 15
Brant, J. A. Fenno	1 17 00
Ruth, A. T. Barstow	1 24 09

The judges were C. G. Jones, S. N. Small, W. C. Lapham, H. E. Nelson and Com. A. L. Baker. Protests were entered by Takalon against Marion C., Owaissa against Wawenock, Micmac against Opitsah IV., and Opitsah IV. against Micmac.

Penataquit Corinthian Y. C.

BAY SHORE, L. I.

Saturday, June 28.

THE Penataquit Corinthian Y. C., of Bay Shore, L. I., opened the season of 1902 on June 28 with the first race for the Lighthouse cup and the spring regatta. This trophy goes to the club member winning the series of six races each year, three times, not necessarily consecutively.

Five class N boats started, including two new ones belonging to H. O. Havemeyer and John R. Suydam. The former, a Herreshoff production, Electra by name, won the race, beating out Amy Foster, winner of the series of 1901, by 5m. and 52s.

Arrow, the Suydam craft, built this year at City Island from the lines of Clinton H. Crane, was unfortunately disabled. Richard Hyde's Gayety withdrew. Winners in the other classes were Dolphe and Helen.

Points scored on the Lighthouse cup were as follows: Electra, 15; Amy Foster, 11; Treasure, 8; Arrow, 2; Gayety, 2. The next contest in the trophy series takes place July 5. The summaries follow:

Sloops—Class N—Start, 2:05.

	Finish.	Elapsed.
Electra, H. O. Havemeyer	3 52 16	1 47 16
Amy Foster, J. C. Smith	3 58 08	1 53 08
Treasure, C. H. Covell	4 03 48	1 58 48
Arrow, J. R. Suydam	Disabled.	
Gayety, Richard Hyde	Withdrew.	

Sloops—Class Q—Start, 2:10.

Dolphe, J. A. Mollenhauer	3 40 38	1 30 38
Toddie, H. Peters	3 38 56	1 28 56

Dolphe wins on corrected time.

Sloops—Class W—Start, 2:15.

Helen, W. H. Wray	3 16 00	1 01 00
Scud, J. B. F. Walling	3 17 04	4 12 08
Lank, E. T. Bailey	3 08 00	1 03 09

The winners were Electra, Dolphe and Helen.

Columbia Y. C.

SOUTH BOSTON, MASS.

Saturday, June 28.

THE Columbia Y. C. sailed its second race off City Point, Saturday, June 28, in a strong northwest breeze. The summary:

Riverside Y. C.

THE fourteenth annual regatta of the Riverside Y. C., of Riverside, Conn., will be held on Saturday, July 5, and will be open to yachts enrolled in any recognized yacht club. The classes are:

Schooners—75ft. and 55ft. classes.

Sloops and Cutters—80ft., 70ft., 60ft., 51ft., 43ft., 36ft., 30ft., 25ft., 21ft., and 18ft. classes.

Yawls—43ft. and 36ft. classes.

Raceabouts—Regular classes.

Catboats—30ft., 25ft., 21ft. and 18ft. classes.

American Y. C. 21ft., 18ft. and 15ft. one-design classes.

New Rochelle Y. C. one-design class.

Horse Shoe Harbor Club one-design class.

Manhasset Bay Y. C. one-design raceabout class.

The races will be started at 12 o'clock, and the starting and finishing line will be indicated by a mark boat and the committee boat, anchored half a mile southeast of the gas buoy off Little Captain's Island.

Entries will be received by the chairman of the Race Committee at 21 Park Row, New York, up to noon of Thursday, July 3; later at the club house at Riverside, Conn.

Kennebec Y. C.

KENNEBEC RIVER, BATH, ME.

Saturday, June 28.

THE second championship cup race of the Kennebec Y. C. was sailed on Saturday, June 28. The weather was bright and clear, and the wind strong, with heavy flaws from the northwest. All the boats carried reefs, Aspenet and Hecla one, and Dewey, Swift and Pirate two. The course was six miles. The summary:

Second Class—21 to 25ft.

	Elapsed.	Corrected.
Aspenet, ex-Com. F. M. Cook	0 50 17	0 50 17
Dewey, Bonney & Farrar	0 53 48	0 53 01

Third Class—18 to 21ft.

Swift, Owen J. Ledyard	0 59 03	0 59 03
Pirate, Jas. A. Bimson	1 04 03	1 04 51

Fourth Class—15 to 18ft.

Hecla, Geo. A. Ward	1 02 01	0 02 11

The winners were Aspenet, Swift and Hecla.

Meteor Beaten.

EMPEROR WILLIAM'S American-built yacht, Meteor, was beaten in a race at Kiel on June 30 by the Empress' yacht, Iduna. Meteor finished 2h. behind Iduna. The reports say that Meteor was steered by the Emperor.

CONTESTS AT INTERSTATE PARK.

Interstate Park. Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Winchester Gun Club.

DETROIT, Mich.—At the regular shoot, June 28, Brodie was very near to the straight score silver cup, winning in Class A with 24 out of 25. Hitchcock beat out Guthard in Class B with 22, and Barthel led Class C with 13.

The day was favorable for good scores, and was acknowledged by the 10 and 15 straights, 14s out of 15s and Brodie's 47 out of 50. We call this good shooting. Following are the scores, the last being the club event:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	15	10	15	10	15	15	25	25
Brodie	8	13	8	13	10	..	..	..	24
Toll	9	13	9	11	9	8	11	22	21

D. A. HITCHCOCK, Sec'y-Treas.

Dover Sportsmen's Association.

DOVER, N. H., June 14.—This afternoon the fourth shoot of the Dover Sportsmen's Association afforded the following scores: Fisher 57 out of 80, St. Evens 52 out of 80, Nosroc 51 out of 80, F. F. Wentworth 47 out of 90, Hallam 14 out of 60.

IN NEW JERSEY.

Trap at Smith Brothers' Grounds.

Newark, N. J., June 27.—There were several warm matches settled on Smith Brothers' grounds to-day. The weather was fair and a good crowd was present. Mr. F. C. Schneider was referee; Mr. H. Gray, scorer.

Sanders—Pape.

The first match was between Messrs. W. H. Sanders and H. Pape, 25 birds, $25. Sanders took the lead at the first inning and never was headed. He won by a score of 20 to 17. The birds were only a fair lot in this match. The scores:

W H Sanders	2220222222220022220202221—20
H Pape	0102212*21*22?22201012022—17

Loebel—Pape—Hainhorst—Sanders

This match was for $50, 50 birds per man, winner to pay all expenses. Mr. Loebel shot in fine form and killed neatly some very fast birds. Hainhorst also did good work. It was a handicap match, and considering the distance, the back-mark men did well. The scores:

H Pape, 28	2010122102100211*0022222—17
	020002*20100022202200220—11—28

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The Field (London) concerning the late Mr. Charles Eley has the following: "The sudden death of Mr. Charles Eley, on the 11th inst., at the ripe age of seventy-eight, will have caused a pang of regret not only in a wide circle of personal friends, but among shooting men generally to whom the name of Eley has long been a household word. It would be beside our present purpose to enlarge upon the benefits which have been conferred upon every user of a gun or rifle by the eminent firm of which the deceased was for so many years a member. On his estate at East Bergholt, in Suffolk, he accomplished wonders in the way of partridge rearing. He was wont to say that when he first went to reside in that neighborhood fifteen or twenty brace of birds a day was about the average bag to be expected; by judicious management he lived to see 3,000 brace killed in a season. And yet he set his face against what he termed mere slaughter; so much so, that in the capacity of a genial host he never countenanced the use of a second gun by any of his guests in a day's shooting. His opinion was always worth having, for he spoke from long experience of the subjects that were most dear to him, and was unselfish enough to impart all he knew if he thought others would benefit by it. Although not a brilliant shot, he could hold his own with some of the best in a long day's game shooting, and at the close of his life he was as keen over a grouse drive or a partridge drive as many a man half his age. Only last year, on a moor which he took with a few friends for the season, he assisted in making a bag of some 3,000 grouse. Mr. Charles Eley was a well-known figure at the Gun Club, and an occasional winner of cups. It will be in the recollection of many that on one occasion when a cup was handed to him he excused himself from taking it away, and with his characteristic generosity, expressed a wish that it should be shot for again at a future meeting. During the summer months he was wont to keep his hand and eye in training by practice at clay pigeons at the London Sporting Park, where he would spend an hour or two in having "birds" sent over him at all sorts of heights and angles to qualify him for dealing later in the year with driven grouse and partridges. Mr. Eley was a keen supporter of the Keepers' Benefit Society, and a generous donor to other associations having for their object the encouragement of field sports and the prevention of poaching. As a member of committee of these and kindred societies his advice was always valued, and in future deliberations will be much missed."

The Cincinnati Gun Club's programme for its annual handicap target tournament, Sept. 23 to 25, is now ready for distribution. Competition is open to the world. Targets, 2 cents. To the seven high averages, $70; to the ten low guns, $80. First day, eleven events at 180 targets. Second and third days, ten events at 170 targets. All 15 and 20 target events, four moneys, 7, 6, 5 and 4 points. Handicap 14 to 22yds. Second day, Wednesday, Sept. 24, events 9 and 10 will be shot as the Cincinnati Preliminary Handicap, 50 targets, entrance $5, targets included, for a guaranteed purse of $250, and all surplus added, twenty-five high guns. Third day, Thursday, Sept. 25, commencing promptly at 1 P. M., events 6, 7, 8, 9 and 10 will be shot as the Cincinnati Gun Club's annual grand target handicap, 100 targets, entrance $10, targets included, for a guaranteed pure of $500 and all surplus added, twenty-five high guns. Regular entries for the above two events will close Tuesday, Sept. 9, and must be accompanied by $7.50 forfeit. Penalty entries, $6, may be made after Sept. 9 up to 1 P. M., Sept. 24, for the Cincinnati Preliminary Handicap, and $12, to 1 P. M. Sept. 25 for the Cincinnati Gun Club's annual grand target handicap. All paid representatives, whether paid in shells, money or otherwise, and all those connected in any way with companies manufacturing guns, shot, shells, powder, targets and traps, shall pay $2 each day extra, and every other shooter will pay $1 each day extra, and this money will be divided among all amateurs shooting through all the regular events and do not draw their entrance fees out. The decision as to who such paid men are, to be left at all times to the manager, whose decision shall be final. Souvenir programme will follow. For further information address A. B. Heyl, Chairman Tournament Committee, 1870 Madison Road, Cincinnati, O. Grounds open for practice Monday, Sept. 22. Ten-gauge guns and black powder barred.

We are indebted to Mr. John S. Lurman, of Catonsville, Md., for a clipping from the Baltimore Sun, which presents some interesting matter concerning some phenomenal shooting done by a child, some excerpts of which are as follows: "Jesse D. Poplar, Jr., seven years old, is probably the greatest shot of his age in the world. He could shoot accurately the first time he put a gun to his shoulder. He is now training to shoot in the big trap tourney which is to be given at Bay Ridge, Md., July 23, 24 and 25. He began to shoot on April 8 last, when his father gave him a 28-gauge shotgun, with which he bagged from a blind fifteen blackhead ducks. On May 17 at the traps he killed 17 out of 20 pigeons at 18yds. rise. On May 24 he killed 18 out of 20, and on June 7 he came to Baltimore and shot at the Baltimore Shooting Association's traps, killing 15 out of 20, with four of his birds falling dead out of bounds, and that with so hard a trigger pull as 9 and 9½lbs., instead of the proper 3lbs. This was enough to make an old expert miss, let alone a tot who had to use two fingers to pull the trigger. On June 14 Jesse killed 10 straight; on the 16th he killed 10 straight; on the 17th, 10 straight, but on the 18th fell down and bagged but 7 out of 10 shot at. His gun weighs 5¼lbs. He uses 1¾drs. of powder and ½oz. shot. At the Bay Ridge shoot he is entered in a 25-bird race on each of the three days of the shoot. Jesse is a son of Jesse D. Poplar, who is the greatest sinkboat duck shot in America."

With pleasure we acknowledge receipt of the following invitation: "You are cordially invited to join us in celebrating Independence Day, July 4, 1902, and the one hundredth anniversary of E. I. du Pont de Nemours & Co. Our business was established at its present location, on the Brandywine, A.D. 1802. One of the most decisive conflicts for American liberty and Old Glory was fought in this vicinity on the banks of that historic stream. The Dupont powder, made at the Brandywine mills, has been used in defense of the Stars and Stripes, by the army on every battlefield, and in every engagement by the Navy, for a century. From Perry's victory on Lake Erie in 1812, to the destruction of Spain's navy at Manila, and the combined victory of Santiago, Dupont powder has proved an important factor in establishing American freedom and securing the respect of all countries for this nation. To commemorate this important era in our business we will, during the evening of July 4, 1902, give a magnificent display of fireworks on the grounds of the Wilmington Country Club, Wilmington, Del. Programme inclosed." The programme provides for fifty elaborate pieces.

The programme of the Michigan State League of Trapshooters' second annual tournament, to be held at Jackson, Mich., July 1 and 2, has eleven events on the first day, of which five are at 15 targets, $1.50 entrance; four at 20 targets, $2 entrance; one at 25 targets, $2.50 entrance, and one, No. 5, at 25 targets, 75 cents entrance, the latter being a championship event for expert, semi-expert and amateur trophies. Five of these events have $10 added to each, and two $5 added to each. On the second day there are twelve events; six at 15 targets, four at 20 targets and two at 25 targets, of which one, No. 4, is the State championship for three men, $2.25 per team. Three events have $10 each, four have $5, and one $15 added. There is also $5 each day for high average. Ship guns to Charles Sarvis, Jackson. Meeting of State League on July 1, in the evening. Amateur handicaps 16 to 18yds. Shoot rain or shine. Hotel accommodations on the grounds. Targets 3 cents, from which 1 cent is deducted for a fund to be divided pro rata among League members shooting through the programme. Sweepstakes open to all. Moneys divided 40, 30, 20 and 10 per cent.

The Fort Lee (N. J.) Gun Club, which has beautiful shooting grounds on the Jersey shore, opposite 125th street, New York city, contemplates a team match with the Brooklyn Gun Club, to take place some time in the near future, if all the preliminaries can be satisfactorily arranged. As Mr. John Wright, the Brooklyn Gun Club manager, expresses himself as willing, the match is reasonably certain to take place.

The following communication is of interest: "The Sistersville Gun Club, of Sistersville, West Virginia, will hold their midsummer target tournament on July 10. For the first time in our lives, we are going to have a distance handicap, and we shall try to put each contestant where he rightly belongs, without having to stand clear off the earth, or even behind the club house. The programme calls for twelve events: eight at 15 targets and four at 20 targets; entrance $1.50 and $2. Shooting will commence at 9:30 A. M., and will be over a magautrap. Purses will be divided Rose system, 8, 5, 3 and 2. Programmes may be had by dropping a card to Mr. Ed. O. Bower, secretary, Sistersville, W. Va."

Mr. A. Betti, manager, Mt. Kisco, N. Y., writes us as follows: "The prospects for the third tournament of the Westchester County Trapshooters' League, to be held here July 4 and 5, are excellent, and sure will this time bring together the largest assemblage of shooters ever seen in this place. Several rooms are already engaged at the Hotel Elwood, and several boxes of ammunition have arrived for different shooters. Surely the members of our club will not spare pains to give to the sportsmen a fine time. Two large tents will be erected close to the club house. One will be used for refreshment purposes; the other for visitors. On the night of July 4 there will be a fine band concert in front of the Hotel Elwood, and also a fine display of fireworks."

Messrs. R. A. Welch and D. Bradley returned last week from a long sojourn abroad. They extended their spheres of influence extensively on this trip, visiting Spain during the latter part of their trip. In the latter country, they came across a distinct novelty in pigeon shooting, the birds being thrown into the air by hand. So deft do the trappers become that they give the birds flights peculiar and difficult for the shooter to solve with the shotgun.

A race meeting on the new half-mile track at Interstate Park is fixed to take place on July 4. There will be a 2.40 class trot and pace, a free-for-all and a 2.25 trot or pace. Several matches also are fixed for that day and place. The Interstate Driving Park Association was formed on June 22, at which of the large number in attendance at the organization meeting over 100 agreed to join as charter members. The Association was formally organized on July 1. A fall meeting on a large scale is contemplated.

The Riverside Gun Club, of Topsham, Me., announce a shoot for July 4, the initial shoot of the club on its new grounds. A new trap house has been built recently. Four high average prizes will be given. Shooting commences at 1 o'clock. Competition is open to all. There are seven events on the programme, four at 15, two at 20 and one at 25 targets. Rose system. Targets 2 cents. Mr. Sumner Stroub is the president. Mr. George Rogers is the treasurer.

At the Interstate Association's tournament, given for the Raleigh (N. C.) Gun Club, June 25 and 26, Capt. Ben Eick was high average; Mr. Neaf Apgar second, and Mr. Walter Huff third. A specially pleasant feature of the tournament was an act of friendly appreciation manifested in the presentation of a pair of cuff buttons to Manager Shaner by President James I. Johnson, in behalf of the Raleigh Gun Club, as a token of appreciation and friendliness.

The programme of the McConnelsville, O., Gun Club's first annual tournament, July 16-17, has twelve events each day, each at 15 targets, $1.50 entrance. High average for three high guns and one low gun. Shoot rain or shine. Rose system, 7, 5, 3 and 2. Targets 2 cents. Magautrap. Warm dinner served. Guns and shells shipped to Shafer Brothers will be delivered on the grounds. Mr. J. F. Dover is the secretary.

The Carlisle (Pa.) Gun Club contemplates holding a merchandise shoot of rare domestic significance on July 4. Ladies' and children's shoes, hash grinder, umbrella, pipe, suspender and other useful articles of virtu are the desirable prizes. In the afternoon, if matters go as arranged, there will be a five-man team race with Chambersburg for the championship of Cumberland Valley.

The matches at Smith Brothers' grounds, Newark, N. J., June 27, resulted as follows: Mr. W. H. Sanders defeated Mr. H. Pape, 25 birds, $25, by a score of 20 to 17. Four-cornered match, 50 birds and $50 per man, the scores were: G. E. Loeble 44, J. Hainhorst 39, W. H. Sanders 37, H. Pape 38. Match at 50 birds, $50: J. H. Wellbrock 40, R. L. Packard 28.

The Hell Gate Gun Club, of New York, will depart from its time-honored midsummer event, substituting a shore dinner for the honored clam bake. This year it will be held on July 22, Mr. Geo. C. Lebohner, of Dexter Park, will attend to the culinary interests. This event is open to members only, and possibly some members of the press.

We regret to note that the Boiling Springs Gun Club, of Rutherford, N. J., has decided to sell its well-equipped club house, grounds and good will. This club was at one time the most active and powerful of New Jersey clubs, though it has been far from inactive of late.

Mr. John S. Wright, the popular manager of the Brooklyn Gun Club, announces an Independence Day shoot (July 4), on the club grounds, corner Enfield street and Liberty avenue, Brooklyn, commencing at 1 o'clock. Take Kings County Elevated to City Line.

Mr. L. B. Fleming, of Pittsburg, on June 24, held his title to the bronze medal emblematic of the championship of Western Pennsylvania, by defeating Mr. W. D. Berger, of Allegheny City, who was the challenger. The scores were 93 and 81.

The Fourth of July shoot at Swanton, Vt., will be an amateur shoot, the main event of which will be the Robin Hood cup contest, $25 added, open to shooters of New England and Canada. Mr. E. C. Fort is the secretary.

Mr. H. B. Ten Eyck, secretary, North Branch, N. J., writes us as follows: "The North Branch Gun Club will hold an open target shoot Friday, July 4. All are invited. Sweepstakes to suit the shooters."

In a ten-man team race between the Clearview Gun Club and the South End Shooting League, Philadelphia, June 28, the former won by a score of 195 to 184 out of a possible 250.

At the W. E. Kessler tournament, held at Des Moines, Ia., June 26 and 27, Mr. C. W. Budd won high average for the two days with the excellent percentage of .946.

BERNARD WATERS.

Rockland Military Academy—Spring Valley.

NYACK, N. Y., June 28.—The appended scores are the result of a second match between Rockland Military Academy and Spring Valley. The latter team won to-day. The deciding match will be shot at Spring Valley, June 26. The teams were very evenly matched to-day:

Rockland Military Academy.

French	11101011101111111110110111—20
Moeller	10101011111110111100101111—18

E. E. FRENCH, Sec'y R. M. G. C.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, June 28.—The appended scores were made on our grounds to-day on the occasion of the second shoot of the second series. Notwithstanding the extremely bad day for target shooting or any other outdoor sport (as it rained steadily all afternoon without one minute's let up), twelve members lined up for the regular weekly contest.

Dr. Meek won Class A trophy on the score of 22, Drinkwater won Class B on same score, and Thos. Jones won Class C on 18.

The shooting was extremely unpleasant, as a head wind caused the rain to beat directly into the shooter's face, and caused the targets to soar and dip very badly. It was so chilly as to make the good fire we had in the club house extremely popular.

Ninth trophy event, 25 targets:

Dr J W Meek	1111110111011101111111111—22
J D Pollard	0111111110011110111111101—20

North Side Gun Club.

ALLEGHENY CITY, Pa., June 24.—The opening tournament of the North Side Gun Club, of Allegheny City, was a decided success, the attendance being larger than any sweepstake shoot held in Pittsburg and vicinity since the large shoot of 1896, which was open to the world.

Shooters were present from New Castle, Titusville, Beaver Falls, New Brighton, McKeesport, Rodfield, Irwin, Sistersville, and other surrounding towns. The shoot passed off without a hitch of any kind. Over 5,000 targets were thrown during the day, and the magautrap worked nicely. The targets were thrown 50yds.

A very high wind prevailed during the entire day, which kept down the scores and prevented any very long runs.

For the total of 190 shots, Lutz, of Beaver Falls, led for the day with 177 broken.

Fleming, of Pittsburg, and Moore, of New Castle, tied for second average with 175, and Dade, the West Virginia champion, landed third with 174.

The contest for the bronze medal representing the target championship of Western Pennsylvania between L. B. Fleming, of Pittsburg, holder, and W. D. Berger, of Allegheny City, challenger, was won by Fleming, with a score of 93 to 81 for Berger.

A purse of $4 was given to each of the three high guns, and a similar amount to each of the three low guns shooting through the programme.

The North Side Gun Club were highly gratified with the success of the tournament, and expect to give a two days' shoot during the early fall with liberal added money.

L. B. FLEMING.

Boston Gun Club.

BOSTON, June 30.—The regular weekly prize shoot occurred at Wellington, June 25, seventeen shooters presenting themselves to try their luck at the flying targets. Leroy was high on the prize match, with 23 broken targets. As to weather, slight wind and very cloudy. As to the average, most of the shooters shot well, as the following scores will show:

Events:	1	2	3	4	5	6	7	8	9	10	11

A Point of View.

CINCINNATI, O.—Trapshooting, in its particulars as a sport, differs radically from those of every other recognized sport which has a national breadth and interest. The difference is in the utter absence of any distinction between the amateur and the professional. The latter affects to consider that trapshooting is sport, and refers to it as such, though to him it is not sport at all; it is a business. To him it is sawing wood.

From a small and comparatively humble start, professionalism has grown till it dominates every branch of trapshooting. There was a time when the salaried professionals had no higher purpose than to sell their goods, enter all the events at a tournament and skim off the cream from all the moneys in such cases as they could not take both cream and milk.

At present all the manufacturers are in frantic competition to make the best showing in the way of winnings and averages with their products, so that at any open tournament an outsider may well be in doubt as to whether competition is run as a sport for those who engage in it, or as a means merely to advertise goods.

There is much to deplore in this destructive ascendency of professionalism. It eternally parades before the eyes of those who are fond of it as a sport that they, as amateurs, are profitable appendages to the business interests of manufacturers who are seeking advertising matter. It is the old story of killing the goose which laid the golden eggs.

Further than that, the professionals, by constant practice week in and week out attain to such a high stage of skill that their performances are not only sufficient to frighten ordinary amateurs out of all competition with them, but sufficient to discourage the amateurs from any attempts in any kind of a competition. The amateur reasons that, if he can miss three targets in ten, while the professional only misses three in 300, what use is there in attempting to shoot at all?

It would be greatly to the advancement of trapshooting if the leading amateurs would immediately take steps to organize a national association. But they will not do so.

Let the professional live, but let him live from his profession. Let him not live as a parasite on the amateur. He has an entire right to his profession. The amateur has an entire right to his sport. The latter buys his guns and ammunition. He pays cash for them. When he comes to use them in competition, he is competing oftentimes against the agents of the very manufacturers from whom he purchased them. In the end, his defeat serves to advertise something or other which served to beat him. If he wins, it serves as an advertisement of what he had bought and paid for already. He is subordinated to what is used. As a contestant, he holds a second place to the trade interests.

One may read the tournament scores week after week to learn that who won is secondary to what won. And the trade generally wins. The same names are dished up in first place week after week, East, West, North and South, wherever there has been a crop worth picking. As a consequence, all kinds of new devices are necessarily invented and put in action to reassure the amateur that the professional is rendered harmless. Club managers, if they have not a sympathy due to substantial manufacturers' favors, are woefully lacking in moral courage in dealing with professionalism. Handicaps are announced which, when applied, do not handicap at all; moneys are divided in a mystical way, which, after all the tooting of horns concerning them, go to the men who can shoot the best, the professionals.

Probably no amateur organization ever had as large a membership as the League of American Wheelmen had. It guarded its amateur interests most rigorously. At one time, it had far upward of 100,000 members. That time is only three or four years ago. In a commercial way—that is, a professional way—it afforded fat emolument to those who knew the professional arts. Professionalism at length grew strong enough in the L. A. W. to make a fight for recognition and won. The L. A. W. to-day is hardly important enough to call it a wreck of its former great self. The principle is the same. One man cannot fatten as a business measure by monopolizing all that is of value in another man's sport.

No doubt but what there is a great deal of trapshooting done in America even under the heavy burdens imposed on it by professionalism. No doubt but what there would be many times more of trapshooting done but for the burdens of professionalism.

When men stop shooting, we can gather together and wonder why they stopped. We can conjecture this, that and the other thing, except professionalism. When the game is dead, as it will be in time under present conditions, some Napoleon can then start a national amateur association out of what is left of trapshooting.

Let us, at least, for a while longer, show more interest in the winner as a shooter than in what he won with. Let us make a pretense that the shooters are honestly engaged as men, each contesting against the others, not as agents who are using their opponents merely for advertising purposes. It is much pleasanter to compete as a man than it is to compete merely as a means for some other man to accumulate advertising data.

I write this from a conviction that the manufacturers, in their headlong eagerness to control both the sales of their goods and their use after being sold, will in time find they have handled a two-edged cutter.

SUCKER.

Central Michigan Trapshooters' Association.

ALBION, Mich., June 26.—Early this season an association was organized consisting of Battle Creek, Marshall, Albion, and Charlotte gun clubs, to be known as the Central Michigan Trapshooters' Association, the object being that of holding tournaments and friendly contests at the traps. The first meeting was held a month ago at Marshall; the second one at Albion, June 26. These gatherings have proven very interesting and created a friendly and healthy rivalry, especially so seeing that there is a five-man team shoot as part of the programme.

The Albion club is a large one, having good officers, and to be up to the times, have set up a magautrap on the fair grounds. Everything is lovely save the background, and this not the best. Targets are thrown against a hill, and there are many trees, just now covered with a very dark green foliage. Hence, there are many low scores, as shown by the tabulation herewith.

Considering that the shoot was intended to be a local affair, there was a large attendance. The Jackson delegation was composed of R. W. Smith, Mr. Ferris and Mr. Crosier; Marshall sent down a fine body of good shooters, viz., C. C. Smith, H. M. Holmes, S. Swarthout, E. De Reamers, L. H. Crampton, C. Brugel, M. F. Roberts, H. Faulkner, John Farnsworth, F. G. Seaman. Homer was quite at home when C. A. Rafter, John Linton and Wm. Brunson got to smashing targets. Part of the Battle Creek club were late getting in, but they had a good team in Fred Howse, S. J. Carpenter, G. C. Willard, Max Hensler and Al. Hensler. The home club was well represented by E. C. Gale, W. J. Cattermole, O. H. Stecker, W. A. Sweeney, L. J. Deering, C. H. Bliss, C. H. Ackley, Homer Brasie, W. S. Daskam, C. D. Baum, A. F. Andrews, Elmer Jacobs and G. W. McGuire. Charlotte sent Sam Robinson, Tom Waddell, Henry Robinson and Fred Hartel, and as but two of them were shooting their team did not compete.

The prizes were mostly merchandise, donated by the Albion business men and women. Price of entrance, targets only. Ties were not shot off, but were decided by chance.

Trophy team shoot, five men to the team, 20 targets to the man. As may be expected, the team contest was the most exciting event of the day. It is very seldom that teams are so evenly matched, as there was but one bird difference in the total of each team, and that was in favor of the Marshall team, which won on the former contest also. The scores:

Albion Gun Club—Bawn 18, Gale 13, Bronson 18, Sweeney 17, C. K. Bliss 14; total 80.

Marshall Gun Club—Crampton 17, Faulkner 15, Swarthout 16, Wade 17, C. Smith 16; total 81.

Battle Creek Team—Carpenter 16, Willard 15, Howes 17, Hensler 17, A. R. Hensler 15; total 80.

Hensler trophy, open to League members, 25 targets: S. Howse 22, Carpenter 18, Gale 15, A. R. Hensler 19, Swarthout 19, A. H. Gale 18, Holmes 15, Robinson 17, Sweeney 17, Crampton 19, Bronson 20, Roberts 19, Hartell 20, Willard 16.

There was little time for any sweepstake shooting, and yet the popping of nitro powder was kept up until sundown. Max Hensler, of Battle Creek shot a steady gait, losing but 10 out of 120 shot at in the regular events. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

SPECTATOR.

Interstate Tournament at Raleigh.

RALEIGH, N. C., June 27.—The Interstate Association's trapshooting tournament, given under the auspices of the Raleigh Gun Club, June 25 and 26, was not as largely attended as had been expected by the local club, but those who were there witnessed some good shooting.

Among the better known shots present may be mentioned the following: Mr. H. P. Collins and Capt. Ben Eick, representing the Dupont Powder Company; Mr. Walter Huff, representing the Hazard Powder Company; Mr. Charles Nichols, representing the Winchester Repeating Arms Company; Mr. J. E. Avery, representing the Union Metallic Cartridge Company; Mr. A. W. du Bray, representing Parker Brothers; Messrs. L. D. Thomas and J. S. Fanning, representing the Laflin & Rand Powder Company; Messrs. H. B. Lemcke and Neaf Apgar, representing the Peters Cartridge Company; Messrs. P. J. Gallagher and J. W. S. Butt, of the Portsmouth, Va., Gun Club, and Messrs. Johnson, Gowan, Walters, Stark, Dixon, Ellington and others, of the local club.

High average for both days was won by Capt. Ben Eick, Neaf Apgar second and Walter Huff third.

After the regular programme had been finished the second day, the Raleigh Gun Club donated a purse of $50, open to all, handicap by distance, to be contested for without entrance fee, the Raleigh Gun Club members not competing for the money. This liberality upon the part of the club was appreciated by all who were present.

A pleasant incident in connection with the tournament was the presenting of a pair of cuff buttons to Manager Shaner, of the Interstate Association. The gift was from the Raleigh Gun Club, and President Johnson, in making the presentation speech, stated that it was a faint expression of the club's appreciation of Manager Shaner's kindly efforts to render the occasion pleasant and agreeable to all. Manager Shaner responded in a few well chosen words.

The Raleigh Gun Club was organized three years ago, and has a membership of about fifty. The club has been in active life ever since it was organized, and the interest in it has steadily grown. Mr. James I. Johnson is President; Mr. Jos. F. Ferrall, Vice-President, and Mr. R. T. Gowan, Secretary and Treasurer. The club has splendidly equipped shooting grounds on the car line, less than ten minutes' ride from the capitol square, where it holds a weekly shoot each Thursday afternoon. Just southwest of the traps stands a clump of trees, affording ample shade on hot summer afternoons. The traps face northeast, looking away over a gentle slope, forming an ideal shooting place. Blackbird targets and expert traps, arranged according to the Sergeant system, were used, and gave the very best of satisfaction. The scores of both days follow:

June 25, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	Shot

Ossining Gun Club.

OSSINING, N. Y.—The scores herewith appended were made at the regular Saturday afternoon shoot of the Ossining Gun Club, June 28. A. Betti came over from Mt. Kisco for a little preliminary practice for the Kisco shoot on July 4-5. Handicap sweepstakes were shot to-day, which equalized matters to a certain extent:

C. G. B.

L. and M. Trapshooters' League.

THE largest tournament that has been held in the Southern country has just come to a close at Shreveport, La. The tournament was given by the Louisiana and Mississippi Trapshooters' League, under the auspices of the Caddo Gun Club, of Shreveport. To say that the shoot was a success, goes without saying, as the scores below will show for themselves.

Mr. Ward Erwin, of the Greenville Club, was the lion of the day, winning first average over all the experts, making a score of 378 out of 400 birds shot at. Taking into consideration that the shooting was done over four expert traps, each set being in a different location, making the targets pretty hard, I think that the score is phenomenal; and also, taking into consideration that Mr. Erwin weighs only 108 pounds. He also won the individual trophy donated by Baker & McDowell, and led his team, which won the loving cup donated by the Peters Cartridge Company. The team winning the cup was composed of Erwin, Blake and Foote; they scored 71 out of 75 birds. This team—and in fact the Greenville Club—is being very ably coached by that veteran trap shot, Major Foote, and a great deal of their success in their team work is due to his wide experience.

Mr. Wilcox, of Texas, shot second; Mr. Fletcher, of Birmingham, third.

Among the experts, Mr. Wade, of Texas, representing the Peters Cartridge Company, won the high expert average; Mr. Spencer, of St. Louis, also of the Peters Cartridge Company, shot second, and Mr. Faurote, of the Winchester Arms Company, shooting third.

The trade was represented by Messrs. Wade, Spencer and Kaufmann, for the Peters Cartridge Company; Messrs. Faurote, Hillman and Hildreth, for the Winchester Arms Company; Messrs. Skelly, Williams and Fanning, for the Laflin & Rand Powder Company, and the only Bert Taylor, for the Hazard and Dupont powder companies.

One of the most pleasing features of the shoot was the presentation of diamond lockets to Maurice Kaufmann, who managed the shoot, and to Mr. George Hillman, who so ably assisted the manager in taking complete charge of the office work.

The next shoot of the League will be held in Greenville, Miss., July 17 and 18, where $500 will be added to the purse and two cents charged for targets. The League shoots are strictly amateur shoots, without any handicap; all amateur shooters will be welcome.

Each of the contestants shot at 400 and scored as follows: Erwin 378, Wilcox 370, Fletcher 367, Wade 366, Mercer 362, Spencer 359, Faurote 358, Jackson, Dick and Miller 356, V. C. 354, Fanning and Frank 353, Darlington 352, Burke 350, Hawkins and Skannel 348, Howard 345, Atchison and G. G. Ingraham 343, Cocke 341, Baker, Saucier, Tucker and Boissau 340, Post and H. Taylor 339, Dickson, Rabb, Turpin and Adams 338, Wilson 337, Watson and McCormick 336, Flournoy, Sr., 335, Guessaz 334, Blake and Conroy 333, McC., Duncan and Gilmer 331, Schaffer 332, P. S. Ingraham and Dickson 329, McMurdo 328, Turner and Coles 327, Skelly, K. K. and Hays 326, Foote and Moser 325, Flournoy, Jr., and Broyles 324, L. J. Lockett and Scoville 323, Clements 322, Graber and Dinkins 320, Fisher 318, Stratton and Walton 315, Abbott 313, Heard 312, B. R. Nash 310, Subblett 309, Thornton 308, John Jenkins 307, Pratt 306, Moore 305, McCutcheon 304, Arnold 300, Pinkston 296, Vick 280, Cleveland 280.

Each of the following shot at 200: J. W. Atkins 177, Dillard and Spears 172, Bennett 168, Francis 165, Lalland 163, Gates 162, Fisher, Fred, Bearing and C. E. Jenkins 151, Kerley and Pollard 149, Elan and Daniel 135, Buell 154.

Shooters in attendance not completing programme either day: Lay, Marston, Hughes, Prescott, Waxa, Helmcamp, Pendleton, Ruple, Brady, Z. T. Luckett, Allen, Poole, Cowley, Cayle, Hildreth, North, Whitside.

NEMO.

W. E. Kessler's Tournament.

DES MOINES, Ia., June 28.—Tournament fixed to be held June 26, 27 and 28 on the old Des Moines Gun Club grounds in this city was fairly well attended.

The programme called for three 10 and eight 15 targets events each day. The shooting was from three traps, Sergeant system. Targets were thrown about 50 yards.

The weather on Thursday and Friday was pleasant, but on Saturday morning it commenced raining and most of the shooters went home. Owing to the small attendance, Mr. Kessler decided not to finish the programme.

Budd was high with 95 per cent. for the two days; Sellers second with 91.3, and McFarland third with 84.3.

June 26, First Day.

HAWKEYE.

They Will Close.

NEW YORK, June 27.—*Editor Forest and Stream:* It might interest the shooting fraternity to know that the entire gun trade are going to close their stores on July 5. It would probably be a good idea if you published this fact, in your next issue. This is merely a suggestion on our part, and if you care to publish it, we would be glad to have you do so. Below are the names of the people who have signed the agreement to close: M. Hartley Company, Winchester Repeating Arms Company, A. G. Spalding & Brothers, Schoverling, Daly & Gales, H. D. Folsom Arms Company, Bridgeport Gun Implement Company, Remington Arms Company, Von Lengerke & Detmold, C. J. Godfrey, Union Metallic Cartridge Company, E. C. Powder Company, Walsrode Powder Company, A. H. Funke, H. Werleman.

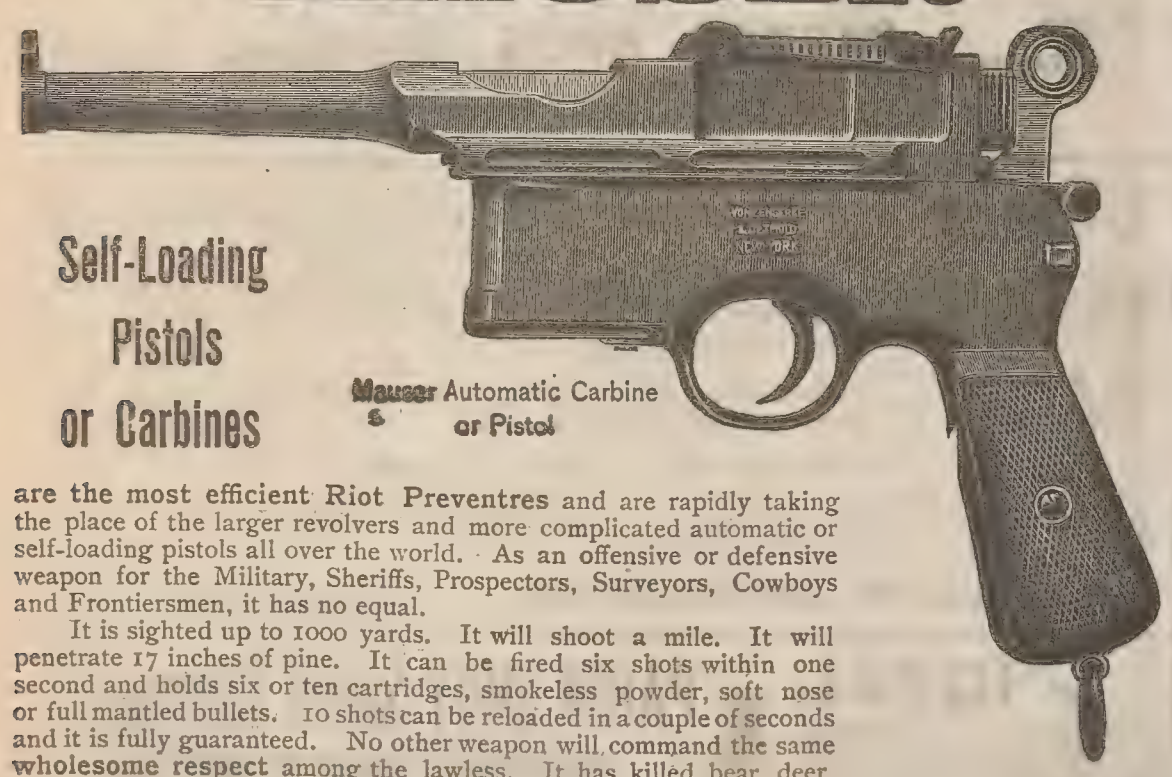
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

PRICE, 6 Shot, Skeleton Stock, New Small Model,	$22.65
" 10 Shot, Wooden Holster and Stock Combined,	25.00
" Cartridges, either Soft Nosed or Full Mantled, per 1000,	25.00

LUGER AUTOMATIC PISTOL AND CARBINE

Weight of Pistol, 1 lb. 13 oz.
Caliber, .30 or 765 mm.
Muzzle Velocity, 1,150 feet.
Range, 2,000 Yards.

Price, $25 Net.

Cartridges loaded with Walsrode Powder with either soft nose or steel jacketed bullets, per 100, $2.50.

This pistol has been adopted by the Ordnance Board of the United States Army, **and can be carried in a holster or coat pocket,** and is powerful enough to kill large game. It has also been adopted by the Swiss Government in 1899. It has a magazine carrying eight cartridges in the stock of the pistol, and the magazine can be thrown out, when empty, and replaced with another in a moment.

At a late test 116 shots were fired in a minute, and a score of 24 bullseyes out of 30 shots was made. The barrel and breech block is forced backward by the recoil from the discharge of the cartridge and empty shell is extracted and ejected by this same movement. This is one of the most wonderful arms ever invented.

THE .32 CALIBER WINCHESTER SPECIAL

A New Smokeless or Black Powder Cartridge And Rifle

The .32 Winchester Special Cartridge, which we have just perfected, is offered to meet the demand of many sportsmen for a Smokeless powder cartridge of larger caliber than the .30 Winchester and yet not so powerful as the .30 U. S. Army, and which could be reloaded with black powder and give satisfactory results. The .32 Winchester Special Cartridge meets all these requirements. Loaded with Smokeless powder and a 165-grain bullet, it has a muzzle velocity of 2,057 foot-seconds, generating a muzzle energy of 1,550 foot-pounds. At the standard testing distance of 15 feet from muzzle, this cartridge, with a full metal-patched bullet, will give a penetration of 37 7/8-inch pine boards. Its trajectory is as follows: 100 yards, 1.23 inches; 200 yards, 5.92 inches; 300 yards, 16.38 inches. From these figures it will be readily seen that the advantages of this cartridge are its great striking energy, penetration, high velocity and consequent flat trajectory. Next to the .30 U. S. Army and .303 British, it is the most powerful small-bore cartridge of to-day. With a charge of 40 grains of black powder, the .32 Winchester Special develops a velocity of 1,385 foot-seconds, which makes it a powerful black powder cartridge.

We have adapted the popular Winchester, Model 1894, rifle, to handle the .32 Winchester Special Cartridge, and are prepared to furnish it in either solid-frame or take-down style, with 26-inch octagon nickel-steel barrel, the list price being $23.00 for the solid frame and $28.00 for the take-down style. Rifles for the .32 Winchester Special Cartridge are fitted with a new and specially designed rear sight, which is graduated for both Smokeless and Black powder cartridges.

WINCHESTER REPEATING ARMS CO., - NEW HAVEN, CONN.

Steam Launch, Yacht, Boat and Canoe Builders, etc.

THE ROBERTS SAFETY LAUNCH and YACHT BOILER. Over 1,000 Boilers in use. 250 pounds of steam. Handsome catalogue free.
WORKS: RED BANK, N. J.
Cable Address: Bruniva, New York. Telephone address: 599 Cortlandt.
THE ROBERTS SAFETY WATER TUBE BOILER CO., 39 and 41 Cortlandt Street, New York.

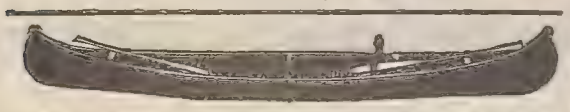
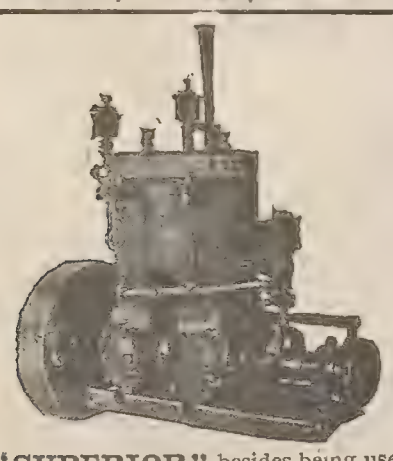
YACHT SAIL MAKER,
Tents, Flags, etc. Yacht Blocks, Patent Sail Hoists, and Fittings. Send for Catalogue,
FALL RIVER, MASS.



CANOES. BOATS. YACHT TENDERS.
Built of cedar, canvas covered. Light, easily handled and in every way satisfactory. Send for catalogue.
ROBERTSON & OLD TOWN CANOE CO.,
9 Middle Street, Old Town, - - Maine.



The "SUPERIOR" besides being used in the Life Saving Service, is now working in Alaska, Denmark, England, and in every state in the United States It stands on its merits. All joints are ground metal to metal, bushings are phosphor bronze, Its firing plugs can be removed from the head without disturbing the head, it has a perfect slow down device, and can be run at any desired speed. Write for catalogue.
LAKE SHORE ENGINE WORKS,
119 East Washington Street,
MARQUETTE. - - MICHIGAN, U. S. A.

FINE CRUISING LAUNCH.
35ft. O. A., 8ft. 6in. beam, liberal freeboard, built of fine material and first-class in every way; finished outside but not inside, being where we can finish in any style cabin, or as an open launch. The design is of the recent square stern type, and is well planned. A number of others in stock, and our 65-page list tells all about these, and some smaller craft.
A stamp and your address brings it to you.
D. H. HECKMAN,
Designer and Builder,
KENNEBUNKPORT, - MAINE.

ROWLAND E. ROBINSON'S
Danvis Books.
These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

"THE CHALLENGE."
This spirited picture of the American Elk has been engraved as an artotype in size and style companion to "Alert," The plate is 13 x 19 inches on 22 x 28 Price (mailed in a tube, postpaid), $3.00
FOREST AND STREAM PUBLISHING CO. NEW YORK.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.
Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.
A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1902, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 12, 1902.

VOL. LIX.—No. 2. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

LONG-RANGE TESTS.

THE story of the preparations for the series of international victories in long-range rifle shooting, beginning in 1874, is being repeated in a quiet way just now. At the Bruce dinner last winter it was resolved by the old-time rifle shots that a renewed effort should be made to organize and maintain a long-range rifle club on the lines of the famous Amateur Riffe Club. It was to be a civilian organization, devoted to any rifle as distinguished from strictly military arms, and to be given up to shooting at the extreme open-sight ranges of 800 to 1,200 yards.

Without much publicity being sought, the organization has been effected, and on selected ranges in New Jersey a great deal of very interesting work has been in progress for some time. Messrs. Bruce and Hyde, of the early American teams, have been acting as shooting masters for a very enthusiastic group of youngsters, and some of the spirit which animated the riflemen of a quarter-century ago has been aroused. The co-operation of the rifle-making and ammunition companies has been secured, and at every shooting day for weeks past some very delicate problems have been met, but as yet they have not been mastered.

These marksmen pioneers have nothing to guide them in the path they have worked out for themselves. All the old data when black powder was used must be laid aside now that smokeless powder has been taken in hand. So far it has proven to be a most uncertain article to handle, and despite the assurances of the manufacturers that it will act the same under all conditions, the marksmen find this to be far from the fact.

A batch of cartridges is prepared and at 500 yards give very uniform results; so on back to 800; but above this those perplexing "unaccountables" become so frequent that it is evident some definite cause must be discovered. That discovery is the current problem of the Bruce-Hyde band of experimenters, and to solve it they are determined if intelligent and persistent work can accomplish it.

It must be borne in mind that the smokeless powders are nitro powders—really of a common origin with nitro glycerine, dynamite, gun cotton and all that class of explosives, and prone to the vagaries which have always marked this group. With black powders the chemical action of the liberation of a great quantity of gas to create a pressure behind the bullet was governed by a few easily understood physical conditions. The size of the grain, the compactness of the mass and any moisture present were factors easily allowed for, but with the more powerful and far more sensitive mass of nitro powder, not only are these factors magnified, but there are apparently new ones which have yet to be detected.

We suggest as a possible cause for some of the irregularity noted, the matter of temperature. A stick of dynamite on a frosty morning is practically inert. The careless laborer who warms it up over the blacksmith fire proves what changes warmth works in the rather unstable chemical mixture. May not something of this be working out in the metallic cartridges as they are slipped into the breech opening? Early in the day, with the rifle barrel comparatively cool, the powder is in very much the same surroundings as in the cartridge case. When the longer ranges are reached the weapon is not only much hotter, as every rifleman knows who has put in a day's shooting of from fifty to one hundred shots, but the time taken for sighting, etc., is longer, and all this gives opportunity for the powder to absorb an appreciable quantity of heat from the metal of the barrel, and so lead to an entirely different form and rate of combustion with an accompanying variable evolution of gas with a consequent change in the initial velocity of the bullet, and a miss where a bullseye was held for and expected.

BIG CATCHES AND THE BIG CATCHERS.

As a rule, we do not print the notes which come to us of tremendous catches of trout or bass, but now and then they are given place to show that the count fishermen are still in the land, and are actively engaged in doing what they can to prevent the rest of the world from having any fishing after they have got through. To impute to such anglers any deliberate motive of this nature would be to do them an injustice. The man who snakes out his two or three hundred trout and tells of it with gusto, in all probability has no thought of what is to follow his own fishing. The idea never enters his head that his intemperance will have any effect whatever upon the fortunes of other anglers. This is illustrated in the case of the correspondent who reported the other day the taking of several hundred trout at a Maine resort, and then recommended other fishermen to visit the same place. Such a person simply does not think. He is a good fellow who would like to have others share his good fortune, so after fishing to his own satiety, he invites others to come and take his place and have some of the great luck after he has departed.

It is clear then that the remedy lies in education. The unthinking, foolish and improvident angler must be made to recognize the principle of the thing. He must be taught to apply to fishing the A B C axiom that you cannot eat your cake and have it too. The only way to accomplish the education is by everlastingly proclaiming the doctrine of temperance in fishing. The principle is accepted more generally now than ever before. It was not so many years ago that the success of a fishing expedition was conventionally reckoned by the score of the fish taken. But among the vast majority of intelligent anglers to-day, there exists no spirit of emulation in count fishing. The men who catch their hundreds and tell of it in public are individual personalities who are out of their place in history. They belong to an angling time which has passed.

Camp keepers and hotel managers of fishing resorts are very often responsible for the count fishermen who herald their big scores to the world, for it is thought by them that other fishermen hearing of the great catches will hasten to get their share of the fun. The very reverse of this is quite as likely to be the case; for your experienced angler who reads of big catches of fish reasons with himself that fished-out waters are wisely avoided, and in consequence he betakes himself to other scenes. The list is not short of fishing resorts once popular and capable of being judiciously farmed for an indefinite period, which have been utterly ruined by the silly connivance of the count fisherman and the foolish landlord.

In her "Florida Days" Margaret Deland paints a sunset on the East Coast and makes the sun sink into the sea. This is matched by Tolstoï, who, in "Anna Karenina," when describing a snipe shooting on a spring evening, tells us that "Venus, bright and silvery, shone with her soft light low down in the west behind the birch trees. * * * Levin resolved to stay a little longer, till Venus, which he saw below a branch of birch, should be above it. * * * Venus had risen above the branch." Of the two manipulators of the heavenly bodies, we are so patriotic as to hold that the American woman who makes the sun set in the east is a greater wizard than the Russian who makes the planets rise in the west. Moreover, if Tolstoï knows as little of snipe shooting as he does of astronomy, he would not amount to much on a jacksnipe bog.

At Mammoth Hot Springs in the Yellowstone National Park on July 20 there will be a convention of the State game wardens of the Northwest. The meeting is the outcome of efforts on the part of Mr. F. W. Scott, of Helena, State Game and Fish Warden of Montana. There will be a two days session, and the discussions will cover many subjects of interest in the work of fish and game protection. The Yellowstone Park is in peculiar degree an appropriate place for such a meeting of game protectors, for it is in itself a striking object lesson of game protection which protects and preservation which preserves. It has even some specimens of that great rarity in the twentieth century, the native wild American buffalo—a remnant bunch estimated to contain twenty-five individuals. The elk, it need not be said, are extremely numerous; they roam the Park and the country south of it by the tens of thousands. The deer are so plentiful and so tame that the delegates to the convention may get sight of them; or failing this, may at least have the satisfaction of seeing at close quarters the bears at the hotel garbage piles. The antelope, under the combined protection afforded by the Park and by Montana under the new game law, promise rapid increase. The beaver has built its dams in almost all the smaller streams. The Park supplies also a demonstration of successful fish stocking. In nearly all the waters visited by the tourists of to-day, trout fishing may be had, either for the native variety or for those which have been introduced by the United States Fish Commission. There are four trouts in the Park—the indigenous black-spotted, and the introduced rainbow, Von Behr, Loch Leven, and Eastern brook trout—and there are no restrictions on the fishing except that trout may not be caught for market.

We conclude to-day the special report procured for us by Mr. J. B. Monroe on the Montana buffalo herds. The summary has special interest at this moment when the report comes from Washington that Mr. Howard Eaton, of Medora, N. D., has secured an option on the Flathead buffalo, which he has told President Roosevelt he would make over to the Government, without profit to himself, if the herd could be acquired and added to the buffalo now in the Yellowstone National Park. The advantage which would accrue from such a disposition of the Montana herd would be very great. It is recognized that the Park buffalo constitute so small a remnant that their ultimate extinction may be looked for. The accession of the Allard herd would provide not only the strength of increased number, but of much needed new breeding stock. The taking over of the herd by the Government would be an assurance that the day of the final passing of this interesting American mammal was to be postponed.

The annual report of the Fishery Board for Scotland gives the results of the series of salmon-marking experiments which have been carried on on the Tay, Tweed and other rivers. Metal labels were attached to a large number of captured kelts, the labels being numbered and the fish when recaptured identified thereby. The records show that the popular notion that a salmon always returns to its native river has a basis in a rule with exceptions. Of twenty-four marked fish which were recaptured in rivers after the lapse of at least one season, nineteen had come back to the river in which they had been marked; five went to other rivers, but of these five only one went to a river very far away. The salmon which holds the record for long wandering was a Norwegian fish which, having been marked and released in the Aadsira River, was recaptured two and one-half years afterward on the Trondhjem Fjord, 500 miles distant.

Executive Agent Sam. F. Fullerton, of the Game and Fish Commission, takes a rosy view of the prospects for Minnesota game. Since the State "has got FOREST AND STREAM'S Platform Plank securely spiked," the change in the situation has been strikingly manifest. Indeed if the progress in this direction now making shall continue, Minnesota game promises to be as plentiful as it was in the old days. The mildness of recent winters has been exceedingly favorable to the quail, which are everywhere reported in great abundance. It is a long look ahead to the time when the venison-consuming lumber camps will cease to be a factor, but just so surely as the forests are to go, lumbermen must go with them, and the slaughter of deer for lumber camps will come to an end.

We have studiously refrained from calling the horse mackerel a "horse mackerel," since the name "tuna" is so much more taking; and "leaping tuna" has in it something of the poetry of sport. But in Atlantic coast waters horse mackerel it is, and horse mackerel it will remain in popular parlance, until some angler shall follow the lead pointed out by Mr. Waddell, Commissioner Collins or Dr. Morris, and by bringing the big fish by capture with rod and reel into the category of game fish, give acceptance to the name by which it is known on the Pacific coast.

The Sportsman Tourist.

Concerning the Roustabout.

Editor Forest and Stream:

Like your many other appreciative readers, I have enjoyed Mr. Spears' series of "Walk Down South" narratives, and regret that they have come to an end. Mr. Spears' observations on the hard lot of the negro "roustabouts" on the steamboat he traveled on, and Mr. Charles Cristadoro's subsequent remarks on the same subject, no doubt present a true picture of this interesting class of the Southern negro, as seen by these gentlemen, through spectacles that admitted no side lights on the canvas. The impression made on their minds, however, by the partial view of the situation which they had opportunity to see, and which they have imparted to your readers, is that these negroes are proper objects of commiseration and sympathy, from the hard, and inferentially unavoidable, lot to which they are subjected.

While FOREST AND STREAM is no proper place for a controversy on the "race question," I may be permitted to cast a few "side lights" upon the picture so graphically drawn by those gentlemen, in order to dispel the very erroneous impression which they have imbibed and laid before your readers, as a consequence of merely superficial observation.

The negro steamboat "roustabout" is a *sui generis,* a class by himself, a unique figure in the post bellum industrial development of the South. His class is perhaps the most independent of all the laboring negroes in the Mississippi Valley. His servitude in steamboat work is exceedingly hard, but is purely voluntary, and is indeed his chosen profession, so to speak. The pay he receives is several times as great as that of any other class of mere laborer, so that the proceeds of a single trip on the boat enable him to lie off, and revel in his most coveted luxury of crap shooting and similar indulgences, until his money is exhausted, when he has no difficulty in making engagement for another trip.

The demands of the steamboat service on the Mississippi River are, from its very nature, extremely exacting on the "roustabout," taxing severely his physical powers while he is actually at work—that is, during the continuance of his "trip." These demands have led to the development of this picturesque class of negro laborers.

But so far from being proper objects of sentimental commisseration, the "rousters" are generally masters of the situation, in large measure dictating the terms of their service; and, after the example of the white "brotherhoods," not infrequently tie up a boat by refusing to load or unload her, until their demands are complied with.

During the busy season, when cotton is moving, the customary pay of the roustabout on Mississippi River boats is sixty dollars a month; and it is not unusual for them to strike for ninety dollars, and get it, when there is great pressure of business.

The roustabout as a class is conspicuous even among negroes, for general cheerfulness, and that disregard of life's vicissitudes which is characteristic of the race, appearing as happy and contented when without any "visible means of support" as when receiving regular pay; working or idling as the whim takes him. But when he has "signed" for a trip on a boat, it is perfectly well understood what the work is to be, and that no shirking is to be permitted. Moreover, he prefers this kind of employment to any other, and cannot be enticed into other fields where both the work and pay are lighter.

Neither can it be considered strange that a gray-haired rouster is rarely, if ever, to be seen, and this for several reasons; as for one thing, he drops out of this strenuous sort of life when he has passed the most robust age and is consequently no longer fitted for it. Another reason is that the roustabout is perhaps the most dissolute in his habits of all the negro population, falling a victim to diseases that result from such habits of life, getting into fatal broils with his fellows, and furnishing the largest proportion of the subjects for the police courts in river towns.

The roustabout is withal an indispensable adjunct to the Mississippi River steamboat traffic, where trips must be made on regular dates, and where freight must be loaded and unloaded on time, day and night, and in all weathers; and long may he continue to labor and sweat in season, and to draw high pay, and laugh and sing, and shoot his "craps," and slash his fellow rouster with his ready razor, and dodge the "cop," and adorn the benches of the police courts, and amuse himself in divers ways; there being no power to compel him either to do or not do these things.

COAHOMA.

MISSISSIPPI.

Doomed.

WHEREVER the invading foot of the white man passes, he seems to leave behind him a trail of blood and ruin. In his footsteps later on may spring up amelioration and improvement; but before his face the native races of men and animals give way and disappear. It has been eminently so in this country, and the same process of extirpation has begun in Africa. The spirit of gain or of sport that has practically wiped out the buffalo here is in operation against the elephant over there. Mr. Frank Vincent, noted as a traveler, author and naturalist, in his excellent book, "Actual Africa," gives us a glimpse of the work of extermination of this noble animal as it is carried on in the Dark Continent. At the time of his writing (1895) he reports that 65,000 elephants were killed annually in Africa. The modus operandi may be seen from the following extracts from Mr. Vincent's description of his trip up the Kassai and Kuilu rivers.

"The day after, early in the morning, as we were rounding a sharp point, we were greatly surprised at seeing a large elephant quietly walking across the river and half out of the water, just before us. Within a minute we had fired five shots at him, three taking effect, and bringing him to his knees. He quickly recovered himself, however, and kept on his way, but soon fell again, and kicked and rolled frantically. Then he gained his feet once more, but we saw that he was badly hurt. He walked a few paces further, and then fell again, and lost by drowning what little of life was left.

"The next afternoon we saw three large elephants, each with fine great tusks, crossing the river ahead of us. They walked nearly all the way over, having only once or twice to swim short distances, and refreshed themselves by diving and by squirting water over themselves. We ordered 'full steam ahead,' but failed to get within range for a 'killing shot.' The next day we saw another very large one, also crossing the river, but we were out of range again. About noon a large elephant undertook to cross the river almost directly before our bows. We hastily got our rifles and fired several shots at his head, now out, now half under water, as he lumberingly swam along. Our steamer had such headway that it ran right atop of him, and he passed directly under us, and soon was so far astern and toward the farther bank, that it was difficult to hit him at a vulnerable point. Though we blazed away, we had the mortification to see him mount the bank and enter the forest. We were, however, so certain that he was mortally wounded and could not get far, that we sent some of our most trusty men to follow his tracks. They were gone a couple of hours, but did not succeed in coming up with him, so we had to reluctantly give up the chase and continue our voyage.

"During the afternoon, within the same hour, three elephants, each by himself, crossed the river ahead of us, but all of them unfortunately beyond a satisfactory range, though we altered the sights of our Mausers and blazed away as usual. Soon we came suddenly upon a huge elephant bathing in the river close to the bank. We at once opened fire upon him, but our speed was so great we could not get a good shot, and though we thought we had mortally wounded him, he quietly walked up the bank and into the forest. We at once stopped and sent a canoe ashore with some men to follow him and see if he was seriously wounded. They returned after awhile and reported that though he was bleeding profusely, they had not come up with him. The next morning, about 7 o'clock, we saw a small elephant crossing the river a long distance ahead. We at once 'put on steam' and bore down upon him. We fired half a dozen shots, and thought, nevertheless, he would escape, when, just as he was mounting the bank, a bullet penetrated the brain, dropping him dead without a tremor. * * * The elephant we shot this day makes a total of four killed out of the eleven we saw on the Kuilu."

These extracts read like the old-time accounts of shooting buffaloes from the windows of passing trains, and alligators from the decks of steamboats in Florida.

It is, of course, inevitable; it is written in large hand in the book of fate. Ivory is in demand; beside, there is not room for big game, especially of the elephantine order, in a country peopled by civilized men. The forests must necessarily melt away before the ax of the woodman. Farms must be opened up if the country is to sustain a large and prosperous community. The red man has been compelled to give place to the white, and the buffalo range to the cattle ranch. The same thing is decreed for Africa. The native races must crowd back and finally disappear, and the great beasts of the African forests are doomed. Sic transit elephantus.

T. J. CHAPMAN.

Knights of the Quill.

THE coronation honors awarded to literary men of England on June 26, whereby they received the title of Sir Knight in the new Order of Merit, will be grateful to the distinguished recipients whom the world of letters knows, and admirers. No doubt the distinction is well bestowed. Those named are: Conan Doyle, the novelist; Gilbert Parker, the traveler and author; Francis C. Burnand, the editor of Punch; Leslie Stephen, president of the Ethical Society; Charles Wyndham, the actor, and Oliver Joseph Lodge, principal of the University of Birmingham.

In this signal bestowal King Edward has but followed the example of his illustrious mother, Queen Victoria, who thought fit, some two years before her death, to thus recognize the literary merits and distinguished abilities of James M. Le Moine, of Quebec, whilom president of the Royal Historical Society of Canada, the author of some forty valuable volumes of history, science, legend and belle letters, in French and English, and already the bearer of many enviable distinctions conferred by dignitaries and societies on both sides of the Atlantic. So that, whosoever may exult or revel in the halo of present consideration, or may fall into the line of preferment hereafter, the precedent will stand that Sir James is the first and only literary beneficiary of her gracious Majesty; bless her memory! In this pre-eminence he will be conspicuous while he lives; and no one will wish to gainsay or impair the prerogative of so worthy and modest a man.

Long and useful has been the period of his eventful life. Many are the friends whom he has survived. Many are the confreres and savans who have been gathered around his hospitable mahogany. Numerous the benisons which have been called down upon his whitening head. And now, at the ripe age of 77 years, bereft as we all are, indeed, but happy in the ministering companionship of his only surviving daughter, he serenely reclines sub tegmini fugi, literally under his own vine, enjoying the entourage and letting the zephyrs stir the somnolent leaves while he looks calmly toward the shadows which are deepening in the valley, because he sees they are flecked with the radiance of the glory beyond. The end of such men is peace.

It was my special privilege to lunch en famille with Sir James last month at "Spencer Grange," in the staid old city of Quebec—and renew an acquaintance which had begun a third of a century ago. There I inspected his patent of knighthood, which he lifted with a commendable show of pride out of a richly embossed and ornate velvet casket emblazoned with the royal arms. It was an illustrated parchment, beautifully engraved with ornamental script, after the fashion of the college "sheepskin," which we students received at graduation, but was rendered tremendously imposing by an enormous pendant of chocolate-colored wax which looked like taffy, and was to be so regarded metaphorically, no doubt.

[I remember that some antiquated army commissions of Colonial and Revolutionary times which were unearthed from our family records, were sealed in the same way; only there was less wax. The higher the commission, the bigger the wax, of course.]

In view of the fact that the broad acres of Spencer Grange adjoin the demesne of the Governor General, it was, perhaps, natural for me to express my pleasure that some portions of the royal fruitage had dropped over on his side of the fence, though it must have been a vice-regal predecessor who shook the tree. The appointees of the Crown at Quebec have always held Sir James in the highest esteem, and he has quite a few elegant souvenirs from the Princess Louise and the Marquis of Lorne, Earl Dufferin, Lord Elgin and other royal representatives; for they have delighted to honor our author and scholar whose standard volumes occupy such conspicuous places on their library shelves. As a further tribute to Le Moine's worth, a few of his old friends, headed by George M. Fairchild, E. T. D. Chambers, Com. J. U. Gregory, Geo. Van Felson, Mayor Parent and such ilk, have chipped in for a life-size portrait of the author, which is being painted by R. J. Wickenden, to be presented to him. Each subscriber is to receive one artist's auto-lithograph from the painting signed by the artist and Sir James. En masse, they form a literary galaxy, such as not only Canada but FOREST AND STREAM should be proud of, for every mother's son of them has been a contributor to its columns, one or the other of them, almost constantly, for nearly thirty years. It was a kind Providence which permitted me to meet them all in June, weathered and gray, the old commodore still at the head of the Department of Marine after 38 years' service; Chambers filling many a gap in natural history which the books have left uncovered; George Stewart, F. R. S., who published Stewart's Literary Quarterly in 1867, and is now editing the Quebec Mercury; and Fairchild, the breeziest author of them all whose forest runes and volumes of Canadian sport are the joy of many interested readers. Fairchild lives at Cap Rouge, several miles beyond the city walls on the St. Louis road, which is a sort of Canadian Plymouth Rock, where the earliest French settlers made a landing 400 years ago, before Kanucks were known. The spot in itself is extremely picturesque, but historically it is transcendent. I suppose the Laval Museum itself does not contain as quaint old curios as those which adorn the walls of Ravenscliff. Everything that the aborigines used (or wished to use), whether Iroquois, Algonquins, Naseaupies, or Red Indians, may be found about the premises, inside the house or out.

CHARLES HALLOCK.

Incidents in an Explorer's Life.

A Jaguar in Broad Daylight.

ONCE I and some companions were sitting in front of a hut in the jungles of Central America watching the sun set, and wondering at the volume of water in the flooded river just before us; then from the other side I saw a great animal come out of the woods, where for an instant it stood in bold outline against the sunset. "What is that?" I cried, "a tapir or what?" An Indian sitting near said, "Tiger." Then the men began calling to the women and children, for some people were stopping with us waiting for the flood to run down, and in an instant there was commotion in camp. Supremely quiet, the great jaguar stood looking across the water; then with a slow movement, his eyes fixed on us, he walked to the river and began to swim as if intent on reaching where we stood and beginning the attack. He must have been well hungry to attack so many people, but a hungry jaguar will do anything. We rushed for our rifles and before the jaguar could cross the broad river all were prepared for him. "You saw it, your shot," whispered one of the Indians, as we stood waiting. Then I stepped ahead of the others, feeling sure of my game this time. I wanted the skin and had just determined to let the beast reach shallow water on our side of the river, feeling sure I could kill before it sprang on us; when one of my companions fired over my shoulder, taking my shot, and killing the game while it was yet in deep water. For a moment or two it struggled, making a magnificent effort to reach shore, then sinking below the surface, disappeared forever, carried down by the swift current.

A Black Jaguar.

If one admires nature in the primeval forests of the tropics, one is apt to become separated from traveling companions in order to see and admire in undisturbed silence. Once on a beautiful clear day I had ridden ahead of a mule train carrying my supplies and mining equipment, and was making my way alone mounted on a stout mule, and following a trail that led on through a great forest of giant palms in Central America. These giant palms spring from near the ground like ferns and rise in graceful curves twenty-five to forty feet. All other vegetation is shut out, and as one passes on great archways of green open in all directions, like the isles of an enormous cathedral, only these have no end, and blend into one another till they form, in the distance, one solid wall of green, with the long archways leading out to it. In the deep shade of such forests many varieties of ferns and wood flowers grow in profusion. I rode on, lost in wonder, till, suddenly there came a rustling among the ferns, a moment of silence, a rustling a little before me; and then a large animal stepped cautiously out on the road, perhaps one hundred yards or more ahead of me.

I could see that it was what the Indians call a black tiger. It looked at me over its shoulders, hesitated for a moment, then faced about suddenly, took a few steps forward, and squatted down in the road, its eyes glowing, and its great tail beating vigorously from side to side. The Indians say if one meets a black tiger, it will kill or be killed, and it is said that if one of these animals appears near an Indian village the people will desert their houses, and that the Indians will never

camp for the night where it is supposed the animals are about.

On the other hand, professors of zoology insist that there is no such animal, but as far as I am concerned I think I saw one. It was squatting in the road just in front of me, had a coal black skin, a thin, loose-jointed body, a rather heavy tail with a tendency to bush toward the end, a square head, small ears and large, clear, yellow eyes. It looked to me more like a panther than a jaguar, and yet it was too heavy about the shoulders, neck and head for a panther.

Naturally, I wanted that animal, and there it was, all ready for fight. I drew my pistol, the only firearm I had with me, and tried to drive the mule nearer, but she didn't appear to like it, and began to act silly. I kept her head on the animal, which was crouching there jerking its tail from side to side with savage vehemence; and from time to time seemed to gather itself as if for a spring, and then settled back again. I was just getting near enough to consider risking a shot, and was trying to quiet the mule, when suddenly around the corner my pack train appeared on a full run, the gold pans clattering, the peons swearing, a tumult generally.

The animal raised its head, looked for an instant, and then with a graceful bound disappeared among the ferns and palm trees. I was disappointed, but I never did have particular luck in shooting.

An Incident in Mule Life.

Once on a mining expedition we had among the mules a strong rebellious young animal that was determined to go where and as she pleased. Sometimes her fancy took her along the high places above the road, sometimes she went down below it, then she seemed to have lost something, and acted as though she expected to find it in the woods, but she had decided objections to walking on the road, and so gave the peons a great deal of trouble. Finally there came to one a brilliant thought. I had a steady old horse, and they caught the ambitious mule and tied her securely to my horse's tail; it wasn't considerate to the horse, but it did fix the mule. She couldn't stop conveniently, and she couldn't get past the horse, neither could she wander up to the hilltops or climb down among the gulleys without taking the horse along, too, but that was inconvenient. For a time all went well, but after a while we came to a place where the road went down between pretty steep banks till it reached a stream of considerable volume. My horse went down the trail in a resigned sort of way, but the mule started along the bank and wouldn't come into the trail; the result was that presently she could go not further, and then came a tug of war, to see whether the horse in the gully could pull the mule down from the high bank or whether the mule could pull the horse's tail out. I scrambled from the saddle as fast as possible, and then the animals seemed to come to an understanding; the horse backed up as far as he could, and the mule braced her fore feet and hung her head over the bank as far as possible, and so they stood. Presently the peons came and untied them, and I declined to have them done up again; and so for the rest of the way that mule followed its own sweet will, "and a 'mule's' will is the wind's will," and the thoughts of a mule are long, long thoughts, incomprehensibly long.

Apologies to the memory of America's great poet, Longfellow.

Eniguas.

Probably all who travel in tropical America will have some experience with eniguas, an insect resembling the flea. The female fastens herself to any protected place on one's skin, particularly under the toe nails; and then working her way through the outer skin forms a little nest and lays a multitude of eggs; these increase in size, and gradually develop till numerous little grubs are formed, which immediately begin to feed on the living flesh of the person who is so unfortunate as to harbor them. Then serious results may be expected, the pain is most severe, and not unfrequently the loss of one's feet follows, or, perhaps, blood poisoning sets in, to end in a most miserable death. This, however, is only among those who, from ignorance or other cause, allow the eniguas' eggs to remain under the skin till they develop the living grubs. Fortunately, some days pass before the grubs develop, while an intense itching gives early warning that something is wrong, and to remove the eggs is a very simple matter; usually after removing them an unpleasant sore is left, requiring some days to heal. Having had one experience with eniguas, I have learned to be careful. My plan of treatment is to remove the eggs and then drop a little permanganate of potash in the place from which they were taken. It smarts for a moment, but after that the sore dries up at once and gives no further trouble. During one of my earlier explorations in Central America I found a number of sores on my feet looking like little boils with a black spot in the center of each. I thought they were nothing but boils, and was surprised to find a tough skin covering them, but by pricking this open I cleaned them out rather indifferently, and finding the pain relieved, thought no more about it. Later my feet began to pain again, presently swelling set in, till one morning I could not put on my shoes, and then I became rather alarmed.

I called one of the natives and learned that eniguas had attacked my feet, that I had allowed some of the eggs to hatch, and that now the grubs were eating into the living flesh, which might cause the loss of both my feet. This was serious, and the remedy they proposed was a thing that the bravest might srink from. I was told that the only way to save my feet was to let the natives strap me down on a table so that I could not move, while they scraped the sores with bits of glass till they had taken out all the grubs, and they might be obliged to even scrape the bones.

I consented, of course, but the preparations sent cold perspiration trickling down my back. Fortunately, I was spared the suffering; an old medicine woman happened to be in camp, who said that if I would give her a dollar she would cure my feet in a day without cutting them. A dollar was no consideration, and she had it at once, though I must confess I doubted her. She seemed to know just what she was about, and went at once to the woods to get some herbs. Within an hour she was back again carrying a lot of bruised leaves crushed together in one hand. These she roasted over the fire and squeezed a black liquor out of them, which she dropped into the sores on my feet. It seemed as though she was using liquid fire, but the sting was only for an instant; then as soon as the smarting had passed, the pain in my feet became easier. I had a number of other sores on my feet and legs which she treated, and then told me that all would be well in the morning. They certainly were feeling much better, and I was decidedly relieved. She would not taken any more money, but ordered me to keep quiet and she would come back to see me next day.

When morning came I was surprised to find that my feet were perfectly cool and natural, that all the swelling had gone down, and that the sores were beginning to heal.

They never gave me any more trouble, and when the medicine woman came back I determined to learn her secret. It was hard work, and money would not buy it; but finally she consented to tell me because I assured her it would be useful to a great many people.

I found that what she had used was a common weed growing all over Olancho in Honduras; yet I have never met with it in any other country.

I took samples, but, when later I showed them to doctors and manufacturing chemists, I was met with a smile of incredulity for my story, and informed that the profession was abundantly supplied with antiseptics.

FRANCIS C. NICHOLAS.

One Summer.

ALL through the spring of '96 the moot question with the city pedagogue and his chum, Fred, was whether they should spend their annual fishing and camping trip in the old place, the valley of Dead River in Maine, or seek new scenes. Odd hours and evenings had been spent at the rooms of one or the other in smoke talks, plans and more active preparations. Rods had been put in order. Fly-books had been inspected and their contents overhauled, till the old flies on the last page, kept for the good they had done, actually failed to suggest another story. Tackle stores had been visited and the last leader, fine-snelled hook and bit of whipping silk, had been added till the stained seal covers could hardly be clasped and the stray ends would insist on proclaiming that the contents of the book was not bank bills.

Then came the sad news of sickness in the chum's family, a hurried packing of his trunk, the straining hand grips, and a sense of desolation for the pedagogue. Who cared for a trip even to the woods if Fred was not along? Fred, who never could understand how he always came to be high line, who could laugh and be jolly when wet to the skin in a cold drizzle with five miles of paddling between him and camp, and who—but lack of space forbids.

After the school books had been laid aside and the dust and turmoil of the city had been exchanged for the fresh breezes of his native hill town in Maine, the pedagogue felt full force again the old desire to be near to nature's heart. Those who know will agree that nothing will satisfy this craving, but such as to lie as near to mother earth as a bed of boughs will permit, and to live on the fat of the land—viz., venison, chops or fried trout in their season. So with many regrets that the trip must be taken alone and many remarks from those who had not been there on the absurdity of such a proceeding, the canoe was loaded on its wheels, the rods and duffle were stowed under the buggy seat, and the fifty-mile drive to Dead River begun.

On a warm, still July morning the canoe glided smoothly from the bank, pointed her nose down the river into a region where she must either convey the traveler or be conveyed by him. It is nine miles of lazy, even paddling over the glassy dead water, between brown earth and clay banks partly concealed by cornels, dogwoods, alders, etc., and surmounted by the first phalanx of spruces, cedars and other soft woods which extend back on either side in unbroken undulations over the foothills till they are met by the hardwoods on the sides of the distant ridges. As the morning advanced the hot sun beat down on the shimmering river surface and incidentally on the lone paddler's unprotected head. There was little evidence of animal life. Only an occasional thin piping of the dainty little Canadian warblers broke the stillness. Where would trout be found in such heat?

But at length the head of the carry is reached and here is shade, a cool drink and rest. Ah! the delight of stretching cramped limbs on a cool mossy bank, of gazing into leafy depths or through the thin screen of green that only half conceals the dancing water! Close by is the head of the rapids—rapids that stretch away for a mile into the forest. But now a few lusty mosquitoes spur to activity. The inverted canoe resting on paddles lashed to the cross bars is first carried safely down the dim trail marked here and there on the rocks by white scratches and dents made by the steel calks in the river drivers' shoes, then back for the pack. This rides easily high on the shoulders, held securely in place by the broad cedar bark thong across the forehead. Fine fellows in their own native wilds, those straight, strong Indians must have been. They did not numb their arms nor round their shoulders with ill-slung burdens, but used their heads in more ways than one, and loaded their packs so as to be carried easily, as they knew it, over the center of gravity, as we know it.

Now the last pitch in the rapids is reached and the pack is portaged almost as far as the canoe. A few feet out on this jutting point of torn granite rock and the whole foamy mass of the river, dead no longer, is seen to leap and thunder down between steep, ragged, gray rocks and spread bubbling and eddying out into a delightful pool. What a tempting cast! But trout will not be found in this water of 65 degrees or so. This cool, moist breeze above the surging water will serve far better than the fan waved over any Eastern potentate to drive dull care away, and incidentally the pestiferous mosquito. An ideal place for a lunch! A lunch with coffee over a small fire followed by a cigar! Life is surely well worth living! The portage past and the afternoon well on, it is only about four miles to the old log camp on the bank where, last winter, in the early snows, four hunters stayed to track and shoot. There is the white birch stump from which we felled firewood on to the ice. Here is the old camp just out of sight from the river; but, oh! how changed! High water has floated the floor logs all awry, the long bench is overturned, the lower bunks are sodden and musty, the table is covered with gnawed, stained newspapers, on which is a thick layer of brown dust from the worm-eaten rafters overhead. A desolate, deserted camp! There, just over the table, is the hole in the roof where went out the bullet, not so very far from the head of a dear camp comrade who was standing near while the new rifle was being wiped out and oiled. A jerk of the lever to show the smooth action and then, as the hammer is let down, it slips under the oily thumb, and, bang! A smothered exclamation, a white, drawn face peering over the smoking barrel to find the friend uninjured. A few awkward, choking words, a hand grasp, a mental vow, since kept, never again to take a gun containing cartridges, even in the magazine, into camp. How plainly it all comes back!

But the afternoon wanes. On this low ground the mosquitoes are collecting in clouds. The camp windows are easily closed with old burlap and cedar splits from the roof, and a small smudge fire is soon kindled on the earth among the floor logs. Another small fire outside for coffee, and later a smudge serves to discourage some of the less voracious of the mosquitoes at least, but the others present long bills to be satisfied only with blood, and liquidate their draughts at sight from neck, wrists and calves whenever these are left a moment out of the smoke. Supper eaten, the cigar smoked in silence and alone, is not quite able to dispell the first and only sense of loneliness of the trip, brought on perhaps by the gathering shadows and the tormenting hordes. However, the camp is clear of the little pests, and will so remain, and soon all loneliness is forgotten in sleep.

A drowsy vibrant scream arouses the sleeper on the upper bunk, but this is soon recognized as the reveille of one or two representatives from the clouds of the mosquitoes outside. As the door creaks open a flood of sunshine pours in, and the enthusiasm of the new day puts to blush the slight homesickness of the preceding night. A belated wood thrush sends his ringing flute notes out over the bog at the back of the camp. A couple of white-throated sparrows are calling "Old Ben Peabody" to each other, and an energetic member of the ever-present tribe of red squirrel is whisking and scolding about on a nearby cedar log. Otherwise it is very still and very satisfactory out here alone.

Once more afloat! Five miles further down the river is a long dam built of logs, and above it on the hillside, well above the mosquito line, is a commodious log drivers' camp, furnished with stove, tableware and bedding, to which the key is somewhere in the duffle bag. Ah! Here is comfort and plenty, for only two miles away is the confluence of the Spencer Streams, Big and Little, both good trout streams, and only a mile away the united Spencers join the river, and nearer yet is the mouth of a cold brook, guarded always by a few big trout; if only they can be coaxed to rise.

After a day or two of comfortable fishing and camping, the canoe is carried over to the forks of the Spencers, and as an occasional cloud rolls over, a few tentative casts are essayed in the big pool at the foot of the cliff. No result! The water must be too warm or the sun too bright. Across the pool among a lot of boulders and down treetops, seeps in a little rill of cold water out of the deep black spruce growth. Standing in the canoe and paddling lazily up toward this, the lone fisher saw down in three feet of quiet water, just where the cool water of the brook flows along the bottom into a shallow basin nicely cleaned and hollowed out, a good sixty lusty trout lying closely packed together, evidently enjoying their perpetual cool bath. A few at the sides were darting uneasily about, flashing their white-edged fins, but most of them lay very quiet. Enough! One must not stare royalty out of countenance. Very gently the canoe is stayed, then backed away out of sight and vibration reach of those beauties. What a regal sight it was! Some of those vermiculated backs must have been at least eighteen inches long, which means two and a quarter pounds or more. Quickly the plan of campaign is layed. Not till that spruce-crowned cliff throws its deep shadow on the pool shall a fly be cast. While waiting for the sun to sink sufficiently, a pint of luscious wild strawberries is gathered into a birch-bark box from an old, half-grown-up, stumpy field, the only one in twenty miles, cleared years ago by the lumbermen on which to raise hay.

When the shadow on the pool is deep and the sun is just sinking toward the horizon, the canoe is very gently worked up into the gorge around and above the shadowy beauties' bower, is allowed to drift down to just in good casting distance and beached on a convenient submerged rock in such a position that the fisherman is screened by a big boulder. Now, very deliberately, fly-dope is applied to neck, wrists, etc., and a cigar lighted. A leader is put to soak and flies follow as fast as selected. A Parmachenee-belle for snapper, a silver-doctor for middle, and a brown-hackle for dropper. The rod is set up and rigged, leader bent on and flies looped into place. All is whist. Trout and canoe are in deep shadow, but far up on the bare ledges above, the sun's last rays linger.

A preliminary cast or two up stream and the flies are allowed to spread just over the chosen locality, then to settle gently—when, slap! swirl—a double is on and something worth while certainly is hooked! Yes, both are on. How they do fight! Steady now! By this time we are well away from the brook mouth and waging battle in the deep, quiet water of the pool. Will the leader hold? If that dropper trout can be kept near the surface he will serve as a counterweight for the bigger one below. At length the dashes are less fierce and the steady strain of the lithe bamboo begins to tell. Then there are no rocks nor brush out here and the odds are against you, my beauties. Great snakes, what a tug! Who would have thought it was in them? Now, as this trip was one of the light-marching order style and for brook trout primarily, there was no landing net along. Can those fellows be saved! Cautiously a hand is run down the leader to the thoroughly exhausted dropper fish, which is easily a twelve-ounce trout, the fingers draw the snell in gently till they are on the fly, all the while moving the

trout about or leaving that to the still moving fish below. Now, with the rod between the thighs, the other hand is slowly brought down to inclose the fish, and simultaneously it is seized and a finger thrust into the mouth to meet a thumb in the gill slit. But now the rested nether fish takes part, giving a vicious tug at the leader and—Shade of Isaak Walton, there are two of them below! Three at a cast! Can they be landed? Luckily, at this critical moment, the hook of the dropper fly is disengaged and trout number one is quickly in the canoe. Now the fight is on again, fast and furious, for a few plunges. What chances were taken in landing that dropper trout! A net! A net! My kingdom for a net! After more play, till there seems little more life left in the two trout, the middle fly is relieved of its shining game in much the same way, and the third beauty only remains. Cautiously he is worked near to midships, the canoe tilted to the danger point, and with a hand on the leader, at just the right moment, he is led with a little lift and swing over into the canoe.

Now their necks are pierced and they are weighed and admired. The middle fly held a plump one-pounder, while the snapper held the heavyweight of the three. He weighed one pound six ounces. The place of the cast must be well rested by this time. A repetition of these successful tactics results in a double at the first cast, and by rare good luck, with much time and care, they are landed. Five trout at two casts! Who will believe it? No one, perhaps. However, there they are, and that's the way they were caught.

At each of our several subsequent visits to this favored pool, fish were taken, but after the first two or three days the exercise of the highest art was required, and at the last, only real live mooseflies (caught on the camp windows) on tiny hooks, attached with thinnest gut and dropped with lightest nicety, availed. But that's just wherein the real sport of fly-fishing consists. Who cares to catch them when no skill is required?

The memory of the fifth lazy evening over the dam in that "camp of proved desire and known delight" will linger long. The city dweller, refreshed with a plunge in the cool river, well-sustained by a meal of crisp trout garnished with wild strawberries and condensed milk, sat tilted back in the light smudge smoke, enjoying a cigar and gazing out over the wide river valley across which streamed the level rays of the moon rising from behind old Basin Mountain. A cool breeze was blowing, laden with life-giving oxygen and the odor of balsams. The night hawks (bull bats) were booming and wheeling in great circles overhead or swooping fearlessly down to hover over the sun-dried chips of the yard. Two little screech owls answered and called to each other at intervals out of the obscurity of the valley. It was a situation and a scene to fill the soul with calm and wholesome thoughts.

The next day was one of toil. The canoe and a small outfit were worked up the rocky bed of the Little Spencer, now at low-water pitch. Paddling a little, poling, pushing, pulling and lifting, coaxed the outfit past the last rapid, through the last pool, and finally over the dam and afloat on the clear, sparkling waters of Spencer Lake. Forest-girt home of the trout and togue, where few indeed molest or even intrude. There are a very few cabins on the twenty-five or thirty miles of shores which are occasionally visited by sportsmen, but the evidences of man's visitation are very few. No steam whistle ever rivalled the loon's wild cry and no sailboat, even, has ever startled the bald eagle that keeps watch and ward over this lake of the woods. Nestled among its rugged mountains and smiling in the sunshine or rushing on the rocks of the south shore in miles of indigo waves tipped with white under a stormy sky, it is ever a wild thing in a wild setting. A couple of hundred yards from the shore is a low log camp, sans floor, sans stove, sans everything in the way of furnishings, except a big square hole in the roof, and under it some big stones on which to lay logs for the camp-fire. Ah! The glad days on the Spencer and the delightsome evenings at the crackling camp-fire called up by the thoughts of that old camp in the woods! Dear old Phil! The college chum and camp companion of those days whose ready wit, never-failing good nature, and keen insight into all the moods and ways of nature, added so much to the pleasant memories of camp life, has finished his work here and gone into the great beyond. In his own words, *"Pax vobiscum."*

On stumbling through the low, familiar doorway of this camp, somebody's duffle was found scattered about. Is there no neck of the woods so securely hidden away in these wilds that the ubiquitous camper has not found it? Well, whoever you are, they probably won't refuse the usual hospitality of the backwoods—i. e., to share with the stranger. Firewood and fresh boughs for a bed are dragged in out of the gathering darkness and arranged under a tight-looking part of the roof. Then comes supper, and later a smoke, as one lies stretched on the blanketed boughs, gazing at the flickering camp-fire that throws dancing shadows into the far corners. How is it that an Havana so enhances its fragrance by being enjoyed under such circumstances? How still it is!

Plump! gently strikes a soft body on a corner of the roof, followed by the scratching of small nails and a scampering of little feet along the eaves. A flying squirrel, doubtless. Wonder where those owls are that used to practice their hooting lessons in the surrounding treetops. The fire had died down and the only inhabitant, as he fancied, of Range V., No. 3, must have been nearly asleep. What's that? Approaching footsteps—from the direction of the lake—two of them! What a thumping and stumbling on the rough path! "Ah! Here's the camp!" says one. "What!" as he sees the smoke. Then they tramp steadily around to the door, and it creaks back on its wooden hinges. "Hello' Room for one more to-night?" This is sent out from the blankets behind the "deacon's seat." Then followed the renewal of the fire, a glimpse of each other's faces, introductions, the laying aside of creels and rods, supper for the hungry, inquiries anent the route down the Spencer and up the Dead River, where Arnold's route in '75 is struck, etc. With the production of some information, maps and cigars, the acquaintance with Messrs. Nichols and Whipple is on. Not ordinary, country rustlers these, out for a few days' fishing, but men of discernment and information, apparently. While Nichols is drying his only trousers at the fire, Whipple, also wet to the hips, unpacks his creel and tenderly takes out a spray of white flowers wrapped in leaves and protected from the trout by twigs. He shakes it out and holds its curious white flowers to the light, wondering what variety of orchid it is, and suggests that it is one of the eighty-odd varieties of Gyrostachys, and shows us how the pinkish pistils, bent in a bow and pointing outward, may be released by a touch to fly upward and inward like a spring to touch their ends pollen laden to the upright stamen.

Not till next morning, when, breakfast over, we were about to separate, two to go down the Spencer to camp and fish, while one went up the lake to strike across country four miles to King and Bartlett lakes, did it come out that these were young professors, teachers of French and higher mathematics in a New York college. Being thorough woodsmen and ready to rough it to the fullest extent, they had struck through the forest from Jackman on Moose River, for some point on the stage line on Dead River, a tramp of nearly fifty miles through an almost trackless forest. There may have been a lingering desire to know more of these manly, modest nature lovers, who revelled in old French literature and differential calculus, these doctors of philosophy who knew the birds and flowers on sight, and never doffed shoes or garments in crossing a ford or fishing a stream, who toted their duffle and tent on their backs and struck through, without map or arms, from one river valley to another unknown river. Be that as it may, the stay at King and Bartlett lakes was short, and the second afternoon following found the three back on the banks of the Spencer, the professors declining an invitation to share the accommodations of the camp over the dam on Dead River. They preferred their tent, they said, so, directed to a camp site on the strawberry meadow, they were left.

That night it rained and blew so that the brooks more than tripled their volume. The professors, their tent having been blown down, appeared at the camp. Here two weeks passed all too quickly, and a chance acquaintance soon developed into a mutual regard and friendship that the lapse of time has only served to strengthen and perfect. Many were the pleasant fishing trips and experiences crowded into that fortnight. On one of our trips together, that to the mouth of Heald Brook, a tributary of the Little Spencer, some four miles from camp, as the trail led through a beautiful hardwood growth, a peculiarly sweet, weird bird song was heard. A love for the birds, vacations in their haunts and ordinary observation, with some reading, serve to acquaint one with the commoner bird notes and their producers. Here was a note not heard except in the deep north woods. An elusive little sprite he must be, for many a chase has he led off the trail, sometimes so far that the dropped pack or rod has been hard to find again. Only the merest glimpses of himself would he allow. So he came to be a sort of tantalizing, haunting thing, and his gay, cheery song took on a fancied note of taunting. None seemed to know him, so for three summers he had mocked all effort to discover his identity. "Now, Whipple, you seem to know all the birds, whose song is that?" "That must be the winter wren, a common breeder in this latitude, but rarely seen away from the deep forest." So it was solved, and from that time on his song lost all hint of mockery and became the glad, wild music of the midsummer woods.

At the mouth of Heald Brook, overhung with alders or banked with tough, wiry "tea wood," the matted roots of which form the surface of so many of our northern bogs; it was not easy to force one's way to within casting distance of the water. In eagerly working his way out on the bog, Whipple broke the middle joint of his rod and was hors de combat. However, the stained old fly-book containing things other than flies, was along, and soon two figures were seated on a log busy with knife, glue, quills, shellac and whipping silk, but dividing their attention with the mosquitoes. How the pests did bite! They seemed to recognize that they could take a mean advantage. Meanwhile Nichols was evidently finding the trout. We could hear faint splashes and exclamations or chuckles of satisfaction from up the stream not intended for our ears. He shouted down occasionally to find how the rod progressed, and even seemed at one time on the point of stopping his sport to come down to us till the rod should be finished, and no doubt, like Lowell in the Adirondacks, though not with the same motives, he "avoided to catch" when he could. Assured that the rod was nearly finished, however, he kept on and—filled his basket before he or any one else realized it. At a subsequent visit to this place he insisted, as though in some way to atone for his good sport, on paddling while the other two rods fished.

Among the cherished mementoes of the chase and angle is a stick of white maple sapling picked up that day fresh gnawed and peeled on the beaver dam we found thrown across Heald Brook. Lifting over, the big dome of wood and mud, the home of the little engineers was not far to seek. On this trip, too, Whipple explained on request that the so-called "tea wood" of the bog was a variety of Rhodora, probably Canadensis, and that it was a member of the same family—i. e., the heath family, as "Labrador tea," sometimes used by hunters and Indians in lieu of other wherewithal to "bile the kettle." The leaves of the bog Rhodora are similar in shape to those of the tea plant, but the leaf of the "Labrador tea" (*Ledum*) has a concave, brown, wooly nether surface, while the leaf of the Rhodora is smooth.

At length the day for breaking camp came all too soon. Plans were made for a next summer's trip up the Kibby Stream. The professors tramped along up the Spencers nearly to the lake to help with the canoe, which had been brought down for use in fishing. A shower coming up, the last cigars were smoked as the three sat huddled close under the overturned canoe to avoid the raindrops. Not that the professors cared for a little wetting, but they wanted to be sociable with one who did. So, the shower over, with a handclasp and wishes of good will that were not empty words, the professors set out south to find their way to civilization by following Dead River, while the lone fisher made the best of his way by land and water to the sporting camps at King and Bartlett lakes, where the canoe found a ready purchaser in the person of the genial, hearty proprietor. Next day a sixteen-mile tramp on a buckboard road returned the traveler to the land of sawed boards and paint, where travel by stage and rail is easy.

GRAPHO.

"A Walk Down South."

Editor Forest and Stream:

I have read to their conclusion, with unabated interest, the thirty-five chapters of Raymond S. Spears' "Walk Down South," a most misleading and insufficient title, for which I would suggest "River Life in the Southwest" as a substitute.

I infer that it is the author's intention, and perhaps the purpose of the publishers of FOREST AND STREAM, to issue these very valuable letters in book form. Such a book ought to sell like hot cakes in the river towns west of the Alleghanies, for the sketches cover phases of river life in the Southwest which I do not remember to have ever seen presented except in isolated bits. Added to Mark Twain's steamboat experiences, they cover pretty much the entire fluviatile economy of the continental midway and its peculiar people, and add a chapter to the volume of distinctively "American Notes," to which Charles Dickens was pioneer contributor, and very ungenerously received, too, at the time of writing them. They are life photos of which the chance tourist, however favored, seldom secures more than transient glimpses.

I don't know of a book or subject that should command so wide or eager a market. The interested reader ought to be thankful to obtain so much grist at so small expense of comfort. For my own part, I would not provoke my gorge to get the information which Mr. Spears has done in the only way in which it could be gotten—namely, to live with the men. In these fastidious later years of life, when I am grooming my appetite, I often wonder how my stomach could have ever retained what went into it in those years "when I went gipseying."

CHARLES HALLOCK.

Natural History.

Montana's Buffalo.

The Pablo-Allard Herd.

(*Concluded from last week.*)

The Pablo-Allard herd of buffalo consists this spring of about 360 individuals, divided as follows:

Full-blooded buffalo	300
Half-bred buffalo	60
Quarter buffalo	1
	361
In 1898 the calves produced were	48
In 1900	50
In 1901	50

It will thus be seen that the increase is very rapid, and by proper attention and the frequent renewing of blood the herd should last and grow. The heifer drops her first calf at three years old and breeds thereafter for many years. The herd is now in charge of Michel Pablo.

The Conrad Herd.

In the spring of 1901 the Conrad Brothers, of Kalispell, Mont., purchased some buffalo of Pablo and Allard estate. They were bought as a business venture, and the owners have since offered to dispose of some of them. They are kept near Kalispell in an inclosure of 240 acres.

The herd consists of thirty-six full-bloods. The number of calves born in 1901 was nine. Three calves and one cow died in calving, probably from injuries received in handling and driving on the way from Pablo's in early spring. There are eight bulls, one stag, eighteen cows and heifers, of which three are three-year-olds. The calves are dropped in May and June. None have been sold.

One two-year-old bull was castrated. He went off by himself for some time until he had recovered. The fence which incloses the buffalo is about five feet high, with one wire at about three feet from the ground. The same fence would be required for domestic stock.

They have been fed about fifty tons of timothy and grain hay. The buffalo seem to prefer the grain hay. They all look fat and thrifty. Some of the cows were commencing—April 5—to shed their winter coats. Everything connected with the buffalo is in good shape.

Mr. Ford, who personally attends to this herd, is an old Montana cattleman, and so thoroughly in sympathy with the animals that they ought to do well in his care. The public is not allowed to frighten or worry the buffalo, but interested persons will be given every opportunity to see the herd. The herd is run by business men, and information concerning it may be had from W. A. Conrad, Kalispell, Mont.

Michel Pablo and his Home.

Michel Pablo is a half Blackfeet, half Spaniard, and was born on the Great Plains. When he was quite young his parents moved to the Colville Reservation. His early life was one of hardship and rustle, and he seems to be a man who knows every phase of Western life.

About 6 ft. 2 in. in height, weighing about 240 pounds, without any spare flesh, active and pushing, he seems a man thoroughly awake and alive to all business ventures. His ranch is run like clockwork; a skilled Chinese chef runs the kitchen; two business-like men, a French-Canadian and a German, attend to the ranch and farm work; meals are had on time, horses curried night and morning, stables swept out, wagons, buggies and farm machinery under cover, fences and all buildings in good repair. Everything denotes push and progress. He has an elk park, and two cows, two bulls, and one last year's calf occupy a well fenced twenty-acre tract. I saw some wild geese, and some queer looking geese around the house. During our talk he told me he had some cross geese, between wild and tame. I forgot to examine them in my haste to catch the boat.

He told me of having had a white mountain goat which would get upon an ordinary rail fence and walk the top rail for a quarter of a mile. Some hounds one day caught it away from home and killed it. He is now negotiating with parties in the Northwest Territories for some antelope.

Large fine work horses are used on his ranch, and lighter horses for cow and driving purposes. In winter he runs a private school close to his ranch and pays the teacher. He has tried the mission schools, but they were too slow and worshipped the past. He wants his children to progress and look to the future. His wife is a full blood Flathead.

There were three children at home, a good-looking girl of about 16, who keeps books for her father and keeps account of all his many business transactions; a boy of about 12, who seemed to have his father's rustle and go. There was a younger boy; all could answer almost any kind of a business question.

The ranch contains some 450 acres of good farming and grass land. It is situated on the east side of the valley close to the belt of timber. He has large irrigating ditches. He has a barn that will shelter 100 head of stock. All kinds of improved harvesting and haying machinery are carefully housed. The broad level prairie rolls away to the west. Here is all a western man wants, plenty of fine timber, water and grass. His house is large and commodious, suitable for his business, and he is building an addition.

The cowboys or herders of the ranch are living about ten miles west, on the Pend d'Oreille River. They have a good ferry and a good house and stable.

I talked for about four hours with Mr. Pablo. His daughter got out the books and gave me the sales, which are kept as references. The Allard estate will some day have to be settled. Mr. Pablo, as I understand him, is guardian for the smaller children. Pablo owns half, and the Allard estate the other half-interest in the buffalo. There is a great danger of the herd being divided and scattered (or one-half scattered), as one of the Allard boys insists on being a Wild West showman and is rapidly getting rid of his portion of the herd. I was given to understand that there must be some kind of a definite division this season. Herein lies the greatest menace to the herd.

Pablo told me of an exhibition they gave in Butte City some years ago. When they purchased the Buffalo Jones herd, or as they call them, the Winnepeg buffalo, Allard, who went east to ship them out, suggested that Pablo take a bunch of Flathead buffalo, drive them to Butte City and meet the herd from the east there. They would then give a show in the fair grounds at Butte. The buffalo were handled easily, and they arrived in Butte after a drive of about 150 miles. There were present bronco busters that could ride anything that walked on four legs; they were to ride the big bulls at the tail end of the show. The eastern herd came in by rail, and when they were turned loose with the others, there were many hard fights between the two herds.

The show was a success. Broncos were ridden to a finish, all kind of wild west roping was done with credit; then came the riding of the buffalo. This was "a new one" on cowboys. Wild Texas steers had been ridden for July 4 celebration for generations; there was no record of a man forking a buffalo.

Two of the best riders were singled out for this. Neither of the busters was anxious for the first ride, and they drew cuts to see who would have to climb the hump of the first bull. The first man to ride was a noted horse rider. He would crawl on the wildest cayuse as though it were pastime. A large husky bull, young and active, was roped by Pablo and heeled by another man; the rope was run through a hole in a post and the bull's head was drawn up to the post. The buster complained of not feeling well, when he saw the rolling eye and fighting attitude of the bull.

"Don't weaken now," said Pablo to the cowboy. "Go and throw in a couple of glasses of the worst whisky you can find; we will have him saddled before you get back." The cinch had to be lengthened to fit the bull, and the saddle was on before the would-be buffalo buster had returned. After a look at the trembling and now thoroughly aroused bull, he again complained of not feeling well.

"Crawl him, son," said Pablo; "crawl him; see all these people here who have paid to see the wild son of the prairie ride the equally wild buffalo." The cowpuncher took a chew of Climax plug, drew a long breath, turned pale behind the ears, and climbed into the saddle. When the bull was turned loose it was a very tame performance. He could not twist a saddle, and the rider raked him with the spurs and rode him to a finish. They cannot jump high or land hard. The next rider rode his bareback, and said it was like riding work horses; a soft job.

Range of the Herd.

The lower Flathead Valley, or Flathead Indian Reserve, is the place where the buffalo are kept. On the north is the Flathead Lake; on the east the high snow-capped Mission Range; on the west is the Bitter Root Range. The valley seems to be surrounded by high mountains. At the eastern part of the valley, at the foot of the Mission Range, are large forests extending out into the level part of the valley several miles. The Pend d'Oreille River runs through the western part of the valley, and between the river and timber are from ten to twenty miles of the finest grazing prairie country in the West, comparatively level, with an occasional hill rising abruptly and forming small round buttes. A wagon can be driven almost anywhere, as there are low passes and level ground on all sides of these hills. Several small creeks come down from the Mission Mountains, and flow west across the valley and empty into the Pend d'Oreille River. The valley is about 35 miles long and from 10 to 20 miles wide.

DOMESTICATED BUFFALO AND HALF-BREEDS.
From photographs of the Jones Herd. Reprinted from FOREST AND STREAM.

About ten miles below Flathead Lake, on the west side of the valley, and bordering the Pend d'Oreille River, is the range of the buffalo. On the bench land and about five miles east of the river, is the summer range. There are a number of lakes here where the buffalo usually water, but in the hot summer when the lakes go dry, the buffalo go to the river. It is an ideal spot for this last remnant of the greatest of American game. The range is rather short, but the buffalo seem to be in better flesh than either horses or cattle.

Their winter range is on the low bald mountains west of the Pend d'Oreille River. In December the buffalo commence coming from their summer range in small bunches. They swim the river of their own accord and take up their winter range on the bald hills bordering the west side of the river.

The snow sometimes gets very deep in the valley, and all stock must be fed; not so with the buffalo. In the coldest weather they can be found bedded down in the snow with their heads to the wind, and seem to be contented. A buffalo keeps his head to the storm; all other stock turn tail and drift with it. Sometimes the thermometer drops to thirty degrees below zero, but the herder said he had never seen a buffalo which seemed to be cold.

When the snow goes in the spring and the ice goes out of the river, the buffalo come to the stream and swim to their summer range. Sometimes a small bunch will be slow in coming, but the herder will give them a start toward the river, and they will keep on until they reach the summer range. They are handled about the same as range cattle; the so-called herder is merely a range rider, although everybody here called him the buffalo herder.

Tame Buffalo at Home.

The herder, Jimmy Michel, is a very intelligent mixed blood, and took me out to see the buffalo. To him I am indebted for much information. We were riding for several hours, and he gave me a chance to see about two hundred buffalo. From a high butte a number of small bands could be seen, while close to us, stringing out in single file and coming to water, was a herd of about one hundred. The day was calm and warm, and we lay in the sun on the butte and watched the buffalo come in to water. Sometimes a cloud of dust would rise from around a water hole, and an old bull would be seen horning the ground and throwing up the dust in the air.

Jimmy told me of a cow and calf which stayed on the winter range until late. One morning she came to the river with a calf not over twenty-four hours old. They took the water without any hesitation. The river at this time is high; it runs like a millrace, and is a quarter of a mile wide. The calf swam easily under the lee of its mother, and landed without apparent exhaustion. The same swim is a hard job for a fat strong saddle horse.

With the herder I rode down off the butte, where we had lain watching the herd. There were about one hundred head close by, and they were slowly grazing away from the water. We approached, giving the buffalo the wind of us. When we were within 300 yards of them they threw up their heads and came for us on a gallop. They gathered around us, snuffing and looking, the yearlings bucking and playing like domestic calves. We stood still and watched them. Most of them were within 40 to 80 feet of us; a few old bulls were strung out behind, and they slowly came on, in our direction. There was no sign of fear or wildness; there was no indication of bad temper; just good-natured curiosity and playfulness. We rode off and left them standing, looking after us. The cows were commencing to shed. All looked in good flesh and thrifty. Not so with the range cattle close around, most of which were poor and had a distressed look after being fed hay for two months.

Habits.

Accounts differ somewhat as to the temper of buffalo. Mr. Ford, who manages Mr. Conrad's herd, told me they were as easily handled by an intelligent man as a bunch of cattle. Mr. Pablo, who drove a part of his herd to Butte for exhibition purposes, said that as soon as they were out one or two days, they handled fully as easily as domestic cattle. They were bedded down at night on the open prairie, and were a great deal easier to night-herd than ordinary stock. A buffalo would rise in the night, feed close to where he had been lying, and again lie down. Domestic cattle will attempt to graze away from the herd.

In the rutting season the bulls fight, and then all agree that it is best to leave them alone. I failed to get any story of any one being hurt by a buffalo. Sometimes a bull is seriously injured in a fight. At this season domestic bulls leave them alone. The buffalo usually wins a battle with a domestic bull very easily when weights are even. During the rut the bulls are self-willed and hard to manage, but every one seems to believe that at other seasons they are no more dangerous than a band of range stock. I stood in the Conrad inclosure, and two old bulls fed up to within forty feet of me. They had the wind of me. One young bull took some notice of me, but the others merely turned somewhat from their course and grazed past. No buffalo of either the Pablo-Allard or Conrad herd are branded.

Pablo told me of a buffalo bull which fought for three days with a large muley polled angus bull. They would fight until tired out, then rest and renew the conflict; the buffalo finally won the battle.

The herder told me of one cow which—when her calf was very young—always came out and chased him and his horse for several hundred yards. Sometimes she gave him a hard run to get away. After a few days, she was all right again.

The bulls fight much as do domestic cattle. The herder told me that when one bull got the advantage, and the other turned to run, the stronger bull would lunge viciously, and often tore the other in the flank and hindquarters.

When the Buffalo Jones herd and the Pablo herd met in Butte, there was plenty of fighting, but no serious results. I did not learn at what season this meeting took place. Pablo and the herder said the bulls—in season—were continually fighting.

Mr. Ford, of Conrad's herd, maintained there was no fighting at rutting season. A bull would cut a cow out of the herd and drive her off to some other part of the pasture.

Mr. Ford said that a cow in calving gave no sign, as usually shown by domestic cows. She would be uneasy and restless; then she would leave the herd, and in two or three hours come back with a calf by her side.

The Conrad herd are kept in confinement. There are double the number of cows to bulls, which may account for the absence of fighting at the rutting season. They were changed from their range, where they were as free as it is possible to be in these days, to the Conrad inclosure. This was all done, and the actions of the herd

noted, in one year. Mr. Ford said he never saw one seek the shade. In the hottest weather they go up on the top of the hill. There are plenty of large pines and considerable brush in the pastures. Mr. Ford said they seemed to avoid both. A mother never cached her calf. It was always under her eye.

Cross-Breeding.

At one time a number of Galloway cows were purchased and conveyed to Wild Horse Island, in Flathead Lake. A number of young buffalo bulls that had been raised with, and as I understand, suckled by domestic cows, and kept with the milk stock until full grown, were put with the Galloway cows on Wild Horse Island. This island is about four miles square, or nearly square. It is called six miles by some. It rises about 1,000 feet above the level of the lake. On the north end it is covered by pines and other evergreens. Most of its surface is covered with good grass, with now and then a pine tree. It looks like a rolling prairie, sloping from the north end, where the hills are high and abrupt, in a gentle grade to the south end, where the prairie meets the lake. It is an ideal summer range.

These cows were kept there several years, but the venture was unprofitable, as a number of the cows died in giving birth to the first calf. After the first calf was born the cow seemed to have no further trouble in parturition. The experiment was discontinued, and since then there has been no effort made at cross breeding.

When the cows were taken off the island one or two of the buffalo refused to be driven or taken off. When the rutting season came on one bull swam off the island to the mainland, a distance of half a mile or more. The first herd he struck was a bunch of dairy cows belonging to a rancher. The cows seemed to be afraid of him, with his long beard and big black head, and they struck out for their home corral. The buffalo followed and insisted on being sociable. When the rancher came to milk, he also lost his nerve and would not go into the corral. He dispatched a boy to Pablo's and left his cows without milking for a couple of days. The rancher lived off the reserve, and it was a long way to Pablo's. When the herder reached the rancher's home he found that the bull could not be driven away, and the herder threw him and castrated him, and he was then driven away without difficulty.

The general impression is that if left to themselves the buffalo will not cross with domestic cattle. The buffalo run in bands, and while occupying the same range, they herd together and act just as antelope, elk and buffalo would act when occupying the same range. In order to cross, they must be kept away from their own kind. What half-breeds are there run by themselves and with the buffalo, never with the domestic cattle. Half-breed bulls are castrated, and the heifers prefer the buffalo bulls and breed to them. There are a number of three-quarter buffalo, but only one one-quarter buffalo.

There is no attempt made now to encourage them to cross-breed. The band is so large that with a few years of luck there will be all the buffalo the range will support.

Description of Cross-Breeds.

In size the half breeds are somewhat smaller than buffalo. The hair is not so long over the hump and fore quarters. The beard is smaller and shorter; the coat more even and darker; the long flowing hair on outside of front legs a great deal shorter; hump somewhat less prominent; tail a little (perhaps 6 in.) longer, and thicker; horns lighter in color, straighter and do not turn in at the point so much, which gives them the appearance of being longer. Pablo said the horns when polished were always black.

In a bunch of twenty-five mixed bloods, I saw one with a tail like domestic stock, and his general look was more like a black domestic steer than a buffalo. The herder told me it was a half-breed steer. Castration does not seem to make any material difference in the full-blood buffalo's appearance, the fattest and about the largest bull I saw, the herder told me, had been castrated, but at what age I could not say.

A full-blood buffalo, which has been castrated when young, has straighter horns than the entire animal. The horns do not turn in quite so much at the point.

I could get information regarding only one quarter buffalo. The mother was a polled angus, the sire a half-breed.

Pablo told me it looked like a polled angus—muley or polled; the coat very fine and silky and very black. I did not learn the sex. Pablo told me of one he called a Texas buffalo, evidently a half-breed. It was yellow with black bars on its legs. I did not get a good description of this animal.

Half-breeds are more easily handled than buffalo. Pablo told me of a half-breed heifer whose mother was a Hereford cow, sire a buffalo bull. She has the bald face of the Hereford, and is without horns. She has a long dark buffalo-marked coat. She is somewhat of a hermit and seems to prefer being alone.

The band of half-breeds I saw seemed to be thinner in flesh than the buffalo. When started they run like the buffalo, breaking into an easy gallop, almost from a walk. They were fully as gentle as ordinary range stock.

I could not find any evidence to support the theory that the mixed bloods ever cease to breed. I asked the question and they told me that all the cows have calves. I have no doubt but there are some mixed bloods that cannot be told from buffalo by the ordinary observer.

Deaths on the Range.

Sometimes a buffalo is found dead on the range, and no reason can be given for the death. There must now be some very old buffalo in this herd; the bulls injure each other in fighting, but these causes do not cover most of the cases.

They told me of one buffalo bull which persisted in ranging off toward the reservation line, sometimes crossing beyond the bounds. Complaints came in that the bull was doing damage. A cowboy was sent to bring him back. He would only stay a short time and then go back to his old range. At last he became ugly and refused to be driven.

The ranchers living in the section where the buffalo ranged were asked if he did any damage, and they all insisted that he did not. Pablo at last took a wagon and drove out and butchered him. In skinning the animal his hide was found to be loaded with all kinds of small shot. A great number of .22-caliber rifle bullets were also found under it. The ranchers had evidently been afraid of him and shot to keep him away from their outfits, or else some one filled him full of shot out of pure maliciousness.

Such causes as this may account for some of the deaths. There have not been a sufficient number of these to cause any uneasiness, and I am inclined to think they must be from old age and injuries received in battles at the rutting. The herder said they sometimes were seriously torn, and some had died from this effect. None had died from lack of feed and exposure, as domestic cattle on the plains so often do.

When a buffalo is shot on the range, the buffalo merely start or give a little jump at the crack of the rifle. Then they gather around the fallen buffalo, and have to be driven away before the animal can be butchered.

Sales from the Allard-Pablo Herd.

The following records of recent losses of buffalo from this herd by sale and accident are taken from the books of the concern. Many of them are without date, and other particulars, yet they are interesting so far as they go. From the dates given it probably would not be difficult to trace up many of these sales and to learn full particulars about them. It will be noted that almost all the sales are of bulls or steers. There is always a superabundance of males in the herd:

No date. Sold to a Mr. Adams, of Massachusetts, six yearling heifers and two two-year-old heifers; taken east for breeding purposes.

Sold to a Michigan banker named Hills, two two-year-old heifers, and one two-year-old bull.

Sold to Governor Young—and no one seems to be able to tell where he governed—two two-year-old heifers, one two-year-old bull; for breeding purposes.

Three head sold to C. C. Willis, Horse Plains, Mont. No record, but they were probably butchered.

The above undated sales were probably made by all parties interested in the herd.

1899—Wilkins, of Bozeman, bought one old bull; butchered.

1899—Five were sold to Meyers, of Helena, Mont.—bulls and steers; butchered. Record does not show by whom sold.

1899—Sold by M. Pablo, to a butcher in Kalispell, Mont., one old bull. It is stated that the butcher sold buffalo meat at a high price all through the winter.

1899—Sold by Michel Pablo, one old bull to Caspar Deschamps, of Missoula; butchered.

I find the following entries made without date:

Sold to Howard Eaton, one bull, one heifer. Went east for breeding purposes.

Dec. 14, 1901—Jos. Allard sold one stag, very old. No record of purpose.

May, 1901—Sold by Jos. Allard, four cows and calves. Went east for some park. No record as to buyer or locality.

May, 1901—One cow and one yearling killed in round up. This was done while rounding up to take the Conrad purchase out, then made.

1901—M. Pablo sold nine steers and stags to Morris, of Seattle, Wash. They were sold for butchering, but I heard that the city of Seattle bought them and put them in a park.

Nov. 23, 1900—Michel Pablo killed one stag for beef for his home.

1902—Sold to Wilkins, of Bozeman, by the firm Pablo & Allard, three head of old steers. The buyer came, butchered them on the range, took the heads and meat. Their hides were still hanging on the fence at the herders' camp.

January, 1902—Jos. Allard sold eight head, sex not stated, buyer not known. (? Eaton and Talstrup. ED. FOREST AND STREAM.)

March 7, 1902—Jos. Allard sold four head. There is no record of the sex of those sold, nor for what purpose.

Feb. 11, 1902—Jos. Allard sold one cow, two bulls, to butcher at Horse Plains, Mont.

February, 1902—Jos. Allard sold one steer to butcher at Horse Plains, Mont.

February, 1902—Jos. Allard sold one half-breed to Sears, of Wallace, Idaho; butchered.

How to Get There.

Parties wishing to see these buffalo should take the Great Northern Railway to Kalispell. Here there are good hotels, and all kinds of driving, saddle and pack horses can be obtained if desired.

A short drive or walk of a mile north of the business part of the city will take you to the Conrad herd.

If you wish to see the Pablo-Allard herd, an outfit can be obtained, and you can drive down on either side of the Flathead Lake. A distance of seventy-five miles will bring you to them. The country is well adapted to camping; wood, water and grass are abundant, and good camp grounds are encountered every few miles. A good way to go is to take the steamer Klondike, which sails from Demersville, three miles from Kalispell. The boat leaves for the foot of the lake every Monday, Wednesday and Friday of each week during the spring, summer and fall. The round trip costs $5. Stages run from Kalispell to Demersville, fare 50 cents.

You board the Klondike between 5 and 6 o'clock in the morning, take breakfast on board. For sixteen miles you steam down the Flathead River, which is bordered by dense forests of large pine, fir and tamarack, but an occasional ranch house and field is passed. At the head of the lake you pass the post office, store and saloon comprising the town of Holt. A run of twenty miles on the lake takes you to Dayton Creek. Here the Flathead Indian Reservation begins. A stop is made here, but soon the boat moves on, and you pass down the lake by Wild Horse Island, where, as already stated, a number of Galloway cows and buffalo bulls were kept for a number of years. You are due at Polson, the foot of the lake, at 11 A. M.

Here Mr. Henry Terrvault keeps a general store, runs a hotel, and can furnish almost any kind of conveyance you may wish to take you to see the buffalo. A ride of seven miles brings you to Pablo's ranch.

If you are an old hand and want to camp and look at things in your own way, you can drive down the Pend d'Oreille River—which leaves the lake here—in a southwesterly direction, and you will soon be in the summer range of the buffalo. I advise people to see Mr. Pablo or either of the Allard boys.

This country is an Indian reserve, and it might be advisable to be with some resident. Mr. Pablo is a busy man, and treated me with old-time hospitality, but I do not think he would be able to take care of very many people at one time.

One can camp at Mr. Terrvault's at the boat landing, and with a good saddle horse or driving team can see most of the buffalo in a day. The country is fine for driving, although with a saddle horse some of the low mountains or high hills that rise up out of the tableland and border the buffalo range may be climbed so that one has a wider view. When the visit is over you can take the stage from Terrvault's, and a drive behind four fine horses takes you across the main Flathead Indian reserve to the Northern Pacific, at Ravalli. The distance is thirty-five miles, and is made in five hours. Stage connects with steamers from Kalispell.

You can leave Kalispell in the morning, have a boat ride down the river and across the lake of sixty-five miles, then stage it thirty-five miles to the Northern Pacific at Ravalli for supper. At Ravalli there is a good general store and hotel kept by Duncan McDonald, who was born and raised in this place.

If it is more convenient, one can reverse the trip just outlined, and start from Ravalli, where, if one is used to travel in the West, he will find everything he will need.

I found everybody kind and polite, and did not see a bad man with a gun hung to him on the trip.

J. B. MONROE.

Catching Fulmars in St. Kilda.

THE remote island of St. Kilda is exempted from the operation of the Wild Birds Protection Acts, for the reason that the inhabitants are dependent for their living on the sea fowl which abound there, and which are most easily taken from the cliffs toward the close of the breeding season. This fact, it would seem, has not escaped the notice of His Majesty the King, for in a recent letter to Dr. C. F. Forshaw, who is about to revisit St. Kilda, Sir Francis Knollys, writing from Buckingham Palace on June 5, says: "I have had the honor of submitting your letter of the 2d inst. to the King, and I am commanded to request you to inform the inhabitants of St. Kilda, when you next visit that island, that he trusts that they will have a successful season in their occupation of fulmar catching." For the benefit of those who may have but a limited acquaintance with northern sea fowl, it may be well to explain that the fulmar, so called from the Gaelic name for the bird, is a large petrel about the size of our common gull (*Larus canus*) for which at a little distance it might be mistaken. But though resembling it in size and color while at rest, it is observable when on the wing that the flight feathers are gray instead of black, while a closer inspection would reveal the peculiar nasal tubes which characterize the petrels, and cause the beak to present a very different appearance to that observable in the gulls.

In British waters the great stronghold of the fulmar is St. Kilda, although of late years it has been found breeding in the Shetlands, on Foula and Unst, and there are indications that its breeding range as a North British species is more extensive than was formerly the case. Unlike the smaller petrels and shearwaters which lay their eggs in crevices of the rocks, among loose boulders, and in burrows excavated where the soil admits of it, the fulmar makes a nest like a gull on a ledge of sea cliffs, lining it with a little dried grass, and in this it deposits a single white egg. The number of these birds which resort to St. Kilda for the nesting season is almost incredible, and can only be estimated from the returns of the numbers killed for food by the islanders. The season for capturing them lasts for eight days from Aug. 12, during which short period it is said that from 18,000 to 20,000 are annually captured.

The method of catching these birds is peculiar to St. Kilda, and although the process is simple enough, the danger attending it must be witnessed to be appreciated. Hanging on a rope, usually made of twisted thongs of cowhide and sheep's hide, the fowler descends the fearful precipices armed with a sort of fishing rod with a noose at the end. This he dexterously slips over the head of the bird which is sitting on a ledge of rock beneath him, and hauls it up. He then dips the bird's beak into a small leather bag suspended to his waist, and there the oil is vomited. The bird is then killed for food, the feathers and the oil forming articles of export.

The late Rev. H. A. Macpherson, in his "History of Fowling" (Douglas, 1897), thus describes the fowling-rod by which the fulmars in St. Kilda are captured, and of which he gives a sketch: "A rod which I brought back with me from St. Kilda measures about six feet six inches in length. It differs in no respect from a plain sea rod except that its upper extremity bears a slip noose mounted on a switch. This noose is made of horse hair, and is plaited together with strong quills, probably those of the gannet."

It will be easily understood that no one but a practiced cragsman could venture to engage in so perilous an occupation as that of snaring fulmars on their nesting ledges. Bishop Stanley, in his "Family History of Birds," has collected some thrilling anecdotes of the dangers attending the avocation of the fowler in St. Kilda, and many readers will doubtless remember the illustration in that little volume which depicts "the perilous leap of a bird catcher," who, having inadvertently let go his rope while collecting eggs, had to jump off a ledge to catch it as it swung several feet in front of him.

In MacLean's "Sketches of St. Kilda," 1838, quoted by Gray with approval in his "Birds of the West of Scotland," it is stated that the fulmars "are from two to three pounds weight. About 200 will go to fill a herring barrel; yet each family, after serving the poor, shall have from four to five barrels salted for winter use." With regard to the alleged weight of a single fulmar, there must be surely some mistake here; probably it was only guessed from the size of the bird, a misleading mode of computation. So far as the writer's experience has extended with birds of this species, taken off the east coast of England during the winter months, the weight of an adult fulmar

in good condition is not more than one pound, or that of a red-legged partridge.

According to Mr. E. C. Stanford, the oil obtained from these birds is a good deal mixed with a rougher sort procured from the Solan goose or gannet, and realizes a poor price as an ordinary rough fish oil. When genuine it is of a clear dark slightly reddish sherry color, and has a powerful and peculiar odor, of which the whole island and all the inhabitants smell. It is certainly a fish oil (he says), and possesses nearly all the properties of cod liver oil.—J. E. Harting in London Field.

A Pailful of Rattlers.

A GOOD and truthful tale is told by a distinguished alumnus of Yale, a classmate of Senator Depew. The facts came under his personal observation and were related to me as follows: "I was visiting friends up at Sheffield, Mass., last August, and one of the principal amusements for all hands was blackberry-picking. The only drawback to this exercise was the occasional presence of a big rattlesnake among the rocks where the best berries grew. After several severe frights fruit began to grow scarce upon the table and we were in despair. Finally, one morning a couple of young college men came along on their wheels and upon learning the trouble, promptly volunteered to clear Black Rock in one day or stand treat when we all got back to New York. They wore thin knickerbockers, ordinary hose and shoes, and were each provided with a hickory cane. This constituted their entire armament, with the exception of a big 15-quart milk pail, which they took along to gather berries in. They carried along a light luncheon provided by my hostess and took matters as easily as though starting out for a walk through Central Park.

"Well, the hot day dragged its slow length along until 5 o'clock, when the boys appeared carrying the big pail between them. We chaffed them about snakes and finally asked how much fruit they had picked. 'About 50 pounds or so,' said the slim pale youth, the more studious of the twain, who thereupon proceeded to take from the pail rattlesnake after rattlesnake, to the number of eight. Both men apologized for the absence of the biggest one they saw, which, unfortunately, had gotten away into a hole before they could get in a killing blow on the neck with the hickory cane. We assured them that no excuses were needed as the snakes were duly displayed on the lawn before our astonished and admiring gaze. The two largest measured exactly six feet in length. One of these had thirteen perfect rattles, and we called the veteran 'old '76.' The remaining four ran from four to five feet each.

"The hunters excused themselves for not bringing berries, saying they had been pretty busy with the reptiles. After taking photographs of the eight snakes hanging on a pole the boys skinned them and took their prizes along, saying that they were to be presented to various fair friends in New York.

"I forgot to say that inside of one of the largest snakes they found twenty little baby snakes, which were promptly killed." PETER FLINT.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Moose.—IV.

An Expedition into New Brunswick.

(*Concluded from page 8.*)

THE next morning Moore started back for Tehoe and carried my rifle for King. Toward evening Ed sent a seductive call reverberating down the valley toward Rocky Brook. A bull answered away up on the ridge to the west and came rapidly toward the horn. King said he feared he might get lost and started to meet him and show him the way down to the lake. Presently, about sixty yards ahead, he saw a dark object move between two trees. At the report of the gun the bull went down, he was up in a second and went down again with a bullet through the loins, about four inches in front of the first one, but he did not stay down. With head lowered and hair turned the wrong way, the very incarnation of rage, he charged. King says he can answer in the affirmative the question so often asked, whether a wounded moose will charge or not. At about forty yards another bullet caught him about in the center of the forehead, but high up in the heavy, bony ridge, from which the antlers spring, too high for the brain, and he went down again, they thought, for good, but after a few convulsive kicks he staggered to his feet and made for the lake. After he had passed a shot from the .30-30 struck him in the rear end of his anatomy. He did not go down but rather increased his speed. Another passed through the web of his right antler. By this time he had reached the lake and started across. When almost a hundred yards out a shot from the Mannlicher shattered his lower jaw on a line just in front of the eyes, so that it only hung by the skin. The great shock stopped him, and another bullet struck behind the ear, and he went down and out. I have related the killing of this fellow just as it has been told me, because he was about the largest one that has come out of York County in a long time, and being so large and old furnishes a good text for a dissertation on the general utility of modern small-caliber, high-power rifles for hunting big game. I went into the woods a firm believer in their killing and stopping power, but heard so much unfavorable comment on them by men whose opportunities for judging of their killing qualities could not be surpassed, and then had the opportunity of seeing some wounds myself which caused me to weaken very much in my estimation of their stopping power. High velocity and low trajectory are desirable in a rifle, but should not be attained at the sacrifice of lead; in other words, the so-called shocking power will not offset a large bullet at slower velocity in my judgment.

After the scalp had been taken off I removed the bullet with a hatchet and a chisel; some of it had been dug out with hunting knives and lost. The portion saved weighs 120 grains, the bullet originally weighed 236 grains, so that 116 grains were lost. There was nothing to indicate that the bullet had splattered or left the mantle, because the first part removed was the base of the mantle. The lead looks as if it had been melted from the heat generated by the sharp pitch of the rifling and the impact against bone that it could not penetrate. One is reminded of the question we used to debate in our schoolboy days: If an irresistible force should meet an immovable body, what would happen? About the nearest approach to an irresistible force that we know anything about is the explosion of a full charge of high-grade smokeless powder, and the head of a bull moose simulates the immovable body sure enough. I have related what happened.

We were in great luck; Ed had a large, deep dish pan in which we put our heads and boiled off all the meat. The parts that would not go into the pan were filled with boiling water with an old can, so that the lining of the nose and mouth came away as well as the rest of the flesh. This is the way to clean heads. The taxidermists wrote us that ours were the best prepared heads sent them last fall, and the reasonable charge they made for mounting them indicates that they were well prepared.

It was Friday noon before King got up to the cabin with all his duffle, although the head and scalp had been brought up the day before. If King could have had a caribou we would have had our legal limit, except the deer, but no one expects to get deer in New Brunswick; they are not plentiful. They tell you that many years ago they were plenty, but great hordes of wolves, like the Huns of old, came down out of the north and they disappeared. They think they are coming back. It seems strange that they should not when they are so plentiful just over the border in Maine.

If some enterprising maker will just give us a modern high-power rifle of 10 to 12 mm. caliber with sixty to seventy grains of Walsrode or some other high-grade powder behind a 400 to 450 grain soft-nosed bullet, the big-game hunters will rise up and call him blessed. Blake, of Batavia, N. Y., has made a few high-power forty-caliber guns on orders, but they are not on the market. If I understand the situation correctly, it is this: Those who hunt moose and the guides generally are in favor of a heavier gun than those now in use, and, of course, a larger and heavier bullet with more powder behind it.

I think it self-evident that such a gun would be more deadly on all large game, not moose alone. We have no quarrel with the 7 mm., 7.65 mm., the 8 mm., or even with those fellows who are hurrying their orders across the great damp spot for the new Mannlicher or Mauser 9 mm. We admire the pluck of these German makers, and are only sorry they have not seen fit to offer us a 10 mm. instead. These are all excellent guns for what they can do, but I will venture the assertion that every guide in New Brunswick, unless it be Adam Moore, who seems to be in love with .30-calibers, would be glad to see every hunter that goes into their territory armed with a 10 mm. .40-caliber, instead of with a 7.62 30-caliber, and it strikes me that Adam would look with favor on such a gun when visions of a great, gaping, external wound to let out the blood, one that could be found without putting on magnifying glasses, and bruised and lacerated tissues and fractured and comminuted bones came up before him, and our old friend, Uncle Henry, would find in it the consummation of all his desires in the gun line and the old .577 cannon, which weighs about one-fifteenth as much as Henry himself, would no longer be a "thing of beauty and a joy forever;" and the transportation problem would be partly solved with him, and my old friend Ben would not apply opprobious epithets to it, like "popgun, pea shooter, moose bird killer, etc."

"I like to see a hole in the barrel, doctor," he said to me one day, "and a place to put in lots of fuel. I have noticed that a big chimney draws better than a small one." He had not been in love with my rifle; said he always felt better when he had the big .45-90 along, but after the moose and caribou fell to it with one shot each, he had more respect for it. Ed had no words of praise when he came up from Tehoe. He said "Your gun was bad enough; it took six shots to kill, but we never would have gotten him with King's .30-30." If I had had the same shots with the .45-90, two would have stopped him.

Jim Moore carried a .44 Sharps, and nothing of smaller caliber would satisfy him. Alex was particularly bitter against small calibers. Two seasons before he was guiding young Weaver, of Philadelphia, and had an experience which everybody in New Brunswick knows and many in the States have heard about since Frederic Ireland's article appeared in this paper last February. As I write a letter has just come from him, in which he says:

"You know, doctor, that last fall I advocated heavier guns. You had good luck with your game, but you struck them on fatal spots. The small gun is all right if they strike the head, heart or the lungs, but the chances are about ten to one at a 200 or 300-yard range that any sport will aim for the middle of his game. Now this is where the heavy gun tells, we will say .45-70, .45-85, .45-90. You are a doctor, you must know if a ball passes through the middle of a moose that he will bleed on the inside a great deal faster than he would from a .30-30, and they die so much more quickly. I was talking to William Carson, who was up with a party the same time you were up last fall; he told me that they lost five out of seven, and their guns were .30-30. He said that one morning they were going up over a ridge and they saw a moose jump to its feet. He pointed it out to the sport, he fired at it and it fell, and when the gun went off the second one jumped to its feet and started off. They followed it, thinking the first one was all right, but they did not get a chance at the second one. When they came back to the first one it was gone. They followed it seven miles, but lost it after all. He also told me that he saw Braithwaite, and he told him that they lost eleven of their game last fall; and if so there is something wrong somewhere, and I would like to see all you sports bring heavier guns next fall, and probably you will find out where the trouble is. So much for the size of guns."

Late Saturday afternoon John Hays came as agreed. We were pretty well packed up. Ed was so in love with our acetylene lamp that it had to be left behind with numerous other remembrances to each of the party. Early Sunday morning our packing up was completed. It was arranged that Ed and Ben would remain with the count. Alex was to go with John Hays and the sled load, King, Wilfred and Jim Moore had argued themselves into believing that they knew of a short cut through, via Tehoe Lake andMcKay's old camp to our meeting point at Ten Mile Camp, where we were to meet for dinner. I went with Ben's younger son and the saddle horse around the road. Just before we reached Rocky Brook a fine bull caribou jumped into the road fifty yards from us and kept ahead for several hundred yards. I had nothing to shoot with except a .22 Marlin, so he went his way undisturbed. We beat the other party to the meeting place one hour. Their short cut proved to be longer than around the road. After a hard tramp John Hays' welcome hostelry was reached in time for late supper, and we turned in for the night on the big feather bed, described in my first letter. Wilfred came early to take us to Boiestown, but Hays and Alex did not get in with the baggage, heads and hides until 11 o'clock. Their delay caused us to miss the morning train down to Fredericton, and as the mixed train only runs every other day and this was not their day, we were guests of the Duffy House over night. Next morning, with N. T. De Pauw, of New Albany, Ind., who came in with a good head from Braithwaite's territory, I went to McMillens and photographed the head of the Weaver moose. He bought it for $10 of the parties who found it. We got down to Fredericton at 12:45. Our friend Allen met us after dinner and unfolded the plan made for our entertainment at a banquet that evening by the Tourists' Association and the good friends we had made there, but we were obliged to decline, our train was to leave at 5 o'clock and business at this end of the line needed attention. King was able to check his hide through to Detroit as baggage, because it was in a gunny sack, mine was only baled with wire and cost $2.50 express charges; see the point!

To the tired and careworn business or professional man who is working from twelve to sixteen hours a day, burning the candle at both ends and wondering why the hair begins to silver, the eye loses its brightness, the step its elasticity and the erect form to bend with cares when he should be at his best; if you have done me the honor to read these letters, let me urge you to go and do likewise. You will not find the fountain of youth in the wilds of New Brunswick, nor a panacea for all the ills of life, but you can get close to the great heart of Nature in a restfulness and stillness that will cause you to startle at the tumultuous beatings of your own heart. The walking and exercise will whet your appetite and improve your digestion; the coated tongue and fermentation of ingesta will disappear, and with it the sallow complexion and jaundiced tinge of the eyes. The excess of uric acid, ptomaines, toxines and other products of imperfect digestion will be eliminated, cleared out, so to speak, by the aid of great draughts of balsamic ozone-laden air, which can be yours for the taking, and you will be healthier, happier and better able to take up your daily work than your brother who has plodded along and denied himself the pleasure of such an outing. D. W. GREENE, M. D.

DAYTON, O.

CHICAGO AND THE WEST.

Wisconsin Fish and Game Law Held Unconstitutional.

CHICAGO, Ill., July 5.—There will always remain upon the records of fame the name of that Texas justice of the peace who declared all laws prohibiting the sale of whisky unconstitutional. He said it was "agin reason and agin natur'." History does not state whether the supreme court of the State of Texas ever confirmed this justice of the peace in his notions in these matters.

A county judge in Winnebago County, Wis., on July 2, put in his bid to join the Texas J. P. on the roll of glory. He decided that the fish and game law of the State of Wisconsin is unconstitutional. The case will be taken to the supreme court, but as, in the matter of the Texas J. P., we don't yet know what the supreme court may think of the wisdom of the lower legal luminary.

Two game wardens undertook to board a steamer on the Fox River with the purpose of searching for contraband game which they had reason to suspect was carried by the boat. The captain put the wardens off the vessel. The wardens later arrested the captain and prosecuted him under the game law for misdemeanor in obstructing wardens in their search for contraband game. The worthy judge of Winnebago county held that the law as it stands on the statute books operates as a forfeiture of property rights. He therefore declared it null and void. This leaves all the steamboats plying out of Winnebago Lake to carry illegal fish and game with absolute impunity. It is astounding how much mischief a small individual can do in this world without a great deal of effort on his part. That this is mischief cannot be denied. The neighborhood of Lake Winnebago has been a battle ground between right-thinking sportsmen and wrong-thinking market-shooters and fishermen. While we may presume that the fight will continue, it is deplorable that this unnecessary delay and cost should be forced on the decent citizens of the State of Wisconsin.

Howard Eaton and the Flathead Buffalo.

The beautiful supplement to last week's FOREST AND STREAM and the editorial and news mention regarding the well-known Flathead herd of buffalo received a curious addendum this week by reason of the plans of a Western man in regard to this same herd. Mr. Howard Eaton, a well-known character of Medora, N. D., on July 2 returned from a visit to President Roosevelt at Washington. It is stated that a part of his purpose was to induce the U. S. Government to purchase the Allard herd and turn it loose in Yellowstone Park. Mr. Eaton has recently bought several full-blood buffalo from the Allard herd, and is said to have secured options on nearly all the full-blood buffalo now to be found on the Flathead reser-

vation. He offers to turn these options over to the Government without any commission or profit to himself, and states that his object is simply the preservation of the species. It is believed that the Yellowstone Park herd needs new blood before there can be any general multiplication of its numbers. It is stated that President Roosevelt turned over the matter to Secretary Hitchcock, asking that action be taken in the premises.

The only thing militating against this proposition is the old axiom which runs to the effect that it is wise to let well enough alone. The buffalo herd in the Yellowstone Park was once far more numerous than the Allard herd. None the less, poachers cut it down to its present pitiful remnant. Sometimes the buffalo wander out of the Park on the western side and are killed outside the Park limits. There is no reason to suppose that the same conditions will not prevail in the future. Now the Allard herd is at least doing fairly well in the Flathead country. Unless Uncle Sam can better protect Yellowstone Park than he has ever shown himself able to do, it is a grave question whether it would be wise to transport these buffalo into what might prove to be the burial ground of their race.

Wants Chickens.

Mr. Edward Banks, of New York, has a friend, a Mr. Cleave, of Altoona, Pa., who wants chickens. I would refer these gentlemen to Deputy Warden Stephens, at Detroit, Minn. State Warden S. F. Fullerton could no doubt give advices also. Friends of mine who shot with Mr. Stephens last year reported very good success, and said that then he had a good string of dogs.

About the Magnetawan.

Mr. J. W. Evans, of Steubenville, O., writes in regard to recent inquiries about the Magnetawan River: "You may say to Mr. E. L. Brown that the trip down this river is not only possible, but also pleasant, but canoes should be used. I have forgotten the number of portages to Byng Inlet, but they number about forty. To go in a boat takes away the pleasure to a great extent. I have gone down the Moon, Magnetawan, Musquash and Seven Rivers, using both kinds of boat, and will never go again except by canoe. Mr. Brown should write to George Ross, Magnetawan village, the best guide in all that region."

I have a letter at this office, addressed to Mr. F. L. Brown. If the latter will forward his address I should like to send him this letter.

Where to Get Your Moose.

The number of big-game hunters in this part of the country increases annually, and there are several men here in Chicago who have asked me where to get a moose next fall. Therefore, the following letter from Adam Moore, of Scotch Lake, New Brunswick, comes most opportunely at this time. The pistol to which Adam refers is the Mauser which I gave him for his spring bear hunt. His remarks regarding this arm, and also regarding the new moose country which he has discovered, will be found interesting:

"I have had the best kind of luck; got eight bears, good ones, too, and the Mauser is just the thing to kill them with. It punches a clean little hole that don't bleed any, but kills them all right. The bullet is not expansive. There is such a small part of the bullet not covered with the patch that it is just the same as a full metal patched bullet.

"I had John (my son) with me, up the Tobique, and a nephew of mine, that has the ambition to be a mighty hunter, so I took him this spring to give him his first lesson, and he is learning well. When we got up there we started out to put out a line of bear traps northeast of Nictou Lake, where we went last winter looking for moose. I found your U. S. tin cup at the brook where you lost it, and then my luck began. John and I climbed to the top of the mountain and climbed trees to take a look at the country, and about two miles northeast we saw water, so we started for it, and found the nicest pond for moose you ever saw. There is about ten acres in it, and the bull moose signs that were there was a sight for sore eyes. I told the boys that I was better pleased to find that pond than I would be to find ten bears in our traps. It is about six miles from the lake, and the woods round it is a perfect park. You can see 200 yards. We decided at once to build a camp there, and we did—a good one—the size of the camp at Bathurst Lake, all peeled and finished in good shape. We even cut about two cords of wood, so we could go in there and not make any noise. I am going to get a new light cooking stove and take it in there when I go up in August.

"But that is not all. We struck out over the divide on the same course, northeast, found another brook with a chain of five nice ponds and lots of beaver. These are about two miles from our new camp. It is a perfect moose country, has never been hunted, and by the horn marks it looks as if they were all bulls. I saw nothing to compare with it on the route we took last winter.

"We set five bear traps out in that country and got five bears in them, and the place is alive with caribou, too. I found two big moose horns near where we built the camp that had been shed last winter, and by the looks of the sign the whole country has been a moose yard.

"If Mr. Robinson, of Chicago, will come, I will give him John for guide and my nephew, who has been with me this spring, for cook, and that camp and country to himself. I never do guarantee a man a moose, but I have so much confidence in the country and the kid, that for a small advance on regular charges, if he is a fair hunter and will do as John tells him, I would be willing to say, no moose no pay, if he will stay a month. I think you know me well enough to know that I am not overdrawing the facts to try and get a party. I have Mr. Weed again, and a friend, and I don't need that ground for them. I don't think this offer is going begging very long, and if he wants it, let me know at once.

"We cut out a good clean trail from the lake to the furthest ponds about eight miles. But that is not all we have done up there. We cut another camp the same size and style, on the river, in a fine moose country, and I have a good stove there now, the same as the one in Nictou camp. You see, since I have got that country alone I am going to work to develop it. I have never seen more big bulls than this spring, and there is no doubt of it they are plentier than ever, and I never felt as confident of being able to get every man a moose as I do this season. We worked very hard up there; we were two days each week tending our traps, and four days of each week to build camps and cut trails."

So Adam found my old Yellowstone Park U. S. tin cup! I lost it up there last winter in the snow, five miles from camp, and with it lost my luck. Adam found luck again when he found the cup. Wouldn't take a thousand dollars for that sooty, dirty tin cup, so I reckon I'll have to draw on Uncle Adam for it.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Hunting Rifle.

BUENOS AYRES, Argentine Republic, S. A., May 28.—*Editor Forest and Stream:* I have just been enjoying a pleasure I have not had for a number of months—a chance to read FOREST AND STREAM—which I owe to a new-found friend, Dr. H. W. Peard, of Coronel Suarez, an important wheat market town south of this city. He is a born naturalist and sportsman of the better class, whose observations in this country have added to the world's knowledge of numerous birds and quadrupeds.

But the motive for this letter is to say a few words, just a few, about the small-bore, high-power rifle, after having read the interesting accounts of personal experiences by Mr. C. M. Stark and Mr. Frederick Irland in your issue of Feb. 15, 1902. It would seem from both their accounts that they refer to the all-jacketed .30-caliber bullet. If this is true, they are both right and both wrong. It is, of course, well known that the steel-jacketed projectile, long and slender, with a comparatively sharp point, will even penetrate a bone without crushing it or at once stopping the man who is hit. For this reason, because it wounds and disables but does not kill, its use is advocated in civilized warfare. One might fill almost any large game animal with holes with a .30-caliber gun, using all-jacketed bullets, and never get the animal unless he happened to be hit in a vital spot, and perhaps not then.

But if the .30-caliber bullet is steel-jacketed only part of the way, leaving a soft lead point of about .35 of an inch in length, there will be a different, very different, story to tell. In fact, I am quite sure, though I have never tried it on moose, that there is no gun made of greater killing, crushing power than the .30-40 Winchester, model 1895, when soft-nosed bullets of 220 grains weight are used, backed by from 36 to 40 grains of nitro powder, specially adapted as to rapidity of burning, for this gun and projectile. The soft-point, when it spreads upon contact, impelled by the weight of harder metal and the tremendous force behind it, tears a hole big enough for a man's fist, and nothing can stand, or run, against it. I have used it in the Rocky Mountains on deer, and have hunted there with old-timers, men who have lived in the mountains for years, and they are getting rid of their big, clumsy, large-calibered guns in favor of the small-calibered guns, simply because they have seen what the latter will do. Give me one good chance at any animal with my .30-40, and I will agree to stop him. But it would be only silly and cruel to go about punching holes in the few game animals left in our country with all-steel-jacketed bullets. I have seen the difference in an experiment on a beef animal, where the steel-jacketed bullet in the head seemed to produce no effect and the soft-nosed bullet felled the animal as if struck by lightning.

The advantage of this gun, with its box magazine, is very great, because the balance of the gun is preserved and is always the same, while in the old-style guns the heavy cartridges are in the magazine under the barrel, and every time the gun is fired the balance, or "hang," of it changes. So by all means use the neat, light, powerful small-calibered gun. F. W. BICKNELL.

Illicit Game in New York Restaurants.

SUITS have been brought by State Game Protector Overton, in the Eleventh District Municipal Court, Manhattan, against Shanley's Restaurant, Broadway near Forty-second street; Healy's, corner Columbus avenue and Sixty-sixth street, and the Manhattan Oyster and Chop House, Sixth avenue near Forty-fourth street, for serving quail out of season.

The penalties amount to about $1,200. Protector Overton obtained the evidence by taking parties to late supper to the places, and after ordering, carrying a part of the carcass of each bird away, so as to allow no question as to evidence.

Massachusetts Quail.

BOSTON, Mass., July 5.—It is astounding to see how plentiful quail are. June 12 I was at Georgetown (near Haverhill) and was driven around to several ponds by ex-Senator Wm. Butler, President of the Georgetown Fish and Game Club, and Mr. Abbott, President Groveland Fish and Game Club. All day we could hear the whistle of Bob White, and on one occasion saw a big covey fly across the road, while a pair sat on the rail fence until we had driven by. J. W. COLLINS.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

84

In the Scientific American an interesting communication appears regarding a large wild goose, weighing 16 pounds, which was shot by a hunter on the shore of Lake Liberty, Washington. On picking up his game the hunter was surprised to see a piece of polished ivory protruding from the breast of the goose. The ivory projected about two inches. With great difficulty the man pulled the stick out, for the flesh had grown tightly round it, and the wound had entirely healed. He then saw that it was the long, sharp point of an arrow, which was made of ivory, about eight inches long, and as large as an ordinary lead pencil. The ivory had on it some delicate carvings, and was quite unlike any used by Indians. The bird must have been wounded by an Esquimau, and flown several thousand miles with the arrow imbedded in its breast.

85

FOREST AND STREAM'S list of 100 curious sportsmen's finds presents many notable instances, but none more remarkable than one made by Oscar Dougherty, a citizen of Alton, although he did not go to the woods to find it. Oscar, like many other good Americans, is fond of the succulent chicken, and last week went to a local butcher shop, where he bought a fine young cockrel, which he took home for his wife to prepare for dinner. The good lady went about this duty philosophically, until she opened the crop of the bird and emptied out what appeared to be a small arsenal of modern ammunition. Mr. Dougherty was called and picked out from the contents of the crop twenty-four No. 2 percussion primers of standard make, only a portion of which had been fired, and two No. 22 short rifle cartridges. The presumption, of course, is that gravel was scarce and ammunition plenty where that bird lived; but the writer did not push the inquiry further. For the absolute veracity of this circumstance as related above, however, he is prepared to vouch.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Random Notes of an Angler.

Salt-Water Anglers are Rarely Enthusiasts.

IN the course of a conversation with a gentleman a few days ago, he remarked that "There is a strange dearth of literature on salt-water fishing, which is most unaccountable to me; it is only very rarely that an angler writes for publication anything in relation to the attractions of his outings on the "briny deep," and when he does put pen to paper it is in a most perfunctory, matter-of-fact way, and he never permits himself to indulge in rhapsodies. I wonder why this is the case. Sometimes I imagine that it is because of the deadly monotony of sitting in a boat and waiting for a fish to bite, sometimes for hours at a stretch. What is your opinion in relation to this matter?"

The question was a difficult one to answer offhand, but on giving considerable thought to it I have come to the conclusion that while angling with the fly for the nobler game fish is in consequence of the surroundings in which it is pursued, an art which appeals to the poetic instinct in the angler's nature, fishing in the salt water fails to arouse that sentiment except in a very slight degree. What can be compared with the ecstatic feeling with which one follows the meanderings of the trout brook or the rush of the salmon stream through scenery which is always picturesque and often sublime? And is it to be wondered at that the devotees of the fly rod become enthusiastic in relation to the charms such sport bears for them and delight in telling of them?

But salt-water fishing has its attractions, and in the absence of the opportunity for enjoying the higher sport, it affords to anglers a recreation which is far from despicable. I daresay that all would be glad to have a chance to try their skill on the lordly salmon or the gamy trout of the northern lakes and streams. But salmon fishing is not easily obtainable by the great majority of anglers; it takes time, which cannot well be spared by most men who are tied to business, and it is also an expensive recreation, which is an important consideration with many. Of course, almost everyone would like to own an automobile or steam yacht, or a nice trotter, but as all cannot do so they have to content themselves with that which is attainable. I doubt very much if salt-water angling ever aroused much of a poetic feeling in any one, but it certainly affords an exhilerating pastime that even salmon fishing does not eclipse. One cannot be upon the mighty ocean breathing the ozone and iodine with which the breezes are laden without feeling that there is something in life worth living for; there is no other tonic that compares with it, and it is free to all. New York has exceptional fishing advantages.

The fact is not generally appreciated, but I have no hesitation in saying that there are available to the angler within easy reach of New York many more and better localities for good sport than are found near any other large city on the Atlantic coast. In fact, there seems to be no limit to them, and no matter how persistently they are taxed their supply of desirable game and food fishes shows no indications of diminution; for the average catch of the angler is as good to-day as it was ten years ago, and of some species it is even better.

In hardly any other locality does this condition obtain.

For example, within my memory the striped bass was a common species in the Charles River, near Boston, and it was taken in dozens of localities all along the north shore and south shore of Massachusetts Bay, and even in Dorchester and Quincy bays, but it is now very rarely met with even in waters which have not become polluted and which would seem to be its natural abiding places, and I doubt very much if anglers now kill fifty of these splendid game fishes in any one year north of Cape Cod.

And so with many other species. The tautog or blackfish, which used to be very abundant, is now so scarce that anglers have ceased to follow it except at a very few points, such as Cohasset, the rocky shores near Scituate and the rugged ledges at Eastern Point, Gloucester.

The black sea bass is, north of Cape Cod, becoming almost a curiosity, and bluefish, which were so common that large catches were formerly made by "trollers" as near the city as Dorchester and Quincy bays, is, I believe, never found in those or adjacent waters, and Boston fishermen depend now almost entirely on Buzzards and Narragansett bays for their bluefishing.

From this it will be seen that the salt-water anglers of the "Hub" have but very little sport left to them, and

they have good cause to envy the abundance which their New York brethren enjoy.

Concerning Weakfish.

Among our seacoast game fishes, the weakfish or squeteague is undoubtedly the favorite in this latitude, for it gives more real sport to those who use the rod and reel than any other species, the striped bass, perhaps, alone excepted, and it is followed by vastly more anglers than is either of the others.

Indeed, so numerous are those who depend on weakfishing for their summer sport, if a census of them would be taken, its numbers would surprise the uninitiated. There are four species of weakfish on the Atlantic coast, but the squeteague whose range extends from Cape Cod to the Delaware Bay, and the spotted weakfish, commonly but improperly called the sea trout in the South, which is found along the coast from Southern New Jersey to Florida, are the two species best known to anglers.

My first acquaintance with these last-named fish was made a number of years ago under rather peculiar circumstances. I had accepted an invitation to enjoy a fishing excursion on a steamer which carried parties from Philadelphia to the "Banks," which are situated ten or a dozen miles to the eastward of the Delaware Breakwater, and had been promised that I should have some good sea trout fishing, they being very abundant at that time.

I thought I was pretty familiar with the habits of the fish I had heretofore known as the sea trout, and while I was incredulous that any of the silvery beauties that I had known for many years were to be found so far south, I was anxious to know what the species was that went by so inviting a name.

As the steamer passed down the river that night I heard, of course, a great deal of "fish talk" from the excursionist anglers who were aboard, and this chiefly related to the gamy sea trout and the black sea bass, both of which were to be taken at the Banks.

I listened and tried to get all the information I could, but I obtained no facts about the alleged sea trout, except that they were silvery bright with numerous black spots, were very gamy and their weight was all the way from two to five pounds.

A little before sunrise the steamer approached the wharves near the Breakwater, and here a short stop was made before passing out upon the bay. A number of fishermen were pointed out to me on the wharf to which we were moored; each of whom had a fine string of what I at first supposed to be squeteague, but which, by reason of their numerous black spots, I discovered were the spotted weakfish of the South, *Cynoscion carolinensis*.

I gave them as close an examination as I could in the short time in which the steamer lay at the wharf, and found them to be more round and stocky than the squeteague, and apparently with much greater strength, but in most respects they differed but little from the others.

We reached the Banks early in the forenoon, and as soon as the anchors were dropped the hooks on the hand lines were baited and dropped into the water. There were, perhaps, fifty fishermen aboard and they all kept busy.

While hand-line fishing has no charms for me, I like to see others enjoy it, and to say that the sport "waxed fast and furious" is to put it very mildly.

Deep-sea flounders, black sea bass, scuppaug—called "porgies" in the tidal waters of the Middle States—and weakfish were pulled up and sent flopping all over the steamer deck. I found that in addition to the squeteague, the spotted weakfish was being taken, and was told that along that section of the coast both species mingled and were so equally abundant that in a day's catch about half would be of each kind.

Further north, however, along the Jersey shore, the spotted weakfish becomes more rare and, finally, is entirely displaced by the squeteague. The bait that was used by the fishermen consisted chiefly of pieces of quahogs or hard-shell clams, although fresh herring had been provided for those who preferred to use them.

I watched the varying success of the fishermen for several hours and noted the proportionate catch of the different species. The black sea bass were far and away the most abundant of all, but the "porgies" were by no means scarce. The weakfish were rather plentiful, also, the total catch being upward of thirty. They seemed to take the clam bait with avidity, although the hooks and tackle were quite coarse, very different in fact from that which anglers who use the rod and reel are accustomed to use. I saw none that would scale over three pounds, and the average weight could not have been more than two pounds.

They were as beautiful fish as one might ask to see, in fact, they seemed to be of more brilliant coloration than those which are taken on the flats and in the small bays along the coast.

Everyone who has caught these fish knows how beautifully iridescent their color is when they are first taken from the water. The green and purple and gold added to and blended with the silvery sheen of their armor, make them one of the handsomest of fishes, but the bright colors soon fade, and in a short time they become dull and unattractive.

How they are Caught.

Weakfish are among the most abundant of our coastal fishes, and the methods employed in their capture are varied. Market fishermen who desire to make the largest possible catch familiarize themselves with the best localities, and, disdaining to waste time with rod, reel and fine tackle, anchor their boats in tideways or on the edge of a channel and pull in the fish as expeditionsly as possible. A favorite method with both market fishermen and sportsmen is by "drifting," in which either a hand line or stout rod is employed. The boat is allowed to drift with the tide and breeze, keeping as closely as possible to the silvery beauties, care being taken not to drift so rapidly as to go by then nor so slowly as to permit them to pass beyond the reach of the anglers.

The weakfish are continually on the move in pursuit of the minnows, shrimp, etc., on which they feed, and as they often gather in large schools and swim near the surface, their movements may be easily followed and a good catch made. The bait used in drifting consists usually of white worms, sand worms and shrimp, shedder crabs are also a favorite with most anglers. Sportsmen anglers who use finer tackle get their sport chiefly from still-fishing.

Their boat is anchored "just off the edge of the tide," and "chumming" with shrimp is resorted to to draw the fish about them. A stout rod is employed with about 75 yards of line (oil-boiled is preferred by most anglers). The leader is of good single gut—a salmon leader is none too good, and the hook that I think is most used, is about a No. 3 Sproat.

The reel may be either a multiplier or an ordinary trout or salmon reel. My preference is for a click reel, such as I use in salmon fishing, but of a smaller size.

In Vineyard Sound and Buzzards and Narragansett bays, practically the northern limits of the squeteague, they are much less abundant than they are along the coast of Long Island and New Jersey. A catch of ten or a dozen fish in the first-named waters being regarded as "high line," while in the others a take of fifty or sixty in a day's fishing of a single boat is not at all uncommon.

In the files of FOREST AND STREAM such statements as the following appear:

"The fishing in Jamaica Bay is at its best; catches of fifty weakfish in three or four hours' fishing are not rare."

"At Gifford's Station, Staten Island, weakfish are now numerous. On Sunday and Monday the ebb tide yielded from eight to twelve fish to a boat; all being of good size."

"Weakfishing at The Raunt, Jamaica Bay, is very good at present. Mr. George Schwind, of that place, reports that on Friday of last week one boat got sixty-two and another forty-five, while catches of from twelve to twenty-five are of daily occurrence."

"The catch in Great Egg Harbor was very large, some boats taking 150 on a tide."

"Two men caught 200, many of them very large, in the ocean not far from Ocean City, N. J., on a single tide."

In fishing for squeteague a small swivel sinker is used, one that is only heavy enough to carry the bait to the proper depth, and many anglers use a float to keep the line in proper place. The squeteague is a sharp, fearless biter, and the instant the hook is felt the fish gives a vigorous run, sometimes taking out fifteen or more yards of line and causing the reel to ring right merrily. The first run is always the strongest, but the fight is sure to be an interesting one as long as it continues. With almost electric speed the fish rushes about in every direction, now with a quick run it dives deep in the water, and tries to entangle the line in the weeds and rocks at the bottom.

Failing in this, it darts to the surface and leaps high in the air with all the agility the grilse displays, shaking its head like a bass and making every effort to dislodge the hook.

It is, while it lasts, as exciting a struggle as one can wish, but the fish soon becomes exhausted, and, lying on its side, permits the angler to draw it nearer and nearer, until finally the landing net is employed and the captive is lifted into the boat.

The squeteague is, like the bluefish, exceedingly voracious, the number of small fish that it destroys being very great; but it kills only for food, while the other continues its attacks long after its appetite is gratified.

I have watched them while feeding in the great tanks in the New York Aquarium and could see no difference in their movements in capturing the minnows which are thrown to them from those of the large trout in adjacent tanks; they rushed for their prey just as the others did and gorged themselves to repletion.

In fact, if one did not know the difference between the species he would believe them to be identical.

EDWARD A. SAMUELS.

[TO BE CONTINUED.]

Black Bass in Woodcock Cover.

OTTAWA, Ont., June 20.—*Editor Forest and Stream:* As we happened to be in this city at the opening of the black bass season, we were given an opportunity to indulge in a rare kind of sport that our old-time friend Throop had so often talked about to us—"gunning for black bass with a fly over good woodcock grounds." Hitherto, whenever he would become over enthusiastic in discoursing about this sport, which could only be had at a certain season of the year—the middle of June—we would quietly touch the bell and order in the refreshments—and change the subject to something that we had enjoyed or might at some future time be likely to be in a position to enjoy. So when he gave us an invitation to accompany him with a couple of other friends —who were thoroughly good fellows—to the locality where the wary black bass "used" during the period of high water in the Grand River—as the lumbermen call the Ottawa—of course we could not resist the temptation—and we joyfully accepted his invitation.

The next morning at the station of the Ottawa and Aylmer trolley line, we found awaiting us the well-known trap shots—Messrs. A. W. Throop, W. Slaney, also Mr. Sissons Throop and Master Norman Throop—a chip and true son of his father—the redoubtable A. W. Our destination was the club house at Aylmer Park, where we met for a few moments the Province of Quebec Fish and Game Inspector, N. E. Carnier, who was on his way to some more northern fishing grounds. At the club house we took a couple of skiffs for a three-mile row across the lake to the bass-woodcock grounds.

Among A. W.'s outfit was a mammoth fish basket about the size of an ordinary clothes basket. In reply to our little fun regarding the size of this basket, we were gravely and soberly assured that it would be none too large for our catch. We had a quiet pull over across the lake, as the enlargement of the river is here called. On the south shore we passed around a point into a large back bay that contained several low islands whose shores in many places were fringed with thick cripple brush. The water in the river being at its high tide, the low flat shores of these islands were covered to the depth of several feet, and the smallmouth bass were congregated in among the flooded bushes. By keeping outside in the boats, so that with a long cast we could drop our flies close up under the bushes, we would often be rewarded with a vicious strike. While we lost many a fine fish, with easy fishing we safely landed fifty-five good size bass—all smallmouth. We also took one small maskinonge, and a small pike, several perch and rock bass.

The smallmouths were instinctively "cute," for invariably, when they felt the prick of the hook, they would dart toward the boat and out of the water, and too often with a spiteful shake of the head, would send the fly away flying.

Individually, we at first lost every fish that we raised, but we soon learned to circumvent their wily tricks. As soon as they struck, by giving a sharp twist of the wrist, settling the hook well home, then throwing the tip of the rod well back and rapidly reeling in the line, thus keeping a stiff strain all the time on the fish, we soon had them well under control, but they were gamy—true grit to the backbone—first out of the water, then down grubbing along the bottom to find a snag to snub the leader around; failing in this, whiz-z-z would go the reel, as they would make a rush out for the open water, to double back under the boat. It was a steady fight, until at last they broke away or became tangled up in the landing net; then only we had them safe.

Our catch, while not large in point of numbers, was large enough for us, as we took things easy, and had keen appetites to satisfy, which caused us to make repeated calls for lunch. We ate under the shady canopy of some wide spreading branches of scrub oak—on a clean carpet of green grass surrounded by wild flowers and woodland song birds—which included our North American mocking bird, libelously named catbird, and with not a mosquito nor blackfly to give us annoyance. We ate, we drank, smoked and related truthful anecdotes, some of them old enough to be historical; in fact, we enjoyed ourselves in a decorous and rational manner.

We took all of our fish with the fly. The most killing fly was the Parmachene-belle, which, to be properly offered so as to excite the smallmouths' cupidity, should be dropped on the overhanging bushes, then with a quiet movement of the rod dropped off into the water. As it sinks below the surface, give it a little motion, then look out for trouble. Our experience with artificial baits when after voracious fish has taught us to make our lures appear like a thing of life struggling to escape. Fish take artificial baits from one of the following motives: Some kinds of fish take them for food; others from curiosity, or playfulness, and under certain conditions some regard the baits as a nuisance to be removed from their vicinity. We see an illustration of this when we drop a bait down where a bass is guarding her spawning bed. It would take many pages to fully cover the above subjects, so we will leave them for some future article.

Master Throop was taken along partly for his company and partly to row one of the boats while one of us older ones fished. This latter part of the programme was not at all to his liking. While he did not break out into actual open rebellion, he would when a fish was lost make cutting observations and indulge in sarcastic reflections about our lack of skill in handling a bass. We remembered his tender age and tried to remain undisturbed, which was at times a hard task, one that required strong self-controlling efforts. After our first lunch, while we were enjoying a restful smoke, we became aware of the fact that the young gentleman had disappeared with one of the boats. We found him around the point of the island playing a large bass, which he successfully landed single-handed. The way that he held the rod in one hand and worked the boat away from the brush with the other, then used the landing net, was an object lesson and an illustration of youthful precocity belonging to the present age. When he returned to the landing he had added several more fish to the score.

At first we were of the opinion that the bass were in among those bushes for the purpose of protecting their young, but we soon became convinced that this was a mistake, that they were in there where there was an abundance of feed and also cover. In some places they were in perfect schools. As the high waters go down they gradually retire to the deep waters, where they are then taken with live bait down-fishing. Though while returning in the evening, we were thoroughly drenched in a heavy shower, we put in one of the red-letter days of our life. We also had learned something new about the habits of the smallmouth bass. With the exception of the evening shower, the day was a beautiful one. All of our fish were taken with a fly, our companions were of the right sort, genial, whole-souled gentlemen. And the boy—"God bless them"—he gave the spice with an interesting flavor to the outing.

At the club house landing we found some waiting friends, among whom was Thos. A. Duff, Esq., the president of the Dominion Trap Shooters' League; Geo. Ketchum and others. Of course, we had to exhibit our full basket of fish, and received their congratulations with due and becoming modesty. STANSTEAD.

Big Catches Mean Future Dearth.

THE piece under the title of "The Schoodics," where one of your subscribers writes that he and a friend took 200 trout, which he says is a common occurrence there, attracted my attention. Further, he says that he saw one man bring in 120 trout up to three-quarters of a pound, and recommends anglers to come there to fish. I will simply say that if they expect to get anything, they had better get there soon, or the fish will be all cleaned out, and I cannot understand the satisfaction of killing so many fish unless a man is a fish hog or running a fish market. I often meet good fellows that are fish hogs and do not know it, and I feel sorry for them. But a good many of them are getting educated of late years, and learn that they cannot kill them all and have the sport last from year to year, and they realize after a while that in order to keep up the supply they must kill only a few and return the rest to breed and make sport later on. C.

CHICAGO AND THE WEST.

Western Angling Situation.

CHICAGO, Ill., July 5.—Pretty much everybody in Chicago left the city yesterday for some place out of doors and out of town. About 125,000 people decamped bodily, leaving behind only enough to make the streets untenantable with the din of crackers, guns, etc.

It would seem that the season has been a good one thus far, the high waters having resulted in a general movement of the fish and the cool weather having offered conditions favorable for angling. We do not often hear of big muscallunge in this country any more, but a few came down from Wisconsin last week. The Milwaukee & St. Paul Railroad exhibited one taken by Mr. F. A. Wheat, of this city. This fish was caught in Bullard Lake, and weighed 26 pounds. A grand specimen came also from the Little St. Germaine Lake, 42 pounds, a beauty taken by a lady, Mrs. C. A. Wheeler, of this city. Mr. Wuthmann, of Chicago, also sent down a 38-pounder from the same water. When it is remembered that the St. Germaine country has been hammered persistently for twenty years or so, it would seem that the angler who has lost a muscallunge may yet take heart of grace.

Mr. W. T. Davis, of the Manitowish Club, sends a kind invitation to join his party at the Divide retreat on Turtle Lake, Wis. The club will be in camp until July 23, and it goes without saying that among so large a number of industrious and successful anglers something will be doing between now and then. I regret that I cannot accept this kind invitation.

Nepigon Trout All Right.

The Nepigon season being now at hand, and several Chicago parties being upon the point of starting for that historic stream, the following advices put out by the Canadian Pacific Railway may be of interest: "A report that has been going the rounds of the newspapers that a disease has struck the trout of the Nepigon, on the Canadian shore of Lake Superior, and is killing them off by the thousands, is contradicted by the officials of the Ontario Fishery Department. Inspector McKirdy reports to Toronto that the report is absolutely false and unfounded, and that the fishing has never been better than it has been this year."

Tips From an Angler.

A trout fisherman well posted on Michigan waters adds the following useful little tips on fish, fishing and fish laws. Anglers will please cut out these fly-dope recipes and place them in the rod case, where they are not to forget them in case they want them in a hurry some day:

"Inclosed find recipe for Col. Fox's fly-dope. I have not found it satisfactory on some occasions. If mosquitoes, midges, etc., are bad, fly-dope No. 1 on annexed sheet is good, in fact the best I have used; No. 2 answers for most places where I have had experience. The best way to use No. 1 or No. 2 is to put on exposed parts of person and let it remain, simply washing palms of hands and eyes, as may be necessary. Not a pleasant way to do, but effective.

"On two occasions I have caught speckled trout with artificial flies during thunderstorms. Last Wednesday I fished on the Boardman from 7 to 11 A. M., during a rain, and caught fifteen trout with flies. When I commenced fishing the rainfall was light, but afterward quite heavy.

"If the State of Michigan would charge all non-residents a license (excepting women and children) and use the money so obtained to enforce the protective laws, it would accomplish something. I am a non-resident; have fished in this State for many years. Dynamite is used freely by many persons in trout streams in this State and does more to ruin fishing than anything else."

COL. FOX'S FLY-DOPE.

Oil pennyroyal, 1 dram; oil cedar, 1 dram; oil peppermint, 1 dram; fld. ext. quassia, 1 dram; gum camphor, 4 drams; vaseline (yellow), 2 ounces. Dissolve gum camphor in vaseline by aid of heat and add other ingredients.

FLY-DOPE NO. 1.

Pine tar, 1 ounce; oil pennyroyal, 1 ounce; vaseline, 3 ounces. Mix cold in a mortar.

FLY-DOPE NO. 2.

Oil pennyroyal and oil tar, each 1 ounce; camphor gum, 1¼ ounces; vaseline, 3 ounces; carbolic acid, 2 drams. Add a little paraffin wax to above to make it a little firmer, so that it will not be too soft on hot days.

Mr. J. M. Oliver, of this city, wants to join me in a trip after small-mouths on the Mississippi River or some other stream. I cannot get away just now, but would suggest that he go to Prescott, Wis., on the C., B. & Q.; to Alma, Wis., on the C., B. & Q.; to La Crosse, Wis., or to others of the points between the foot of Lake Pepin and the city of La Crosse. A six-ounce fly-rod is heavy enough, but it is better to take special flies for that river, the Onondago being the best, as I have often mentioned in these columns.

Western Anglers in the East.

Mr. W. B. Mershon, of Saginaw, Mich., is just back from his lodge on the Cascapedia River, and is good enough to give the following information regarding the success of himself and friends. Pretty young salmon anglers, these, at nine and twelve years of age!

"I had a fine time on the Cascapedia," says Mr. Mershon; "the fishing was good this year—better than I have seen it for years. The continued high water seemed to bring in a good many fish, though at times the river was so dirty we could not go out, and I lost a good deal of fishing, but more than made up for it when the water did get right.

"Mr. Thos. Harvey stayed with me about ten days and missed the good fishing. He got six salmon, the largest weighing 31 pounds, but his average was a fraction over 26 pounds. My boys and I had twenty-two fish, averaging 26 1-6 pounds. My largest was 41 pounds. Little Ted, nine years old, killed a fish. I hooked a small one, 9 pounds in weight, and handed the rod over to him, and he played it until it was successfully gaffed and brought into the boat. Billy, twelve years old, was out a few days with his own boat, independent of his dad, and he had the good fortune to get three nice salmon, running from 22 to 27 pounds.

"I never saw the fish fight better. Nearly all of them were jumpers. I used a large fly on account of the heavy water. My best day was six, although one day with my boys' help I took eight.

"I only saw two bright, sunny days in all the time I was away; cold wind and rain predominated, but I have come home feeling like a fighting cock. I ran across a good many anglers returning, and all reported exceptionally good fishing."

Mr. Watts Humphrey and Mr. C. H. Davis are back from the Little Pabos. They took nine salmon. Mr. Bennett, of Minneapolis, was with them. The above is the score of the three rods. The salmon in that river are smaller, and their average was only 12 pounds.

The Weight of Fly-Rods.

Mr. E. W. Raymond, of Post Mills, Vt., offers the following interesting and useful hints regarding the weight of fly-rods. His mention regarding the heavy rods, the "choke-bore rods" of which I have complained, is speech of gold. It is not the longest line which takes the most trout, or the stiffest fly-rods which give the greatest skill or the greatest pleasure. He writes:

"I notice in the last FOREST AND STREAM your inquiry for advice of a 4½-ounce rod. I do not claim to know everything about rods, and the man who does claim this only shows his ignorance, but for twenty-five years I have been in touch with anglers from California to Maine all over the United States and Canada, am also a crank on trout fishing, and have made several trips into Maine and other waters. I will give you my opinion, which I think will be the verdict of the best-posted anglers in the country. Do not have your rod over 9 feet in length for 4½ ounces; with a 9-foot rod of this weight with proper 'hang' you can cast a fly as far as will be required in practical fishing, and it will handle as large trout as you can hope to hook, and if you do get hold of that big one that always gets away, you need not be afraid of your rod in fairly clear water. It will also be light and a pleasure to handle it.

"I think I have read all the articles that you have ever written and printed in FOREST AND STREAM, and I think I only lack two numbers of having a complete file of FOREST AND STREAM for the last twenty years, and I often think of some of those 'good things' that you are giving away in the Western countries.

"Above all things, avoid one of those tournament rods which are made for long casts; they are of no use in actual fishing."

Chicago Fly-Casting Club.

Following are the records of the Chicago Fly-Casting Club on June 21:

	Distance and Accuracy, Fly, Per Cent.	Distance and Accuracy, Per Cent.	Bait Casting, Per Cent.	Bait, Per Cent.
C. F. Brown	94	98 4-15	87.3	81.8
G. A. Davis	..	..	93.7	88.1
H. G. Hascall	99 2-15	98 6-15	94.7	91.3
E. R. Letterman	..	..	93.8	86.4
E. L. Mason	..	..	95.2	89.3
F. N. Peet	99	98 7-15	96.9	97.4
H. W. Perce	99	98 5-15	98	97
C. B. Robinson	..	..	91.2	92.1
A. C. Smith	98 7-15	98 11-15	98.3	99
F. S. Smith	..	..	95	95

Next contest, June 28.

Winning Scores, Regular Event—Distance and accuracy fly, H. G. Hascall; bait-casting, A. C. Smith.

Re-entry—Distance and accuracy fly, A. C. Smith; bait-casting, A. C. Smith.

English and American Fly-Rods.

There is a cock-sureness about our English cousins which is sometimes a trifle amusing. I presume Great Britain is the most provincial country in the world (unless it's New York). Not that provincialism is not quite as well as cosmopolitanism sometimes, and not that it is not a poor province which will not stand up for its own notions. Here is what a firm of English tackle makers say regarding "light and powerful rods" in the Fishing Gazette of London. This firm makes a rod of 4½ ounces 8½ feet, but I infer does not approve of it, for the communication noted goes on to say:

"In discussing what is a reasonable weight, we have to bear in mind the strength of the angler and the conditions under which he is to fish. Both vary to a considerable extent, and the writer (an angler of moderate strength, who has fished many of the principal rivers in Europe both for salmon and trout), if he may be permitted to give his opinion, considers one ounce to the foot as the maximum for trout rods. Lighter rods, down to as low as 7½ ounces for 10 feet, and so on, are practical weapons, and very suitable for men under the average.

"Do not let us be led away with the idea that these 2-ounce to 4½-ounce rods are universally approved in America, because they evidently are not. It may be all very well for American makers to produce these toys, but the fact that we send into America a great many of our built cane rods of our usual weights, and that at any rate many prefer them to the rods they get in that country, and are willing to pay our price, and an added duty of 45 per cent., is fairly strong evidence; and we might add further the fact that we have no complaints of overweight, nor are we asked to reduce in any way.

"To give an example. One of our latest productions (which we have just had the pleasure of turning out for our genial editor), is a rod 10 feet 4 inches in length, intended for dry-fly, and sufficiently powerful to lift and drive a medium Houghton line.

"The same style of rod can be made a good deal less in weight for wet-fly. We make no apology for giving particulars of this rod as taken by us during manufacture. The length, as we have said, is 10 feet 4 inches. The rod is cork-handled, with lock-fast joint, and our patent combined spear and butt cap. The three pieces of cane forming the rod, before commencing to joint or do any work on them, weighed 4¾ ounces. The handle, winch fitting, lock joints, rings and varnish weigh 3¾ ounces, thus making a rod of 8½ ounces. The patent spear and butt cap are, in comparing with a rod not so fitted, deducted; they weigh 1½ ounces, and if we add them to the 8½ ounces, the whole rod completed is 10 ounces, but, as we point out, the rod considered without this patent spear and butt cap is 8½ ounces. Now, it will be seen that if a rod of this length requires 4¾ ounces of bamboo alone (and neither the Americans nor any one else can use a lighter, better, or stronger bamboo), what becomes of these light rods of 4½ ounces, or even anything under 7 ounces? As we have said, and as the editor in a footnote to a previous letter very wisely remarked, such things were only suitable for 'ladies and girls.' Now as 5 ounces out of a total of 10 ounces of this rod referred to is in the hand, there surely is not much for the average man to complain of in the way of weight."

Another firm says on the same topic:

"With reference to light rods, we would point out that we have had no inquiry for such a light rod as mentioned or we could easily have supplied him with a 4½-ounce or any other weight rod, made by the best firm of English rod-makers, who can produce a rod equal, if not superior, to anything made in America, both for lightness and strength."

The "genial editor" referred to is Mr. R. B. Marston, and I am sure no angler can read his writings without calling him brother. We would like him in Chicago. But the first thing we would do to him would be to show him that American split-bamboo—or, as the English term it, "built cane," rods are in the better grades called heavy when they run so high as 7 ounces, and even a 4½-ounce rod is thought heavy enough at least for stream fishing by men who can walk as far, jump as high, spar as well and do a great many other things as well as the average athlete on either side the water. An American 4-ounce rod is by no means a rod fit only for "ladies and girls," but a tool with drive enough to it to fish in a bit of wind, and powerful enough to kill any trout or bass up to 3 or 4 pounds. I have a 4-ounce rod with which I once killed two bass, either of which went over 3¼ pounds, and that in a pool under a bridge on which I stood. I fished from the upper side of the bridge, and could hear the fish jumping below and behind me, the tip of the rod being popped down under the bridge. It held, and the bass came up stream and into the net eventually. I do not consider this rod relatively as powerful, ounce for ounce, as others I have owned since. In our best American makes a 5-ounce rod is a heavy one for trout fishing in an average stream. One of 7 ounces I have rarely seen used in any but the heaviest kind of fishing. One of 10 ounces I personally never saw used by any American angler who patronized our best makers. It would be thought nearer a salmon rod than a trout rod.

We do not use 2-ounce rods in our part of the world, and would call that a fad. I know one angler who kills hundreds of trout each year on a 3-ounce rod, though he thinks 4 ounces or 4½ ounces would please him better. A 6½-ounce rod, in our best make, may, and in all likelihood will, prove too stiff for easy casting at short range, especially in so short as 10 feet. And poorer and cheaper rods run heavier.

I have always thought the English sporting gear honestly made and very durable, but inclined to heaviness and clumsiness. I don't see how they happen to make their dry-flies so dainty. One would expect an English fly, to be fit for any but "ladies and girls," to weigh about 2 to 10 ounces.

It is likely that the greater part of the weight in English rods is in the fittings, reel seat, etc. I have seen some of their rods with a big ball at the butt, which meant weight of unnecessary extent. I do not hear of any English wooden reel seats or a butt finish like our American Catskill pattern rods, where all the weight goes into the essential part of the rod, and not into balls, spears or metal butt caps.

It is much a matter of fancy, or matter of habit, in the use of rods. It would be unkindness for one angler, or one set or cult of anglers, to seek to impose their ideas upon another. I imagine that, ounce for ounce, we could beat the British with our regular angling rods, such as are in general use; that is, of course, to say, with our high-grade rods as against their high grades. We have a lot of trash in our cheap American department store tackle. But that is not to say that we want to change the English Ephraim to another sort of idol. Their fathers have always made rods that way, and I think it is illegal in England to think of making them any other way. Two hundred years from now they will still be making them in the same old way. And the Americans will then be selling their style of rod to the Kalmuk Tartars and the Chinese mandarins. We are a light and frivolous people, especially in Chicago, but we come to arrive, as we say, in Chicago.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Rangeleys.

UPPER DAM, Me., July 5.—Fishing is good here. The water is high for so late in the season. Both lakes are full, in fact, but the gates are closed, so that the Pool is not too "lively." Some record fish are being taken; that is, fish weighing 3 pounds and over, caught on the fly. R. N. Parish, of Montville, Conn., made a big record June 27, a salmon of 6 pounds 6 ounces, one of 12 pounds 9 ounces, and one of 10 pounds 5 ounces. June 29 Mr. Parish got a salmon weighing 6 pounds 12 ounces. July 4 he took a salmon of 5 pounds 9 ounces. So far this year he is champion angler of the Pool. It will also interest brother anglers to know that he catches these salmon on exceedingly small flies, No. 10 and 12, the bow of the hooks not over three-sixteenths of an inch across. June 29 John S. Donne got a trout of 4 pounds 4 ounces; J. Morgan, a salmon of 4 pounds 7 ounces; E. F. Van Dusen, of New York, a salmon of 6 pounds 8 ounces; July 3, J. C. Dougherty, of Syracuse, N. Y., a salmon of 5 pounds 3 ounces; Mrs. J. C. Dougherty, a trout of 5 pounds 2 ounces, a most beautiful fish that gave the lady lots of sport. It took nearly half an hour and till after dark to conquer it. Prof. J. F. Moody, Auburn, Me., got a trout of 3 pounds on the morning of July 4. That evening Mr. R. N. Parish broke his rod over a salmon, and lost him. That fish he believes to be as large, or larger, than his fish of 12 pounds 9 ounces, noted above, which is the largest salmon ever taken in the Rangeley waters. J. C. Dougherty caught a salmon of 3 pounds this morning.

SPECIAL.

Tuna on the Atlantic Coast.

BOSTON, July 5.—I have read with much interest the communication concerning the tuna in Myra Bay from Mr. J. A. L. Waddell, which appears in FOREST AND STREAM of this date. If the so-called "tuna," which is the same species (as has been indicated by Mr. Waddell) that the Atlantic coast fishermen know as horse mackerel, albicore, etc., will take a hook readily off this side of the continent, and there seems no reason to doubt it, then it is certain as much sport can be had catching this fish with rod and reel in our coast bays as elsewhere.

It is well known that the horse mackerel of New England and Nova Scotia is exceedingly voracious; it eats herring, mackerel, menhaden or other small species suitable for food. But it is not always fastidious regarding its diet, for the late Capt. Nathaniel Atwood has said: "I have seen the horse mackerel swallow dogfish whole weighing eight pounds. As fast as we got out the livers of the dogfish they would catch them and eat them."* This exhibition of the gastronomic capabilities of the horse mackerel took place in Provincetown Harbor, and seems quite sufficient to convince any one that fish of this species, frequenting Atlantic coast bays, will bite at a hook, statements to the contrary notwithstanding. All that seems necessary for sportsmen to do who are anxious to capture one or more of these fish off our eastern shores is to go after them at the proper time with suitable tackle, use the right kind of bait and—go when the fish are in the locality they visit.

Everybody may not know that Cape Cod Bay is often filled with horse mackerel ranging in size from 30 to 600 pounds or more. But such is the fact, and it is not uncommon for the weirs to catch hundreds of them at a single haul. One morning in the summer of 1891, when I was at the "landing place," on the bay side of North Truro, many of these large fish were brought on shore from the pound nets; they mostly ranged from 60 to 100 pounds, but the largest was estimated to weigh 400 to 500 pounds. After they were thrown on the beach I had them photographed, and later the big fellow was secured and shipped to Washington, where a papier maché cast was made from the specimen for the U. S. Fish Commission's exhibit at the World's Fair. Reference to this incident is made only to indicate the great abundance of the species in Cape Cod Bay, but probably this could be more forcibly suggested by the simple statement that a canning establishment did quite a large business that summer in packing in tins horse mackerel labeled "Deep-Sea Salmon." It may, however, be remarked incidentally that this brand of "salmon" did not prove popular, and the business was discontinued. Nevertheless, the horse mackerel swarms into the Cape Cod Bay now as before, when fancy prompts it, drives after schools of herring and mackerel with all its old-time vigor and relentlessness, and rips up the fishermen's nets as if they were cobwebs.

The species, though sold to some extent for market purposes, is comparatively of small commercial importance now. There is little inducement for the practical fisherman to take it except to prevent the destruction of gear and more valuable fish. But here is an opportunity for the sturdy angler to secure sport with rod and reel not excelled, I believe, in any water under the sun. And among all the sportsmen who frequent the Massachusetts coast in summer it is to be hoped there may be some who will thoroughly test this question in Cape Cod Bay, while a similar test should be made, if possible, at Myra Bay. If once it can be found that the tuna can be caught in our Atlantic bays, there will be sport enough and to spare at certain seasons.

J. W. COLLINS.

*The Fishery Industries of the United States. G. Brown Goode and Associates. Section 1. History of Aquatic Animals, page 331.

MR. WADDELL'S article on Nova Scotia tuna, in FOREST AND STREAM for July 5, is in line with a contribution on the same subject which I sent to FOREST AND STREAM last year. It seems absurd for fishermen to go from New York and Boston to California for tuna, when they fairly swarm in our Eastern waters. All through the herring season the tuna are considered a nuisance by the net fishermen, and they are so greedy that I have seen them take herrings that were simply tossed over the side of the boat. They show almost no fear, and if any one seriously wants to try tuna fishing, I will be glad to give him directions for finding the fish. I have been after salmon when the tuna were on the coast, and did not have the proper outfit for sea fishing. Further than that, the local fishermen were unwilling to row the boat when I proposed to try the tuna with the first joint of a salmon rod and the salmon reel, they were so certain that the boat would be upset if the tackle held.

ROBERT T. MORRIS.

NEW YORK, July 8.

Mr. Rourke's Salmon.

THE St. John, N. B., Globe says: Mr. E. Vernon Rourke, clerk in the Savings Bank, returned on Saturday from Dalhousie. Mr. Rourke brought home with him as a result of his skill as a fisherman, a monster salmon weighing 40 pounds 4 ounces. The fish was caught by Mr. Rourke Friday morning at the Montgomery Pool at the Flatlands, about nine miles from Campbellton. It is the largest fish taken this year, and is said to be one of the largest and finest ever caught on the Ristigouche, where the fish do not average as heavy as on the Metapedia and some other rivers. Mr. Rourke's capture of this fish was a noteworthy achievement for an amateur, particularly as he was using a trout rod and reel. He was in a canoe with two Indians, and in the hour and twenty minutes that it took to land the fish, was towed a good mile down stream. The fish, as stated, weighed 40 pounds 4 ounces. It measured 3 feet 10 inches long, and was 25 inches in circumference. The old sports on the North Shore warmly complimented Mr. Rourke on his capture, and St. John fishermen who saw the fish have done the same.

In a letter to the Free Press Mr. John H. Fairbairn, of the Post Office Department, Ottawa, gives an interesting account of this notable fishing achievemeat. He says:

"Rourke and myself, after finishing transfer of Dalhousie Government Saving Bank to P. O. Saving Bank, went over for a day after salmon in the Ristigouche, and we brought away the biggest fish of the year. We were both perfectly green hands as regards the 'king of fishes.'

"I got a much smaller one (22 pounds), and we lost one over after an hour's play, which was certainly not smaller than 20 or 25 pounds.

"The fishing is just beginning to hum. We are on private waters and have offers of other Metapedia and Ristigouche water galore.

"This is a glorious country, and the Bay Chaleur is simply grand."

Megantic Fishing.

MEGANTIC FISH AND GAME PRESERVE, June 30.—The fishing has been exceptionally good in the Megantic Preserve, and is improving every year, both in size of fish and number taken. Our members and guests have taken salmon up to 5 pounds and trout up to 3 pounds 6 ounces this year, and quite a good many 2 and 3 pound trout. Ed. Grant, the old guide and camp owner, of Beaver Pond, says that our fishing is better than it used to be and the fish are averaging larger, which I think is good evidence that the club rule that "only enough fish shall be killed as are needed for the table" is a good one.

We are about to build a new and much larger hatchery, from which we expect to hatch about 400,000 trout and salmon next season, which we shall rear in small ponds until fall before turning out, and we have great hopes that our waters will continue to show better results every year.

L. O. C.

Points and Flushes.

Dr. Geo. W. Clayton, P. O. Box 914, Chicago, writes us as follows: "Please insert in your fixtures the dates of the fifth annual bench show of the Texas Kennel Club, Oct. 8-11. Mr. John Davidson will judge sporting dogs, and Mr. L. A. Klein will judge all non-sporting breeds. Our prize list will be out in three weeks." Dr. Clayton is superintendent.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

JULY.

10-12. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
10-12. New York, Newport series, Newport.
10-12-14. Newport Y. R. A., open, Newport.
12. Duxbury, club, Duxbury, Massachusetts Bay.
12. Winthrop, club, Winthrop, Boston Harbor.
12. Hull-Massachusetts, club, Hull, Boston Harbor.
12. Corinthian, club championship, Marblehead, Mass. Bay.
12. Beverly, second Corinthian, Mon. Beach, Buzzard's Bay.
12. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
12. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay
12. Squantum, M. Y. R. A., open, Quincy Bay, Boston Harbor.
12. Royal Canadian, 25ft. class, Toronto.
12. Kennebec, club, Bath, Maine.
12. Canarsie, J. B. Y. R. A., open, Jamaica Bay.
12. South Boston, club handicap, City Point, Boston Harbor.
14-16. Newport Y. R. A., Newport.
19. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
19. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
19. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
19. South Boston, club handicap, City Point, Boston Harbor.
19. Stamford Corinthian, Y. R. A. of L. I. S., open. Stamford, Long Island Sound.
19. Duxbury, club, Duxbury, Massachusetts Bay.
19. Winthrop, club, Winthrop, Boston Harbor.
19. Corinthian, club championship, Marblehead, Mass. Bay.
19. Beverly, club, Monument Beach, Buzzard's Bay.
19. Manhasset Bay, club, Port Washington, Long Island Sound.
19-26. Larchmont, race week, Larchmont, Long Island Sound.
19-31. Royal Canadian, L. Y. R. A. circuit, Toronto.
21-26. Interlake Y. A., an. regatta, Put-in-Bay, Toledo, Lake Erie.
24-26. Hull-Massachusetts, midsummer series, Y. R. A., open, Hull, Boston Harbor.
26. Quincy, club, Quincy Bay, Boston Harbor.
26. Winthrop, club, Winthrop, Boston Harbor.
26. Duxbury, club, Duxbury, Massachusetts Bay.
26 to Aug. 2. Corinthian, annual cruise, from Delaware River to Long Island Sound.
26. Beverly, third Cor., Mon. Beach, Buzzard's Bay.
26. Manhasset Bay, club, Port Washington, Long Island Sound.
26. Beverly, third Corinthian, Monument Beach, Buzzard's Bay.
26. Mosquito Fleet, club, City Point, Boston Harbor.
26. Atlantic, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
26. Corinthian, club championship, Marblehead, Mass. Bay.
26. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
26. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
26. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
28. Wollaston, M. Y. R. A., open, Quincy Bay, Boston Harbor.
28-29. Boston Y. R. A., open, Marblehead, Massachusetts Bay.
29, 31 and Aug. 2. Kennebec, commodore's cup series, Bath, Me.
30-31. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.

AUGUST.

1. Manhasset Bay, race for 18ft. one-design classes, Port Washington, Long Island Sound.
1. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.
2. New Bedford, club, South Dartmouth.
2. Indian Harbor, club, Greenwich, L. I. Sound.
2. Royal Canadian, dinghy, 16ft. to 25ft. classes, Toronto.
2. Penataquit-Corinthian, open regatta, Bay Shore.
2. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Duxbury, club, Duxbury, Massachusetts Bay.
2. Winthrop, club, Winthrop, Boston Harbor.
2. Corinthian, annual, open, Marblehead, Massachusetts Bay.
2. Columbia, race to Macatawa Bay, Lake Michigan.
2. Manhassett, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
2. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
2 Brooklyn, Y. R. A. of Gravesend Bay, Sea Gate, N. Y. Bay.
4-5. Manchester, M. Y. R. A., open, West Manchester, Mass. Bay.
5. New York, cruise, rendezvous at New London.
6. New York, cruise, run to Newport.
5-6. Misery Island, open, Salem Bay, Massachusetts Bay.
7. New York, cruise, Astor cup races.
7. East Gloucester, M. Y. R. A., open, Gloucester, Mass. Bay.
7-9. Seawanhaka cup races, Dorval, Lake St. Louis, Canada, between representatives of Royal St. Lawrence Y. C. and Bridgeport Y. C.
7-9. Macatawa Bay, Lake Michigan, Y. A. open races.
8-9. Annisquam, M. Y. R. A., open, Annisquam, Mass. Bay.
9. Hempstead, Y. R. A. of L. I. S., open, Glen Cove, L. I. Sound.
9. Northport, Y. R. A. of L. I. S., open, Northport, L. I. Sound.
9. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
9. Knickerbocker, annual cruise, rendezvous College Point, L. I. Sound.
9. Kennebec, open, Bath, Maine.
9. New Bedford, club, South Dartmouth.
9. Quincy, club, Quincy Bay, Boston Harbor.
9. Royal Canadian, first class, Toronto.
9. South Boston, sailing tender race, City Point, Boston Harbor.
9. Duxbury, club, Duxbury, Massachusetts Bay.
9. Beverly-Van Rensselaer cup race, Marion, Buzzard's Bay.
9. Winthrop, club, Winthrop, Boston Harbor.
9. Wollaston, club, Quincy Bay, Boston Harbor.
11. American, M. Y. R. A., open, Newburyport, Massachusetts Bay.
15. Penataquit-Corinthian, annual cruise, Bay Shore.
16. Royal Canadian, 30ft. class, Toronto.
16. Shelter Island, open regatta, Shelter Island Heights.
16. Horseshoe Harbor, Y. R. A. of L. I. S., open, Larchmont, Long Island Sound.
16. Huntington, Y.R.A. of L. I. S., open, Huntington, L. I. Sound.
16. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
16. Hull-Massachusetts, club, Hull, Boston Harbor.
16. Seawanhaka Corinthian, club, race for Centre Island cup, Oyster Bay, Long Island Sound.
16. Duxbury, club, Duxbury, Massachusetts Bay.
16. Winthrop, club, Winthrop, Boston Harbor.
16. Beverly, fourth Corinthian, Monument Beach, Buzzard's Bay.
16. Corinthian, club championship, Marblehead, Mass. Bay.
21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor.
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

SEPTEMBER.

1. Indian Harbor, club, Greenwich, L. I. Sound.
1. Quincy, club, Quincy Bay, Boston Harbor.
1. Corinthian, club, Essington, Delaware River.
1. Corinthian, annual cruise, Marblehead, Massachusetts Bay.
1. Larchmont, fall regatta, Larchmont, Long Island Sound.
1. Sachem's Head, Y. R. A. of L. I. S., open, Guilford, L. I. Sound.
1. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
1. Lynn, M. Y. R. A., open, Nahant, Massachusetts Bay.
1. Beverly, open, Monument Beach, Buzzard's Bay.
1. Royal Canadian, first class, Lorne cup cruising race, Toronto.
1 Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Penataquit-Corinthian, fall regatta, Bay Shore.
4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.

—. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Eastern Y. C.

MARBLEHEAD, MASS.

Friday, July 4.

THE second special open race of the Eastern Y. C. for the restricted classes of the Yacht Racing Association of Massachusetts, was sailed off Marblehead, Friday, July 4, in a very light, fluky air. The breeze varied from southeast by south to northwest. Seeboomook won in the 25-footers, Rooster II. in the 21-footers and Savage in the 18ft. knockabouts. At the start the breeze was southeast by south, and as it was extremely light, all classes were sent over the short course, three miles to windward and return.

In the 25-footers Calypso went over the starting line in the weather berth, with Seeboomook under her lee. Then came Chewink and Sally VI., with Chewink in the windward position. All went to the starboard tack after crossing the line, and Sally VI., which was to leeward, tacked across the sterns of the other three and took a position at the weather side. She made by this and led the bunch to the weather mark. All three keel boats turned the mark close together, while Calypso, she of the centerboard, could not find wind enough to make her move. After turning the weather mark the breeze flattened out and the three keel boats came together, about drifting toward the finish line. As they came inshore they met a northwest breeze. Spinnakers had to be abandoned and a few tacks were necessary to make the line. Seeboomook laid a beautiful course and finished first, with Chewink II. second. Sally VI. overstood the line in looking for wind and was some distance behind. Calypso could not do anything in the light air.

In the 21-footers Porcupine got the best of the start, but Rooster II. poked out ahead on the windward leg and turned the mark in the lead. She held her lead to the finish. The 18-footers went over the starting line in a bunch, and then they split tacks. In the light air they traveled about even, and, when they had turned the windward mark, they all became bunched again in the calm. With the shift of wind Savage pulled out and finished in the lead. The summary:

Class D—Y. R. A. 25-footers.

	Elapsed.
Seeboomook, B. A. Smith	1 32 22
Chewink II., F. G. Macomber, Jr.	1 32 53
Sally VI., L. F. Percival	1 36 56
Calypso, A. W. Chesterton	1 49 48

Class S—Y. R. A. 21-footers.

Rooster II., Adams Bros.	1 36 50
Porcupine, C. H. W. Foster	1 38 57
Opitsah IV., S. H. Foster	1 42 47
Mildred II., S. P. Moses	1 46 28
Micmac, R. Hutchison	1 49 25
Perhaps II., J. E. Robinson	1 49 46
Chloris, Cheney & Lanning	1 50 57

Class I—18ft. Knockabouts.

Savage, J. S. Lawrence	1 52 57
Rattler, I. D. Irving	1 55 36
Biza, A. Douglas	1 57 35
Malillian, B. S. Permar	2 00 10
Scrapper, Loring Bros.	2 05 41
Tokalon, R. J. Randolph, Jr.	2 13 45

Saturday, July 5.

Another fluky race was the special open for the Y. R. A. restricted classes, given by the Eastern Y. C., on Saturday, July 5. The breeze was south southwest at the start, but on the second leg it shifted to southeast. It was very light throughout. In the 25-footers Seeboomook was first over the starting line, and she led all the way to the finish. She has proven superior now in both light and strong breezes. In the 21-footers Porcupine got the best of the start and led to the first mark, but on the reach and the run Little Haste went out ahead and finished first, with Porcupine second. In the 18-footers Savage had the best of the start, but on the windward leg Ayaya, Biza and Malillian worked out ahead. On the last two legs Malillian came to the front and won, with Biza second. The summary:

Class D—Y. R. A. 25-footers.

	Elapsed.
Seeboomook, B. A. Smith	1 43 49
Chewink II., F. G. Macomber, Jr.	1 45 11
Sally VI., L. F. Percival	1 48 02

City of Boston Regatta.

OFF CITY POINT, BOSTON, MASS.

Friday, July 4.

ONLY two boats of the first handicap class and the boats of the one-design dories and sailing tender classes finished within the time limit in the City of Boston open race on Friday, July 4, under the auspices of the Yacht Racing Association of Massachusetts. The air was fluky throughout, and there was no chance to bring out the true merits of the different boats. The summary:

First Handicap Class.

An attempt was made to resail the unfinished races on Saturday, but it had to be given up, as there was no wind.

Beverly Y. C.

WING'S NECK, BUZZARD'S BAY.

Friday, July 4.

THE open sweepstakes regatta of the Beverly Y. C. was sailed off Wing's Neck on Friday, July 4, in fluky winds. The Buzzard's Bay one-design 30-footers found the wind very light until they had nearly reached the turning buoy, and they kept close together. After turning the buoy they took a stiff southwest breeze and commenced to spread out. Praxilla went out to the front and led to the finish line. A close race was sailed between Totem and Alison in the fourth class cats, Totem winning by 5 seconds. In the 21-footers Terrapin won handily, and Spider had an easy win in the 15-footers. The summary:

30-footers—One Design.

English Letter.

THE dangerous illness of the King has put an end for the present to the great naval review at Spithead. Everything was so far advanced that it was possible to form a fair idea of what the scene would have been like, and though the show of warships would hardly have been so imposing as in 1897, the number of yachts would certainly have been greater. Even a week before the day fixed for the review the fleet of yachts anchored in Southampton water was larger than any I have yet seen there. The anticipated review has had the effect of spoiling the German Emperor's cup race. Only seven yachts entered, and of these, but three started—Cicely (the new Fife schooner), Vol-au-Vent and Leander. Leander is smart yawl of 98 tons, designed by Payne last year, and owned by the Hon. Rupert Guiness, and Vol-au-Vent is an old vessel of 104 tons, built by Ratsey, of Cowes, so far back as 1875. Cicely was put scratch and had to allow Leander 3½ hours and Vol-au-Vent 5½ hours. They started last Saturday in a smart westerly breeze and finished at Heligoland on Monday evening, Vol-au-Vent saving her time from Cicely by over 5 hours. Leander also saved her time. Details of the race are not known yet, but the result shows how very difficult it is to handicap vessels that have to sail on a compass course. Cicely is the prettiest schooner I have ever seen, but from what I hear Mr. W. Jameson's new auxiliary schooner will be even smarter, though smaller. She was launched last week at Fairlie, and is bound to create a sensation. In size she is called a 40-tonner (a meaningless phrase nowadays), and is of much the same size as the racing 52-footers. Her motor engine is placed well forward in the boat, and the exhaust is led into the foremast, which is a hollow steel spar cased with wood. The engine is said to be of 75 horse-power and is a "Napier." This ought to develop very great speed in so well-designed a boat. The most startling feature (in so large a yacht) is that her sails are scarlet, the vessel being named Scarlet Rambler. Her draft is light, in order that she may be able to enter shallow harbors on the Irish coast. Altogether, this yacht is a notable departure for our waters, as her headroom is obtained by a low booby hatch—a very unusual thing in cruising yachts of this size over here. However, the object is plainly to produce a bonafide auxiliary yacht—not merely a sailing yacht with a little motor in it for oily calm weather. Scarlet Rambler will be able to make passages that will compare well with steam yachts of twice her tonnage and keep the sea when they have to scuttle into the nearest shelter. She will carry petrol in her tanks for 100 hours' continuous power driving. From the time this yacht's keel was laid until she was finished, only one month elapsed. Some delay occurred in delivering parts of the motor equipment, but the builder's work was over in that time. I don't think you can show a better record than that even in your "greased lightning" land!

The already attenuated 52ft. class has temporarily broken down. Camellia, the Payne boat, did not start in the Nore to Dover match, owing, it was said, to her topsides having opened. She is at her builders for some "small alterations," but as these include new garboards, it may possibly be a case of altering the d measurement of the yacht. Anyway, the garboard strakes do not usually form part of a vessel's topsides. Secrecy in all such matters is nowadays considered absolutely essential. Camellia fails on the wind a little, but is a very fast boat with sheets checked. Any improvement, even if slight, should enable her to stop the triumphal march of Lucida occasionally.

In the Solent class racing—confined to yachts of 36ft. and under—the best boats in the various classes so far are Nyama (Fife 36-footer), Sorais II. (Fife 30-footer), Duet (Payne 24-footer). The proportion of sail to length in the various classes is altogether uneven, and the new rule will not work out its ultimate development for a considerable time yet. The entries are few in all classes, but next winter should see a spurt in building. The tendency of the rule is apparently not to curtail beam unduly lent to approximate draft—so half the beam at the station measured (.6 of L.W.L. aft of stem). This is the minimum amount of draft allowed there, but it is not otherwise measured, so that the custom is to make the profile triangular and thus get a lot of useful untaxed draft at the stern-post. This result was foreseen, but neglected when the rule was passed. It appears likely that this will be the prevailing type, but I think it is certain that a rather narrow craft in the classes of 30ft. and upward would win many prizes. The time has not come yet to try the experiment. It will arrive when four or five boats of the other type are making close races in any one class.

Last Thursday Miss Cust, the owner of the 36-footer Cuckoo II., died suddenly. She was one of the best-known yacht women on the Solent, and her death created much regret. Cuckoo II. is a Sibbick boat, and fairly fast in light weather, but of too large a d measurement.

The official measurement of Mr. Cecil Quentin's schooner Cicely is 95.67 rating, and with the deduction made for her "inferiority of rig" she will sail as of 81.3 rating. She would have a very fair chance with Sybarita and Kariad in open racing if the course gave a large proportion of reaching. Our rule treats schooners rather unfairly in the matter of spinnakers, for the area of sail between the masts is of no use when dead before the wind, and no allowance is made for this in the size of the spinnaker. It would surely be fair to allow the whole area forward of the mainmast to be put into the spinnaker provided that this sail be always set on the mainmast.

Another American motor firm has established an agency over her, Messrs. Westmacott, Stewart & Co., of St. Helens, Isle of Wight, having taken a agency for the "Standard" motor. The name is a good one over here, and this firm are high-class builders, having a most complete yard.

Mr. M. B. Kennedy has promised to race Sybarita at the Clyde regattas, so that Kariad will have some racing at home after all.

E. H. HAMILTON.

Springfield Y. C.

SPRINGFIELD, MASS.

Friday, July 4.

THE fourth annual regatta of the Springfield Y. C. was sailed on the Connecticut, on Friday, July 4, in a very light northwest breeze. On account of the lack of wind the races for the Commodore's, the Ladd and the Parish cups had to be abandoned. The summary:

Sailing Race.

Bridgeport Y. C.

Seawanhaka Cup Trial Races.

BLACK ROCK, LONG ISLAND SOUND.

June 30, and July 1, 2 and 3.

THE races for the Seawanhaka cup, being the only international matches of the year, naturally caused widespread interest among yachtsmen throughout the United States and Canada.

It was through the efforts of Com. Thomas H. Macdonald that the Bridgeport Y. C. sent a challenge for the Seawanhaka cup to the Royal St. Lawrence Y. C., and it is a matter of regret that he got so little support in the enterprise from his own club members. Not only in the building of the boats, but in the managing of the trial races much of the unpleasantness that came up reverted to him, and in a great measure the blame was placed on his shoulders. It was not until all the boats and their crews arrived at Black Rock that every one realized that the club had a big proposition on its hands, and that it was going to take more than one man to look after all the details. Not only did the men of the different crews have great difficulty in finding places to sleep in and keep their clothes and dunnage, but they were astounded to find only one railway and cradle available, so that it was practically impossible to haul more than four or five boats over one tide, which meant that several had to stay overboard while the others were drying out.

Although Com. Macdonald's enterprise did not seem to impress the Bridgeport Y. C. men, it did interest yachtsmen all over the country, and from them he received cordial support. Nine boats were built to compete in the trial race, three sailing under the Bridgeport Y. C. flag. Two out of these three were owned by a syndicate headed by Com. Macdonald, and the third by Messrs. Clinton Barnum Seeley, and Wilson Marshall, a well-known yachtsman, and owner of the schooner Atlantic.

Eight of the nine boats built were on hand for the races. Tecumseh, the boat selected by the judges as being the best all-round craft in the fleet, was designed and built by Messrs. Jones and La Borde, of Oshkosh, Wis. She is owned by a syndicate headed by Com. Macdonald. Tecumseh is 37ft. over all, 22ft. waterline, 7ft. 6in. breadth and 6in. draft of hull. She was an extreme scow, with considerable power and flat overhangs. Mr. James H. Jones, her designer, sailed her, and she was better handled than any of the other craft. Her crew was made up of Frederick Gates, mainsheet; Leroy Gates, jib, and Charles Sherwood. The team work of this crew was remarkably good; all the men in the boat understood the scow type thoroughly, and in consequence got more out of their boat than did any other crew in the fleet. If these men are permitted to sail in Tecumseh when she races on Lake St. Louis, the Canadians will have to look to their laurels. In addition to a good crew, Tecumseh had a remarkably fine suit of sails, much superior to those seen on any other boat in the races.

Massasoit, the boat that finished second best in the races, was designed by Mr. B. B. Crowninshield, and built by Mr. W. B. Smith, of Quincy, Mass. She is also owned by a syndicate headed by Com. Macdonald. Massasoit is 39ft. 9in. over all, 26ft. 7in. waterline, 8ft. breadth and 6in. draft. She is by far the smartest scow her designer has ever turned out. Her high freeboard would indicate that she was a boat of considerable power, but this did not prove to be the case, for in a strong breeze and sea she was not a match for several of the other boats. Massasoit was sailed by Mr. W. H. Jennings, and he was assisted by Mr. Edgar Sherwood on mainsheet; Mr. Harold Fish, jib, and Mr. Preston Sherwood. There was some criticism on Mr. Jennings' work as helmsman of the boat, but this is often the case when a good man is sailing a losing boat. Mr. Jennings not only sailed his boat well, but got all there was out of her, and much credit should be given him. Masasoit is a fast boat in light and moderate weather, and in smooth water turned out to windward in wonderful shape.

Crusader, the Western boat, that stood third in the racing, was designed by Mr. George B. Reid, and was built by Rameley, of White Bear Lake. The boat is owned by Mr. Homer P. Clark and Mr. L. P. Ordway. Crusader was one of the best built boats in the fleet, and was able to stand more pounding and racking than some of the others. She was 37ft. over all, 22ft. waterline, 7ft. breadth and 6in. draft. Mr. L. P. Ordway, her helmsman, is a boat sailor of thirty years' experience, and has twice sailed against the Canadians, once in Yankee and once in Minnesota. Mr. Ordway was ably assisted by Mr. Frank M. Douglas, who owned Minnesota when she sailed on Lake St. Louis, and Mr. Donald Bunn and Mr. J. J. Johnson. Crusader was perhaps the best all-round boat in the collection. She was a match for any boat in the fleet in fresh to strong breezes and a sea, and had she had a good light air sail she would have finished a winner.

Seeress, the competitor sailing under the colors of the Manhasset Bay Y. C., was designed by Mr. Charles D. Mower and built by Thomas Smith, of Bayonne. She is owned by her designer and Mr. Albert B. Hunt. Seeress is 39ft. 5in. over all, 26ft. 9in. waterline, 8ft. 2in. breadth, and 5in. draft. She was sailed by Mr. Charles D. Mower, with Mr. Edward MacLellan on mainsheet, Mr. Albert B. Hunt jib, and Mr. Harry S. Fairchild. Seeress was at her best in fresh to strong winds. In light weather her large steel board (the largest in the fleet) hurt her, and this, together with poor sails, accounts for her indifferent showing.

Frontenac, another of the Western-built boats, is owned by Mr. Charles De Hart Brower, and she sailed under the Penataquit Corinthian Y. C. flag. She looked to be the most powerful craft of any of the contestants, owing to her full section and high freeboard. The boat was designed and built by Gus Amundson, of White Bear Lake, Minn., and she was a remarkably well-built boat. Frontenac was sailed by Charles De Hart Boower, Jr., who, considering his age and experience, handled his boat very skillfully. He was assisted by Mr. F. O. Came, on mainsheet; Mr. Willis Putnam, jib, and Mr. Thomas Hardenburg. Frontenac showed up well in all conditions, and is a very good all-round boat.

Nutmeg, the only fin boat in the fleet, was designed and built by Mr. Lawrence D. Huntington, of New Rochelle, for Messrs. Wilson Marshall and Clinton Barnum Seeley. She is 38ft. over all, 23ft. waterline, 6ft. breadth and 5ft. draft. Her best chance is in very light air or fresh breeze and smooth water. Nutmeg was sailed by her designer, Mr. L. D. Huntington, with Mr. R. N. Bavier on mainsheet, and Mr. L. Blank jib. She sailed under the Bridgeport Y. C. colors.

Filibuster, the boat designed by Mr. W. Starling Burgess, and built by Graves, of Marblehead, for Mr. F. B. Crowninshield, was perhaps the most unlucky boat of all. Shortly after she was launched she capsized off Marblehead, and, after being cut in two by a big sloop that ran alongside to render assistance to her crew, had to be almost entirely rebuilt inside of a week, so that she would be ready for the trial races. Filibuster was so badly out of shape when she arrived at Bridgeport that it seemed almost useless to race her. Even after she arrived it could be seen she was originally a most likely looking boat, and had she not been so unfortunate would have undoubtedly been a better performer. Her owner and skipper, Mr. Frank B. Crowninshield, deserves great credit for bringing his boat to the starting line after such a run of hard luck. On board Filibuster were some of the best amateur sailors in the East—Mr. E. J. Horton and Mr. Frank Burgess. Filibuster is 40ft. over all, 26ft. waterline; 8ft. 8in. breadth and 6in. draft. She sailed under the Eastern Y. C. flag.

Monsoon was also designed by Mr. W. Starling Burgess and built by Mr. W. B. Stearns, of Marblehead, for Messrs. Hollis Burgess and T. K. Lothrop. She was the only pointed bow boat in the fleet. Monsoon was sailed by Mr. Hollis Burgess. On board were Mr. T. K. Lothrop and Joshua Crane and E. Burwell. She sailed under the Manchester Y. C. flag.

Wampnissic, the ninth boat, did not show up for the trial races, as she was found to be lacking in windward qualities. She was designed and built on speculation by Mr. Benjamin Hallock, of Moriches.

The Regatta Committee was made up of Mr. Frank Bowne Jones, of the Indian Harbor Y. C.; Mr. Charles P. Tower, of the New Rochelle Y. C., and Mr. Carl Foster, of the Bridgeport Y. C.

The rules governing the trial races were practically the same as in previous years.

First Day, Monday, June 30.

The easterly gale that blew with considerable force all day Sunday seemed to have cleared the atmosphere, for Monday was fair, but hardly favorable for boat sailing, as there was little wind. Two officers from the revenue cutter Dallas, which had been ordered to Black Rock to keep the course clear, were out in launches. The judges and newspaper men were on board Mr. Henry S. Burr's power yacht Helys, an admirable boat, just suited for the purpose.

FIRST ROUND.

A triangular course was logged off, the first leg of which was a beat and the other two legs reaches. The wind was very light from the S.E. by E. At 1:20 the warning signal was given; at 1:25 the preparatory, and at 1:30 the starting gun. Nutmeg was first across, with Monsoon just to windward, then came Seeress, Filibuster, Crusader, Frontenac, Tecumseh and Massasoit. Although late in getting over the line, Tecumseh soon began to draw into the lead, and with sheets eased a little and with good headway on, soon left the rest behind. The times at the first mark were:

Tecumseh	2 11 45	Filibuster	2 15 50
Nutmeg	2 14 35	Crusader	2 18 05
Monsoon	2 15 43	Frontenac	2 18 10
Massasoit	2 16 21	Seeress	2 20 44

It was a broad reach to the second mark, and sheets were eased off and spinnakers set. The pole was allowed to run way forward and the sheet carried out and around the forestay and lee shroud, making a large balloon jib. Tecumseh continued to draw ahead a little, but the positions of the others remained virtually the same. At the second mark the times were:

Tecumseh	2 23 06	Filibuster	2 29 55
Nutmeg	2 28 00	Frontenac	2 30 21
Monsoon	2 29 37	Crusader	2 31 11
Massasoit	2 29 46	Seeress	2 31 04

On the run home, with spinnakers set to port, Nutmeg drew up a little on Tecumseh, but the latter already had the race well in hand. The times at the finish of the first round follows:

Tecumseh	2 40 28	Crusader	2 48 33
Nutmeg	2 44 08	Filibuster	2 48 55
Monsoon	2 48 21	Frontenac	2 49 03
Massasoit	2 48 33	Seeress	2 52 46

The following table shows the elapsed times made by each boat over each leg of the course:

	First Leg.	Second Leg.	Third Leg.	Course.
Tecumseh	0 41 45	0 11 21	0 17 22	1 10 28
Nutmeg	0 44 35	0 13 25	0 16 00	1 14 08
Monsoon	0 45 43	0 13 54	0 18 54	1 18 21
Massasoit	0 46 21	0 13 25	0 18 47	1 18 33
Crusader	0 48 05	0 13 06	0 17 32	1 18 43
Filibuster	0 46 59	0 12 56	0 18 00	1 18 55
Frontenac	0 48 10	0 12 11	0 18 42	1 19 03
Seeress	0 50 44	0 13 20	0 18 42	1 22 46

Tecumseh won by 3m. 40s.

SECOND ROUND.

As soon as Seeress finished, the warning signal for the next round was set. The race was started at 3:05. Filibuster was first away, with Crusader, Seeress, Nutmeg, Massasoit, Monsoon, Tecumseh and Frontenac crossing in the order named. The breeze had shifted a little and was freshening. Massasoit was doing much better, and Tecumseh had pulled into third place. It took a long and a short leg to fetch the mark. A strong tide was setting the boats down on the mark, and most of the skippers did not make sufficient allowance for this, and had to make several tacks to clear it. Good judgment on the part of Crusader's helmsman at this point put him ahead of Tecumseh. The times at this mark were:

Massasoit	3 28 33	Seeress	3 32 33
Frontenac	3 30 14	Nutmeg	3 33 24
Crusader	3 31 03	Monsoon	3 34 15
Tecumseh	3 31 23	Filibuster	3 36 00

The hauling wind made the second leg a beat instead of a reach. Massasoit was showing to much better advantage. Nutmeg, Monsoon and Filibuster held the starboard tack after rounding, and had a lee bowing tide, which helped them considerably. Seeress was doing much better in the freshening breeze. Massasoit continued to improve, and the times at the second mark were:

Massasoit	3 44 04	Seeress	3 48 57
Tecumseh	3 46 49	Nutmeg	3 50 25
Crusader	3 46 58	Monsoon	3 51 52
Frontenac	3 48 50	Filibuster	3 52 41

It was a spinnaker run from this mark to the finish line. Massasoit was well ahead and a sure winner barring a breakdown. Crusader drew ahead of Tecumseh and finished second. Seeress had pulled up into fifth place. The times at the finish of the second round follow:

Massasoit	3 57 37	Seeress	4 02 46
Crusader	4 00 51	Nutmeg	4 05 14
Tecumseh	4 00 53	Monsoon	4 06 28
Frontenac	4 02 12	Filibuster	4 06 53

The following table shows the elapsed times made by each boat over each leg of the course:

	First Leg.	Second Leg.	Third Leg.	Course.
Massasoit	0 23 33	0 15 31	0 13 33	0 52 37
Crusader	0 26 03	0 15 55	0 12 33	0 55 51
Tecumseh	0 26 23	0 15 26	0 14 04	0 55 53
Frontenac	0 25 14	0 17 44	0 16 12	0 57 12
Seeress	0 27 33	0 16 47	0 15 56	0 57 46
Nutmeg	0 28 24	0 17 01	0 14 49	1 00 14
Monsoon	0 29 15	0 17 37	0 14 26	1 01 28
Filibuster	0 31 00	0 16 41	0 14 12	1 01 53

Massasoit won by 3m. 14s.

THIRD ROUND.

The committee decided to reverse the course for the third round, which made the first leg a beat in the S. wind. At 4:20, when the boats were started, the breeze had increased to a fair sailing breeze. They were bunched on the line at the start, and Seeress came down and gybed over, her skipper looking for a good berth. This caused a mix up for a moment, but all luffed out around the committee boat. Monsoon got the best start, with the rest of the boats following in the order named, Massasoit, Frontenac, Crusader, Filibuster, Nutmeg, Seeress and Tecumseh. Massasoit soon pulled into the lead, again showing her superior windward qualities under the prevailing conditions. Crusader was second, with Frontenac third. The times at the first mark were:

Massasoit	4 43 37	Seeress	4 48 42
Crusader	4 45 06	Monsoon	4 49 06
Frontenac	4 45 20	Nutmeg	4 49 13
Filibuster	4 48 10	Tecumseh	4 49 28

The next two legs were reaches. Crusader began to cut down Massasoit's lead in most alarming fashion. The judges took no time at the second mark. On the last leg Crusader was pushing Massasoit hard for first place. Seeress was slowly pulling up, and finished in fourth place. The times at the finish of the third round follow:

Massasoit	5 09 06	Filibuster	5 12 32
Crusader	5 09 38	Tecumseh	5 13 02
Frontenac	5 11 09	Nutmeg	5 13 35
Seeress	5 12 05	Monsoon	5 14 23

The following table shows the elapsed time made by each boat over the first leg and the course:

	First Leg.	Course.
Crusader	0 25 06	0 49 38
Frontenac	0 25 20	0 51 09
Seeress	0 28 42	0 52 05
Filibuster	0 28 10	0 52 32
Tecumseh	0 29 28	0 53 02
Nutmeg	0 29 13	0 53 35
Monsoon	0 29 06	0 54 23

Massasoit won by 32s.

The result of the first day's racing had been anything but satisfactory, as in the fluky breeze no definite conclusions could be reached.

Second Day, Tuesday, July 1.

The boats were to sail a windward and return course on the second day's race, and after the light and fickle breeze that prevailed on the day previous, the majority of the owners and crews were glad to see the fresh N.W. wind that was blowing when the boats went out to the starting line. It was a condition of wind and sea that was just suited to the type of racing craft represented—i. e., a strong breeze and smooth water. The contestants sailed around the bay, some under two and some three reefed mainsails, waiting for signals from the committee boat, but none appeared, and the different boats finally ran up to the judges' boat to find out the cause of the delay. When the committee announced that the race had been postponed on account of the weather, the majority of them were astonished, and protested in no unmistakable terms. The committee argued that if any of the boats capsized some one might be drowned, and as the wind was off shore, they might be blown over to Long Island, because there was no boat to pick them up. They quite overlooked the fact that the revenue cutter Dallas never left her anchorage during the races, and might have been used for this purpose. Several of the men owning and sailing the boats who had participated in races at Lake St. Louis felt that they were better qualified to decide whether or not the conditions were the same as were experienced in Canada, for none of those on the committee was really familiar with the weather that boats are liable to meet when racing in Canada. The race was abandoned for the day, and the dissatisfied crews hung around ashore all the afternoon. Mr. Joshua Crane, one of Monsoon's crew, left for home soon after getting ashore. Mr. C. M. Griggs, one of the White Bear Y. C. men also left that night for the West, being thoroughly disgusted with the committee's action. It was a most unfortunate incident, and the committee unquestionably made a very great blunder.

Third Day, Wednesday, July 2

FIRST ROUND.

When the boats came to the line for this race, over a windward and leeward course, two miles to a leg, the wind was light from S.W. by S. The warning signal was given at 11:55, and ten minutes later, at 12:05, the boats were started. Crusader was first away, followed closely by Massasoit, Tecumseh, Seeress, Frontenac, Nutmeg, Monsoon and Filibuster. Tecumseh soon moved from third to first place. Tecumseh came down on Massasoit and crossed her bow, while the latter went across Crusader's bow. The times at the weather mark were:

Tecumseh	12 38 46	Frontenac	12 43 11
Massasoit	12 38 53	Nutmeg	12 44 33
Crusader	12 41 25	Filibuster	12 49 12
Seeress	12 41 45	Monsoon	12 50 06

Spinnakers were set smartly after rounding, and it was a close race back to the finish line. Massasoit cut down

Tecumseh's lead slightly. Both Crusader and Seeress made better time down the wind than did Tecumseh and Massasoit, but their gain was not sufficient to put them in the first place.

	Finish.	Elapsed.
Tecumseh	1 00 16	0 55 16
Massasoit	1 00 20	0 55 20
Nutmeg	1 10 26	1 05 26
Crusader	1 02 30	0 57 30
Seeress	1 02 55	0 57 55
Frontenac	1 05 59	1 00 59
Filibuster	1 18 06	1 13 06
Monsoon	1 19 11	1 14 11

Tecumseh won by 4s.

SECOND ROUND.

The boats were sent off for the second round at 1:40, and crossed the line in this order, Tecumseh, Seeress, Massasoit, Nutmeg, Crusader, Monsoon, Frontenac and Filibuster. Seeress began for the first time to show some of the speed displayed early in the season. Massasoit worked into the lead, with Seeress second and Tecumseh third. The sloop Diana, owned by a member of the Bridgeport Y. C., blanketed or back-winded several of the boats all over the course, and the revenue officers seemed powerless to keep her off the course. How little interest a man has in the sport when he interferes with an international affair! The times at the weather mark follow:

Massasoit	2 10 06	Crusader	2 15 07
Tecumseh	2 11 26	Nutmeg	2 26 30
Seeress	2 11 22	Filibuster	2 27 16
Frontenac	2 13 21		

Spinnakers were set, but could not be carried far, for the wind shifted to N.W., making it a beat back. Tecumseh again showed her good windward qualities, and passed Seeress, but could not overtake Massasoit. The summary of the second round:

	Finish.	Elapsed.
Massasoit	2 35 52	0 55 52
Tecumseh	2 36 20	0 56 20
Nutmeg	2 44 40	1 04 40
Seeress	2 36 52	0 56 52
Frontenac	2 38 08	0 58 08
Crusader	2 38 33	0 58 33
Filibuster	2 46 52	1 06 52

Massasoit won by 28s.

THIRD ROUND.

At 3:40 the boats were sent off for the third round. The breeze had hauled back to S.W., and was blowing fresher. Tecumseh was first to start, closely followed by Massasoit and Seeress. Massasoit and Tecumseh stood in on the north shore out of the tide, while the others stayed outside and got its full force. Massasoit rounded the outer mark 39s. ahead of Tecumseh. The times at this mark were:

Massasoit	4 08 17	Crusader	4 12 22
Tecumseh	4 08 56	Nutmeg	4 13 44
Seeress	4 12 04	Filibuster	4 14 12
Frontenac	4 12 19		

On the spinnaker run home Tecumseh caught and passed Massasoit and finished a winner. Seeress made the best time down the wind. The summary of the last round follows:

	Finish.	Elapsed.
Massasoit	4 34 13	0 54 13
Tecumseh	4 33 43	0 53 43
Nutmeg	4 36 08	0 56 08
Seeress	4 34 27	0 54 27
Frontenac	4 34 55	0 54 55
Crusader	4 34 45	0 54 45
Filibuster	4 35 47	0 55 47

Tecumseh won by 30s.

Fourth Day, Thursday, July 3.

FIRST ROUND.

The morning of the fourth day did not hold forth many inducements for small-boat racing, as a strong S.W. by W. wind was blowing, which kicked up a rather nasty sea. In the morning rain squalls made matters more uncomfortable. The course was triangular for the first round, and the boats were reefed when they came to the line. The boats were started at 1:10. Frontenac was first to cross, the others following in the order named, Massasoit, Crusader, Tecumseh, Filibuster, Monsoon, Nutmeg and Seeress. Monsoon and Filibuster fouled at the start. It was a reach to the first mark, and Tecumseh rounded ahead. No times were taken there by the judges. At the second mark Tecumseh rounded after some pretty windward work at 1:39:53, Crusader at 1:40:10 and Massasoit at 1:41:23. The wind had let up so much that reefs had been shaken out on most all the boats. Tecumseh held her lead on the third leg and finished a winner. The summary of the first round:

	Finish.	Elapsed.
Tecumseh	1 52 25	0 42 25
Crusader	1 52 21	0 42 51
Massasoit	1 53 45	0 43 45
Seeress	1 53 56	0 43 56
Frontenac	1 54 52	0 44 52
Filibuster	1 57 54	0 47 54
Monsoon	1 59 24	0 49 24
Nutmeg	2 03 32	0 53 32

Tecumseh won by 26s.

SECOND ROUND.

The second round was started at 2:25. The wind was much lighter and the sea was quite smooth. The boats got away in the following order: Nutmeg, Filibuster, Massasoit, Crusader, Seeress, Frontenac, Tecumseh and Monsoon. Tecumseh again worked her way through the fleet into first place. The times at the first mark were:

Tecumseh	2 45 06	Seeress	2 46 30
Crusader	2 45 29	Nutmeg	2 46 30
Massasoit	2 45 53	Monsoon	2 47 08
Filibuster	2 46 20	Frontenac	2 47 30

After going on the port tack, Tecumseh weathered Massasoit, and Crusader moved up on Tecumseh. When nearing the second mark the wind comes out of the W. and freshens rapidly. Tecumseh shows a great burst of speed, and passes Massasoit, and finished a winner. The summary of the second round:

	Finish.	Elapsed.
Tecumseh	3 14 24	0 49 24
Massasoit	3 15 05	0 50 05
Nutmeg	3 16 16	0 51 16
Seeress	3 16 21	0 51 21
Crusader	3 16 33	0 51 33
Filibuster	3 16 35	0 51 35
Frontenac	3 19 34	0 54 34
Monsoon	3 20 16	0 55 16

Tecumseh won by 41s.

THIRD ROUND.

The committee decided to sail the boats the third time over a windward and leeward course. Monsoon had withdrawn, consequently there were only seven starters. All hands had their mainsails reefed, but all carried their largest spinnakers down the wind. The start was made at 4 o'clock. Massasoit was first across the line but Crusader made the best time down the wind. The times at the leeward mark:

Crusader	4 16 24	Frontenac	4 17 37
Filibuster	4 17 04	Tecumseh	4 17 46
Massasoit	4 17 21	Seeress	4 17 55
Nutmeg	4 17 33		

Tecumseh shook out one of her reefs, but she was too far behind to cut down Crusader's substantial lead to any noticeable degree. The times for the third round follow:

	Finish.	Elapsed.
Crusader	4 45 08	0 45 08
Frontenac	4 46 45	0 46 45
Filibuster	4 48 50	0 48 50
Seeress	4 49 29	0 49 29
Tecumseh	4 49 32	0 49 32
Massasoit	4 54 44	0 54 44
Nutmeg	4 56 55	0 56 55

Crusader won by 37s.

FOURTH ROUND.

At 5:30 the boats were again sent away to sail over the windward and leeward course. At the start Filibuster and Tecumseh nearly fouled each other. Mr. Crowninshield was nursing his boat along at the time, as his tiller had just broken, and it was only by very capable handling that he avoided a collision. According to the rules of the road, he was entirely in the right, but he was disqualified by the judges. This looked as if Mr. Crowninshield, who is one of the best sportsmen in the country, was being discriminated against. The numerous fouls that had happened in the other races had been overlooked for some reason or other, and Mr. Crowninshield was picked out in the last race of the last day to be made an example of.

This race was Seeress' from the start; she outsailed the fleet down the wind, turning the leeward mark first. The times at the leeward mark were:

Seress	5 38 22	Tecumseh	5 39 19
Crusader	5 38 52	Frontenac	5 39 31
Filibuster	5 39 10	Massasoit	5 39 40

The two-mile beat to windward was an interesting one. Seeress held her lead and finished a winner. Tecumseh, after a hard battle, worked ahead of Crusader and finished second. The summary follows:

	Finish.	Elapsed.
Seeress	6 07 54	0 47 54
Tecumseh	6 08 21	0 48 21
Crusader	6 08 31	0 48 31
Massasoit	6 09 45	0 49 45
Filibuster	6 11 04	0 51 04
Frontenac	6 12 28	0 52 28

Seeress won by 27s.

Ten races were sailed in all, and the points made by the boats each day were as follows:

	First day.	Second day.	Third day.	Totals.
Tecumseh	19	22	25	66
Massasoit	21	21	19	61
Crusader	18	14	23	55
Seeress	10	16	21	47
Frontenac	13	12	14	39
Nutmeg	12	7	8	27
Filibuster	8	6	11	25
Monsoon	9	1	3	13

After the races the boats were made ready for their return to home ports, whether by water or rail.

Crusader and Seeress have been shipped to White Bear Lake, where they will be raced.

Frontenac will be raced on Great South Bay.

Nutmeg and Monsoon will be taken to New Rochelle and laid up.

Filibuster will be used for day sailing around Marblehead.

Corinthian Y. C.

MARBLEHEAD, MASS.

Friday, July 4.

OUT of 37 starters in the special invitation race of the Corinthian Y. C., sailed off Marblehead Friday, July 4, there were only 7 which finished. The breeze was fluky from the start, ind in the classes that did finish there was considerable distance between the boats. The summary:

Class D—Y. R. A. 25-footers.

	Elapsed.
Sally VI., L. F. Percival	2 44 08
Chewink II., F. G. Macomber, Jr.	2 50 11
Seeboomook, Smith	3 08 43

Class B—Handicap.

Ruth, Wheelock	1 42 30
Aspinet, E. W. Remick	1 47 18

Class K—Raceabouts.

Sintram, W. P. Fowle	3 24 03
Baggera, R. C. Robbins	3 35 00

An attempt was made to resail the unfinished races on Saturday, but it had to be given up on account of lack of wind.

Newport Special Thirties.

NEWPORT, NARRAGANSETT BAY.

Friday, July 4.

THREE of the Newport special 30-footers sailed an interesting race on Friday, July 4. The wind was fresh from the S.W. The course was from Brenton's Cove to and around Dyer's Island. Barbara finished the winner. The summary:

	Finish.	Elapsed.
Barbara, Winthrop Rutherfurd	5 42 19	2 20 19
Esperanza, H. O. Havemeyer, Jr.	5 44 16	2 22 16
Caroline, Pembroke Jones	5 47 49	2 25 49

Saturday, July 5.

On Saturday, July 5, the 30-footers attempted to race over a triangular course in a light N.E. breeze. The race was won by Esperanza, and the boats sailed only once over the course, the wind being so light. The summary follows:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 06 02	1 21 02
Carolina, Pembroke Jones	5 09 44	1 24 44
Barbara, Winthrop Rutherfurd	Withdrew.	

History of Chicago Y. C.

CHICAGO, Ill., June 23.—When the small band of yacht owners undertook the reorganization of the Chicago Y. C. in 1897, they found the proud organization, founded more than twenty years before, to have little to boast of in the way of fleet or membership, and nothing in the way of a home.

After an interval of indecision, the club house of the Argonauts was obtained as a home, and for five years, from its little south verandah, the members (numbering sixty in 1898) gazed upon the long stretch of park breakwater, which even in those days was looked upon as the site of the future home of the club. The first steps toward the realization of this hope were taken in 1899, when the trustees obtained from the United States Government a permit to erect a building in the harbor adjacent to the breakwater. The permission of the South Park Board, and finally of the city, was obtained, and in the fall of 1900—after an interval of anxiety over the building plans, ways and means—the contract for the foundation was let. Before the work could be started, winter closed the harbor in her icy grasp—and another period of waiting was before the club. With the advent of open weather the work was started and pushed to final completion.

The work upon the superstructure, though started in April, was delayed during most of the summer by injunction proceedings, and the middle of October was reached before the work was again allowed to proceed. The building was completed during the winter, and in May, 1902, the club moved into the new quarters.

The foundation consists of 105 white oak piles, 45ft. long, driven in water varying in depth from 10 to 20ft. These were capped with 12x12in. white oak timbers, carried in both directions, with lighted joists between, the whole being covered with a 2in. plank platform laid diagonally. The unusual strength is required on account of the location of the opening in the protecting breakwater, which exposes the building to heavy seas from the southeast, which had to be met by substantial construction, if swaying was to be avoided. This is illustrated in the case of the group of piles, under the south chimney, which, 25ft. above the point where they enter the ground, are called upon to support a load considerably more than 100 tons.

The club house is a three-story structure, 66x138ft. outside dimensions, the main floor being the second above the water level. A bridge from the park breakwater communicates directly with the main floor. On the left, as you enter the hallway, is the office and main stairway, with doorway communicating with the rear stairs, from which access is had to the kitchen and service portion of the house. Opposite the office is the ladies' dressing room and main cloak rooms. The entrance hall opens into the reception hall (a room 27x33), which extends to the front edge of the porch, the east side being inclosed with glass doors on either side communicating with the north and south verandahs.

To the south of the reception room is the living room (35x40ft.), with large double doors communicating with porches 15ft. wide on the east and south exposures. These doors are sufficient in number to make the porches and living room one large apartment when thrown open for dancing.

To the north of the reception room is the dining room (24x40ft.), with porches and communicating doors identical in arrangement with that provided in the south wing, except that in this case they are screened in, and in pleasant weather the porch tables are the most popular feature of the club house.

To the west of the dining room is the kitchen and pantry, with servants' stairway communicating with the store rooms and servants' dining room on the lower floor, and with the servants' bedrooms above.

North of the kitchen, communicating with the dining room and verandah, is the buffet (10x10ft.), equipped with small serving bar, refrigerator, sinks, etc., with storage room reached by private stairway just beneath.

The main stairway communicates with a billiard room (27x27ft.) on the upper floor, which opens on to a small verandah (15x27ft.), facing the east.

To the south and north of the billiard room are chambers (twelve in number) for the use of members. These chambers average 11x15ft., and each suite is provided with toilet and bathrooms.

On the west of the billiard room is the dicectors' room, four servants' rooms, with toilet and bathrooms, occupying the northwest wing.

On the lower floor, the toilet room (10x20ft.), locker room (17x32ft) and shower baths are located at the foot of the main entrance stairway.

The servants' dining room, storerooms and sleeping quarters for the dockmen, occupy the northwest corner, the balance of this floor being taken up with sail lockers, one 3x4.6x8ft. being provided for each yacht in the fleet; storage room for shells, with ample space remaining for canoes, dinghys, spars and so forth.

The lower floor has an 18ft. verandah, extending around its south, east and north sides. Along the entire east front is a 12ft. dock, while along the west front is a 4ft. landing stage for the use of the small boats.

The interior finish of the building is particularly attractive. The woodwork of the living room is weathered oak, and its beamed ceiling, expanse of bookcases, broad fireplace, and leather-upholstered furniture of oak of the same finish as the surrounding woodwork, makes it particularly pleasing.

The entrance hall and reception room are finished in weathered oak and furnished with grass furniture.

The dining room is finished in birch, furnished in mahogany and has a broad fireplace corresponding to that in the living room.

The entire main story is floored with quartered oak, stained and polished.

Porches are furnished with chairs, tables and settles of rustic hickory.

The woodwork of the chamber floor is finished in white enamel, and in the basement yellow pine, natural finish, is used.

Throughout the house the decoration and draperies are elaborate and in harmony with the woodwork. The house is lighted by electricity, and the water supply is pumped by the same agency.

An idea of the generous nature of the accommodations

NEW HOME OF THE CHICAGO Y. C.

may be gathered from the fact that the building has nearly 7,000 sq. ft. of verandah space, beside the bridge, dock and landing stage.

Messrs. Holabird & Roche, the architects, have embodied in the plans many unique features, tending to the comfort of the members in the use of the club house; for instance, all the porch railings are made solid, with scuppers inside to drain the floors, thus acting not only as a shelter from the wind, but allowing the porches to be screened in with wire or glass, by simply inserting a frame in the openings. On the east verandah the projection of the reception room is for the purpose of affording a windbreak, so that no matter from what direction the wind may blow, a lea is always provided in the shelter, where the verandah sailor may find comfort. This is a very essential provision in a climate such as this, where the high winds make an unprotected verandah uninhabitable during many of the finest nights of the summer.

G. H. A.

Western Yachts.

The Fourth at Chicago.

CHICAGO, Ill., July 5.—The tenderness of the average modern yacht was well brought out in the races off this port yesterday, where no less than three accidents marred the quality of the sport offered. The weather was warm but clear, the wind a bit puffy, but not impossible as a yachting breeze. Under such conditions Vencedor lost her main mast at the start in the Pfister cup race; Colleen split her mast in the same race, and in the first of the Lipton cup series, Sprite, which was giving the favorite, La Rita, a good hard run for the decision, lost her rudder and fell out of the race.

The Lipton Cup Series.

The win of La Rita, Mr. Peare's new yacht, was a somewhat hollow one, as Arab IV., second, was 18m. be-

NEW HOME OF THE CHICAGO Y. C.—RECEPTION ROOM.

hind. The course was triangular, about the four-mile crib, two miles to the leg, and twice around. The wind was fresh and a bit puffy. Of the five starters, Spray was first off at 1:35:10, La Rita and Sprite next, then Privateer and Arab IV., which got a bad start and fell back of the judges' boat. Sprite hung to La Rita pretty well on the first round, but the latter boat began to edge away at the first leg of the second round, and had established a lead of nearly 1m. at the time Sprite broke down. Arab IV. made a grand stand finish, coming strong out of nowhere at the close of the last round. The times of the boats were as follows:

	Start.	Finish.	Per Cent.
La Rita, G. R. Peare	1 35 15	3 55 21	100
Arab IV., J. H. Cameron	.. ..	4 13 05	80
Spray, J. B. Keogh	1 35 10	4 13 35	60
Privateer, O. Daniels	1 35 31	4 16 20	40
Sprite, Dr. Pinckard	1 35 17	. .. ..	...

The judges were A. T. Bliss, Geo. A. Martin, C. E. Kremer, and E. C. Berriman. The Columbia Y. C. people turned out en masse and the guest boats were crowded, a great popular interest attending the series for the cup offered by the well-known and well-liked Sir Thomas Lipton. The latter sent a cablegram of good wishes, which was received just before the start in the regatta yesterday afternoon.

It was a Columbia Club affair, Colleen and Spirte, the Chicago Y. C. entries, both being disabled, Colleen not starting in the Lipton cup race, and the matter was left entirely to the Columbia boys. The Milwaukee Y. C. entries were received too late to qualify. The matter thus simmered down to a smaller entry and a tamer fight than was desirable for an event of this consequence. All the clubs of the Great Lakes ought to have boats in this series.

The races will be run on the per cent. system of scoring, the percentage standing at this date, La Rita, 100; Arab IV., 80; Spray, 60; Privateer, 40; this being in accordance with the Columbia Club percentage tables. At the close of yesterday's race La Rita was the favorite on the series, though what Sprite may do with mended steering gear remains to be seen this afternoon, when the second race of the series of three will be sailed.

The Lipton Cup.

The Lipton cup for 21-footers, Massachusetts cabin class, is a beautiful trophy. In height it is 39in., its form that of a vase, two graceful figures serving as handles, and showing two scrolls, one bearing the word "Victory," the other "Good Will." The American eagle appropriately dominates the trophy.

The panels of the cup show surfaces decorated by wreaths, lilies, yachts, etc., one panel presenting the shield of the United States enameled in red, white and blue, surrounded by a laurel wreath. The pedestal is of ebonized wood, paneled and appropriately inscribed to Columbia Y. C., Chicago, as well as bearing the name, "Sir Thomas J. Lipton Competitive Cup, Instituted 1902."

It need hardly be said that the gift of this cup from Sir Thomas was gratefully appreciated by the members of Columbia Y. C. The trophy was formally received by the members in a meeting at the club house June 21, where appropriate speeches and resolutions were entertained. The races of to-day and next day will be closely watched by all the Chicago sailing contingent.

The Pfister Cup.

The Pfister cup was presented to the Milwaukee Y. C. a year ago, open to competition for yachts built under the L. M. Y. R. A. rules, 21ft. knockabouts. The first race was held a year ago yesterday in Milwaukee, and was won by Colleen, of Chicago. The latter boat made it two out of three to-day, and if she shall last in her present form another year, will win the cup apparently without difficulty. Colleen is owned by Dr. W. L. Baum, of Chicago, and her victory to-day was, under the circumstances, a plucky one, as she came in with a split mast, result of a sudden puff of Lake Michigan's strong air, which caught the boat at the second buoy.

Colleen was away well in advance at the start, the Milwaukee boats Vagabond and Badger following in the order named. The first leg was sailed reaching, and Colleen liked the going very much, bettering her lead to the first turn and thereafter holding the race safe. The judges in the race were H. S. Griswold, Messrs. Whitney, Noble and Belden, of Chicago Y. C.; H. Y. Brown and W. U. Kirby, of Milwaukee Y. C. The actual times in the Pfister cup race were: Colleen, 1:45:18; Vagabond, 1:46:09; Badger, 1:49:20.

The harbor was packed with craft during the sailing of this race, the big guest boat, Hackley, being crowded. Milwaukee Y. C. sent down about fifty representatives, among these Com. E. P. Vilas, C. A. Vilas, F. C. H. Strachan, J. M. Handley, Fred Cook, John Rice, A. K. Taylor, A. Mather, J. Johnston, W. N. Kirby, Ed. Sanger and P. R. Krueger. Ten boats came down from Milwaukee, a handsome fleet, which return to-day, Saturday, accompanied by the fleet of the Chicago Y. C., which starts to-day on its cruise up the coast to Kenosha.

Minor Races.

It was expected that Vencedor and Siren would have another of their famous fights yesterday, but Vencedor's injury put her out of it. In the schooner race, Alice beat Hawthorne. The Milwaukee boat, Illinois, took the measure of the Chicago craft, Prairie, in Class 2A. Dolphin won in Class 2B. The following are the times of the above events:

Class 2A.

	Finish.	Elapsed.
Illinois	3 55 14	1 43 44
Prairie	3 56 14	1 46 08
Minota	4 00 47	1 50 47

Class 2B.

Dolphin	4 21 11	1 54 29
Beatrice	4 18 24	2 01 11
Charlotte R.	4 15 23	2 05 23

The foregoing races were sailed over the Chicago Y. C. regular course, the start being made at the Van Buren street gap.

Columbia Y. C. had out between forty and fifty craft of all description and classifications in the general regatta yesterday afternoon.

Tecumseh of Oshkosh.

So at last a Western boat really has gone down for the trial races for the Seawanhaka cup! It was not a Chicago boat, for Chicago, after all, is not the hottest sporting town on earth when it comes to getting out and doing business at the other fellow's four corners. Tecumseh comes from Oshkosh, from Oshkosh on Winnebago Lake, which latter body of water is a good deal hotter and sportier than Lake Michigan, mile for mile. It hardly need be said that the selection of Tecumseh as the challenger for the cup, after its decisive winning at Bridgeport, leaves the Oshkosh soul in a state of exuberance which only hoops of the strongest sort can be expected to restrain. One hazards it as a safe wager that things were doing at Oshkosh yesterday, as well as here in Chicago.

Kenosha Cruise.

Later.—In the Kenosha cruise of the Chicago Y. C. to-day the following boats first started for the Milwaukee and Chicago fleets: Illinois, Siren, Hawthorne and Alice, followed twenty minutes later by Mowaja.

Second Lipton Cup Postponed.

The start in the second race for the Lipton cup this afternoon was postponed from 1:30 to 2:30, in order that Colleen and Sprite might be fitted better for the race.

The weather is clear, with a heavy and puffy wind. The course is three miles to leeward and return, repeated, the start to be made from the Van Buren street gap. The leeward course runs to northeast to-day, the wind from the southwest, fifteen miles an hour. Colleen at the start is liked, though it is doubted whether her stick will serve under such weather.

Colleen finds the wind too stiff for her patched stick, and returns a few minutes before the starting gun. At 2.40 all the boats go over the line on the starboard tack, La Rita first, Privateer second, Arab IV. third, Sprite fourth, Spray last.

Arab IV. is called back by the judges to cross the line properly. Sprite and Privateer draw up on La Rita, which breaks out spinnaker. At 2:50 Sprite breaks out balloon jib and appears in the lead. Arab IV. begins to show strongly.

Later.—The race is declared off, injury to the machinery of the judges' boat is reported to make it impossible to judge the race. It is decided to resail the race, and the start is set for 4:10. It is stated that only La Rita and Arab IV. will start.

July 6.—Only La Rita and Arab IV. started in the 4:30 start, after the breakdown of the judges' boat in the first attempt at the second race, Saturday afternoon. Sprite had fear of a second accident, and Privateer was forced to pull out of the race, joining Colleen in the hospital. Arab IV. was away first, passed by La Rita shortly, and a brief jockeying match was ended by the Peare boat forging ahead. The revenue cutter Morrill acted as judges' boat, and La Rita was first to turn the buoy; it dropped Arab IV. only 6s. behind. Beating home, Arab IV. boldly shook out a reef, La Rita holding on double reefed in a stiff wind. As the boats began to split tacks at 5:08:15, La Rita gradually drew away, and although Arab IV. held up well, it could not point and foot with the mahogany boat, and the latter won handily, finishing at 7:00:00; Arab IV., 7:10:00.

Columbia Y. C. last night entertained the visitor, Com. Bliss. The third race of the series will be sailed Monday. It is hoped there may be more starters. It is a bit hollow thus far.

Later,—La Rita won third Lipton cup race to-day by 3m. 25s. Sprite only other starter.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Larchmont Y. C.

LARCHMONT, LONG ISLAND SOUND.

Friday, July 4.

THE twenty-third annual regatta of the Larchmont Y. C. was held on Friday, July 4. For a time it looked as though the race would have to be abandoned for lack of wind but at 2:45 o'clock, nearly four hours late, the warning gun was heard, a little breeze having sprung up.

The 70-footers were sent away at 3:05. Rainbow was on hand for the first time this season. In addition to the owner, there was on board Mr. E. A. Willard and Capt. Hank Haff. It was a quartering free run to the first mark, and balloon jibs were carried. Mineola was first over the line in the best position. Rainbow was astern and to leeward, with Yankee just a little further behind. Yankee and Rainbow got into a luffing match on the first leg, and after getting well under the Long Island shore they set spinnakers and ran down to the first mark. The second leg was the windward one and all the boats held well under the shore getting the benefit of the wind and tide. From the second mark across to the finish line it was a broad reach, and in the freshening breeze the boats made good time.

The schooners sailed over the same course as did the 70-footers. Elmina got the best of the start, and after a hard race won by 1m. 12s. Elmina also won the Colt cup for schooners, as the trustees have changed the conditions governing this trophy, so that it is now raced for in class D instead of class B.

The schooners Katrina and Gevalia raced in cruising trim. The former boat allowed the latter fifteen minutes time over the course, but Katrina won out with minutes to spare.

The interest of the day was centered in the two new bronze 60ft. cutters designed by Messrs. Gardner & Cox. The boats are remarkably well-turned craft. Their low topsides and bronze bottom gives them a very rakish appearance. On board Neola was Messrs. George M. Pynchon, the owner; Frank Henderson, William Gardner and Capt. Bob Dennis. On Weetamoe was Messrs. Henry F. Lippitt, C. Oliver Iselin, L. V. Clark and Capt. Harry Haff. Neola was well berthed at the start. On the first leg both boats got into a luffing match and were well across the Sound before they squared away and set spinnakers to run down to the mark. At the mark Neola was 25s. in the lead, and it bid fair to be a close race up to the time that Weetamoe twisted the eye in the bobstay plate, and came jogging around the course under mainsail, topsail and staysail.

In th 51ft. class, Humma, sailed by Mr. W. Butler Duncan, beat Syce very handily.

The two old 40-footers, Ondawa and Choctaw, had a close race, and the former won by a small margin.

In the 43ft. class Dorwina, Effort and Challenge started. Dorwina was well sailed and finished a winner by 2m. 9s.

Leda, in the 36ft. class, had no difficulty in defeating her three competitors, Spasm, Empress and Possum.

Mr. John Hyslop's yawl Tern defeated the Crowninshield-designed yawl Columbia by 5m. 36s.

In the 30ft. class Hanley made her first appearance, and defeated Mimosa and the old crack Alerion.

Indian got her first race of the season in the raceabout class.

Mr. Frank J. Gould's Rochelle won in her class.

In the New Rochelle one-design class Knave won, and in the Manhasset Bay one-design class Lambkin won.

The wind was light from the S.W. at the start, but increased so that during the last half of the race there was a good sailing breeze.

The summaries:

Sloops—Class H—70 to 80 ft.—Course 15 Miles—Start, 3:05.

	Finish.	Elapsed.
Mineola, August Belmont	5 24 02	2 19 02
Yankee, J. R. Maxwell	5 25 54	2 20 54
Rainbow, Cornelius Vanderbilt	5 29 11	2 24 11

Schooners—Class D—65 to 75ft.—Course 15 Miles—Start, 3:10.

Elmina, F. F. Brewster	5 35 59	2 23 59
Muriel, Charles Smithers	5 35 11	2 25 11

Schooners—Class D—Cruising Trim—Not Over 65ft.—Course 15 Miles—Start, 3:10.

Katrina, James B. Ford	5 49 45	2 39 45
Gevalia, T. O'Conor Sloane	6 13 56	3 03 56

Sloops—Class J—51 to 60ft.—Course 15 Miles—Start, 3:15.

Weetamoe, F. Lippitt	5 54 08	2 39 08
Neola, George M. Pynchon	5 47 46	2 32 46

Sloops—Class K—43 to 51ft.—Course 11 Miles—Start, 3:20.

Humma, H. B. Duryea	5 18 02	1 58 02
Syce, C. F. Judson	5 32 31	2 12 31

Sloops—Class K—Cruising Trim—43 to 51ft.—Course 11 Miles—Start, 3:20.

Choctaw	5 37 51	2 17 51
Ondawa, H. J. Robert	5 36 44	2 16 44

Sloops—Class L—36 to 43ft.—Course 11 Miles—Start, 3:20.

Dorwina, Clifford V. Brokaw	5 22 50	2 02 50
Effort, F. M. Smith	5 24 59	2 04 59
Challenge, Wallace T. Foote	5 32 12	2 12 12

Sloops—Class M—30 to 36ft.—Course 11 Miles—Start, 3:25.

Leda, Henry L. Maxwell	5 30 15	2 05 15
Possum, E. S. Ballou	5 41 04	2 16 04
Spasm, E. D. King	5 34 59	2 09 59
Empress, G. M. Hecksher	5 43 40	2 18 40

Yawls—Class M—30 to 36ft.—Course 11 Miles—Start, 3:25.

Columbine, C. A. Gould	5 46 01	2 21 01
Tern, John Hyslop	5 40 25	2 15 25

Sloops—Class N—25 to 30ft.—Course 11 Miles—Start, 3:30.

Alerion, A. H. Alker	5 48 06	2 18 06
Mimosa, Trenor L. Park	5 43 21	2 13 21
Hanley, Clifford Mallory	5 42 26	2 12 26
Zaza, G. P. Granberry	5 57 22	2 27 22
Gossip, D. B. Pratt	5 51 07	2 21 07
Iroquois, S. C. Ayer	6 02 33	2 32 33

Raceabouts—Course 11 Miles—Start, 3:35.

Rogue, A. B. Alley	6 07 05	2 32 05
Jolly Roger, T. B. Bleecker	Withdrew.	
Mavis, G. L. Pirie	6 07 16	2 32 16
Indian, H. L. Maxwell	6 06 34	2 31 34
Scamp, A. Pirie	6 09 38	2 34 38

Sloops—Class P—21 to 25ft.—Course 11 Miles—Start, 3:35.

Rochelle, Frank J. Gould	6 01 46	2 20 46
Chingacngook	6 08 48	2 33 48
Snapper, A. B. Alley	6 09 56	2 34 56

Larchmont 21-footers—Course 11 Miles—Start, 3:45.

Houri, J. H. Esser	6 11 51	2 36 57
Adelaide, J. J. Dwyer	6 14 57	2 39 57
Dorothy, L. G. Spence	Withdrew.	

Sloops—Class R—Not Over 18ft.—Course 11 Miles—Start, 3:40.

Hope, Lewis Iselin	6 24 50	2 44 57
Cricket, H. C. Pryor	6 27 57	2 47 57

Manhasset 18ft. Raceabouts—Course 11 Miles—Start, 3:40

Firefly, Guy Standing	6 37 42	2 57 42
Mist, J. W. Alker	6 41 15	3 01 15
Bab, J. R. Hoyt	6 36 18	2 56 18
Arizona, G. A. Corry	6 35 16	2 55 16
Lambkin, S. W. Roach	6 34 44	2 54 44

New Rochelle One-Design Class—18ft.—Course 11 Miles—Start, 3:40.

Captor, P. L. Howard	6 29 12	2 48 12
Knave, W. N. Bavier	6 26 39	2 46 39
Ace	6 30 35	2 50 35
Deuce, L. D. Huntington	6 27 28	2 47 28

Dory Class—Course 11 Miles—Start, 3:40.

Prize, H. H. Van Rensselaer	5 51 05	2 11 05
Cecil	6 06 57	2 26 57

The winners were Mineola, Elmina, Katrina, Neola, Humma, Ondawa, Dorwina, Leda, Tern, Hanley, Indian, Rochelle, Houri, Hope, Lambkin, Knave and Prize.

Riverside Y. C.

GREENWICH, LONG ISLAND SOUND.

Saturday, July 5.

THE fourteenth annual regatta of the Riverside Y. C. was held on Saturday, July 5. Although fifty-one boats started, the race was a most unsatisfactory one, owing to the light and variable winds.

After some clever jockeying before the race between Mineola and Yankee, the former got the best start, and kept in the lead all over the course, finishing the winner in her class.

Neola was without a competitor, as Weetamoe could not be repaired in time to start. Neola sailed alone about half way around the course, when she withdrew, her owner not wanting to run the chance of wetting her new sails, as a thunderstorm was threatening in the N.W.

Effort made a good showing in the 43ft. class, beating the new Gardner & Cox boat Challenge, which withdrew.

The surprise of the day was in the 36ft. class, when Leda was beaten by both Spasm and Possum. Leda got a bad start, and all through the race the little slants of wind that came up now and then did not seem to reach her. Leda is painted black above the waterline this year, and she presents a very smart appearance.

At the time the boats started there was a very fair sailing breeze from the N.W., but this gave out and left the boats becalmed for a time. Finally a little wind came up from the east, and after this died out it came in from W.S.W. The boats had a good breeze to finish with. Just after the boats completed the race a heavy thunderstorm broke and for a time blew very hard. The summary follows:

Sloops—Class H—70 to 80 feet—Course 25 Miles—Start, 12:40.

	Finish.	Elapsed.
Mineola, August Belmont	4 43 27	4 03 27
Yankee, J. R. Maxwell	4 45 13	4 05 13

Schooners—Class F—Not Over 55ft.—Course 25 Miles—Start, 12:35.
Regina, W. Hamilton, finished, but time not taken.

Sloops—Class J—51 to 60ft.—Course 25 Miles—Start, 12:45.
Neola, George M. Pynchon, ... Withdrew.

Sloops—Class L—36 to 43ft.—Course 18 Miles—Start, 12:50.

Effort, F. M. Smith	3 55 37	3 05 37
Challenge, W. T. Foote, Jr.	Withdrew.	

Sloops—Class M—30 to 36ft.—Course 18 Miles—Start, 12:50.

Spasm, E. D. King	4 38 20	3 48 20
Leda, H. L. Maxwell	5 54 00	4 04 00
Possum, E. S. Ballou	4 49 35	3 59 35

Yawls—Class M—Not Over 36ft.—Course 18 Miles—Start, 12:50.

Spindrift, S. C. Weld	Withdrew.

Sloops—Class N—25 to 30ft.—Course 18 Miles—Start, 12:50.

Eupronzi, Alfred Peats	4 57 35	4 07 35
Alerion, A. H. Alker	4 57 52	4 07 52
Mimosa, Trenor L. Park	4 52 59	4 02 59
Zaza, G. P. Granberry	5 09 23	4 19 23
Hanley, C. D. Mallory	4 51 53	4 01 53
Gossip, P. M. Brooke	4 59 51	4 09 51

Raceabouts—Course 14½ Miles—Start, 1:00.

Mavis, G. L. Pirie	3 56 43	2 56 43
Scamp, J. F. Pirie	3 59 17	2 59 17
Indian, H. L. Maxwell	3 57 33	2 57 33
Whistlewing, H. M. Crane	3 56 22	2 56 22
Rogue, A. Bryan Alley	3 58 23	2 58 23

Sloops—Class P—21 to 25ft.—Course 14½ Miles—Start, 1:10.

Ojibway, D. P. Morse	3 58 50	2 48 50
Chingacngook	3 52 50	2 42 50
Robin Hood, G. E. Gartland	3 57 59	2 47 59

Larchmont 21ft Class—Course 9 Miles—Start, 1:10.

Houri, J. H. Esser	4 41 12	3 31 12
Adelaide, J. J. Dwyer	4 14 44	3 04 44

Sloops—Class Q—18 to 21ft.—Course 9 Miles—Start, 1:15.

Enos, E. D. Mead	3 43 05	2 28 05
Gazabo, N. P. Vulte	3 41 18	2 26 18

Topf	179 159 157 143 146	8 7 16—31	16 10 22—48

Mat. Gindele now holds the range record with the fine score of 233. This beats the former record made by Payne by one point, he having scored 232, which has stood high for several years. The latter expresses a determination to go after the record again. He has now returned to the fold, having been visiting in the East for the past two months. The incident of the day was the tieing of three members for first place on the Honor target with the good score of 71.

The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road, July 6. Conditions: 200 yards, offhand, at the German Ring target. Hasenzahl was declared champion for the day with the good score of 226. Weather, strong and clearing. Thermometer 97. Wind from 4 to 6 in the A.M.; changing to 10 to 2 in the afternoon.

Rifle at Shell Mound.

SAN FRANCISCO, June 30.—Yesterday proved a favorable day at Shell Mound as regards weather conditions. The most notable work done was that of D. B. Faktor, who made three consecutive 72's in the Germania 3-shot competition. Scores:

San Francisco Schuetzen Verein, monthly bullseye shoot—J. von Husen 50, F. Koch 328, D. B. Faktor 334, John Utschig 347, Louis Bendel 380, F. Brandt 436, D. Salfield 437, F. P. Schuster 446, August Jungblut 483, J. C. Waller 483, F. Gooss 495, H. Zecher 499, A. Mocker 502, R. Stettin 568, John de Wit 595, S. Heino 623, J. Gefken 683, August Pape 829, H. Lilkendey 947, N. Ahrens 973.

Germania Schuetzen Club, monthly bullseye shoot—F. Brandt 292, F. E. Mason 324, J. Gefken 423, N. Ahrens 470, George H. Bahrs 472, S. Heino 658, O. Bremer 682, D. B. Faktor 737.

Germania Schuetzen Club, competition for trophies—F. E. Mason 225, A. Gehret 223, D. B. Faktor 221, John Utschig 221, F. P. Schuster 220, Otto Bremer 209.

Competition for cash prizes—F. E. Mason 72, D. B. Faktor 72, F. P. Schuster 71, A. Gehret 71, D. Salfield 71, Louis Dendel 71, August Jungblut 69.

ROEEL.

From the Sun we take the following concerning the death of a gentleman eminent in the field of manufacture: "John H. Hall, president of the Colt Firearms Manufacturing Co., died yesterday in Hartford. On Friday, June 6, he suffered a stroke of apoplexy and since that time his death had been only a question of days. Mr. Hall was born in Portland, Conn., March 24, 1849. He succeeded to a quarry business in his native town, which had been in his family for several generations, and largely developed it by combinations and extensions. He was recognized as a successful business man, when he was asked to come to Hartford in 1888 and take the management of the Colt company. Since Mr. Hall's connection with the company began, its business had largely developed. In politics Mr. Hall was a Democrat. He served one term as State Senator in 1895-6. He was a director of many Hartford institutions, was prominent in the Episcopal Church and was a thirty-second degree Mason. He leaves a widow, one son and one daughter."

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

July 10.—Sistersville, W. Va.—Midsummer target handicap tournament, of the Sistersville Gun Club.

Interstate Park. Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The programme of the eighth annual tournament to be held at Bay Ridge, A. A. county, Md., July 23, 24 and 25, is open to all. There will be $200 in added money. On Wednesday and Thursday, the first two days, the open-to-all programme is alike, eleven events, alternately 15 and 20 targets, $1.50 and $1.75 entrance. Also, on the first and second days, there is a county programme. On the first day there are eight events for county amateurs only; of these, four are at 15 targets, $1 entrance; three are at 20 targets, $1.40 entrance; and No. 8 is at 50 targets, $1 entrance, for a handsome silver cup. Four moneys, 40, 30, 20 and 10 per cent in sweeps. On the second day the county programme "for County Shooters," has five events, two at 15, two at 20 targets, and No. 5, a four-man team race, at 100 targets, entrance $2 per man. This is open to any four men of any county in Maryland; 1st, $35; 2d, $15. Each team must send $4 on or before July 21, or a penalty will be added. The third day will be devoted to live bird competition. Event 1 is at 7 birds, $5 entrance, high guns. Event 2 is at 10 birds, $7, two moneys, 60 and 40 per cent. Event 3 is at 20 birds, $10, three moneys, 50, 30 and 20 per cent. The foregoing are followed by three $2 miss and outs. In event 3, known as the Bay Ridge handicap, the winner, in addition to first money, will receive a handsome sterling silver trophy, value $50. Two shot, miss and out in this event. The added money, $50, each day in the target events, is to be given as average money to the ten highest scores on the reverse system, as follows: First and 2d, $3 each; 3d and 4th, $4 each; 5th and 6th, $5; 7th and 8th, $6; 9th and 10th, $7 each. A gold medal will be given each day to high average. Handicaps in target events, 14 to 20 yards; in live bird events, 25 to 32 yards. Handicap committee, Messrs. J. C. Hicks, L. German, W. Chew and Dr. Lupus. Grounds will be open for practice on July 22. A contestant may shoot for targets only. Shooting commences at 10:30 sharp. Shells for sale on the grounds. Targets 2 cents. Two sets of traps will be used. Guns and shells shipped to J. R. Malone, 2671 Pennsylvania avenue, will be received and taken to the grounds. Mr. Malone is the manager of the tournament. Bay Ridge is situated on Chesapeake Bay, at the mouth of the Severn River, 36 miles from Baltimore by rail. It has a fine bathing beach, boating and fishing. There is a first-class hotel on the grounds; those who wish to secure rooms in advance should communicate with Mr. Malone. Trains leave Camden Station, Eutaw and Camden Streets, daily, over the Baltimore & Annapolis Short Line, at 8:50 A.M. and 1:30 P.M. Round trip 50 cents. Leave Washington daily at 9:10 A.M. and 11:55 P.M.

The Breeder and Sportsman, San Francisco, in its issue of June 28, states as follows: "Trapshooting is apparently having a boom throughout the interior of the State. Many gun clubs have recently been organized. The sport seems to have attracted the attention of many new shooters and bids fair to maintain a renewed interest among sportsmen. * * * The California Inanimate Target Association is to all intents and purposes an institution of the past. At a meeting of such representative officers and club delegates as could be convened on the 23d inst., the sentiment of those present was for disorganization, because under the existing stage of affairs it would be impossible to carry out any proposed measures or transact any business whatsoever as the then status of the organization was such, by reason of the disbandment of several clubs, that under the governing constitution and by-laws nothing could be done by the board of governors in accordance therewith. This contretemps could have been avoided had there been a meeting last year any time previous to the withdrawal of several clubs and their representatives when the proper amendments, etc., to the by-laws, etc., could have been adopted. After the affairs of the old association were wound up, the preliminary formation was made of a new organization, based on similar lines, but further reaching in its scope. The new association was called the Pacific Coast Trap Shooting Association. Temporary organization was effected with Dr. W. S. George, of Antioch, president; pro tem, T. L. Lewis, vice-president; W. J. Street, secretary. These gentlemen, together with A. M. Shields, wre constituted a committee to draft a constitution and by-laws and formulate rules. The next meeting will be held at the call of this committee. It is the intention of the organizers to have an individual membership of shooters, instead of a club representation. Membership in the new association will be open to all sportsmen of the coast."

At the Michigan State Trapshooters' League second annual tournament, held at Jackson, July 1 and 2, there were three ties on 24 for the expert championship medal, between Messrs. Wood, John Parker and Chas. Caleb, the latter wining the shoot-off by breaking 25 straight. Mr. P. A. W. Fitzsimmons, of Tecumseh, won the semi-expert and Mr. W. C. Somerville, of Flint, won the amateur medal.

Mr. C. T. Chubb, secretary, under date of July 2, writes us as follows: "There will be a tournament, held at Algona, Ia., Wednesday, July 16, under the direction of the Algona Gun Club. Twelve 15-bird events, $1.50 entrance, and $3 added to each event, is the programme. Professionals welcome to shoot for targets only. We have fine grounds; good hotels, and a very large gun club. Send for programmes."

The team match, shot on Outwater's grounds, at Carlstadt, N. J., July 2, between Messrs. E. Kattengell and Count Lenone against Messrs. A. Dietzel and F. Gerbolini, 25 birds, $25 per man, resulted in a victory for Messrs. Kattengell and Lenone by a score of 41 to 38.

The secretaries of gun clubs who send the programmes of their club tournaments to us for purposes of review in the same week that said tournaments take place, should calmly ponder over the fact that it is not news to state that a thing will happen after that very thing has already happened.

On July 12, at 2 o'clock, East Side Gun Club's grounds, Newark, N. J., the Richmond Gun Club will hold a live-bird shoot. Sweepstakes will be the main feature. Mr. A. A. Schoverling is the secretary. His address is P. O. Box 475, New York.

Mr. J. H. Outwater, Carlstadt, N. J., announces an all-day shoot at his place, July 17, the programme of which is 7 birds, $5; 20 birds, $10 entrance; birds included in each event, to be followed by miss and outs.

The third tournament of the Michigan State Trapshooters' League will be held at Ann Arbor, July 24 and 25.

BERNARD WATERS.

WESTERN TRAPS.

Cripple Creek of Colorado.

CHICAGO, Ill., July 5.—The following were the scores made at the last weekly shoot of the Cripple Creek Shotgun Club:

*Fifteen singles and five pairs.

Richmond, Ind., Gun Club announces its handicap shoot Sept. 3-5.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, July 5.—The appended scores were made on our grounds to-day on the occasion of the third trophy shoot of the second series. Marshall and Thomas tied for Class A trophy on 22; Marshall won on shoot-off. P. McGowan won Class B on 20, and Monighan won Class C on 19. A straight south wind blew across the traps, making the shooting quite difficult. Owing to the absence of many of our members from the city on Fourth of July excursions, the attendance was not up to standard, only fifteen members lining up for trophy event. The day was beautifully clear, and aside from the strong wind, an ideal one for target shooting:

Tenth trophy shoot, 25 targets:

Birch Brook Gun Club.

LYNN, Mass., July 5.—Eighteen shooters faced the traps at Lynnhurst Saturday afternoon, July 5, and among them were several shooters from Amesbury, of whom, Lockwood, Allen, Hatch and Spofford did some good shooting. Mr. Colville, representative of the Dupont Powder Co., was present and made over 90 per cent, breaking 113 out of 125 shot at. No. 1 was merchandise; No. 2 was the medal event. Scores:

HENRY ROOD, Sec'y.

Standard Gun Club.

BALTIMORE, Md., June 24.—The Standard Gun Club has made preparations for a shoot July 4 of special interest, a championship cup race being the main feature. Any resident of Maryland is eligible to contest for it.

In the seventh club shoot, held to-day, Messrs. Lester German and Harry Dupont led the club in the 50-bird event with 47 breaks. J. W. Chew was second, Storr third, Malone, John and A. R. M. broke 42. Following are scores made yesterday:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	15	10	15	50	Targets:	10	15	10	15	50

From Mr. M. F. Lindsley.

KING'S MILLS, O., July 2.—*Editor Forest and Stream:* If you will kindly grant me space, I wish to thank the many friends of Mrs. Lindsley and myself who have extended to me their sympathy in this my time of sorrow.

M. F. LINDSLEY.

Jackson Park Gun Club.

Paterson, N. J., July 4.—The Jackson Park Gun Club held a little shoot this afternoon at their grounds which proved to be quite interesting, as the scores will show.

This shoot was gotten up on short notice, since last Wednesday, and a few cards were sent out to some of our nearby friends.

The live birds were ordered in New York on Thursday and were delivered in Paterson in good condition at 9 o'clock this morning. They were an exceptionally good lot, quick to take wing. There were very few sitters, and some were fast enough to suit any one.

Capt. Money came down early and went straight to the grounds, where I found him, and proposed to him that we go over to Ryles' Park, a beautiful place on the banks of the Passaic River, about 300yds. from our grounds. After congratulations by Tom Ryle, the Captain espied the ping pong table, and he was soon exercising himself. He proposed a game with me. I soon had enough, as the Captain appeared more like a youngster and was in the best of trim. I introduced him to a friend of mine, who I did not know could play, and they were soon at the game, and gave an exhibition which was very interesting. They played two games which were very close and brought out plenty of encouragement for each contestant.

Returning to the shooting grounds, we found Morgan, Hopper and Capt. Powers. Capt. Money soon challenged Hopper to a 5-bird match for the price of the birds. They were soon at it. Money lost his first, a corker, skimming along the grounds till one yard over bounds. Capt. Powers was after Morgan with the same proposal, and they started in as soon as the others finished. The Captain got the worst of the bargain. He was game, and they fought it out in the next event, a tie on the first 5, and then Powers struck his gait. Several other shooters had arrived by this time, a large crowd. The heat was something awful for a time.

The first regular event, 10 birds, had six entries, and produced some fine shooting. The second event, 15 birds, produced some more fine shooting and good birds. Morgan and Money seemed to get the cream of them. Hopper and Doty shot in good form and time, and took the money. The third event, $1 miss-and-out to finish the birds, as there were not enough for another event; they only shipped us 200—all they had. Ten birds, $5; 15 birds, $7.

We soon had them at the targets, and more entries. Capt. Money was in great form losing but 7 out of 95. Powers, Wright and Doty were in good form also. Capt. Money and Doty had a little battle by themselves; first 25 each scored 21; second 25, Doty 24, Capt. Money 23.

The club is under the management of a board of managers now, and we look for more shooting. Garry Hopper drove us all over to the Ryle Park Lodge, where we were invited to partake of chowder, crabs, lobsters and plenty of refreshments, which finished a good afternoon.

DUTCHER.

East Side Gun Club.

SAGINAW, Mich.—The East Side Gun Club, of Saginaw, gave a very pleasant shoot at their grounds in Stolz woods. The threatening weather in the morning discouraged many who would have turned out otherwise.

The shooters from out of town present were: H. Waters, of New York, representing Laflin & Rand Powder Company; J. Cole, of Massachusetts, representing U. M. C. Company; J. C. Graves, of Midland; L. R. Grossell, G. W. Varnum, Wm. Grant and T. Miller, of Vassar; W. B. Jarvis, of Grand Rapids.

Bay City sent the following delegation of shooters: J. Cotter, Sr., J. Cotter, Jr., C. A. Russell, S. C. Allen, E. I. Flues, F. F. Hagaman and F. Johnson.

H. W. MERRILL, Sec'y.

Haverhill Gun Club.

HAVERHILL, Mass., July 4.—Our holiday shoot failed to draw our usual attendance, but those shooters who toed the line kept busy. The day, so far as weather goes, was ideal, and that fact must surely have had an influence with the contestants, for most of them shot very badly.

Events 5, 6 and 7, 50-target prize match, was won as follows: Dickey, 22 yards, 1st, sole leather gun case; Howe, 21 yards; Allison, 19 yards, and Miller, 18 yards, scored 38, Miller winning in shoot-off, 2d, Thurman shooting blouse. Tozier, 18 yards; Bowen, 19 yards and Lambert, 22 yards, scoring 36, Tozier winning, 3d, a Powers cleaning rod.

Had not a good number of out-of-town shooters appeared our numbers would have been small indeed. Among them was W. L. Colville, the genial representative of the Dupont brand; "Bob" Smith, of the Iver Johnson Co.; Pryor (Limus), Richards, Cole and Dennison.

Those named above have never visited us before, but declared their intention of coming again. The old reliable four in number one squad are no strangers, and are always welcome.

Our next attempt will probably be Aug. 27 and 28, on the occasion of the Interstate Association tournament. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot

FRED W. ATKINSON, Sec'y.

Towanda Gun Club.

TOWANDA, Pa., July 4.—The tournament of the Towanda Gun Club, the 15th annual meeting held to-day, was the most successful shoot ever held here. The visitors were Spencer Reed, of Tunkhannock; J. W. Ensign and W. H. Stroh, of Pittston; H. D. La Plant, D. Higgins, W. J. Hall, Fred Allen, of Sayre; A. C. Sterling, of Wilkes-barre; J. N. Knapp, of Auburn; C. S. Cottle, of Skaneateles Junction. Messrs. Cottle and Knapp tied for high average, and they will decide the ownership of the silver medal at some future date. Knapp won the gun case, Stroh the revolver and Montayne the pin. Six men made averages above 86 per cent. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

W Farwell	16	13	16	29

Michigan State League Tournament.

Such a continual rainfall as that of the past two months cannot be recalled by the oldest inhabitant. On Monday a drizzling rain fell continually, and when the morning sun shone out bright on Tuesday morning those interested in the Michigan State League tournament, July 1 and 2, began to imagine they had been ushered into some foreign climate where the air is purified by the glowing sunshine. No wonder then that a large and most enthusiastic gathering of the Michigan trapshooters were early on the grounds at Michigan Center, the splendid grounds used by the Jackson club, and presided over by Charles Sarvis, who shows by his arrangements of the grounds to be the right man in the proper position.

We found a magautrap and a Sergeant system facing to the northeast, with a good background, sun shining bright with a slight north wind that elevated the targets slightly. Taking the layout as a whole, everything was favorable for good scores.

Jackson has an actual membership of less than ten men, but they are workers. There was Smith in the office, Linabury doing the squad hustling, while here and there, and all about the grounds might at all times be seen Wolcott, Crosier, Dr. White, Dr. De May, Dr. Taft and Mr. Thompson, most of them shooting in the events and making good scores. Thus it is not surprising that everything passed off in clockwork order.

Beside this array of home talent, there was present that old-timer and energetic tournament manager, the only Jack Parker, ready to assist whenever a little advice became necessary.

A litle canvass revealed the fact that Detroit had a good delegation in Jack Parker, A. Toll, J. H. Cox, H. Guthard, Jacob Klein, A. J. Stanley, Owen Scotton, Mr. Wood and Joe Marks. Ann Arbor turned out with W. W. Wadhams, A. Cullom, B. F. Schumacher and W. Carson. Flint had the good shots and medal winners, W. C. Somerville, Chas. Caleb, A. D. Caldwell and T. E. Houghton. Battle Creek was a little shy, but carried away honors with Max Hensler, A. R. Hensler and Sam Howes. Tecumseh had a good pair in C. R. Wilson and Mr. P. W. A. Fitzsimmons. The home crowd consisted of the wideawake boys as follows: W. W. Wolcott, H. B. Crosier, B. E. Linabury, M. W. Thompson, C. W. Sarvis, J. B. Schumaker and the trio of doctors, C. J. White, J. H. De May and Taft. Some of the towns were represented by pairs, viz., Marshall with W. B. Wade and L. H. Crampton; Grass Lake with E. A. Carpenter and B. Scott; Leslie with F. E. Sayers and V. E. Covert; Kalamazoo, Grand Rapids and Saginaw were not represented, but some individual representations hailed from points, viz., H. C. Young, Munith; W. W. McQueen, Bay City; Leonard Finletter, Adrain; C. E. Alban, Willis. Outsiders were few, and they were disposed to kick on their 20yd. handicap, viz., J. M. Hughes, Palmyra, Wis.; Kit Shephardson, La Grange, Ind.; Mr. Lang, Findlay, O. Mr. G. C. Williamson, of Muncie, Ind., was a busy man distributing souvenir badges and making new acquaintances.

The shooters were handicapped from 16 to 18yds. for State men and Messrs. Shep, Hughes and Lang at the 20yd. limit. Three cents was charged for targets, and one cent was reserved for a fund to be divided between League members shooting through the programme.

The programme consisted of eleven events, with $60 added money.

Event No. 5 was a championship contest, three medals combined in one shoot being that of expert, semi-expert and amateur trophies. This was the center of attraction, there being three ties on 24 for the expert medal, viz., Wood, Parker and Caleb. On the shoot-off Caleb won easily by breaking 25 straight. Fitzsimmons won the semi-expert and Somerville the amateur medal. As the latter's win was the third he is now the permanent owner, and will pass into the semi-expert class.

While Michigan Center is five miles from Jackson, there is everything there to make shooters happy—hotel, lake, boats, fishing, summer resort, with its merry-go-round, and other amusements galore. The scores:

Second Day, July 2.

After a good night's rest at the Sarvis Hotel, the shooters were in no great hurry to get their guns unpacked, as the weather man had not duplicated his weather of yesterday, but instead, as if one clear day was too much for Michiganders, had endeavored to empty the clouds of their accumulation of the day previous as well as that of to-day's portion. The programme called for shoot rain or shine, but as there were no provisions for shelter overhead at the score, the shoot was postponed until about 11 A. M., when it had cleared up sufficiently to begin the programme. But the heavy rain had kept many away, and the attendance was not nearly so large as on yesterday. All those present shot the entire programme, and they experienced winds, cloudy background and toward the close of the day very threatening clouds caused much uneasiness, yet fortunately the storm passed around, and the very lengthy programme was finished.

Twenty-five men shot in most of the events, one of which was a team shoot of three men from a club, and that was the one shoot which attracted the closest attention and demonstrated that team shoots are what draws a crowd. There were six clubs that entered, three of them from Detroit, viz., Yaller Club, Ideal, and Live Bird Club. Jackson had two clubs and Flint one. The Ideal and the Yaller boys were very even, each getting 67, with J. H. Cox, the star performer with the only straight score. Flint fell a little short, as one of their medal winners fell off from his championship form. The good looking Jackson team came out for their spurt last, and they looked to be winners before a shot was fired. Some wagers were made, and the race was on. The first 30 targets saw but one goose egg, and that Mr. White's eighth. Their next 30 ended with two gone through Wolcott's pattern, and the remaining 15 were all smashed save Thompson's twenty-fourth, a fast dropping target, closing with a grand total of 71—White 24, Thompson 24, Wolcott 23.

There was a $1 sweep on the side, and Scott, shooting as did others for the money, made 24.

Scores of teams:

Ideal Team, of Detroit.

Somerville .....011111111011111111101111l—22—66

Scores made not so good as yesterday, yet Thompson held up well and made an even 90 per cent., his nearest competitors being Wolcott and Harvey, from Detroit, though Houghton was but one behind. Stanley, Marks and Caleb were bunched. Max Hensler duplicated his score of yesterday by winning two firsts in succession and then fell away for the remainder of the day. He does not shoot enough to withstand the punishment of continuous two days' shooting. The scores:

The programme provided for a rebate of one cent per target for the two days. The number shooting in all events proved to be fifteen, and each drew out $6.75 for his sticktoitiveness.

The rules and by-laws of the Association were amended so that the rebate hereafter given will go only to those who compete as a team, and those who do not come as a club will be barred from this rebate.

Editor Forest and Stream:

We, the undersigned, having received programmes of the tournament of the so-called Michigan Trapshooters' League shoot, held at Jackson, Mich., on July 1 and 2, and after consulting said programme wherein it is specified that the sweepstakes were open to all, and the only mention of handicapping is that amateurs would be handicapped at from 16 to 18yds., and considering this a fair proposition, we accepted the same and were present at said shoot. After paying our entries for the day's programme, we were informed that we were handicapped 20yds. We being the only scratch men, although professionals and semi-professionals, comprising the flower of Michigan shooters, were placed at from 16 to 18yds., no Michigan shooter being placed at a greater distance.

Trapshooters, as a rule, are a genial lot of gentlemen, who extend a warm and generous welcome to brother shooters, and although there were many here who openly protested against the injustice, yet the controlling element of this so-called Michigan Trapshooters' League did not care to meet us on equal terms, although we were paying 3 cents each for targets, one cent of each going into a pool to be divided among all League shooters shooting the entire programme. This virtually being a tariff of $2 per day imposed upon non-residents for the privilege of shooting.

K. C. Shepardson, La Grange, Ind.
Thomas W. Lang, Findlay, O.
J. M. Hughes, Palmyra, Wis.

[Concerning the above matter, we fail to find conditions which made it compulsory to compete if any one did not wish to do so.]

Trap Around Reading.

Reading, Pa., July 4.—The South End Gun Club, of this city, held an all-day target shoot to-day on the grounds along the river, near the Bingamin street bridge. The fine weather brought out a large crowd of sportsmen, and the shoot was a success throughout. The scores follow, all sweepstake events at 10 targets:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Boyer .....110011001111100— 9—19

Referee, Newman.

Pottstown, Pa., July 1.—At a meeting of the Shuler Shooting Club, of this town, held at the Shuler Hotel, it was decided to move the shooting house from the present shooting grounds at Saratoga Park to the East End Base Ball grounds, which grounds were decided upon as the club's new shooting grounds. The club members desired the change made, owing to the new grounds being nearer to town. The opening shoot will be held about July 24, when a large attendance is expected, especially from out of town sportsmen. The shoot will be open to all, and a good time is guaranteed.

Duster.

Raleigh Gun Club.

Raleigh, N. C., July 3.—The weather was entirely too warm for our members to do justice to themselves. All the good shots fell down except Jos. I. Johnson, who held his own, beside tieing the heaviest man in our club. His record was 90 per cent. He has the best all-round record in our club, but several have made up their minds to get in his class ere the season is over. The following event was at 50 targets: Whitaker 26, Gowan 33, Gray 32, Johnson 45, Pearce 35, Eberhart 23, Parker 36, Fellows 29, Worth 21, Ferrell 24.

R. T. Gowan, Sec'y.

Westchester County Trapshooters' League.

Mt. Kisco, N. Y., July 5.—The Westchester County Trap Shooters' League held its two days' tournament at Mt. Kisco on the 4th and 5th, the gathering on the Fourth being a representative one. The day was extremely sultry, but no rain fell to mar the day's sport. Among those from out of town were the following: T. H. Keller, Peters Cartridge Co.; J. T. Skelly and J. S. Fanning, of the Laflin & Rand Powder Co.; F. E. Butler, U. M. C. Co.; Edward Banks, Am. "E. C." & "Schultze" Gunpowder Co.; C. W. Dudley, L. H. "Mike" and Simon Glover, all of New York City; G. H. Piercy and his son, L. H. Piercy, of Jersey City; C. G. Blandford, of Ossining, N. Y., and many others. Of the home club, A. Betti, manager; President Frank Bailey and G. Sutton, all worked hard for the success of the shoot, Mr. Sutton looking after the cashier's office and Mr. Betti acting as squad hustler and general superintendent. Al. Rae's department (refreshments, etc.) in the big tent to the left of the clubhouse, was patronized satisfactorily, Bert Vandeusen finding that chicken salad, ice cream and sarsaparilla made a combination apparently well suited to the average trapshooter's appetite on a warm Fourth of July. There was a good attendance of spectators, an unusually large number of ladies gracing the clubbhouse with their presence.

The trap was run by an expert from Ossining, who managed to throw the targets far and fast enough to make a straight score more than usually pleasing. The strangest thing about his work was that the later it got in the day and the warmer it got in the traphouse the further he threw the targets. George Piercy was high average on the first day, shooting remarkably well and evenly; on the second day Jack Fanning went to the front, with the result that he and Piercy were tied at the end of the tournament for high general average. Fanning, however, being ineligible for the average money, the solatium for first average went to Mr. Piercy. On the second day the attendance was quite small, and the programme was run through quickly in order that the visting sportsmen might be able to reach nome before Sunday morning. After their departure several novices, residents of Mt. Kisco, tried to equal the scores made by the experts. Al Rae was easily high man, the four others in the squad only managing to break four targets between them, the race being at ten targets per man, and each of the four accounting for one target. Their names are therefore suppressed out of regard for the feelings of their respective families.

On the night of the Fourth there was a band concert in front of the Hotel Elwood, the music being discoursed by a large-sized orchestra under the direction of Mr. A. Betti, who proved that target shooting and music do not conflict. After the concert a fireworks display in front of the hotel attracted a lot of attention, Mr. Skelly handling Roman candles with much skill, showing that his acquaintance with Laflin & Rand's explosive productions enabled him to show off to the best advantage fireworks of every description. His efforts were highly thought of.

The scores of the two days follow:

First Day, July 4.

Roustabout.

Birch Brook Gun Club.

Lynn, Mass.—Owing to a tournament at Wellington run by O. R. Dickey, of the Boston Shooting Association, there were not as many at the traps on the 28th as usual. Riley was high man in the merchandise and medal events. There was a tricky wind most of the time, causing the left-quarterers from the magautrap to duck and some of the others to rise, so the scores of some were not so good as usual. Nos. 3 to 9 were practice events.

Events:	1	2	3	4	5	6	7	8	9

Berryman	..	..	..	9	..	..	..

Boston Shooting Association Tournament.

BOSTON, Mass.—The finest tournament held in Massachusetts since 1888, was the verdict rendered by the old-timers upon the Boston Shooting Association's two-day tournament at Wellington, Mass., June 27 and 28. There were two reasons for the success of the meet; first, the managers of the shoot were blessed with fair weather on both days, and secondly, the team matches among five-man teams from Maine, Rhode Island, New Hampshire and Massachusetts, and a special ten-man team match between Maine and Massachusetts, drew shooters and spectators from all parts of New England, and the shooting of each member of the various teams was keenly watched by a large and enthusiastic crowd of friends.

The five-man team match was the first of a series of four which will be held in the New England States for a purse of $200, $100 of which is the entrance money from teams from the four States entered, and $100 which has been donated by the Chamberlin Cartridge and Target Company through Paul North. In this contest Maine secured a lead of 8 birds over Massachusetts with a score of 451 out of 500. Massachusetts came second with 43, Rhode Island third with 435, and New Hampshire fourth with 398. The conditions in this match were 100 birds for each man at unknown angles. The next shoot in this series will be held at Providence, R. I., in July, and the winner will be determined by the aggregate of birds broken in the four shoots.

The greatest interest, however, was taken in the match between ten-man teams from Maine and Massachusetts for a purse of $100, and it certainly was the closest and most exciting contest ever shot between ten-man teams. The averages made by both teams must surely be new records. Massachusetts averaged .912 per cent. per man, and Maine .908 per cent. per man, each man shooting at 100 birds, 50 unknown and 50 known angles. Massachusetts won by the small margin of 4 birds in 2,000 in a hair-raising finish, and the members of the team were heartily congratulated by their courteous opponents from the Pine Tree State.

A similar match will be shot in Maine in August, and a third at some neutral ground later.

Two sets of traps were used, one Sergeant system and one set of five bluerock expert traps. More than 20,000 birds were thrown in the two days, and the traps worked very smoothly. The fine breaking qualities of the birds manufactured by O. R. Dickey called forth many favorable comments from the visiting shooters, as there were certainly not more than half a dozen dusted targets during the two days.

On Saturday every train that stopped at Wellington poured out its quota of shooters, so that the management was fairly swamped, and at 3 P. M. all further entries had to be rejected in order that the team matches might be finished. Shooting was continuous from 9 A. M. until 7 P. M., with the exception of an hour for dinner. Mr. Dill, the caterer, a member of the Association, provided the dinner each day, and it was deserving of the many praises it received.

Among the celebrities present outside of New England, were J. A. R. Elliott, who shot in splendid form, winning high average both days; E. Banks, S. Glover, T. H. Keller, Haze Keller, Doremus, T. Morfey, Dick Swiveller, and S. Van Allen.

The weather conditions the first day were unfavorable to high scores; the wind blew the targets about in rag-time melody, and nearly every miss was caused by over-shooting.

On the second day the same conditions prevailed in the morning, but after dinner the wind softened down, and fine conditions prevailed for good scores.

The scores for both days, including the record of the team matches, follow:

Friday, June 27.

Events:	1	2	3	4	5	6	7	8	9	10

The Wellington Tournament.

DUNBARTON, N. H., July 1.—*Editor Forest and Stream:* The Boston Shooting Association were favored with good weather and a large attendance at their recent tournament. It was a great pleasure to me to meet so many of my old friends of the shooting fraternity, and also numerous new men whom I know only by reputation.

First of all comes J. A. R. Elliott. I had not seen Elliott since February, 1885, when I met him in New Orleans. Elliott was the star of the tournament. Old gray-headed shooters and their numerous younger brothers were eager to see and know him. Elliott came East, hunting for clams and sea breezes—crops which the wooly West did not produce. From force of habit he came to Wellington. As to his shooting, the scores tell the story. I can only say that it became somewhat monotonous to see him break targets. There was no variety to it—a broken target in front of his pump and an empty shell flying from the breech at the same time seemed to be about all.

There were many others of considerable fame in the shooting world: T. H. Keller, of Ideal Cartridges, was on hand, as lithe and graceful as ever. I think that Tee Kay and I mutually admire each other. Now I am quite sure that Tee Kay has discovered the fountain of perpetual youth, and I think it is mean of him that he does not print of how he found and uses it and inclose a copy in every box of his best-on-earth cartridges. It would beat the prize candy package out of sight. For some time he shot in his usual old-time form. A certain event on the programme was called, and Tee Kay was one of the squad. Some of his ardent admirers (I think Ed. Banks started it) formed a line and followed him to the score.

When he took his position before calling pull, his admirers formed a half circle close by and gave him no end of advice as to holding. Some men would have been rattled by such doings. I think Tee Kay's nerves are made of the same mixture as the shot he uses. At all events, I never saw him shoot so well, and I decided at once to withdraw my standing offer to shoot him a match on the Concord grounds for a million or so a side. The way he centered target after target made me think that any one could learn to shoot. When the score was finished, he bowed gracefully to his supporters and said, "No charge, gentlemen, for the lesson I have given you. Shoot Ideal cartridges, hold as I do and you will get there every time."

As for the inter-New England team match, Massachusetts ought to have won. For some reason their crackerjacks failed to cracker. At the last moment New Hampshire entered a team. For what reason that team entered I fail to see. The first match went to the Pine Tree State, and they earned it. The Maine men were good fellows, even if one of them did try to inveigle me into a match.

A stranger came to me and said, "I read your offer in FOREST AND STREAM to match two old fellows up your way against any two of equal age, and I will take it up." I had no idea this man came from Skowhegan or some other settlement in Maine where they have moose, bears and other things, but when I found he intended to put up two Maine men, I told him to read again my challenge and he would find that it was surrounded with a barbed-wire fence forty feet high, which ran straight around the boundaries of New Hampshire.

We all had a good time at Wellington. Those who won did not have to waste much time counting their winnings. Elliott has no doubt blown his in on clams and sea air. There is just one point I criticize about this tournament: There were not assistants enough to handle it. Dickey and another man struggled with the scores, figuring out who won and the amount, and got somewhat balled up. The scorers usually acted as judges. This is not the way to run a tournament according to my old-fashioned idea.

C. M. STARK.

The Fourth at Omaha.

THE shooting fraternity of Omaha celebrated the Fourth of July in very appropriate style. The Dickey Bird Gun Club gave an all-day tournament at its elegant grounds north of the city. This is a new organization of 40 odd members, and will do much good work before the year is out. The day was very favorable, except for a hard cross wind, which made the flight of targets so erratic that but few straight scores were made all day. F. C. Riehl won first and H. S. McDonald second average on the regular programme, and in all, fifty men participated.

Two club trophy contests were held in conclusion, for Class A and B medals. Parmelee and Fogg tied on 25 in Class A and did not shoot off. The Class B honor was won by W. Hooper with 24.

This was Frank Parmelee's first appearance at the traps in many months, and it will be seen that he has not lost form. The scores follow:

No. 9 was Class A medal; No. 10 Class B medal.

IN NEW JERSEY.

Forester Gun Club.

Newark, N. J., July 4.—There were conditions as follows at the shoot of the Forester Gun Club to-day:

Sergeant system, electric pulls, all-day shoot, good lunch. Event No. 15 was the match, a squad shooting in between to give the guns a chance to cool off after shooting at 15 targets. Events 17 and 18 were at doubles.

Next shoot Labor Day; live birds in the morning and targets in the afternoon.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18

P. M. Kling vs. J. J. Fleming, for small stake:

J J Fleming.....1111111011111110111011111—22
P M Kling.....1101101111111101111111111—22

The tie will be decided at some future day, as Mr. Kling ran out of shells.

J. J. FLEMING, Sec'y.

Team Match.

Carlstadt, N. J., July 2.—The two-man team race, Messrs. E Kattengell and Count Lenone against Messrs. F. Gerbolini and A. Dietzel, shot at Outwater's place to-day, resulted in a victory for the former by a score of 41 to 38. The birds were a fair lot, though there was no wind to help them. Messrs. Dietzel and Gerbolini had the race up to the finish, where they lost 5 birds in a bunch. The conditions were 25 birds per man, $25, loser to pay for birds. The scores:

E Kattengell .....1211112102122222220212102—22

Mauser Automatic Carbine or Pistol

Self-Loading Pistols or Carbines

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

PRICE, 6 Shot, Skeleton Stock, New Small Model,	$22.65
" 10 Shot, Wooden Holster and Stock Combined,	25.00
" Cartridges, either Soft Nosed or Full Mantled, per 1000,	25.00
MAUSER Latest Model 7 m/m and 8 m/m SPORTING RIFLES,	45.00
With Double Set Trigger	50.00

313 Broadway, New York. BRIDGEPORT, CONN.

WINCHESTER

METALLIC CARTRIDGES

DURING our 30 years of gun making, we have discovered many things about ammunition that no one could learn in any other way. Our discoveries in this line, together with years of experience manufacturing ammunition, enable us to embody many fine points in Winchester Metallic Cartridges for rifles and revolvers which make them superior in many ways to all other brands upon the market. Winchester cartridges in all calibers are accurate, sure-fire and exact in size. They shoot when you want them to and where you want them to; being made and loaded in a modern manner by exact machinery under the supervision of skilled experts. Remember this, and insist upon having Winchester Cartridges, and you will get the best.

FINE CRUISING LAUNCH.

35ft. O. A., 8ft. 6in. beam, liberal freeboard, built of fine material and first-class in every way; finished outside but not inside, being where we can finish in any style cabin, or as an open launch. The design is of the recent square stern type, and is well planned. A number of others in stock, and our 65-page list tells all about these, and some smaller craft.

A stamp and your address brings it to you.

D. H. HECKMAN,
Designer and Builder,
KENNEBUNKPORT, - MAINE.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

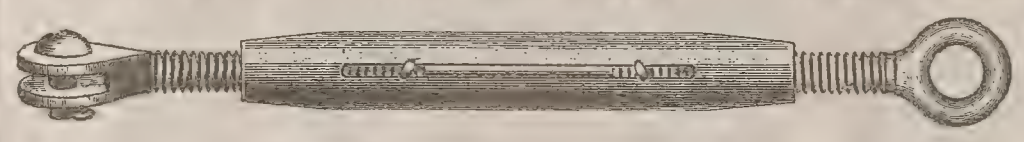
Send for our **No. 4** Booklet and Price-List.

EXTREME LIGHTNESS COMBINED WITH GREAT STRENGTH.

The particular construction employed by us enables us to produce a *Hollow Mast, equally strong and reliable, and yet stiffer than one of the same dimensions of solid spruce, yet the former will be anywhere from thirty-five to seventy-five per cent.* (*depending upon the thickness of shell*), *lighter than the solid.*

J. G. FRASER, Manager. **The Spalding St. Lawrence Boat Co., Ogdensburg, N. Y.**

FORGED TOBIN BRONZE TURNBUCKLES.



With Cast Manganese Bronze Sleeve.

Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

FOREST AND STREAM PUBLISHING CO. NEW YORK.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

ROWLAND E. ROBINSON'S
Danvis Books.

These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

Send for Special List No. 7 of odd lots of Fishing Tackle, Rods, Reels, Spoons, Lines, Hooks, Flies, etc. at about half price.

GAME LAWS IN BRIEF AND WOODCRAFT MAGAZINE

For April.

The best thing in the April "Game Laws in Brief and Woodcraft Magazine" is George H. Kingsley's vivacious story of "Chamois Hunting in Switzerland." It is surcharged with humor, and all in all, is one of the raciest accounts of outdoor adventure ever written.

Other features of the April number are Judge Haliburton's famous story "How Many Fins Has a Cod?" Phil Robinson's weird tale "The Last of the Vampires," and W. J. Dixon's story of strenuous life in the Southwest, "La Vega de Capulin." The poetry embraces Professor Blakie's "Musical Frogs," and F. R. Shattuck's quaint bits of Southern plantation philosophy, "Mutable" and "Immutable."

THE GAME LAWS IN BRIEF AND WOODCRAFT MAGAZINE is published quarterly, on the first days of January April, July and October. Subscription, **one dollar** per year. Subscriptions may begin with any issue. Single number, **25 cents.** Remit by money-order stamps, or draft on New York.

Sent postpaid, on receipt of 25 cents, by the

WANTED.
COPIES of FOREST AND STREAM FEBRUARY 9, 1901.

Guns, Revolvers, Ammunition, etc.

Here's a Bullet that will not injure your gun.

LUBRICATED WIRE PATCHED BULLETS

Just the thing you have been looking for for years.

Prevents Fouling, leading and deposit of metal in the grooves of the rifling.
Cleans and Lubricates the barrel with every shot, making swabbing entirely unnecessary.
Are Perfectly Adapted to any style of gun, slow or rapid twist, Black or Smokeless Powder, and are more uniformly accurate in shooting than any other form of missile known to the inventor.
Perfectly fill all the Grooves of the rifling, and are thus backed by the full charge of gas generated by the powder explosion.
There being less Friction, the velocity is greatly increased and the trajectory is flatter than with any other bullet ever made.
Sample bullets mailed to any address on receipt of stamps to prepay postage. **Catalogue free.**

Experts on Guns & Shooting

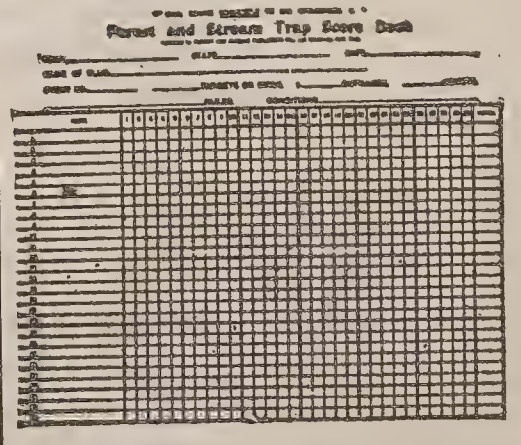
By G. T. TEASDALE-BUCKELL. Cloth, 390 pages. Illustrated. Price, $4.00.

The work gives the practical experience and personal views founded on practice of the leading gun makers of England. The subjects discussed are: The Evolution of Shooting During the Century; Shooting Schools; The Formation of Guns; Two Eyes in Shooting; Sights and Their Use to Guns; Style; The Shape of the Stock and Handiness; Cast-off and Bend; The Use and Abuse of the Try-Gun; Choke-bores or Cylinders; Pigeon Shooting; Game Shooting; Heavy Charges in Gun Barrels and the Effects Upon Them of Various Powders; Cap-Testing; Shotgun Patterns; Hidden Dangers in the Shooting Fields; Loading of Cartridges with Various Powders. The experts whose views are given are: Past-Masters Joe Manton and Joseph Lang; Atkin, Beesley, Boss & Co.; Churchill, Cogswell & Harrison, Gibbs, Grant, Greener, Holland & Holland, Jones, Lancaster, James Purdy & Sons, Rigby, Watts, Webley, Richards.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK

FOREST AND STREAM
Trap Score Book

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score will admirably fill the needs of clubs and contestants in affording a means of keeping a fair record of contests. Each book contains a generous number of sheets, so ruled as to make all the divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than the fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in black faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and each sheet is strong enough to hold firmly in place if the book is desired for permanent records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1902, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 19, 1902.

VOL. LIX.—No. 3. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE BUFFALO REMNANTS.

THE increased interest in buffalo preservation is encouraging, and it would seem that there is now a prospect of some earnest action by the Government looking toward efficient efforts in this direction. Congress has appropriated $15,000 for the purpose of protecting the buffalo in the Yellowstone National Park, and for establishing there a herd of domesticated buffalo, and the Hon. C. J. Jones—better known as Buffalo Jones—has been commissioned to carry out this purpose. No one has had more experience in capturing the buffalo than Mr. Jones, whose interest in the subject, after twenty years, is as keen as ever.

Beside the two considerable herds in Montana, described in FOREST AND STREAM of July 5 and 12, there are several other bunches of importance. Of these the most considerable is the Corbin herd in New Hampshire, said to be doing well, and perhaps next after that is the one of about forty-five head, belonging to Scotty Phillips, of the Cheyenne River Indian Reservation. There is another bunch of about twenty-six now on Antelope Island in the Great Salt Lake.

The owner of this last bunch, Mr. Dooly, is apparently willing to part with his buffalo and the island to the Government, to establish here a national buffalo reservation, and the subject certainly deserves consideration by the authorities.

The island is described as about twenty miles long, three to five miles wide, and with an excellent water supply. The buffalo are said to be in good order, and to maintain themselves during summer and winter in excellent condition.

Mr. Dooly's herd is slowly increasing, and he has very wisely arranged to make some exchanges of stock with Dr. Frank Baker, of the National Zoological Park, and thus to infuse fresh blood into his herd. Such exchanges of blood between different buffalo owners are of the very highest importance, for it is only in this way that the various small herds of buffalo scattered over the country can be kept from deteriorating and finally running out.

It has been suggested that if the Government should see fit to secure Antelope Island and Mr. Dooly's buffalo as the beginning of a national park in Utah, there is room also on the island for many animals of other species which are now becoming more and more scarce.

FOREST FIRES.

THE danger of fire from the careless use of firearms in the woods is so great that the Secretary of the Interior has issued an order forbidding the carrying of firearms, particularly shotguns, in certain of the forest reserves without special permit. The order applies to San Gabriel, San Bernardino, San Jacinto reserves and others. Thousands of outers and campers wander over the ranges in the summer, and fires due to carelessness are constantly menacing the forests; on the San Gabriel reserve alone forty-five fires were extinguished last season by the forest rangers.

Following the example of the Federal Government, some of the California reservoir companies which control large mountain territory have prohibited the carrying of firearms on their lands. It is estimated that more than a third of the disastrous mountain fires are due to ignited gun wads which kindle the dry brush. We now and again hear of Maine timber land owners who object to hunting on their territory because they fear the starting of fires by sportsmen, but their apprehension is chiefly of the spread of conflagrations from carelessly built or abandoned campfires. The average inexperienced camper has no realization of the hazard attaching to his fire building, but in Maine every woods visitor is by law attended by a guide, who understands the necessity of caution with the campfire.

Superintendent of Forests William F. Fox, of the New York Commission, issues these concise and comprehensive warnings for campers in the Adirondacks:

Fires will be permitted for the purposes of cooking, warmth and insect smudges; but before such fires are kindled, sufficient space around the spot where the fire is to be lighted must be cleared from all combustible material; and before the place is abandoned, fires so lighted must be thoroughly quenched.

All fires, other than those hereinbefore mentioned, are absolutely prohibited.

Hunters and smokers are cautioned against allowing fires to originate from the use of firearms, cigars and pipes. Especial care should be taken that lighted matches are extinguished before throwing them down. All persons are warned that they will be held responsible for any damage or injury to the forest which may result from their carelessness or neglect.

Girdling and peeling bark from standing trees is prohibited. Fallen timber only may be used for firewood.

WORK AND PLAY.

IT is not infrequently the case that, at a certain stage of mature life when business cares multiply and worldly interests grow in importance, men, who were once practical enthusiasts in matters pertaining to sport of the rod and reel, gun and dog, rifle and camp life, or yachting and canoeing, abandon entirely all active participation in sport, giving as a reason that the burdens of many responsibilities and active duties in business exact every moment of their time. They are "chained to business," but with chains which in the greater number of cases have links which are wholly fanciful.

With some men of peculiar temperament, the business habit grows into a kind of business mania; and possessed by this mania the victim's one reply to suggestions of recreation is, "I haven't time."

Now the expression "haven't time" is in very many cases only another way of saying "don't take time." No man can righteously be so continuously busy that he cannot find time for something outside of his business. If he is working so hard as all that he is doing more than he individually has any right to do; and if all that he does must be done by some body, he should give some one else a chance to do some of it. He owes it to himself, and to others, to "have" time, which means to "take" time for some of the amenities of life.

The fact is that the army of sportsmen—shooters, anglers, yachtsmen and others—is recruited from the ranks of the world's workers. The man you meet with a rod on the stream or in the fishing boat on the bay or casting his line into the surf, is there and then at play; but if you follow him to his home after his outing is over you will find him doing something else than reeling in fish, and ten to one doing it with the same zest he displayed in his fishing. No rule can be made which will cover every case, but any experienced observer of anglers and their ways will bear out the assertion that those who accomplish most as fishermen are the very ones also who accomplish most in the work that is set before them.

There is no substantial ground, then, for the conventional "I have no time to go fishing," because among those who do go fishing are those who in their working days are every bit as busy and as efficient and as successful as the stay-at-homes, and accomplish as much in the end—to make no account of what they get from the fields and the streams.

Many tens of thousands of Eastern brook trout have been put out this year in Oregon streams. In Ontario during the last bass stocking season nearly 10,000 adult black bass were distributed to new waters covering a distance of 400 miles. These two facts are indicative of the extent of the transfers of game fishes which are so rapidly enlarging the fishing resources of the States and Provinces.

The recent enlargement of the Big Horn Forest Reserve in Sheridan county, Wyo., and the creation of the Yellowstone Park Forest Reserve, in Big Horn county, Wyo., bordering the Yellowstone National Park, have cut off a large tract of country on which sheep have been pastured, and the sheep men are holding indignation meetings to protest against such invasion of their ancient rights and privileges. Concerning which it may be said that the sheep men do not own the country and the country is under no obligation to provide them free pasturage. They have no rights in their former sheep ranges which the public is bound to respect; the pasturing of sheep means the ruin of the country they ravage, and the sheep men should have been shut out from the public lands long ago.

Didymus, Jacobstaff and the rest of them are giving us a delicious exhibition of human nature in their discussion of what real sport may be; for each one of them adopts as the criterion the particular form of recreation in which he himself finds pleasure. In this they are only following in the steps of their forebears. It was so in Walton's time; and when the author of the "Compleat Angler" set out to celebrate his own pastime, he ingeniously provided for his characters Auceps a falconer and Venator a huntsman to contemn the contemplative man's recreation, in order that Piscator the angler might have occasion to praise it:

AUC.—Why, sir, I pray, of what fraternity are you, that you are so angry with the poor otters?

PISC.—I am, sir, a brother of the angle, and therefore an enemy to the otter; for you are to note, that we anglers all love one another, and therefore do I hate the otter, both for my own and for their sakes who are of my brotherhood.

VEN.—And I am a lover of hounds; I have followed many a pack of dogs many a mile, and heard many merry huntsmen made sport and scoff at anglers.

AUC.—And I profess myself a falconer, and have heard many grave, serious men pity them, it is such a heavy, contemptible, dull recreation.

PISC.—You know, gentlemen, it is an easy thing to scoff at any art or recreation; a little wit mixed with ill-nature, confidence and malice, will do it; but though they often venture boldly, yet they are often caught, even in their own trap.

Life is so short and the growth of trees so slow that the average person does not go in enthusiastically for planting a forest, provided he can do anything else with his land or his capital. But corporations are long lived and can look to the future; and we see railroads putting out great plantations for their supply of ties. The Diamond Match Company, which consumes a vast amount of pine timber, has engaged in practical forestry on a large scale, to meet its future requirements. The company some years ago bought a tract of 30,000 acres in Massachusetts, the most of it denuded of trees, and planted it to pine. Recently it has acquired for the same purpose 50,000 acres in Butte and adjoining counties in California, which are being planted to pine. The Diamond Match people manage their forests on the most advanced lines of European forestry development, cutting down only such trees as are of proper age and size, and replacing what have been cut with new ones.

Greenwich, Conn., salt-water fishermen have a grievance against the non-residents who invade their sand beaches and dig the sandworm useful for fish bait; and the town fathers have been prevailed upon to enact a decree that any outsider caught digging worms in Greenwich sands shall forfeit to the treasury $5 and costs. Five diggers from New York and Jersey City were swooped down upon by the Greenwich constables last Saturday and for the 2,000 worms found in possession paid $23 fine and costs per man. The Greenwich law is presumably based upon a theory that the sandworm comes under the head of fish or game; but it will strike outsiders that the Connecticut people are running the non-resident law system into the ground.

Dr. Tarleton H. Bean has secured from the Appellate Division of the New York Supreme Court a reversal of the judgment of the lower court in his suit against former Park Commissioner Clausen for removal from the directorship of the New York Aquarium. As Commissioner Clausen's action in removing a competent official to make room for an ignorant office seeker was purely a political spoils trick, a final victory by Dr. Bean would be in line with the interests of good government.

And now we hear of Nova Scotia and Newfoundland anglers providing themselves with tuna outfits from New York tackle houses, for their own use and for London anglers who are coming across the Atlantic this summer to make trial of the fishing for the big fish. If the development of the tuna as an angler's fish in Atlantic waters is thus to be an occasion of international rivalry, American fishermen should look to it that the credit for the first tuna taken with rod and reel does not go to the other side.

That is an extraordinary instance of ruffed grouse tameness which Mr. G. Hills relates to-day.

The Sportsman Tourist.

The French Cruiser's Visit.

SOMEHOW the French men-of-war are different.

In Apia one could acquire a fine taste in cruisers. There was the still precision of the German corvettes, white as our own navy before war's alarms. The British gunboats had their individuality, there was a sort of atmosphere of being off on a good time aboard their black hulls to which German militarism does not know how to unbend. In times of peace at Apia one got to know these vessels and their officers. German cruisers were in the harbor for all of nine months of the year, or if their anchorage were empty, the muffled boom of guns out at sea showed that they were only out for drill. British cruisers sailed in and out again, and with all the uncertainty of their movements succeeded in making two or three months' stay in the year. Even American cruisers managed to keep just as much in the public mind by staying away altogether. It gave scope, this unvarying absence, for reminiscence of the last visit of the Mohican or the old Adams, which once made the record trip of fifty-nine days from Panama to Apia, or the Iroquois, whose last voyage started from San Francisco for Apia and ended in Puget Sound, after a cruise of wild wreck. There was always the chance of a Yankee cruiser, about once in so often the wiseacres on the beach had certain knowledge that one was coming; then the tradesmen made combinations to purvey supplies, and intercepting letters were sent to Honolulu to establish relations with the coming paymaster. Prosperity was in the sight of everybody as the recollection ran back to memory of how the Yankee boys scattered money all along the beach, and the round gold pieces flew in store and bar and jingled in the pockets of the shrewd half-caste who has acquired a competency already by syndicating the industry of returning deserters, whom he hid in the bush until the precise moment when they became worth ten dollars apiece delivered on the cruiser's deck.

Somehow the French cruisers are different. Apia gives them scant consideration; they are really regarded almost as naval tramps. For one thing, France had nothing to do with the running of Samoan affairs, and its cruisers were, therefore, rank outsiders, not authorized to fire a single gun and call it war. Once a year a French warship comes into port on its way between the two French colonies of Tahiti and New Caledonia; it comes unannounced and unexpected, its stay is but brief and without bearing on governmental affairs, and, the tradesmen say, it contributes all too little to local coffers. The French at home legislate sharply against religious orders, and have even gone so far as to order their expulsion, but in the Pacific they foster the work of the mission of the Marist priests, whose labors have in Oceanica always preceded the establishment of French protectorates. The annual visit of the French cruiser is solely to pay honor to the French bishop of the missionary see of Samoa, and to look to it with the fostering care of a great and forever republican nation that no quarrel should exist between the two lay French citizens in Samoa.

If the one French moiety had begun to squabble with the other French moiety, it would have been a sad plight, something, perhaps, like the interdict of the Middle Ages. For Citizen Jacques was a carpenter of coffins, and Citizen Georges was also a carpenter of coffins. If the normal business rivalry had ever reached an acrimonious stage, it can only be imagined what a sad state of affairs would have ensued. In the interests of the blessed dead it was just as well that the officers of the Republican navy should call and compose the differences which in the year had begun to arise between Citizen Jacques and Citizen Georges.

Early one afternoon in the fair season, when the very clouds are not only no screen to the blaze of the sun, but rather serve as mirrors to reflect the glare, the signal flags unexpectedly began to flutter at the pilot station on Matautu Point, and the tale they told in fluttering signals was that a man-of-war was in sight. Between the early morning hours and the late afternoon hours all who can choose comfort spend the day beneath broad verandahs. Island habit keeps one interested in the sea, therefore you pick a shady reach of verandah where it is still possible to know what is going on out upon the ocean, and planting there the work and the sewing woman with her dwarf machine, you study that empty stretch of water until the weariness of seeing nothing for day after day becomes an ailment, a habit of thought. But the whole expanse of ocean is too great a contract to watch, man or woman, every white person in the exile of Apia does the work by deputy, never for long does one move out of sight of the pilot's flagstaff, for Captain O'Ryan keeps one of the savage islanders of his boat crew sitting all day long and every day on a stump at the end of the point sweeping the horizon with a spy glass that no coming vessel may escape him. Seldom was a vessel sighted except the mail steamers at four weeks intervals, but the occupation does not pall upon the native watchman, every Polynesian in the broad Pacific would be only too happy to draw salary for sitting day by day on a stump.

On this particular afternoon the signals had scarcely begun to climb the pilot's flagstaff when the sewing woman caught them and announced their meaning. Sure enough a cruiser was in sight, and through the glass it was easy to make out the broad bands of the tricolor. The news was soon confirmed, not that there was any room to doubt. The houseboy was away in the pursuit of one of the duties for which he drew pay, his afternoon swim. In the dull despair of housekeeping in Samoa this necessity of taking a bunch of hours right out of the day, which the houseboy claimed as his right, grew on the housekeeping mind as a part of his duty. When one is served by attendants who look upon the assumption of even a shirt supplementary to their waistcloth as the equivalent of wearing livery, it is after all commendable as a duty well performed when the houseboy takes a few hours off for bathing purposes. The houseboy was far more insistent upon the niceties of official etiquette than were those upon whom he conferred the high honor of accepting their wages. Of course the flag at the Consulate was flying from the lofty flagpole on the beach, which in itself is a memorial of the wrecked Trenton and Vandalia, being made of a spar from each. But that did not satisfy the ideas of his mightiness, the houseboy. There were degrees of Stars and Stripes, and in his judgment the dignity of a great nation was lessened by the flying of the eight-foot flag, which was standing out as stiff as a board in the full blast of the trade wind. He was for displaying the full-size sixteen-foot ensign which the regulations allowed every day and in all weathers. It broke his heart when the rule was laid down for his guidance that the small flag must be used on all days in between steamers, and always in rainy weather. If it had not been for that, the Government's bill for bunting would be enormously increased. A large flag would scarcely last a week in that high wind. He was only a houseboy, but he strutted under the idea that he was an official of the United States. He had no hesitation about encouraging such an idea, no inconsiderable portion of Samoan politics was settled in his cook house, where island statesmen called upon him to find out how America would regard their conduct. Really those matters of statecraft could be settled just as well in the cook house as in the Consular office, and a reasonable view of Samoan affairs will see in the lesser building the more appropriate place for such settlement.

When he saw the man-of-war signal on the pilot's flagstaff, the houseboy recalled the fact that a small flag was flying. The white people around at the Consulate in Vaiala might be stupidly content with such a small display, they were so careless about so many of these essential matters. But as an official of the American Union (he never failed to call it laboriously in full the "Unaike Sekeke Meleke"), he knew what was due to official dignity, and he knew that it was measured by sixteen feet, and hang the price of bunting. Back from the swimming place under the Vaisingano bridge he came running at top speed, almost the only known instance of haste on his part in the direction of his place of employment, though reasonably prompt the other way. Not halting to close the gate of the compound—a solemn necessity so long as the pigs of the native village roam at large—he dashed up the steps with a shout in passing of "French man-of-war," and went at once to the closet in which the flags were kept. With equal promptitude he selected the largest in stock and dashed down to the flagpole. To strike the offending banner was easy; all he had to do was to loosen the halliards and the wind carried the flag down with a rush. But the difficulty came in hoisting its larger successor, for he had not learned the sailor fashion of hoisting the flag in a bundle, which comes loose at the top of the mast. Now, it is no easy task to hoist some eight square yards of bunting to the top of a staff more than a hundred feet high, when the wind is blowing as it does blow in the afternoons in Samoa. On his first attempt he failed. Within a foot of the top the flag stuck fast and would go no higher. He hauled it part way down and made a fresh trial. Again it stuck obstinately at the same place; again he hauled it down for a new start. This succeeded, and the dignity of a great nation was represented by its full sixteen feet of stripes, and the houseboy felt that as an official of the United States he had not proved remiss in the discharge of his duties.

Far more than any man can do, a woman projects herself to the other side of any event, and sees unerringly what effect it is producing upon others, and, of course, this was still more the case with the imperfectly tamed Samoan who felt that he had done his whole duty. In this case it was easy to understand that the officers of the French cruiser which then was just in front of the official residence and not more than a mile off shore would be in a state of puzzled wonder as to the meaning of two dips of the flag from the American Consulate. Two dips of an ensign have no meaning. There is no naval code or other system of the etiquette of the men of the sea in which two dips can carry any meaning. Yet on the other hand to touch the flag at all must mean something. Any motion of the flag not otherwise comprehensible would undoubtedly be taken as a signal of distress and action taken accordingly. There was no particular distress in Vaiala at that time; nothing, at least, beyond the lack of ice and the general loneliness of life in mid-Pacific. The landing of a boat load of French sailors and marines coming to the rescue of American interests would have been a relief to the general monotony, but it would have entailed all sorts of official explanations that it was just as well to avoid. It was a clumsy situation at best. The only way out of it was to complete the ill-timed salute and put in the explanations afterward. The houseboy, accordingly, was ordered to lower the flag once more and finish out the salute. No sooner had this been done than the cruiser dipped her ensign.

According to the local custom of the port of Apia, a relic of the warring times, when it took any amount of diplomacy to arrange an official call of the consuls on the ships, the consuls had twenty-four hours in which to make the first call upon a visiting warship without regard to any questions of relative rank. But in this instance the American representative thought that it would be just as well to go off at once and make the explanations as to the houseboy's efforts to be correct. After a hasty attempt to remember the convolutions of the more common irregular verbs in the French grammar, he started out in his boat to pay the official call.

After the first few words of reception, and before it was possible to lead up in an unobtrusive fashion to the subject, the French captain broached it himself. As soon as he began enthusiastically about the eternal amity between the two great republics of the world, it was clear that any attempt at explanation and casting of blame on the houseboy would only spoil a charming situation. France was tickled clean through with the spontaneous expression of the warm regard of America which every Frenchman in his infancy learned to believe in, which none the less it "deliriated" this particular French officer to find manifested in the heart of Oceanica. Was anybody going to apologize after that? Well, no. Not a word said to suggest that this sort of salute was not specially ordered in Washington for French gunboats.

When it came time for the call to end, there was encountered a hitch, a thing not common in warship experiences, where things generally move with beautiful precision. Samoa was very wise in the matter of guns and salutes. Even the Samoans knew all about it. They knew that a consul was entitled to receive his seven guns and that a consul-general got two more in token of the superiority of his rank. Unfortunately, their own king was sometimes saluted (a great personal distress to him, for he was gun shy), and his twenty-one guns rather tended to produce the impression that he was three times as important as a consul. That complicated affairs, for it was the three consuls who did all the ruling, while the king did nothing but reign at $48.60 per month, royal magnificence at $12.15 a week. What the hitch was failed to make itself clearly apprehended, as a junior officer came up on the run. It seemed to be that the second captain had mislaid the powder, or some such annoying event, which might happen on any man-of-war, if it had two captains. Meanwhile it was graciously offered to look over the ship. There was a preponderance of live stock, pigs beyond counting, coops of hens in every place in which it was possible to stow the great producers of omelets, no less than four cows were peacefully tied in stalls on the deck. At last the powder ceased to be mislaid; the steward had probably locked it up in his pantry; the salute could be fired and the caller could go away with all the honors.

Next morning when the call was returned—they are very punctilious in the South Sea, where there is nothing larger to occupy the mind—the French captain still carried his enthusiasm with him, as though a great international union had just been cemented. He was charmed to find that madame was in residence; he should crave permission to call upon her with some of the passengers of his cabin, ladies of the superior colonial government in Tahiti. As to passengers, oh! yes, when there were ladies of the number it did much to add to the pleasure of the voyage; the cruisers in the South Sea were expected to carry many. Tahiti was the whole width of an ocean from Noumea, and it was only in New Caledonia that it was possible to embark upon the steamers of the return to France. It was therefore a part of the French colonial policy that the naval vessels should carry passengers between the widely separated French colonies of Oceanica, for this trip he was carrying fifty-four, and it was for their feeding that the animals were carried alive upon the deck. His experience was that the presence of the animals did not at all interfere with the naval duties of the sailors. Of course, in time of war the animals would be thrown overboard; as to the passengers in such a case, there would be some other provision for them.

The French vessels of war in South Pacific waters are probably well fitted to their uses, but they are inferior to the fleets of the other European nations which cruise south of the line. They are entirely unarmored cruisers of an old type, in all likelihood vessels which have outlasted their usefulness elsewhere, and which have been sent to Oceanica principally because they have the room for passengers and their necessary live stock on deck. That seems to be very nearly the sum of their employment, to lie for months at a time either in Noumea or Papeete, once a year to make a slow voyage with passengers either from New Caledonia to Tahiti, or the same voyage in the reverse order. They seldom employ their spare time in marine surveying, such as occupies British and German commanders. Once in a while they may be called on to exact some punishment for a massacre on the French islands in the west, the Loyalties and part of the New Hebrides. If they were more earnest in their patrol of these wild lands, it might be that the French islands would in time lose their reputation for being populated with the most intractable cannibals of the whole Pacific sphere of barbarism, a reputation which up to the present the native inhabitants have done their best to deserve at every opportunity. Instead of performing the rigid police which the civilized powers regard a duty when brought into close touch with the wild races of the world, the French fleet has no higher function than as acting as a connecting line at rare intervals for the subsidized French steamship line from Marseilles to Noumea by way of Australian ports. Slowly carrying passengers and live stock, they strive to make one call a year at Samoa and Tonga and Wallis Island, and wherever else one of the superior order of the French clergy is in charge of a mission.

LLEWELLA PIERCE CHURCHILL.

Down the Magnetawan.

In Two Parts—Part One.

FOR some time we had been studying guide books and charts, getting all the information we could about the Magnetawan River. Two things on which every source of information agreed, and which we found to be true, were, that the river was very rough and there was from eight to ten miles of carrying to be done. We were fortunate enough to procure a chart of the river with all the portages marked, and felt that with two competent guides we could now make the trip with safety. Having heard that neither guides nor canoes could be hired at Burk's Falls, we wrote to Captain Swartman, of Waubaushene, to engage two guides and canoes for us there. He procured Wilson Mowers and Clayton Gillete, two thoroughly competent and reliable men, and two good canoes. We met the guides at Orillia Monday afternoon, Aug. 12, 1901. Neither of them had ever been on the Magnetawan, but they had heard of its terrors, and one of them was ready to go home, as there was a woman in the party.

The Pacific Express on the Grand Trunk was crowded, until there was no longer standing room, with men going to harvest the great wheat crop in the Northwest Territory. The proverbial "room for one more" was actually occupied, and the crowds of men at the stations beyond Gravenhurst were obliged to wait for the night express.

The railroad company was selling tickets to Winnipeg for $10. The men, who had taken advantage of these low rates, were quiet and respectful. There was little or no drinking and no disorderly conduct. They were evidently small farmers lured by the low rates and good wages, many of them no doubt hoping to get land of their own in this great wheat country.

The train was thirty minutes behind time, and the stores were all closed when we reached Burk's Falls. Being anxious to start down the river the next morning on the little steamer that runs to Ahmic Harbor, Mr. Sharp kindly took us into his store that night, put up our provisions and sent them to the dock the next morning. We expected to spend ten days on the river, but considered it advisable to carry provisions enough to last four people fourteen days, of which the following is a complete list:

4 loaves of bread.
25 pounds of flour (15 would be enough).
1 pound baking powder.
30 pounds boneless shoulder.
5 pounds cheese.
5 pounds sugar.
4 pounds coffee.
5 pounds butter.
2 quarts beans.
4 dozen beef and vegetable tablets (Armour's).
4 pounds rice.
4 pounds prunes.
1 pound tea.
1 sack salt.

We took no canned goods on account of the long portages, and found our provision list very satisfactory. Our cooking outfit weighed 9 pounds, and consisted of the following articles: 4 tin buckets with close-fitting lids and a tin coffee pot; these nested, and the lid of the largest bucket (6-quart) fitted down over all. Four tin cups, four knives, forks and spoons; six tin plates, two frying pans with one detachable handle (we should have had two handles), and one wire broiler. We also had with us copper wire, a few trunk nails, a mixture of white lead and glue for stopping leaks in canoes; six candles, 75 feet of rope, matches, a sportsman's ax and two cakes of Ivory soap. We always take Ivory soap, for if it falls into the water it does not sink and can easily be recovered, and if you have to do any scouring there is always plenty of sand.

We spent the night at the Burk House, and were furnished excellent meals and a clean, comfortable room and bed. This is, I believe, the oldest house in the town. Its location is delightful and commands a magnificent view. We had met a young Englishman, named Bennett, at the station, who intended starting down the river the next morning. He was going to Bing Inlet, and preferred making the trip down the river in a canoe to going around by rail, so we arranged to travel together, and early Tuesday morning, we commenced our voyage down the Magnetawan on the steamer Winnona. The trip down this part of the river in the early morning, the little steamer following the windings of the river, sometimes backing in order to make the bend, is enchanting. The gently sloping banks, grass-grown to the water's edge, and the gentle current, gives no hint of the perpendicular shores of rock and the furious rapids beyond. When we reached Lake Cecebee, we saw a number of tourists and one or two camps. At Rocky Bend we left the steamer, which runs into Ahmic Harbor, and embarking in our canoes continued on our way. We had crossed Ahmic Lake and had gone but a short distance down the river when we came to Knoeffler's Dam, where there is a log house. We cooked our dinner on this portage. On leaving Ahmic Lake the character of the river is entirely changed. Instead of the gently sloping, grass-grown banks, we find steep, boulder-strewn shores, covered with pine, hemlock, maple and birch. Some distance below this portage we left the river and turned to the right into Poverty Bay.

The water was very low, but we succeeded in pushing our canoes through the mud and grass to the portage, which is about half a mile long and not difficult. By taking this route through Poverty Bay we had been able to avoid a part of the river known as the Three Snaith Rapids, a series of falls and rapids that have cost the lives of more than one tourist and river driver.

When we reached the end of the portage we had a beautiful stretch of river ahead of us. The banks were well wooded and less steep; the water clear and cool, and a good current. We put out a troll and soon hooked a wall-eye, but it swam off as we were about to lift it into the canoe, and we did not get another strike, although we were traveling over good feeding grounds. My husband and I were in one canoe with a guide, and the other had all the baggage. The Englishman had a craft; I can hardly dignify it by the name of canoe, made of one-eighth-inch basswood, covered with canvas and given coat after coat of a mixture of white lead and glue. It was about 10 feet long, with a 28-inch beam. The ends came suddenly to a sharp point, and the gunwales were very small. Its lines were anything but graceful, and a crankier craft never floated. He had a complete one-man cruising outfit, and when it was stowed away in the canoe with him in paddling, the stern was not more than four inches above water. If his load had not been perfectly balanced the canoe would have capsized long before it did. Bennett had been down the river before, and as we came into Fletcher's Bay he paddled ahead to a farmhouse to get milk for supper, as we expected to camp on the next portage. On one side of Fletcher's Bay there is quite a clearing and two or three farmhouses. There is a bridge across the river at the foot of the bay and a road to Ahmic Harbor.

Bennett had beached his canoe and had gone to a house near the end of the portage; when we came along the farmer's hogs were investigating his canoe and its contents, but we arrived in time to prevent any serious damage. Crossing the next portage, we camped on a sandy beach in the first bend below. Our tents were pitched on the clean, white sand and comfortable beds were made of balsam boughs. For supper we had bread, butter, boneless shoulder, coffee, and milk so fresh that it was not yet cold.

The guides rolled logs up to the fire for seats and picked up short boards and made a table. While we sat around the camp-fire, prunes were put on to cook, and we enjoyed them very much for breakfast. Although not more than half a mile from a farmhouse, we had passed the clearing and were again in the woods, with no sign of civilization around us. We were camped on the sandy beach of a beautiful little cove. Back of us was a rise of several feet to a bench, from which the hill rose abruptly. The falls were just around the point on our left, and could be faintly heard. In front lay a pool of calm water, beyond which was the swift current of the river against a steep bank covered with forest trees. As night came on the trees and hills appeared to close in and surround us, and when we looked up through the opening to the stars twinkling in the sky, we seemed to be down below the surface of the earth, while the moon shining down through the trees, filled the forest with weird shadows, which we were too tired to linger long around the camp-fire and watch. Although this was our first night out, we slept, as one only can sleep, soothed by the soft murmur of running water and the spicy fragrance of the pine.

The next morning we got almost a tin cup full of good, rich cream off our milk. Cream for our coffee, good bread and butter, fried shoulder, cheese, prunes and all the milk we could drink, did not prove a bad breakfast. While we were packing up two men came up the river in a flat-bottomed boat and stopped to talk awhile.

A short distance below our camp we came to the portage around the rapids known as Hell's Gate. This portage is about a mile long, back some distance from the chute through a beautiful bit of forest. We went through a bed of ferns, where many of the fronds were five feet long. By the side of the path we saw where a deer had been dressed, the long hair showing it had been killed in the winter. We were told that three men were fishing at this chute from a canoe, when one of them, desiring to fish from a rock near the shore, had the canoe put alongside the rock, but as he stepped out, he accidentally gave the canoe a slight push; it was caught in the current and carried down the rapids, drowning the occupants.

We had a long rope attached to each canoe and Bennett said they could be let down the next rapids, so we did not look for a portage.

The first part of the rapids we shot, then unloaded and let the canoes down as far as we could with ropes, but the last part had to be carried, and the sharp, loose rocks along the shore made the carrying very difficult and dangerous. To have made the portage around the entire series of rapids would have saved us much trouble and anxiety. The next portage is on the left, but the right shore looked as though we might let the canoes down. Going into a cove on our right we beached the canoes and walked down along the shore to investigate, but the water was too rough. The guides and Bennett came back to take the canoes across the river to the portage, but the Doctor walked on down to the end of the rapids. There were some pieces of baggage that Doctor and I had always carried across the portages, and as they were troublesome for the guides, I thought I would carry them. I picked up our boat cushions, which were also our pillows, a coat, jacket, camera, two fishing rods and a small satchel. When I started they did not seem heavy, and the portage was short, but long before I reached the other end, I had decided that, in order to maintain proper discipline, in the future the family must all keep on the same side of the river.

Bennett had his canoe and all his duffle across and was shooting the last part of the rapids, when he stuck on a rock in the middle of the river. He could not shove the canoe off and stepped out on a rounding knob of rock that was about four inches below the surface of the water. When I came to the end of the portage, he was standing in the middle of the river, holding his canoe by the rope, and the Doctor was standing on the opposite shore.

The swift current made it impossible for Bennett to get into his canoe again; he could not get ashore, for the water on one side of him was six or eight feet deep, and on the other side he could not touch the bottom with his paddle. After several attempts he succeeded in catching a small stone the Doctor threw to him, and tying it to the end of the rope attached to the bow of his canoe, threw it back, and the canoe was drawn ashore, Bennett keeping one of the paddles. He wore low canvas shoes with rubber soles and canvas leggings, fastened with leather strings, which were crossed and re-crossed around his legs. How he could keep his footing on that rounding knob of rock, even in the soft shoes, with the water rushing past him and piling up over his feet, I could not understand, and when he fastened his paddle in the lacing of his legging, got out his pipe, filled it, struck a match, lit his pipe and commenced to smoke, I thought it the height of recklessness and folly. He must have stood there ten minutes before the guides came down and brought him ashore.

We shot the next rapids and came to a clearing where the Great North Road crosses the river. There is a short rapids under the bridge, but the ropes saved us a carry. The river is divided here by Maple Island, which is quite large, diamond-shaped and well wooded. We kept to the right over a pretty stretch of river and camped for dinner at the first bend. The Doctor and Bennett went to a farmhouse for supplies, for we had not carried either potatoes or onions from Burk's Falls, knowing we could get them here. This is the last place on the river where supplies can be procured, unless some of the tourists on Deer Lake are kind enough to accommodate you, but they frequently have trouble getting their own, as all their supplies are brought over from Whitestone. We got a peck of new potatoes, a peck of onions, three dozen roasting ears, one-half dozen cucumbers, pint of vinegar, bucket of sweet milk, and what seemed to be a small watermelon for 75 cents. By the time the foraging party had returned the meat and fish were cooked, the coffee was ready, bread and butter sandwiches were made, which, with sliced cucumbers, we all enjoyed to the utmost of our capacity.

Then came the watermelon, which I was to have the honor of cutting and serving. As I made the first cut, the hungry, expectant look on the faces of those gathered around me was surprising, considering the amount of bread and butter that had so recently disappeared. At the second cut they sat down in a hopeless sort of a way, their elbows on their knees, their heads in their hands.

We had staked our hopes on an over-grown green citron.

"Of all sad words of tongue or pen,
The saddest are these—it might have been."

It was a great disappointment, but we rallied and prepared to move on. Below Maple Island the river seemed to have increased in volume and to have become wilder. Shooting a small rapids we were soon in a narrow river with almost perpendicular walls of rock from twenty to thirty feet high on each side. A fire had run over the surrounding country, leaving nothing but bare, hard rocks, with here and there a skeleton pine, blackened and scarred, still standing, emphasizing the hopeless desolation of the surroundings.

Occasionally we would see a bird of some kind perched on one of these trees, and once a crow followed us a short distance, flying from the top of one dead pine to another, cawing angrily, and an eagle flew over the gorge high above us.

We had been warned about the landing at the first Burnt Chute, and as we neared it the guides paddled along very cautiously, one canoe dropping well behind the other. The portage is on the left and the landing very close to the edge of the falls. We had to keep close to the shore to avoid being caught in the current and carried over. We made the landing without any difficulty and found a rough portage. The path is broad and well cleared, but it is up and down, over little ridges and is almost a mile long. The guides said it was the hardest carry on the river, though there are much longer ones.

The opening through which the water pours into this gorge is not more than fifteen feet wide. The shore on one side is a sheer wall of rock from forty to sixty feet high. The other shore is more broken with great masses of broken rock in the river bed. Below this is a stretch of broad, smooth river, almost a bay, when suddenly the banks close in, leaving a space barely ten feet wide, called the Needle's Eye, through which the water rushes.

There is a fall of four feet at the narrowest part and the river is again broad and smooth. The Needle's Eye is an interesting place. For ages these two points of rock have stood there, resisting all the forces of nature and the current of that mighty river, and have yielded barely ten feet to an apparently irresistible force. The shores, both above and below, are sloping, but at this point the river cuts through a rock standing about twelve feet above its surface. All our duffle was portaged over this rock, but the canoes went through the Needle's Eye attached to threads of rope. As we continued on our way the river became more narrow and the banks were very steep and rough. The roar of water that had slipped over another falls could be heard, and in a short time we reached the landing above the second Burnt Chute.

This chute resembles the one above the Needle's Eye, but is much rougher. It is quite narrow and the banks are almost perpendicular rock, no place less than forty feet high, while the bed of the chute is filled with rocks and boulders. In the middle of the channel lay a boulder, the top of which was about a foot above the surface of the surrounding water. The water from above slipped down and piled up, covering the rock with a smooth sheet of water instead of breaking breaking into foam. Near the end of the portage where we landed were two graves showing that the chute had been taking toll from the crews of river drivers that had dared its waters. These graves had been carefully tended by the men who had taken the spring drive down. They were covered with moss, and ferns were planted around them. We were told there are twenty-two graves on the river.

On the right hand shore, almost opposite the portage, a small stream comes tumbling and dashing down the steep bank in a series of cascades. Sparkling and dancing in the sunlight, it seemed to be in such mad haste to throw its small torrent into the big river. This portage is about a mile long with a bit of winding river below that is exceedingly beautiful. The sloping pine-covered banks threw their shadows on the clear, still water, showing a magnificent reflection. We came upon a party of two ladies and three gentlemen in canoes getting a bucket of water at a spring on the shore. They paddled out to us and gave us a drink of good, cold spring water. One of the ladies said that if we needed bread she could let us have some, but we still had one loaf, and I was conceited enough to think I could bake biscuit in the skillet. Their summer cottage was down the river a short distance, and was a very artistic log house. Below the cottage is a small island in the middle of the river, and a drop of a few feet on each side. We kept to the right and made a short portage along the shore. Bennett landed on the island, and taking out his tent, bedding and provisions, attempted to let his canoe down with the rope. The water was very rough, the channel full of broken rocks, and his canoe capsized. He lost his tin cup and troll, but an old gun he had was still under the thwarts when his canoe was righted. We were now in Deer Lake, and wanted to reach a point beyond Dead Man's Rock, where we knew there was a good camp ground. The lake this evening was wondrously beautiful, its calm surface was dotted with small islands, clothed in pine and silver birch. The sun, well down in the western sky, threw a path of crimson and gold across the lake which seemed to beckon us on.

"And the evening sun descending
Set the clouds on fire with redness,
Burned the broad sky, like a prairie,
Left upon the level water
One long track and trail of splendor,
Down whose stream, as down a river,
Westward, westward, Hiawatha,
Sailed into the fiery sunset,
Sailed into the purple vapors,
Sailed into the dusk of evening."

The golden pathway was irresistible, and we kept on toward the setting sun until the light had died out of the west, and our path was lost in darkness. Then we landed on the first island we reached and put up our tents. Our supper of roasting ears, bacon, bread, butter, cheese and coffee was cooked and eaten under the stars. It rained and was quite stormy during the night, but we slept well and felt perfectly secure in our litttle canvas house.

In the morning we boiled potatoes for breakfast and I baked bread in the skillet, but it was not exactly a success. We intended spending the day on Deer Lake and wanted to reach the river drivers' camp ground, which was well protected, yet afforded a good view of the lake, but the storm clouds were rising in the west, and we did not care to break camp unless the weather cleared.

One of the guides suggested taking a troll and trying to catch a fish for dinner. Soon after they left camp the sky became very threatening, and it commenced to thunder. This put an end to their exploring, and they returned in less than an hour bringing in a five and three-quarter pound wall-eye. Two men in a canoe came to our camp and wanted to buy bread. They said a steam yacht came from Whitestone every day with supplies, but for some reason it had failed to come the day before. There are several summer cottages on the lake, and we saw a few tents. By 10 o'clock the sky cleared, the sun was shining and the gray mantle of fog had lifted from the lake. We loaded our canoes and started to hunt the camp ground. When we saw the round top of Dead Man's Rock, projecting a few inches above the surface of

the water, we knew that the landing we were hunting was just beyond. We found a charming camp ground, about one hundred feet back from the lake, and on quite an elevation. Our tents were pitched on a bench and back of us the ground rose gradually and was well wooded, while the gentle slope in front had been cleared of all but a few of the largest trees. Ferns grew all around our tent, while the fireplace, table and benches were in the center of a clean, cool grass plot. For dinner we had stewed onions, cucumbers, bacon, fish, bread, butter and tea.

One side of the fish was skinned and the firm white meat carefully trimmed off the ribs and put into a skillet of hot bacon fat; then the other side was treated the same way, the white meat never touching water. Fish dressed in this way retains all its delicate flavor. The wind was quite high in the afternoon and evening, so we baked bread and rested. In two quarts of water we cooked a handful of rice and beans with two potatoes and two onions sliced. When these were well done we added eight of our soup tablets, making an excellent soup for supper.

In the evening we went out to troll, and in less than half an hour we hooked and landed a seven and a half pound wall-eye. This fish was dressed, put in a bucket and hung as high up on a pole as we could reach. For breakfast we fried part of the fish and broiled the rest of it in a wire broiler over hot coals. The bread that had been baked in the skillet the day before, was split in two and the inside toasted brown and buttered. This breakfast would have been good at home, but out in the pine forest seated around a rough board table covered with paper napkins, the blue sky overhead and one of the most beautiful lakes in Canada spread out at our feet, with the sunlight dancing upon it, is it any wonder that five people ate a seven and a half pound fish and great pieces of hot buttered toast? Loading our canoes we continued on our way to the west. It was a glorious morning, and we left this picturesque lake with many a longing look.

A. W. C.

The Magnetawan as a Canoe Water.

TORONTO, July 3.—*Editor Forest and Stream:* I noticed the inquiry of Mr. F. L. Brown in a recent number of the FOREST AND STREAM as to the nature of the River Magnetawan, between Ahmic Harbor and Bing Inlet, and as to whether a trip down it would be feasible by canoe or skiff; and as we have an officer at that point, I wrote to him for such information as I thought would be of use to Mr. Brown. I have this moment received his reply, in which he says that "the trip to Bing Inlet can be made by skiff or canoe, but I think a canoe preferable, as there are a number of portages. There are few settlers along the route. Supplies can be procured here (Burk's Falls). He ought to have a guide."

S. T. BASTEDO,
Deputy Commissioner of Fisheries.

The Controversy. I

GOOD men will differ, and it is well.

"If all men thought as I do," said a good old brother, "they would all want my wife."

"And if they all thought as I do," replied his candid neighbor, "no one would have her."

No harm is done by such men as Didymus, Carney, et al, candidly stating their preferences in the matter of sport, for that they are good men and sportsmen we all know. That big game hunting does not appeal to our Nestor is his misfortune, as it loses him some grand sport in reality, and, in addition thereto, delightful enjoyment of the sport of others, as so often thrillingly and interestingly set forth in our sporting journal "par excellence."

Though some of us are, not all of us can be, in the matter of sport, as our Irish friend was about his favorite beverage—"Good whisky! Faith! ut's all good, only some of ut is bhetter thin other."

It is the writer's blessed privilege to enjoy all sport from fishing a doodle bug hole with a straw, to big-game hunting—barring trapshooting at live pigeons—but he has strong preferences.

The man who really does it, even if he is only an amateur in the matter of recounting it, whether it is big or little game he hunts, will interest his brother sportsmen in his adventures. That Didymus pays the writer a compliment—which is believed to be sincere and is highly appreciated—is not due to any literary merit in the articles that have pleased him, for though often writing, I am not a literary man in the true sense, but is due solely to the fact that when telling of a day afield it is the story of a real event, loved but not lost.

How much sport of any kind has there been in Spears' "Walk Down South," and yet when has anything been done by the boys in the woods or on the water that has afforded such universal pleasure as has his most excellent stories. The reason is that we have the action in every line and truth in every incident.

It is the story that drags in the telling, or savors of the article manufactured out of the whole cloth, that we read at and conclude to leave for another day, be it a tale of the .30-30, or the scatter gun; but if the action is good it will go, let the game be big or small. If you never shot a rifle in your life nor hunted big game of any description, you can enjoy a hunt with the man who can really get you out, even after elephants. If you doubt this statement turn back a few months and read any of the articles on big-game hunting contributed by Mr. Carney to FOREST AND STREAM and prove its truth.

Our Nestor enjoyed them, and others of the same kind that we have had from time to time, and is only expressing his disapproval of some of the big-game pipe dreams that occasionally get away from the office cat and into the columns of this high-class publication. He loves to stir the boys up and never means quite all he says, except when arraigning vandals for committing sinful waste of the good things of the field, forest or water, in which noble work may be long continued. This—by the way—is all rather personal, but we old friends can be as personal as we please, "entre nous."

LEWIS HOPKINS.

Smith and Jones.

A Contrast.

SMITH was a man whose motto was: *Time is money.*

Jones was a man whose motto was: *We'll be a long time dead.*

Smith, in order to live up to his motto, set to work systematically to save time. He began by curtailing his hours of slumber. He got up long before breakfast was ready and fussed and fumed because he had to wait. When at length the meal was served, he sat down and bolted it, then seized his hat and rushed for the elevated station. If, after turning the corner, he saw a train approaching, he made an extra spurt in order to catch it. The stairs he took three at a time. But usually he got left. Then panting and exasperated, he would pace up and down the platform swearing at his luck and more especially at the management of the road which did not put on more trains.

On reaching his office, if every clerk was not in his place and everything O. K., he proceeded to work himself into a state of mind, from which he did not recover for half an hour at least. It was suggested by a friend who encountered him on one of these occasions that he smoke a cigar and soothe himself.

"What, sir! Smoke?" exclaimed Smith. "I never smoked a cigar in my life. An idle, wasteful habit, sir."

From 8 o'clock till noon it was one continuous "hustle." He dictated his letters at a gallop—chopping all his English—threw a word to this visitor or to that—darted to the telephone with a "Who's this?" before his mouth was to the receiver—scolded vehemently if there was the least delay—rushed back to his desk, yelling orders to the clerks, then on a sudden thought dashed into the street and went flying in one direction or another—returned out of breath and perspiring, threw off his coat, flung himself into his chair and pitched in once more.

The noon hour he dreaded, for he knew that he must interrupt his labors to eat. Why can't we eat and work at the same time? he would ask himself; or, Why do we have to eat at all? He thought seriously whether it would not be possible to invent some device whereby the stomach could be opened and filled from the side. What a blessing—what a saving of time—that would be! Though obliged to give it up, as far as opening the stomach was concerned, he partially solved the problem by going to a "quick lunch" resort, where he made two bites of a sandwich and a piece of pie and away.

His afternoon was even more strenuous than his morning, and when he arrived home he was fagged out. At dinner he gorged himself to make up for his meager breakfast and lunch, and was stupid as a cow thereafter in consequence. If his wife proposed the theater, or a ball, he would beg to be left alone, and usually was while she went out with "cousin Charlie." For an hour or two he would dawdle over financial reports, or stock market quotations, and then drop off to sleep like a serpent that had swallowed a goat, his slumbers being visited by the most horrible nightmares.

Ten years of this began to tell on him, so at his doctor's imperative order, he took a vacation of a week. (His doctor wanted him to make it a month, but he wouldn't hear of it.) Away he went, therefore, promising himself to leave his business behind, as per prescription, but it was no use. He did nothing but think of it all day and fret and worry and bore himself to death. Whether on water or on land, fishing or golfing, it was all one. What's the good of wasting time with a fool line, or a fool ball? he would say. When his week was up he shouted for sheer joy and returned to harness, vowing that he would never again get out of it.

For the present we will leave him and turn to Jones.

Agreeably to his motto, Jones had evolved a very different scheme of life. When he awoke he did not jump feverishly out of bed, but lay for a while smiling over the recollection of his dreams, or just "soaking," as the schoolboys say; and if, perchance, he closed his eyes again, it didn't at all matter. Breakfast was always at his orders, and he ate the meal deliberately while reading his morning paper. This usually afforded him much occasion for amusement. It was the record of the daily human comedy. After breakfast, instead of rushing to the elevated station to catch a train, he set out leisurely to walk down town. At the office he left the attendance of clerks and all such matters to a trusted subordinate. "I never bother with details," said Jones. Consequently he had a good deal of spare time on his hands, which he employed in talking and laughing with friends who called. He smoked a mild cigar in the morning and another in the afternoon, and once in a while he would leave the office with some bosom friend and come back looking particularly contented and jolly. From which it was argued by peeping Tom, the "wise guy" of the office—but no matter. His lunch he usually spent an hour over, and he always had a soup, a cut of roast or boiled, and a vegetable. In the afternoon he took things dead easy—was out in the open air much, but yet not idle. At 4 o'clock promptly he started for home—again on "shank's mare." Before dinner he bowled for an hour. After that meal, which was as sensible and as sensibly partaken of as his lunch, he read FOREST AND STREAM for a good digestion. Twice a week he went to some play or other amusement with the wife of his bosom (who was never known to indulge in one little nagging word—so true it is that good nature in the husband begetteth good return in the wife). During the other evenings of the week he played whist, or chess (he drew the line at ping pong) or read some breezy works of adventure.

But what Jones did especially was this: Every now and then he went off on a little sporting tour. In the spring he went a-fishing, in the summer he went a-golfing or a-sailing, and in the fall he went a-hunting. Oh, the pleasant hours he spent in contact with nature! What joy it was to play and land a great silvery trout, or make a straight drive, or reef a mainsail in a blow, or stop a partridge on the wing! And what joy to drink in the fresh air, bask in the sun and revel in the manifold beauties of nature! And then what a store of health he was laying in—how his lungs grew deep, his stomach grew strong, his sinews grew supple, his eye grew clear and his skin grew brown and luminous! Talk of the granaries of Egypt! They were not in it with Jones' store. Happy Jones!

Now the reader is to know that Smith and Jones had been boys together, but had drifted apart on the ocean of life. It happened thirty long years ago after this event that the two quondam friends ran across each other. Neither did Smith recognize Jones, nor Jones Smith, but a mere chance discovered them to each other. Smith was being helped into an invalid chair, and Jones, passing at the time and seeing his feebleness, with his usual good nature went to assist the attendant.

"Sir," said Smith, in a weak emasculated voice, "you are very kind. It would give me pleasure to know your name."

"My name is Jones," said Jones.

"Jones, Jones," repeated the invalid, "any relation to the family of that name of Spring Valley?"

"Rather," said Jones, "the worthy Ephraim was my parent."

"Is it possible?" exclaimed the invalid. "But you are surely jesting. Ephraim had no son who could look so young as you."

"Oh," said Jones, "I ain't so young. Fifty next birthday, I guess."

"You don't look forty," said the invalid. And then ruefully: "Do you remember your old comrade, Bill Smith?"

"Why, sure," said Jones. What of him?"

"You see him before you, Sam."

Jones fell back in astonishment. Then he rushed forward and grasped the invalid's hand.

"I'm so sorry," he cried, "to see you like this, Bill. What has done it?"

Smith leaned back in his chair wearily, like a broken man.

"Making a million," he answered, with a sigh.

FRANCIS MOONAN.

Camp-Fire Flickerings from the Miami Valley.

WHO does not love to look back over the receding years and recall to his mind stories of the old days, days when the red hunter pitched his wigwam on the banks of the lonely rivers and the furry and antlered inhabitants roamed at will in the vast forests? Nothing is more enjoyable to me than to draw my chair up to the fireplace and listen to the stories of some old settler. I enjoy the acquaintance of several of these and have collected from them quite a number of amusing sketches of the frontier, a few of which I will now relate.

At one time the early settlers of Dayton, O., were dependent upon the Kentucky settlers for salt. This necessary article was always brought from Kentucky by way of the old Mad River Trail. It was always put up in great bags and carried on the back of a pack horse. The distance from Kentucky to Dayton was sixty miles, and the trip was usually made in two days. The man generally chosen to make the trip was David Pettegrew, and it was from his son that I learned the following laughable incident:

It was his usual custom when stopping for the night to turn the pack horse loose without taking off the packs, but on this particular night he thought he would take the pack off and rearrange it, as it had been persisting all day in slipping off.

The salt was easily gotten off and the pack saddle fixed securely, but when he came to put the bags on again he found that try as he would he could not lift them. Here was a predicament that, trifling as it appeared, was difficult to overcome. Again and again he lifted at the bags, but all to no purpose. They would not budge an inch. Then a happy idea struck him and he proceeded to act upon it at once. Arranging his bags as best he could he peeled a number of sapling, making ropes out of the bark with which he threw and tied his horse securely. He managed to throw the horse so that its back just fitted up to the bags. Then he fastened the bags to the pack saddle and cut the thongs with which the horse was tied. After a few unsuccessful efforts the horse gained his feet, and the difficulty that a few moments before seemed insurmountable, was overcome.

A Beaver Skin for a Smell of Whisky.

One of the chief articles of barter used by the early traders was whisky. The Indian would pay big prices for a drink of "firewater," often neglecting the wants of himself and family to get the coveted article. In fact, a trader who did not carry it could not remain long in the business. The traders knew this and generally tried to accommodate the Indian with all he could drink, but one time a certain party drank all the whisky themselves before the Indian country was reached. They knew what the consequences would be, but their appetite for liquor was too strong to be resisted. Upon reaching the Indian country they realized that they would have serious difficulty in dealing with the redskins, but, nevertheless, they unpacked their goods and attempted to trade without any liquor. Indian after Indian came up with rich packs of fur and everyone uttered a smothered "ugh" and walked away when he found that he could not get "firewater." At length some one hit upon the plan of telling the Indians a monstrous lie. He told them that the man that made the whisky was dead and that no one else knew how to make it, but as they had always liked "firewater" so well, he had saved the flasks in which it had been kept in order that they might at least get a smell of the beloved liquid once more. The traders then insisted that for each smell out of the flask the Indian must give one beaver skin or other skins of equal value. The demands were complied with, and it is said that they carried on a thriving business as long as they remained in the country. It is needless to say, however, that the traders never ventured among those Indians again after the cheat was found out.

A Farm for a Barrel of Whisky.

In the Great Miami valley at one time lived a man named Fox, who was desirous of obtaining a large tract of land. In the same neighborhood also lived a well-to-do man, who had been at one time the owner of a large distillery in Virginia, which was noted for the fine whisky it produced. Upon removing to Ohio the man sold the plant. He found that in the newly settled section into

which he moved, whisky was not only expensive but scarce as well, and none of it suited his taste. The old man longed for some of his own old time liquor. It happened that Fox had a barrel nearly full of this same man's make that had in some way been carried into the wilds. He offered to sell it to the old man and jokingly said that if he hadn't the money to spare his farm would be accepted in its place. Imagine his surprise when the offer was accepted. The farm was quite large, and is now worth thousands of dollars, but whisky was considered far more valuable at that time, especially to a retired whisky maker.

Another Whisky Story.

In order to show how highly "tanglefoot" was valued by the early Buckeye settlers, I will tell another circumstance of a like character. Years ago when Ohio was a howling wilderness a family of settlers emigrated from the East and sought a home in the lonely wilds. Among their possessions were several pigs with which they intended to stock their clearing. They also had with them several jugs of whisky which were carried on a horse's back. As they were journeying along one day the jugs in some way became cracked and the contents began to rapidly leak away. A family council was quickly held and the affair decided. They had no other vessel into which to put it, and so they concluded that the only way was to kill the pigs and convert their skins into a kind of skin bottle. The pigs were almost invaluable to them, but the liquor was more so. As they were obliged to sacrifice one or the other, they decided in favor of the whisky. Their plan was quickly carried out, and in a little while the skins which had formed a covering for the pigs were converted into leather whisky bottles.

A Rattlesnake Story.

We all know that in the early days our river bottoms were only dense swamps and that each spring the country was submerged by the freshets. This caused the pioneers to settle on the high lands bordering the river valleys. This was very inconvenient, for the nearby swamps were the home of fevers and reptiles. That it required real grit to live in those days is shown by the following. Two boys were one day working in a field on the edge of a swamp when one was bitten in the hand by a large rattler. Of course they were badly frightened, but the uninjured one retained his presence of mind and did the only thing he could to save his companion's life. Ordering his friend to lay his hand upon a stump near by he severed it with a well directed blow with an ax. It was a desperate remedy, but it saved his friend's life, as no medical aid was to be had.

The First Cabin Floor in Cincinnati.

In the latter part of the eighteenth century a man named William Vandiveer (the writer's great-grandfather) left his home in Delaware and crossed the mountains to the headwaters of the Ohio River, where he made a flatboat and descended that stream to Cincinnati, where he proposed to make his future home. He erected a cabin out of the lumber of his raft, using the bottom of the boat for his floor. This was the first floored cabin in the "Queen City of the West." Later this man led a party of emigrants to the newly settled hamlet of Dayton. It is also said that this was the first wagon train to arrive in that city. Some years after he built a mill at Franklin on the Great Miami and there did a flourishing business. The old structure stood through the blasts of many a year until the exceedingly high water of the spring of 1898 carried it away.

Such are the many tales of the past that are afloat in the Miami Valley. The Indians, the pioneers and the game have disappeared, but a memory of their deeds will always remain. CLARENCE VANDIVEER.

Natural History.

Tame Ruffed Grouse.

HUDSON, N. Y., July 3.—*Editor Forest and Stream:* Much has been said and written about domesticating the ruffed grouse, and if I remember correctly, Jay Bee came the nearest to it; but for taming this bird, I think that Mrs. M. McKenna is in the lead.

Some two months ago Mr. McKenna said: "Come over and see our tame partridge and get a picture." Then he told me that in the early spring a partridge came near the house (which is in a grove) and they threw out some crumbs, which she picked up, and the next day she came again, and continued to come, and finally came two and three times each day.

One day they noticed the bird looked larger and darker, and on close inspection found that it was not the same bird, but another, which proved to be the cock bird, as both the cock and hen bird came up the next day.

I drove over several times, but she did not come until after I had started for home. I guess she smelt the camera. One afternoon I went prepared, if necessary, to stay all night, and to take a flashlight if she did not come earlier. I sat down to the table for supper about 6:30. About 6:45 they said, "Come." I dropped napkin, supper and all, and started for the cottage, and there sat Mrs. McK. on the door step and the bird was picking up pieces of apple and eating out of her hand.

There were three members of the family present. I stood in a doorway about eight feet from the bird, and at last stepped out. As soon as she saw me she straightened up her neck, with *Twit, twit, twit,* and walked away.

This bird has come into the kitchen while the dog was lying on the floor and several members of the family have been present; has jumped on the window sill and never shown fear. Last Sunday it was very rainy all day, and she came to the house twice and was fed.

Now if the rainy weather does not kill all the young, we shall not be in the least surprised to see this old cock and hen bring their brood up to the house to be fed and warmed by the kitchen stove.

I inclose you a photograph taken by Miss Ella McKenna, which will show for itself. H.

Can the Rattlesnake Poison Itself?

ST. LOUIS, Mo., July 7.—*Editor Forest and Stream:* In describing the capture of a rattlesnake, Coahoma says: "In his contortions in the effort to get away, the fangs were forced into the snake's lower jaw, so as to produce a free flow of blood, but he did not appear to suffer any harm from his self-inflicted wounds. This is a mystery, as it seems to be a well-attested fact that the injection of a snake's venom into its own veins is fatal to him."

There is a conflict of authorities on this point. Miss Hopley, in her book on "Snakes," quotes Dr. E. Nicholson, of Madras, to the effect that venomous serpents can, and sometimes do, kill themselves with their own venom. She says that the keeper of the reptile house of the London Zoological Garden has known poisonous snakes to die from bites inflicted by others of their own species. Yet she cites other instances to the contrary.

Dr. Weir Mitchell, who is our best authority on the

MRS. M'KENNA'S TAME GROUSE.

venom of American snakes, says positively: "The deadly apothecary does not succumb to his own drugs. I have over and over injected under the skin of a rattlesnake its own venom, or that of a moccasin, or of another crotalus, but in no case have I seen a death result."

Not long ago I saw a large rattlesnake that, after being wounded by a stone thrown by one of our party, struck its fangs so deeply into its body that we had trouble in extricating them. The snake's back was broken by the stone, but it lived half a day, and its death, so far as we could judge, resulted from the broken back alone. There was no swelling where it had struck itself.

Can any of your readers give me details of a case of snake bite treated by hypodermic injection of a saturated solution of potassium permanganate, as recommended by Weir Mitchell? I have carried the apparatus for such treatment, but, fortunately, have had no occasion to use it. It was recently swept overboard, with my other duffle, in a skiff wreck on the Mississippi.

HORACE KEPHART.

The Bobolink's Song.

WE have had two versions by Mr. Charles Hallock of the bobolink's song. Mr. H. H. Thompson sends this to Mr. Hallock as another version:

"John Gillet, John Gillet, scour the kettle, scour the kettle; scour it clean."

HARTFORD, Mich.—*Editor Forest and Stream:* Inclosed please find a good rendition of the bobolink's song, clipped from our paper. SULLIVAN COOK.

Weary of the palaver of the politicians, suppose you go up on Belle Isle any bright day and listen to the bobolinks.

This is the month of the bobolink, and as he breasts the wind and darts over the green fields, Bob sings a riotous song, which, by the way, he stole from the robin, the field sparrow, the little wren and others, too, breathing into the fragments the very essence of summer time.

Swarms of warblers dart and dip carrying their glad cries through the deep green woods, but Bob pipes as though specially commissioned to outdo, in sweetness at least, if not in variety, all the woodland songsters.

Many critics regard him as the finest singer that comes to Michigan. Perhaps he says, in his impish way:

My wife! My wife!
I sing to you!
Mrs. Link! Mrs. Link!
Mrs. Bob-o-Link!
Queen! Queen!
June's here! June's here!
Let's frolic over the wheat!

This free translation is the best the writer could make, but if you try to put in words the spirit of another of his outbursts, you find yourself watching him as he swings on a tuft of tall grass, and imagine that he is saying something like this:

Blubber-dubber-snipper-snapper-snee!
Mrs. Link, to thee! To thee!
Fe-fi-fofum-fee!
Snicker-a-mar-ee!

Bob's as black as tar, except for his white collar and white cap, and his wings are shaded with fine golden seams. He's a plump, saucy beauty who sometimes sings:

Single! Twingle Kerdingle!
I rise! I rise!
To the skies! The skies!

Up, up he goes, over the open meadow, all green like a wavy sea; the sunlight sparkles on the dewy grasses and the rapturous song makes rare music for tired city ears.

Poor Bob! His fate, alas, is shared by many human beings. In the springtime of life he offers every promise of a happy, successful career, but as time passes, he grows lazier and lazier, and finally flies to the rice fields of South Carolina, where he makes a living without any trouble whatsoever, becoming more and more confirmed in his indolence, until along comes the gunners and bring him to the ground.

In the market he masquerades as a plump reed bird. Perhaps he died in time, for long before that, his once musical voice degenerated into a sorry croak. Good fortune proved too much for him, and when he found the rice fields so rich for the mere plundering, he even forgot to practice his notes and his last glory was soon gone. The precious imp of the Michigan fields become the fat dumpling of the rice fields; and that's the last of our Bob whose riotous song was the envy of all the Michigan woodland.

Alexander Dumas on Snakes.

From the Page.

WHEN M. de Villemessant was founding Le Grand Journal he wrote to Dumas asking for his assistance. Dumas at once prepared a romance in six volumes. In the meantime the editor asked him for some articles or causeries which were to be published immediately. "I have the very thing!" cried Dumas. "I was just about to start on a whole series about snakes." "On snakes?" "Yes. I have the entire subject at my fingers' ends. I spent half my life studying them. There's not a soul who knows anything about the dear, interesting little creatures. You will find it will be a great success—this article." The editor, half-convinced, agreed to accept this article "on snakes," saying to himself: "After all, Dumas is very likely to hit on something effective." "If you want a little cash in advance, you can draw on me." "I have plenty," said Dumas, "for the first time in my life, I confess; but still, I really have enough." They parted, and the editor returned to his office. On arriving there he found Alexandre's secretary waiting for him with the following paper ready signed: "Received the sum of fifteen napoleons on account of my story. A hearty squeeze of the hand. A. D." The next day the secretary arrived with the first *feuilleton,* and a letter which ran: "My dear friend: Be kind enough to hand the bearer the sum of nine napoleons. A. D." The very same evening came a dispatch from Havre: "On receipt of this please send twenty napoleons to my lodging at Frascati. A thousand thanks. A. D." An hour later came another: "My Dear Boy: I should have said thirty, not twenty, naps. You are my best friend. The *feuilleton* is on the road. A. Dumas."

The finale of this capital story is no less characteristic. The *feuilleton* arrived by post the following day, and was found to contain exactly four lines of Dumas' composition—two at the beginning and two at the end of the paper. Thus it ran: "I copy from my good friend, Dr. Revoil, the following particulars about snakes." Then came a long essay on that subject, all copied out in his own neat handwriting, and closed by this original remark: "In my next I will deal with the boa constrictor, the most curious of all the snakes."

The Opossum as a Chicken Thief.

HYDE PARK, Mass., June 17.—In answer to a request for information a few weeks since in FOREST AND STREAM, as to whether or no opossums would kill chickens, I would say, though I have no actual proof, I think I have enough evidence against "Bro' 'Possum" to justify a poultry raiser in considering him a suspicious character.

In Seffner, Fla., in March of this year, I killed two opossums near a hen yard owned by a friend, who had, a week or two before that, killed one inside the same inclosure.

To-day I have received a letter from a young son of the friend mentioned above. In it he says: "One night a 'possum came and broke into the coop and took thirty chickens." They had about one hundred chickens hatched in March, and as many more in April.

MARK E. NOBLE.

Ducks Breeding in New York.

WATERTOWN, Jefferson County, N. Y.—*Editor Forest and Stream:* Reports from different parts of the county show that ducks are nesting here in large numbers. Geo. E. Bull, of Rural Hill, reports five pairs of wood ducks and a pair of Canada geese nesting near his place. Reports from Perch Lake and the lakes around Theresa and Redwood, show an unusually large number of wood duck, mallard, black duck and teal. Even along our lake front and the St. Lawrence River, where we met the greatest opposition, the sportsmen are reconciled, claiming that they had the best shooting last fall that they ever had, and that the ducks bred there last year, and that more ducks are staying here this year than last.

W. H. TALLETT.

A Huntsman's Grave.

MORE than a touch of old-world romance was displayed at the funeral, the other day, of Prince Albert of Sachsen-Altenburg. After the service at the church of Serrahn the coffin was placed on a hearse, and the procession went slowly toward the forest, where, in accordance with the last wishes of the Prince, a so-called huntsman's grave had been dug under an old beech tree. When the mourners were all assembled the lid was taken from the coffin, and the body, wrapped in a white satin shroud covered with fir twigs, was taken out and placed in the grave, which was four yards deep and lined with green boughs. Then the prayers of the dead were said, the grave was filled with earth, and a simple white wooden cross was planted on the mound as the only sign of the spot where the forest-lover's dust had been given back to the dust.—**Westminster Review.**

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

On the Meadows.

"While sitting in my blind alone,
Just watching my decoys,
I feel the subtle ecstasy
Of all a hunter's joys;
All careless of the world's affairs,
Nor to its ways inclined,
I envy not a soul on earth,
While sitting in the blind."

F. C. RIEHL.

Whoever has heard the shrill whistle of the yellow-leg, when, when-when-when, and seen the noisy sociable birds come circling down from the clouds in response to a skillful imitation of their own call; has watched them jostle and hurry their companions in their efforts to join the delusive flock of decoys, so peacefully standing in the meadow pond, and then, alas, yielding to the aboriginal instinct that all possess, has raised up and poured the contents of both barrels into the unsuspecting ranks, well he knows by the sweet joy of experience the sport snipe shooting affords.

When the breezes of August are sweeping in from old ocean, bringing comfort and coolness with them, the wanderer by the bay-side will see flocks of little snipe, the oxeye and teeter-rail, running busily along the beach, now hastening after the receding wave that has laid bare a tempting morsel, then scurrying back, pursued by a dangerous billow that threatens to overwhelm them; piping a shrill little note of welcome to the straggler off in the distance, and if the observer approaches too closely, rising on wings that seem ridiculouly out of proportion to their diminutive bodies, and flying away from the unwelcome intruder, alighting again maybe a hundreds yards up the beach, where they once more resume their interrupted feast.

Presently a flock of blackbreasts will swing past, bound for a distant sandbar from which the tide has fallen, giving note to a sweet, wailing whistle, easy to imitate, but difficult to illustrate or describe with the pen. Great plump fellows, these, fattened by many an unlucky shrimp, sand worm or some other small marine creature that forms their daily, if not hourly, diet, for the blackbreasted plover is a voracious bird, seldom if ever neglecting the opportunity of securing some choice morsel, such as are found on the flats or sandbars of the bays.

Then, if the stroller leaves the bay-side and continues his course across the meadows, he will hear the clear whistle of the yellow-leg calling from his feeding place by the edge of some shallow pond to a companion just discernible among the clouds, and as he slowly descends, his answering whistle drifts to the earth and is once more replied to by the relative in the pond.

'Twas in the early fall, not so many years ago, that one of the largest flights of snipe, particularly large and small yellow-legs, that had ever flown along old Long Island's sea-girt shore, was welcomed by sportsmen from Coney Island to Montauk Point. When the tidings of this wonderful flight reached my ears, business was forgotten, the catboat hastily provisioned, gunning box, shells, gun and all the other paraphernalia necessary for comfort shipped, and the staunch little craft was headed across the bay for an island in the center of which lay a most attractive pond, surrounded by the salt meadows.

The day's flight was over when I reached my objective point, a little cove in the island, where the anchor was thrown overboard for the night; only a few of those nocturnal wanderers, quawks, were swinging in clumsy flight across the meadows, breaking the silence with their harsh cries, while off in the distance the bright beacon of the Fire Island light glimmered cheerfully. Lulled to sleep by the ceaseless beat of the surf upon the beach and the gentle rocking of the boat, I slept the sleep of the bayman, calm and deep, refreshing to both body and mind.

Before daybreak I was awakened by the weird, noisy screeching of the gulls, and hastened to prepare the morning meal, which was finished with the utmost dispatch, and then, equipped with long rubber boots, a gunning coat and cap of brown canvas and a heavy sweater—for the mornings have a sharp, penetrating chill which made thick clothing indispensable—with gun, decoys and bag of shells deposited in the bottom of my sharpie, and gunning box in tow, I pushed off for the island. Upon reaching it, I pulled the sharpie up in the sedge beyond reach of the tide and proceeded to drag the box to the edge of the pond, where it was nicely hidden in a tall bunch of grass. Then I set out the decoys, forty of them, all painted and shaped in close imitation of the yellow-leg, in front of the box, and in the shallow waters of the pond. How natural they looked in the dim morning light, with heads all pointing to windward and some tilted at an angle suggestive of feeding, No wonder they fool the live birds. Why, I declare! If I hadn't put that one in that bunch of grass not over three minutes ago I would not believe it was anything but the genuine article.

Hark! What was that sound I heard off in the east? There it is again! A faint whistle—when-when! Yellow-legs sure enough.

I scurried back to the box, and pulling out a couple of shells from the hundred odd that swelled the canvas bag, I jammed them into the gun and then stretched at full length on the hay that covered the bottom of that coffin-shaped creation, built of the lightest wood for convenience in dragging it across the meadows, and dignified by the name gunning box.

For a moment I lay there, then, so close that I was startled into the belief that the bird was in the stool, I once more heard the shrill whistle, thrice repeated. Peeping over the edge of the box, I saw the fellow that had so disturbed my equanimity, not in the stool, but winging his way in easy circles from the heights above.

When, when-when-when, I whistled, with a longing accent that was seemingly not lost by the unsuspecting object of my solicitude. With an answering note, he set his graceful wings and came scaling into the stool.

Just a moment, and then came my time. When those yellow-tinged legs were outstretched in preparation for alighting, I rose in the box, gun to shoulder and eye glancing along the rib. Then that indefinable something that tells the shooter when his weapon is pointed at the proper spot, whispered in my ear, and the ready finger pressed the trigger.

Too late, old fellow. That upward jump was not speedy enough, the No. 10s did their work cleanly, and the first bird of the day lay on his back in the water, rising and falling on the little ripples, caused by the freshening breeze.

Old Sol was now peeping at me over the sand dunes of the nearby beach, and as I waded out to pick up the dead bird I thought I could see a smile of approval on his somewhat dim but rapidly brightening countenance.

How the snipe flew that day! The little sixteen was never idle, and my heap of game gave abundant evidence of its prowess. Flock after flock of yellow-legs swung into the stool and paid toll for their hardihood. A belated blackbreast, hastening after a flock of relatives that had gone before, came scaling over the decoys, but before the smoky haze cleared away, a resounding splash told of another victim.

Misses were by no means scarce, but they, too, were to be expected, for the man that always kills was not lying in the box, only a chap who was perfectly satisfied with an average three of five.

Off in the distance I heard the pill-will-willet, pill-will-willet of the bird whose whistle proclaims his name, and presently, against the blue sky, four specks, rapidly growing larger, caught my expectant eye.

Get down, old man! The sight of your hat brim would alarm these sharp-eyed tattlers, wary and wise in the tricks of man. Flat on your back in the box, and wait! Just one calling whistle. That's sufficient. They see the painted imitations of their species, and on tireless wings fly easily over the meadows, low down and headed directly at the pond.

What! Not coming! For the leader suddenly shoots into the air, closely followed by his three companions.

Keep still! If that restive head had not bobbed up so prominently they would have surely stooled. Now they mount higher and higher until they look like mere dots against the background of fleecy clouds.

Where is that little lead whistle that every snipe shooter should carry? Oh, yes! Just where it always is, snugly resting in the pocket close up to the collar of the coat.

A clear call, twice repeated, and an answer floats down from the heights above. Once more it is sounded, and the little dots, seemingly an infinite distance away, begin slowly circling, gradually increasing their orbit, until once more the varying colors of their plumage may be distinguished—the buff and white that marks this visitor to our coasts.

Stretch out on the hay and stay there, grasping the gun with eager hands and longing, but hardly daring, to peep at the near-by game.

Suddenly there is the whir of swiftly moving wings, and over the box flash four shadowy somethings that a moment later proclaim their reality by splashing down in the water among the stools. There they are, with heads upraised, alarmed at their own daring, and seemingly about to leave the suspicious looking spot.

Take that one just in the act of rising. Good! He's down! Quick! And a sharp report sounds the death knell of two others not a foot apart and just clear of the water.

No use hurrying to get another shell in, my dear boy, the survivor is already a hundred yards away and raipdly increasing the distance between him and the deceiving decoys. Retrieve the three lying in the water and get back to the box, for a faint whistle warns you of the approach of the other game. And the three willet, the largest birds of the snipe family that fly along our coast, were added to the pile lying in the foot of the gunning box.

And so it went, with only a short intermission at midday; snipe constantly in sight, flying in flocks, large and small, across the salty meadows, while to the east and west there sounded the faint reports of guns. Evidently I was not the only one enjoying the pleasure provided by the migrating birds.

The sun had long been down before I gathered up my decoys and returned to the boat, happy and contented with such a bag as I have often dreamt about, but never thought would have the good fortune to secure. Oft-times I have been out and come back without putting my gun to shoulder, but to-day my shell bag was empty and my shoulder aching from the continuous shooting.

As I mused the words of a poem straggled through my brain:

"In spite of all the boomin', it will never seem the same;
And the devil take a country that hasn't any game."

Terse and to the point, somewhat forcible in its declaration, but agreeing perfectly with a sportsman's views, for what would a country be where game was not an existing reality, and the gun lay idle year after year, not wearing, but rusting out? F. ARTHUR PARTRIDGE.

Connecticut Quail and Deer.

ESSEX, Conn., July 10.—*Editor Forest and Stream:* It is quite a good sign of the times to mark that the Bob White in this locality are more plentiful than they have been for years. My father, a man of fifty-six, says he never knew them to be thicker, and this seems to be the verdict of all those who take an interest in this most desirable game bird.

I am pleased to state, too, that deer are also on the increase. Although I have never had the pleasure of seeing one in a wild state, several of my friends, whose word is authentic, have. Only this morning one was seen by Earl Stannard while he was on his way from Westbrook to this place.

Let us hope that the laws pertaining to the welfare of our game may be rigidly enforced, and that in a few years we may have a veritable sportsmen's paradise in this thickly settled State of Connecticut.

GEORGE W. COMSTOCK.

More Rifle Talk.

SPRAGGE, Ont., June 30.—*Editor Forest and Stream:* I have been a reader of your most interesting paper for many years and am always especially attracted by the articles which appear in it from time to time anent guns and rifles. When I first became a subscriber—years ago—the controversy was "Muzzle versus Breech." Then a strong agitation was started in favor of a repeater with a stronger action and shooting heavier charges than then employed (my .45-85 Bullard is now in a gunsmith's shop for sale), and when the manufacturers acceded to this: Behold the era of smokeless powder and small caliber! Then it was black powder versus smokeless, the advocates of the former, dilating on the danger of the extreme range of the bullets projected by the latter, the slight effect in shocking power possessed by full-mantled ones, and the mangled condition of the game hit by the soft-nose!

Now, the cry is for wider calibers and more powder—smokeless, of course. It may surprise some of your readers to learn that such rifles have been made in England, now for at least two years, in double and single barrels. The former weighs from 10 pounds 12 ounces to 12 pounds, and the latter from 9 pounds up. The caliber is .45, and the charge 70 grains Cordite, or an equivalent of Rifleite.

However, for my part, I cannot see any inducement for American arms companies to make these hand-cannon. They would have a very small sale, as their only use would be in the hands of the comparatively few individuals who hunt moose and grizzly bear, and they, as a rule, can afford to pay the price of the imported article.

As to what really constitutes the best rifle for moose, it must to a great extent depend upon the physique of the hunter. One man can carry ten or eleven pounds around all day without more effort than another can six or seven. Were the latter to invest in a heavy rifle, he would find that, perhaps, when after a long tramp he had come upon his game, his tired muscles would fail him as he put his gun to his shoulder, and the muzzle would wobble to such an extent that the bullet would fly far wide of the mark, and consequently the "knock down and stay down" qualities of that particular weapon would be of no avail; while with one suited to his strength, although of much less power, he would have been able to score a hit, and if a repeater, have the power to send in several more if necessary, and so make a kill.

To me it seems immaterial whether one bags his game at one shot or with four! Certainly, it is much more satisfactory to kill cleanly; but when a man has a repeater, the temptation to keep on shooting, so long as his game is up and getting away, is irresistible, and I fancy that many of the accounts of the killing of moose, in which we read—"It took four shots to down him, etc.," are simply from this reason. Not that the first shot was not a fatal one, but having others in reserve, they were also fired.

For myself, I am what most of your readers would call a gun crank. I have a passion for collecting firearms, not old ones for curios, but the newest things out, and when I cannot shoot at the things which walk and fly—and by these I mean those classed as game, and most assuredly nothing else—I take a lot of solid satisfaction in targeting my rifles, moving the sights until they are exactly fitted for me.

When I cannot even do that, I take a delight in rubbing them up and handling them.

Now, in this collection I have four rifles, any one of which I think a man could not be far wrong with if he took it after moose. One, an 8-m. Mannlicher, light, quickly loaded, of extreme accuracy and throwing a bullet with tremendous force; another, a .45-70 extra light, take down, Winchester. This rifle is sighted for smokeless powder, and while I cannot do the shooting with it I can with the others, it is accurate enough for big game and strikes with force. The recoil is wonderfully light for weight of rifle, considering the load it shoots.

My next is one of the new Winchester .32's. It is one of the most accurate weapons I ever put to my shoulder and an extremely pleasant rifle to shoot. I had it only sighted for smokeless powder, as what is the use of being able to use also the .32-40 black powder cartridge? It is too powerful for small game, such as squirrels, partridge, etc., and it is only for these that light charges are required. In this respect an "adaptor," such as is used in England, is the only practical way to use small charges for small game. This is a sort of false chamber which fits into the breech of rifle, and which is itself chambered for a short cartridge, taking a bullet same size as the service one (I mean, of course, in diameter) but light, and driven by only a few grains of smokeless. The adaptor slips into and out of chamber easily, and up to its limited range the cartridge is very accurate.

My last big-game gun is, I think, the most perfect all 'round weapon one can get. It is a double-barrel hammerless by Greener, barrels 26 inches long, made of wrought steel. The right barrel is rifled and shoots the .303 British service cartridge, and the left is what Greener calls a "rifle choke" of 20 bore. No groovings are at all visible. It shoots shot beautifully, and with round ball is accurate up to 150 yards. Its weight is just 7½ pounds.

I have never, so far, had an opportunity to use it on big game, but have no fear of failure on its part when the time comes. That .303 cartridge is a very powerful one, and when one of those 20-bore bullets strikes a moose it is bound to make a hole.

For balance, workmanship and general handiness it is superior to any repeater I have yet seen.

Can any of your readers tell me their experience with one of the "Lee straight pull" rifles, caliber .236?

I have one—a beauty—made to order by the Winchester people, but so far as shooting is concerned its bullets appear to have a positive aversion to be seen in each other's neighborhood! It may be my fault, but I doubt it, owing to the fact of being able to do tolerably well with the other rifles. However, I would be obliged if someone who has used one, on game preferably, would state what it can do.

The high front sight is, in any case, a drawback. Why cannot the manufacturers get the height in front by angling up to it gradually, as is done in foreign rifles, instead of sticking up an unsupported barn door?

Expense, I suppose—but the few dollars extra it would cost would, I am sure, be gladly paid by the satisfied sportsman, and so many Mausers, Mannlichers, et al, would not be sold as now.

ALERT.

Concerning Thrills.

Editor Forest and Stream:

I HAVE been very much interested in several articles by Didymus. He talks right. He seems to be my kind of a gentleman sportsman, not sporting man, though he may be that also. It would not be anything against him. I never killed an elk or moorse, but I trapped it some time in the northern wilds of Wisconsin in the 50's and lived on the product of my gun, killing many deer, wolves and wildcats, sometimes because I had to. But for genuine sport—by sport I mean following out the instincts of a true sportsman—give me a good dog and the stubble or variegated field. There is something grand in following and watching the movements of an educated dog. As you start out of a brisk autumn morning, your dog is away off, in the exuberance of his freedom. How he ranges back and forth, back to you and then away almost like an Antonio, his bright eyes turning to you at every turn. Let him go. He will be all right anon, after he has run off the excitement of this his first outing of the season. You cross that rail fence, the top rail just tinged with the first white frost. As you step carefully over you see Carlo rigid as one of the fence posts. As you very gingerly step up and gently nudge him with your knee or step before him and make a clean double, and you gather in your back pocket a brace of long bills or quail, could the satisfaction be excelled if you had slaughtered a lordly moose or elk? Or, say, you have climbed the mountain side and tracked the royal grouse to his lair and have made a successful bag of, say five out of eight or ten shots; is not that exceedingly happy? You follow moose day after day, in all sorts of weather, and far from camp get a shot, and perhaps you get your quarry. A long tote through the swales and brush—is it fun? Not for the undersigned. As for shooting deer I had just as leave for the fun of the thing go out in a barn yard and shoot down a calf.

My first deer I shot in the Adirondacks—it then was called John Brown's tract—in 1850. We camped under a brush shanty about sun down at the "Old Forge"; and when we awakened in the morning there was a mist or fog hanging over the water in our front. Upon looking over the lily pads of the bayou or bay we discovered seven deer belly deep in the shallow water. I had my pick and dropped a three-year-old buck. I felt good of course, better than I have felt since in knocking over a deer. But was that sport? I can understand the enthusiasm and true sporting element in President Roosevelt's manner in his pursuit of the cougar or California lion. That is game worth while, and the slaughter of which is a benefit to the country at large. That is all right for the President and Prof. Bobo and those that can afford it; but for an old 'un of three score and ten and who has seen some life, give me a breechloader and a good dog among the Bob Whites on the timber doodles. There are certain thrills—thrills I may call them—that come over a shooter or small game that do not fit or find one of the heavier kind. I can fully appreciate Didymus' good luck in his unexpected three woodcock and three grouse. That was good. He had twelve different thrills.

To stop a lordly grouse as he essays to climb the tree tops is great; and as one hears the thud, thud of the beating wings on the leaves, he feels a thrill, and as he gathers in the magnificent bird and smoothes down the glassy feathers of the plump breast, ere he puts it away in the pocket of his shooting coat there is another and very satisfactory thrill. Dou you get that on a deer hunt? The last deer I shot was up in Warren County, N. Y., in '60—a nice buck. I had a flying crack at him about 4 o'clock P. M. on a January day. But I only paunched him too far back. I foolishly followed him too fast, not giving him time to lie down and get stiff before I jumped him again. It was 11 o'clock of a moonlight night before I was able to give him the coup de grace, and I was twelve miles from home. I gralloched him and in a few minutes had his heart broiling, and it was good. With a withe in his nose or under jaw, I drew him home on the snow, through those old woods, through brush, over logs, up hill and down dale. Was that fun and did I thrill? Not much. Well, hardly. No, Didymus and I are agreed, emphatically, notwithstanding Dr. Ambler's able and plausible article. He may be one extreme while Didymus and Jacobstaff are the other.

I like these talks of brother sportsmen in FOREST AND STREAM—the sportsmen's journal of the world. They are a kind of a bond that keeps alive and up to date some of us "old 'uns" whose rifles or breechloaders hang upon the wall to be taken down, perhaps, no more.

Give us some more.

JACOBSTAFF.

A Revolutionary Arm.

RECENTLY the Goshen News-Times, an Indiana paper, told its readers, as a bit of local news, that "Harry Toms, living near Benton, was in town Wednesday with a genuine old flintlock musket bearing the date of 1807." Not satisfied with adding that the gun was still in an excellent state of preservation, the paper went on to say that the gun was carried through the Revolutionary War by Harry Toms, the great-grandfather of its present owner. The Milford Mail noticed the paragraph and asked, as a matter of information, if the News-Times would "explain how a man could carry through the Revolutionary War a musket made in 1807." It is not recorded what the News-Times man said when he read this comment, nor how he will reconcile the discrepancy in dates.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A Week on the Upper Sacramento.

MY vacations are spent in fishing, and I have enjoyed a very pleasant outing at La Moine, Shasta county, Cal. This point is in its infancy as an angling resort, but cannot fail to be appreciated when once visited. The Sacramento River is within two minutes' walk of the house, and Slate Creek is right at the door. Mr. Clifford Coggins, the genial landlord, welcomes you most heartily and makes you feel immediately at home. The accommodations are of the best, and here one appreciates what is hard to find at the majority of resorts; namely, a square meal after the evening fish.

The fishing on the Sacramento River, like most Western streams is best in the morning from 7 to 10 o'clock, and in the evening from 4:30 until dark. Through the heat of the day, the trout will rarely rise to a fly, they will frequently, however, take a spoon or spinner, but the average angler is satisfied with the morning and evening sport. Bait is never used when the flies are on. However, I will relate a little amusing occurrence which greatly tickled my friend Sam. Heller and me. The second day after our arrival a young banker from Woodland alighted from the morning train, but by some accident his baggage had miscarried. Now he certainly was an ardent angler, "would sooner fish than eat," and after a brief introduction by Missouri Tom, his guide, the banker was desirous of at once starting out, but he was minus his tackle. He was soon accommodated in this respect, and a careful selection of flies was added, but he still looked anxious. Suddenly he exclaimed, "Have you a bug or a worm? I am completely lost without my baggage." He evidently had bugs and worms in his valise, but Missouri Tom solemnly swore that he fished exclusively with a fly, and was much disgusted with the banker's request. Unfortunately for the Woodland swain, we could not accommodate him, and he had to wait for his bug or a worm. He was off bright and early next morning for a pool two miles up the river, where he succeeded in landing some good-sized fish with his bait.

Great sport was had by Sam. Heller and myself every day of our stay; the trout averaged from a quarter of a pound to one and a half pounds, with an occasional salmon.

It is a curious fact, noticed probably by most anglers, that no matter at what resort he may be putting up, he invariably conceives the idea that the fishing cannot possibly be good so near "to home," and so he hies himself off either one or two miles above or below, and feels that he has been rewarded by his forethought when he returns with a full creel. Still, were he to drop down to the stream in front of the hotel any evening, he would be surprised how many fish he would pick up. Good fishing is to be had on the Upper Sacramento in June, July, August and September. Slate Creek is an ideal mountain stream well stocked with trout, which, however, do not average as large as in the river, but a good day's sport can be had by the angler, who is an adept at getting over bluffs, rocks, etc.; the creek, however, can be easily waded in July, August and September, and good results had.

The successful flies on the upper Sacramento River are gray-hackle (red body, silver tinsel), grizzly-king, professor, brown-hackle (yellow body) and royal-coachman. A good cast for evening, gray-hackle (red body), tail fly; professor, middle dropper, and royal-coachman, dropper, keeping the dropper fly a few inches out of the water.

JAMES WATT.

SAN FRANCISCO, July 8.

Random Notes of an Angler.

Relating to the Black Bass.

THAT the black bass is the chief game fish of America there can be no question.

It is more widely diffused than any other fish, and the hosts of anglers who follow it almost exclusively vastly outnumber all the trout and salmon fishermen combined. Indeed, so many are there who depend on the bass for sport that Dr. Henshall has been led to say that "The number of black bass anglers at the present day may be reckoned by thousands, where trout fishers are counted by hundreds, and salmon fishers by scores."

It is distinctively the American game fish, being found in Canada and in nearly all the States of the Union, and its merits are now well known in Europe, it having been transplanted in the British Isles and in France, Germany and other continental countries.

No matter where the angler casts his line, either in northern, western or southern waters, he finds the bass the same grand, indomitable fighter, and whether it is the 3 or 4-pound "small-mouthed," such as is found most commonly in our northern waters, or the 15 or 20-pound "large-mouthed" that is taken in the Gulf States, the sport derived from its capture before it is brought to creel is, in the opinion of many anglers, hardly excelled by that from any other fish.

Both species are taken in northern waters, but the "large-mouth" never attains in them the great size to which it grows in the Gulf States.

The small-mouthed bass which is, I believe not found in the South, never reaches such great weight as does the other, but inch for inch and pound for pound, it is the gamiest fish that swims.

The black bass in the North seems to prefer small lakes and slowly moving streams in which the water is fairly clear and cool, to larger bodies of water which are warmer and less limpid.

There are many thousands of lakes ranging in area from 20 to 100 or more acres scattered through the country which furnish ideal abiding places for this fish, and so far as my observation has gone the better the water is the more plucky fighters are the bass that inhabit them.

A single example will suffice to show that this is the case. I was fishing in one of the small lakes which abound in Plymouth County, Massachusetts. Its water was clear and free from sediment, and the bottom and shores were of sand and fine pebbles and gravel. It was as perfect a bit of water as one could ask for, and the bass responded to my lures most generously. I never saw fish more gamy, every one that was hooked being full of fight until the landing net was brought into requistion.

Wild dashes of ten or fifteen yards was the rule, and every fish leaped most vigorously above the surface, and often two or three times in succession.

They made a handsome catch of fifteen fish which averaged about 1¾ pounds in weight. Later in the same day we fished another pond which was well known for the abundance of bass it contained, and caught nine, which were of about the same size as the others; but they did not show any pluck whatever; they gave a dogged resistance to the pull of the line, it is true, but it was not the kind of a fight a bass usually puts up; not one of them made a run of more than 6 or 8 feet, and but one or two leaped above the surface of the water. The pond was about one-half as large as the other, and its water was warm and full of sediment, the shores and bottom were almost entirely of mud, and flags, lily pads and sedges were scattered abundantly through it. It was an ideal pickerel pond, but it was illy adapted to the black bass.

Time and again have I had similar experiences. I know it will be said that the gamy fighters were "smallmouths," while the more sluggish ones were of the other variety, but such was not the case; they were all of the first-named variety, there being none of the others in that vicinity. No, the difference in temperament was owing solely to the difference in the waters.

As to Rods.

I suppose that every bass fisherman has had "troubles of his own" through using unsuitable rods. I have always contended that an angler obtains proportionally the best sport with the lightest rod and tackle available to him. That is to say, a 5-pound trout landed with a four-ounce rod gives much better sport than it would if an eight-ounce rod were used. Times without number have I witnessed magnificent work done with a delicate little split bamboo rod, such as an old-time fisherman would declare to be too flimsy to kill a fingerling trout, and there are many instances recorded of the success which follows the use of one of these little rods.

Archibald Mitchell, in discussing this topic, says: "During the past season a salmon was killed on a Canadian river with a split bamboo rod 9 feet long and weighing only four and one-eighth ounces. The reel used was a plain rubber click reel with 80 yards of fine trout line. The fish weighed 23½ pounds, which is a trifle over ninety times the weight of the rod, and it was gaffed in exactly 27½ minutes from the time it took the fly. This was accomplished on a part of the river where there is a strong current, and at the same place where half an hour has frequently been spent in killing a fish on a regular salmon rod weighing 27 ounces, no heavier and no gamier than the one killed on the feather-weight trout rod." * * * The steady, never-let-up strain that clings is the one that soonest discourages and tires out the fish, and it was surprising how soon the big salmon began to weaken under the steady strain of the little rod."

But—and there always seems to be a qualification to every assertion one makes in relation to angling—although I love to use the small rod with trout, I have, in black bass fishing, come to using a rod of not less then seven ounces in weight. There is so much of real "rough and tumble" in a fight with one of these fish that a very light rod seems to be rather a poor dependence. Beside this, one needs something more than a mere fly-rod, for when he is at a stated time fishing, with a bait and sinker, anon is trolling with a spinning minnow or spoon, and later is casting the fly, all, perhaps, within an hour's time, he manifestly needs a strong rod and a rather stiff one, and a more pliable one adapted to casting, so that he must have all these properties in a single rod or carry two with him for use in a day's sport. I used to employ my trout fly-rods in bass fishing, but finding that they soon came to grief with large bass, I had a bamboo rod built for me which has proved perfectly satisfactory. It has but one bottom piece or butt, but interchangeable to this are two second joints, one as pliable as that of any fly-rod, and the other considerably stiffer, and the tips also vary in strength, one being suitable for fly-fishing only and the other adapted to bait-fishing. A fly-rod is soon ruined if it is used in bait-fishing and one cannot cast a fly very well with a stiff rod.

Caprices of Bass.

Like other game fishes, the black bass is a capricious biter, and the angler who places his dependence on a single kind of line will often meet with disappointment and chagrin.

All of us have seen the time when a small frog was the only bait that had any attractions for the dusky warriors; but in a half hour's time, aye, even less, the frog went begging to be eaten and nothing but the helgramite would suit; and later on the helgramite was spurned with contempt, and a live minnow only would be accepted.

So great is its capriciousness that there are times when nothing seems to have any charms for it, and though there may be hundreds within casting distance, not one will respond to the angler's offerings.

Of course not all its moods are caprices, for like many other fishes the bass dislikes to move about in the direct rays of the sun, and when the day is bright and no ripple is moving, it settles down deep in the water where lurking in the shadow of a submerged rock or a bunch of weeds it remains quietly until the light becomes less powerful.

Favorite Bass Flies.

There are times when the bass, refusing any and all baits, will come to the fly. Of course, there are anglers who use nothing but the fly on any consideration, just the same as there are others who disdain to employ anything but a baited hook, and though both

classes cannot have their innings all the time, it is nothing but fair that each should have them a part of the time.

So far as my own inclination goes, I vastly prefer fly-fishing to any other—and am willing to take my chances with it if fairly suitable conditions obtain.

Of course, fly-fishing for trout and for bass are two quite different things, and I never have felt the same degree of enjoyment with the latter that I have with the other. There is an almost indescribable difference between them which I have no doubt most anglers have noticed.

Trout fishing appeals to the aesthetic sentiment which bass fishing does not stir, but which, on account of the greater fierceness of the struggle, arouses the combative instinct instead. It is almost precisely the same feeling that one has when fishing with light tackle for 2 or 3-pound bluefish; there is nothing poetic whatever about it, it is simply a fight from start to finish. It has its attractions, however, and provided the fish will rise it gives good sport, which is often exciting in a high degree.

There is almost as great a variety of bass flies as there is of trout flies, but a half dozen kinds will as well meet all requirements as fifty would.

I have an almost endless and varied stock which were mostly tied by father, who was an amateur fly-tier of remarkable skill and good taste; but I have never used more than two or three of the kinds; beautiful pieces of handiwork they are, and I treasure them and caress them as elegant souvenirs of an enthusiast's untiring and painstaking industry. But if I were now to buy an outfit I would confine myself to not more than four or five kinds.

It is to be premised that one cannot rise a black bass with a fly in a considerable depth of water, and when a fish does come it will rise to almost any fly, provided, of course, that a judicious selection is made with reference to the condition and depth of water and the degree of light.

My best success on dark water, or at morning or early evening fishing, has been with that remarkable all-round creation, the "Tomah-Jo," which was originally tied in honor of an old Indian guide on Grand Lake, of that name.

I first learned its merits when fishing for "land-locks" on Grand Lake stream in Maine, when I found that it was the most killing fly by all odds, that I had in my book.

I later proved it to be wonderfully successful with ouananiche, which are the same fish as the other; and have often killed salmon and sea trout with it. In fact, I have one in my book which I treasure highly for the reason that I have taken with it three salmon and several good-sized sea trout. Of course, it showed the scars of battle, but it is yet good for one or two fish if it is offered them.

Whenever I have used it in black bass fishing it has been successful, and before all others, too. On one occasion with several other anglers, I was fishing in a small lake in Massachusetts which was famous for its stock of bass. The sky was slightly overcast and a light ripple was on, thus making it an ideal day for sport. The water was of no great depth for twenty rods or so from the shore, and either still or fly-fishing, therefore, was practicable. As we had an abundance of small frogs and helgramites we started in with them, but with only moderate success, for our bait was taken from the hooks as fast as we could put it on, and we soon voted that the bass had been educated to steal bait or some other fish were quicker to get it than they were. The mystery was soon solved by the discovery that a large number of "horn-pout," a fish similar to the catfish and with a sharp horn on each side of the head and one on its back—were the greedy transgressors. The quickness with which they took the bait from the hooks was astonishing and they proved so insatiable that we were forced to shift our anchorage ground, but this proved futile, for no matter where we went the horn-pouts were there and they seized the bait before a bass could make up its mind to go for it. A good many were hooked, of course, but as they were valueless for the creel there was no satisfaction in taking them, and they were thrown back into the water as fast as they were pulled out. I am aware that this seems a good deal like a fish story, for the horn-pout is usually regarded as a sluggish fish addicted to angle worms at night if they can be obtained, but that it should be a quick-moving, aggressive diurnal species, one that would dart for a moving bait and strip it from the hook before a bass could get it seems quite incredible, but such was the fact. At length we abandoned bait-fishing, moved our boats again and began to cast the fly. My friends had a variety of ordinary bass flies which they offered to the dusky beauties, while I had with me none but trout and salmon flies, which I disliked to use with such rough fighters.

I finally put on a Tomah-Jo and threw it out.

I had hardly made three casts when I rose and hooked a 3-pounder which, after a lively fight, was successfully landed. A second and third fish were taken on the same fly before my friends got a rise, and, of course, their inquiry soon was, "What fly are you using?" I showed them, and as I had a half dozen or so in my book, I distributed them among the party, and subsequently we all made a fine catch.

Now, I do not claim that no other fly would have been as successful, but we certainly found none among our books that was. I would suggest if any of my readers are about to have a number of these killing flies tied that they give the tyer instructions to make the yellow hackle a little more full than is usually done, and that only pure silver tinsel is used on the body.

Another bass fly that I have had good success with on dark water is the "Henshall," and the "Cheney" fly has also been a very satisfactory lure.

For bright days, if there is a ripple on, the professor has done good work.

Trolling for Bass.

While bait-fishing and fly-fishing are most generally employed in the capture of the black bass, trolling is a favorite method with many anglers. The lures used are either a live minnow hooked so that it will spin, a phantom minnow, or a spinning spoon.

Probably in no other section of America has the practice of trolling attained the degree of a high art, if such an expression may be used, as it has on the St. Lawrence River. It is followed in western waters a good deal, but in nothing like the degree it has there.

My experience in trolling for bass has been somewhat limited, for the reason chiefly that I prefer the more active sport of fly-casting, but I once utilized a trolling rod and spoon to good advantage. The dam of a large mill pond had gone out in a heavy freshet, which permitted a large number of fine bass, which the mill-owner had been treasuring for several years, to escape into the Charles River, near Boston, into which the mill stream emptied about forty rods from the mill. Of course, as soon as the escape of the bass became known among the local fishermen, they all busied themselves in trying to discover where the fish had located themselves. They were not successful, however, for a very few fish rewarded their efforts, and the belief became general that the large stock of big bass that the pond was said to have contained, was largely mythical. I knew better, however, and bided my time. The river was about ten rods in width at the point where the mill brook emptied and its depth varied from 4 to 8 or 10 feet.

One morning bright and early I rigged up a rod and trolling tackle and with a boy to row the boat I began a systematic investigation.

Coursing back and forth and covering the water thoroughly, I moved down the river an eighth of a mile, and then returning pursued the same course up the river about the same distance. No bass were found, and save a stray pickerel or two, no fish were taken.

At length a ledge of rocks, together with a number of boulders partly showing above the surface, was discovered, and passing these at a distance, which was safe for my trolling tackle, I felt a strike as my minnow came abreast of the ledge, and in a twinkling a 2-pound bass was scurrying about and leaping above the water as if he had entered a jumping contest.

It did not take long to bring him to the landing net and prepare for a fresh encounter, which soon came, and I was then convinced that the abiding place of the fugitive bass had been found.

To say that I had most excellent fishing for a week or two afterward is superfluous.

Dropping my killick at the edge of the ledges I devoted two or three hours of the early mornings to the sport, and with minnows, helgramites—which were scarce in those days—and flies I captured at least twenty-five fish, and enough were left to stock the river plentifully. In fact, it was from the fish that escaped from the mill pond, which I did not capture, that the great numbers of bass which are now found in the river originally sprang.

EDWARD A. SAMUELS.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

Fourth a Failure.

CHICAGO, Ill., July 8.—Most of the angling parties who went out on the Fourth of July for a trip into the angling districts have now returned and they nearly all report the Fourth a failure so far as fishing was concerned. We have had a great deal of rain this spring and the waters are high and roily. Our lakes are from a foot to two feet higher than ordinary, and the disturbed condition of the waters have played havoc with the sport for the past week.

Among those who went up last Friday to the Lake Villa district were Messrs. L. D. La Parle, John Thein, L. Walch, James Hastings, Wm. Du Bois, P. Ambrose, Alex Friend, Dr. Friend and W. L. Beason. These caught a few bass, but they do not speak very enthusiastically of the sport the past week.

Bass at Lake Geneva.

Mr. James Keely, managing editor of the Chicago Tribune, returned from a week or so at Lake Geneva, where he faithfully tried the bass fishing, though with very poor success. That lake is much patronized by wealthy Chicago residents, and the shore line is practically built up with handsome villas. These summer residents understand the value of good fishing, and the lake is annually stocked with many thousands of small-mouthed bass, and without doubt there are many bass in the water. Everything comes high at Lake Geneva. Mr. Keely, feeling the need of expert advice as to the fishing grounds, undertook to charter a local fisherman reputed to be exceeding wise in the matter of small-mouths. He found that it cost him the pretty penny of $8 a day to associate with this gent, and owing to a misunderstanding as to who was running the boat, the fishing came pretty near being nil. This ancient angler is proud and haughty in his ways. He knows how to catch bass, but will not agree that anybody else knows how. A spoon hook he abominates, a frog is anathema, and anything but a good live minnow excites his deep-seated ire. I believe Mr. Keely likes to have a spoon hook above his minnow upon occasion, and hence the misunderstanding which brought him in at night fishless and eight-dollarless.

The same gentleman reports seeing a large school of bass in the shallow water, but they absolutely refused to pay any attention to any sort of lure which he could devise for them. It is likely that they have gone on one of their sulky spells and for some days will not do much business. One would hardly expect bass fishing out in the shallow water at this time of year. The bass have done spawning and have doubtless moved out into the deep water. The thing to do now is to find a bar or reef running up out of the deep water. Here is where the gass lie during the summer months. All of which is much easier said than done.

Bass Bars.

Speaking of bass bars, reminds me that at Lake Minnetonka last week I saw a gentleman whose name I do not know, who had as fine a string of big-mouthed bass as I have seen for some time. He came to the depot at Spring Park after a morning's fishing out in the bay, which runs in close to that station on the east side of the railroad. He had eight bass which weighed 33 pounds, two or three of them running over 5 pounds. He caught eleven in all that morning, and caught them all fishing deep along the edges of a bar, which was shown to him by a youthful boatman, who was the best oarsman he could find that morning. It was a cloudy and very rough day, just the kind of a day which stirs up the big mouths and sets them on the feed. This angler did not anchor his boat, but poked around over the bars, fishing with the frog in 8 to 12 feet of water. His string of bass was a very good one.

Peculiarities of Fish.

I presume there will be no end to the discussion of the whims, moods and fancies of game fishes. The salmon anglers tell us of the moods of the salmon which will set them on the rise all at once, although for hours and days they may have been proof against all wiles. Every one knows the whims of the small-mouthed black bass and of the brook trout. To-day at the Wishininne Club several of the members were talking of these things. Mayor Harrison was present and went on to describe a little experience which he had on the Salmon Trout River with a toad and a trout. He said that he stopped at a pool where he and his boatman saw a number of good trout which for a long time resisted all kinds of feathered fascinations. The boatman caught a big toad on the bank, and just for the fun of it, Mr. Harrison threw it in among these trout. They let it alone for some minutes. At length a big trout began edging its way toward it slowly, as though half a mind to take it in. As this big fellow did so, another fish back of him made a lightning-like dart and swallowed the toad, moving off like a flash. This fish was landed and weighed 3½ pounds. Shortly after, as the guide and angler sat at lunch, Mr. Harrison threw his toad, which was now dead and much disfigured, into the pool, more to keep his leader wet than in the hope of catching any fish. While they were eating, all at once the line began to run out again. A second trout had taken the toad, by this time dead and not attractive. This fish was lost by the parting of a leader when the strike was made.

Mr. Harrison related an incident on somewhat similar lines in regard to a bass whose mounted skin adorns his boudoir. "I caught this bass below a dam on the Sturgeon River," said he. "The water was not very deep and was clear, and looking down into it, we could see numbers of bass there. They would not touch any kind of fly or lure, do the best we could. At length I took a live frog and placed a heavy bullet on the line so as to sink the bait down to the bottom where the fish were lying. The sinker was so heavy that Mr. Frog could not pull it, so he concluded to sit down quietly on the bottom, and did so, directly in the middle of the bunch of bass. They looked at him indifferently, once in a while a big fellow taking a sort of circle around him lazily, as though to get a better look. None of the bass made any attempt to strike at the frog for several minutes. I lay there with my face close to the water for perhaps 7 or 8 minutes or so, when I saw the head of a big bass project from under the apron of the dam. He seemed to be looking at the frog. At length he came out, slowly and deliberately walked up to the frog as though he would smell of it, turned around and went back under the dam. He did this once or twice, but seemed to take no more interest in the frog than any of the other bass had. All at once, for no apparent reason, he came out from under the apron like a streak of greased lightning, and both grabbed and swallowed that frog in one motion. In about one more motion I had him on the bank. The incident seemed to me so peculiar that I had the fish mounted."

Here is proof enough of my often advanced contention that you can make almost any trout bite if you keep on hammering away at him, even with a fly. What the motive is which induces a fish at length to rush at a bait in this way is something left for science to discover, but that they will do so much as above described is easily established from the experiences of many anglers.

Back from Wisconsin.

By the way, the two gentlemen above mentioned, accompanied by Mr. Wm. Ellicott and Col. Bill Haskell, recently enjoyed a very pleasant trip on Manitowish range of Wisconsin. Mayor Harrison was fortunate enough to get one muscallunge of 18 pounds, with others smaller, 9 pounds, 8 pounds, etc. This only after fishing several different lakes. Mr. Harrison did some bass fishing and reports a delightful time. Col. Haskell distinguished himself by capturing a live muskrat, which he calmly picked up by the tail after wading out into the water where the rat was disporting itself. Had this fact not been witnessed by gentlemen of approved character, this story would have been laughed to scorn as that of one seeking only to add to his already resplendent reputation as a gentleman of inventive turn of mind.

Alligator in Chicago River.

Whether the saurians of the Mississippi Delta have taken advantage of the waterway now existing between Chicago and New Orleans is a matter not fully established. Yet day before yesterday a couple of gentlemen saw an alligator swimming in the Chicago River. It was captured after an exciting adventure, in which one of the discoverers got a soaking in the river. The creature was about two or three feet long. There is no place which surpasses Chicago as a big game center, as I am sure a close study of these columns for the past few years will have convinced any reader.

Muscallunge in Wisconsin.

The muscallunge game grows more and more of a speculative nature every year. No one can depend on catching a 'lunge any more. The Turtle Lake region has produced six 'lunge this year, each of which weighed over 30 pounds. I have already mentioned the little St. Germaine fish weighing 42 pounds, caught two weeks

ago by Mrs. Wheeler, of this city. A gentleman who came from that country to-day told me that Mrs. Wheeler not only caught this fish, but stood a very fair chance of capturing its mate. After taking the 42-pounder she was worn out, tired and a little frightened, which is natural for a woman to be after a fight with a fish of this size. She went ashore on the island in Little St. Germaine to rest for a while, but presently went out in the boat again. While trolling past the place where she struck the big fish, she had another very heavy strike. Frightened and weak she dropped the rod in the boat, where it was picked up by the guide, who, with no one to row him, played the fish for a few minutes, until it finally broke away. It is thought to be the mate of the fish which Mrs. Wheeler took, it being an old tradition among anglers that these fish lie in pairs.

The water is reported roily at Turtle Lake at the present time, and the muscallunge fishing is not thought to be good there. The Manitowish waters offer very good fishing when the dams leave the lakes and streams in their normal condition.

Tarpon.

Mr. C. H. Fargo, of this city, is back from a pleasant trip to the tarpon country of Aranzas Pass, Texas. He says he never saw such tarpon fishing as he experienced in all his life or heard of it. Everyone was catching fish, one gentleman landing thirteen tarpon in one day. Mr. Fargo himself killed four handsome fish, playing a good many others which he turned loose, not wishing to go ashore and beach the fish, as is the custom at Aranzas Pass. One morning a fleet of fifteen boats started out from the club. They struck into a school of tarpon and four rods had on fish at the same time, the four fish springing into the air at almost the same moment. This would seem to be an unusual scene in tarpon angling. All this tarpon fishing in Texas is done by trolling and not by still fishing, as is the case in Florida. Mr. Fargo says that he was advised that the best tarpon fishing had not begun at the time of his visit, which was about June 8.

Grayling.

Mr. W. B. Mershon, Mr. Watts Humphreys, Mr. C. H. Davis, and perhaps one or two other of the angling contingent of Saginaw, Mich., propose a trip for grayling some time in the present month and ask me to join them. If it be a possible thing I must certainly accept this invitation, for it has never been my fortune to see a live grayling east of the Rocky Mountains. We think we know where we can catch two or three on a certain remote stream in the southern peninsula of Michigan. It will be a long and hard trip with a great many mosquitoes in it, but if the Saginaw crowd start out after grayling, they are mighty apt to have grayling in the game bag when they come back home. I do not know the exact location of the stream which it is intended to visit.

Gaylord Club of Wisconsin.

Gaylord Club had the misfortune to lose their handsome club house by fire last fall, and the new structure is not yet completed, so that the patronage of the club members has been much less than usual. There are several up there this week, however, and they are having splendid sport. The branches of the Pike have been bountifully stocked by the private hatcheries of this club, and the average weight of the fish is now fully four times as heavy as it was when I last fished those waters. The members of this club get good fly-fishing for bass in the lakes now and again.

Chicago Fly-Casting Club.

Bad weather caused the postponement of the June events of Chicago Fly-Casting Club to July 12. There will be two entries for each event on that day. The regular event scheduled for July 12 is postponed to Aug. 9. Matters in this club are reported pleasant and flourishing.

A Fighting Pike.

My friend, Mr. Albert Bruning, and I started out for a little quiet paddle along the shores of an arm of Lake Minnetonka one day last week. We didn't have a great deal of use for any fish, but we thought we would enjoy two or three for the table if we had good luck. Good luck is a very necessary fixture when you go fishing in Lake Minnetonka, for that water is hammered so hard that it takes a genius to catch more than a half dozen fish in a day, in the average fishing. We started in under the bridge at Black Lake and passed up the right-hand shore of that lake directly on the course where actually thousands of boats go every month, this being within half a mile of the boat livery at Spring Park. Mr. Bruning was rowing and I was seeing what I could do with a spoon hook and frog. We got into the lake a little way when all at once, as I looked about, I noticed a heavy swirl in the water and felt a strike on the line. The fish we at once saw was a good one, but we fancied we had lost him, for he went directly to the bottom in the weeds, and although I put a heavy strain on him, I could not start him for quite a while. We were now at the edge of a bar, with perhaps 30 or 40 feet of water out to the right in the middle of the lake. Bruning started out for the deep water, and we described an arc of a circle on the fish. At last, putting on a strain as great as I thought the rod and line would stand, we were gratified to see him come out slowly toward us. It was not so much weeds as fish which was making the strain on the tackle. All at once the old fellow jumped, and we saw a Great Northern pike, short, stocky and very heavy. We guessed his weight at 10 to 15 pounds, "wet weight," as the saying goes.

It was only a pike, in fact, only what is usually called pickerel, but he was the fightingist fish I have had on the rod in many a day, and, indeed, I have killed many muscallunge which did not compare with him in stubbornness and agility. I presume we fought him for 20 minutes before we could do anything with him. He was so heavy that I could not lift both his gills out of the water at the same time, and so could not do much toward smothering him. We were fishing in a little Mullins "Get There" boat which sits low in the water, made for a duck boat. The fish could whirl this boat around whenever he liked, and for a time it was a question which party had the other. At last the old fellow began to tire so that I could draw him alongside. Then he would take a look at the boat, give it a whack with his tail, which sounded like hitting a wash boiler with a club, and dive 20 or 30 feet straight down. The rod would gradually bring him up again and then he would take another flirt, splashing water all over us. It was quite a session that we had with him. At last I got him alongside, perhaps for the tenth time, and we tried unsuccessfully to poke him into a landing net, there being no pistol in the boat. This sort of thing set him afire once more. Once more he came alongside and I told Bruning to slip his hand under the fish and lift him into the boat. Three attempts at this failed, and it seemed as though the life never would go out of this old warrior's soul. At last Bruning, slowly and quietly, passed his hand under, at the same time grasping the back of the fish with his other hand, and so with a lucky lift got him inboard, where he threatened to smash everything. A few taps on the head with the club settled him at last. We found this fish weighed more than we could weigh on our little 10-pound pocket scale. We estimated its weight was about 12 pounds, it certainly being more than 10 pounds. Not a very heavy fish, but one of the gamiest ones that I ever saw of any species. We thought we were about 25 minutes getting him into the boat. The rod was a split bamboo bass rod of splendid quality and quite as game as the fish.

This fish was taken in waters which are fished over daily by scores of rods. No one can tell how many hundreds of boats have passed over his lurking place along the bar of Black Lake. Truly there are as good fish in the seas as ever have been caught.

How Big Does Muscallunge Grow?

I saw the statement on Jordan and Evermann's recently published book, "American Food and Game Fishes," that the muscallunge sometimes reaches a length of 8 feet and a weight of 100 pounds. I should think an 8-foot muscallunge, if there ever was such a fish, would weigh a great deal more than any 100 pounds. I have never heard from Mr. Nevins, superintendent of the Wisconsin Fish Commission, who caught the 102-pound muscallunge in Lake Minocqua, what were the measurements of the fish, if they were taken. Should this come to Mr. Nevins' eye, will he please advise the readers of FOREST AND STREAM what the measurements of this monster muscallunge were? This is the biggest fish which has ever been taken in any part of the West, so far as known. It has before been stated that this fish was returned to the water and is still there—one of the fishes which are quite as good as any which have been caught.

About Rain Coats.

To-day I started out to make myself a rain coat for fishing purposes, not being able to find anything in the market which just suited me. At a rubber store I found some light rubber cloth such as is used in camera work by photographers. It is apparently silk, water-proofed. The cost was only 35 cents a yard, and I got three yards. Then I had a tailor cut my three yards of stuff in the middle and sew the edges together with a lap seam, all except a hole in the middle big enough for one's head to go through. At the edges of this hole the seams were reinforced with pieces of cloth set in. The material cost me $1.05 and the labor 20 cents. My rain coat weighs just 18 ounces and will cover me well enough, whether standing in the water in a stream or sitting on a boat seat.

By the way, I had a chance to try the coat this very afternoon. I was going out to meet Fred Peet over at Jefferson Park in order to try a fly-rod. It had been raining all the afternoon and the seats of the street cars were very wet. I had put my rain coat in my pocket, thinking we might need it at the park. Enter now a tall and scornful young lady with plenty good clothes. Seeing that she looked longingly at the seat, I accosted her to the effect that her clothes cost about $1,100, and were not good enough for her at that, but if she wished to sit down, I had a little arrangement which I always carried with me for just such cases. I spread my new poncho on the seat, the lady sat down, and for two miles never said a word to me. That was just one mile beyond where I wanted to go. I was scared to ask her to let me have the coat again. Thus one may see that there are advantages and disadvantages in the ownership of a hand-made poncho of which one is very proud.

Trying the Rod.

By the way, as to the fly-rod, I got a box of half a dozen from New York this morning. None of these suited me but one, and that I held out, returning the others at once. Fred Peet and I tried this rod this evening. It weighs 4¾ ounces, is 9 feet 1 inch long and is a shore daisy. This is not so much a casting rod or a tournament rod as it is a fishing rod. It goes into my battery at once.

Meat Rod.

Mr. Peet brought out to the little park lagoon this evening another rod, which I think was about the homeliest thing in the way of a fishing rod I ever did see. It was wound with cane and leather and things at the hand grasp, had a foot and a half of wood above the hand grasp, and then went into split bambo. It had a continual wrapping from one end to the other in diamond pattern. The whole thing, I imagine, must have weighed 7½ to 8 ounces. It was a fright. Fred tried my new rod for a while, and we both agreed it was probably the best one ever made in the whole wide world. Then he modestly asked me to try his rod. I smiled in a lofty sort of way and took hold of the outfit. It was rigged with a D line, good and heavy. I began to cast with it.

"How will you trade rods right now?" I asked him.

"Not for a hundred dollars," said he.

"I don't blame you," said I.

This rod was made by an amateur, or semi-amateur, over in Michigan, who builds a few each winter for his friends at a moderate cost. The builder himself is an angler, and I must say that in this rod he has built a fishing rod. It will almost cast by itself and will drive a line directly into the wind. Short line or long line, it lays it straight and is capable of any amount of delicacy in handling its flies. This is not a choke-bore rod. I should call it a good old-fashioned, plain, homely, cylinder-bore fly-rod, the kind that brings the meat into camp. I don't know how I am going to get it away from Fred Peet, but I think I shall have to have it somehow. There is nothing like having plenty of fly-rods in the family in case anything should go wrong. I am afraid to count up how many I have beside this new one I got to-day, and this one of Fred Peet's, which I am going to have some day.

Bound for the Coast.

By the way, several of the Chicago boys will start out in a few weeks now for the fly-casting tournament at San Francisco. These Chicago folks want to sample the trout fishing on the Pacific Coast. Mr. Peet, for instance, is anxious to go up into the Puget Sound country, of which we read so much. He is a stranger there, and I wish some good, honest angler of that locality would send me his name and address if he is willing to receive Mr. Peet's call sometime in August and to direct Mr. Peet to some good fishing out in that part of the world. He will stop at Seattle on his way back, and any Seattle sportsman can confer a favor on me by doing a kindness to this Chicago angler.

Good Gut.

In spite of the longest kind of a pocket book and the greatest kind of care, it is sometimes difficult to get a first-rate article of gut for leader making. Neither is it always possible to get perfect leaders out of the stock in trade. The best leaders I have ever seen were those tied by the gentleman above mentioned, Mr. Peet, and he got his gut from a firm in San Francisco. He has promised to bring me two or three hanks when he comes back from the shore. Then—after I have traded him out of his homely old fly-rod—I think I shall be pretty near ready to do some business with the trout and bass.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Angling Near New York.

SALT-WATER angling in local waters has been poor for the past week or more, but reports from the fishing waters show that there has been marked improvement within the past few days. The weakfish have again begun to bite, and good catches are reported from most of the waters. In Jamaica Bay, where many anglers were disappointed last week, the weakfishing is now good, while the bay is full of fluke. Sea bass are also being caught in satisfactory numbers.

The Staten Island waters, too, are yielding good results. The weakfishing at Gifford's continues excellent; hardly a boat returns without a good catch of the fish. At South Beach weakfish and fluke are being taken in goodly numbers.

At Sheepshead Bay, L. I., where the weakfishing has been very backward this season, there is now good fishing. Good catches of weakfish are made in the bay off Ritchie's Point, while in the Rockaway Inlet the fluke are plentiful. The outside waters reached from this place are good points for deep-sea fishing.

Weakfishing at Long Beach, L. I., is unsatisfactory at present, but great catches of sea bass and porgies are made here. These fish are caught by the hundreds, but only a few weakfish are taken. Some kingfish are being caught in the surf.

Deep-sea fishing is at its best just now. The boats running to the Fishing Banks bring in large catches of sea bass and fluke, and enormous numbers of ling.

Some bluefish have been caught and a few striped bass, but neither of these fine fish are yet biting in any numbers in the local waters. G. F. DIEHL.

Where to Get Wild Celery.

MR. R. B. WHITE, of Water Lily, N. C., on Currituck Sound, writes: "If any of your friends should want wild celery seed, I shall thank you if you will direct them to me. I have beeen advertising in the FOREST AND STREAM to the effect that I can now supply this seed. My father, Joseph B. White, shipped to the Tolleston Club, of Chicago, a few bushels of wild celery seed to-day. He has also shipped seed to Lac du Flambeau, Wis., and to Denver, Colo." E. HOUGH.

Potomac Bass.

PASSING through Point of Rocks, Potomac River, on Monday, July 7, I saw a fisherman who had caught a fine string of a dozen or more black bass. The river was rather muddy on account of the recent heavy rains. At Harper's Ferry the same condition prevailed, but I saw no bass. The fish at Point of Rocks were about eight to ten inches long, and I am informed that larger ones are scarce in that part of the stream. T. H. B.

A Coney Island Turtle.

JACOB SMYTH, of Lake Street, Coney Island, while fishing for weakfish at the Old Iron Pier last Sunday, caught a turtle that weighed 413 pounds.

Peanut Growing in Miniature.

THOSE who have never seen peanuts growing, will be interested in the experiment. The ground should be light, soil well manured with fresh manure from the stable. Dig a space say about two feet square and six inches deep. Prepare the nuts as follows: Select good firm, full shells; cut a small piece from the shell away from the end having a small fibre attached; soak them a day or two in water, and then plant them about six in a hill two or three inches apart and cover with soil to a depth of one or two inches.

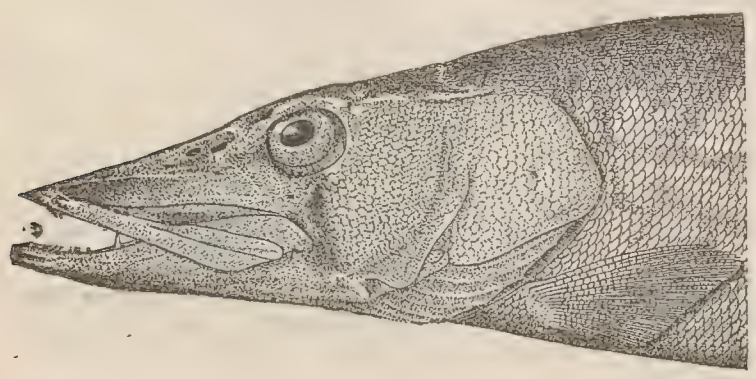
Pike, Pickerel, Mascalonge.

WE reprint for the benefit of several inquirers these illustrations of the three fishes, with enlarged cuts of the heads, showing the markings so clearly that there should be no difficulty in distinguishing one from the others.

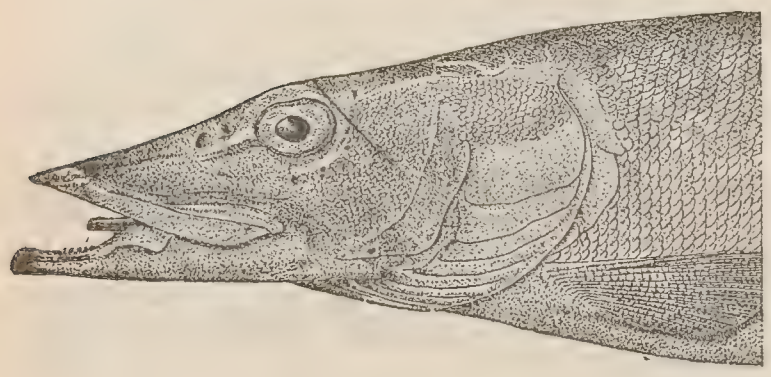
The most marked difference, perhaps, in the pike and mascalonge, that is constant is the scales on cheek and gill covers. In the case of the mascalonge the scales cover the upper half only (generally about eight rows of scales) of the cheeks and gill covers; while in the case of the pike the cheeks are entirely covered with scales, and the lower half of the gill covers is bare the same as the mascalonge. The coloring of the pike is more constant than the coloring of the mascalonge. The pike of this country and Europe are the same, and always it is found with lemon-colored, bean-shaped spots on a darker ground.

Something about the three fishes is told thus by Fred Mather in one of his "Fresh-Water Angling" chapters in FOREST AND STREAM:

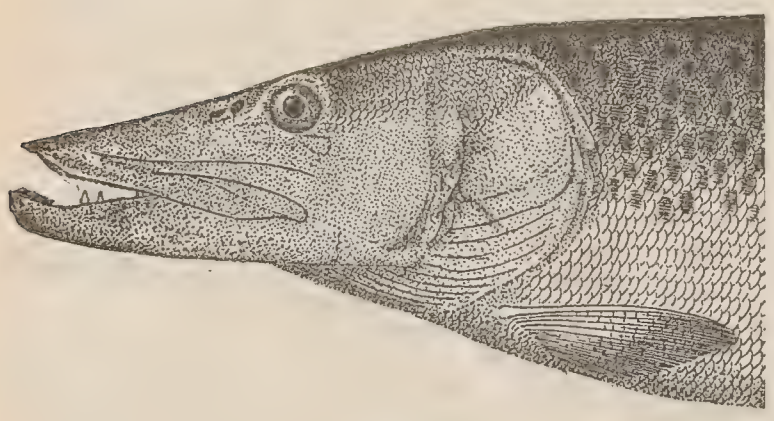
Here are three good American game fishes which somehow seem to be mixed up in the minds of anglers who fish, but do not read. They know the three names, and in a vague way attach them to the fish found in their local waters. To readers of FOREST AND STREAM the differences have been pointed out in print and in picture many times, but these things require to be hammered at and reiterated year after year before a few anglers in separate localities are well enough informed to begin the education of their neighbors. There is no good reason



PICKEREL.
Cheeks and opercles completely scaled.



PIKE.
Cheeks scaly. Lower half of opercles naked.



MASCALONGE.
Lower half of cheeks and opercles naked.

for confounding the three species, for they are not only distinct in points of structure, but their colors differ so greatly that there should be no confusion, and color is more regarded by the angler than by the ichthyologist. A man should not only know how to catch fish, but also how to name them correctly.

Pickerel.

In portions of Canada this name is applied to a hard-finned member of the perch tribe, and in parts of the United States it is used properly, and also improperly, for the great pike. The pickerel, *E. reticulatus*, gets its specific name from the Latin *reticula*, a net, on account of a more or less distinct black network on its yellowish or greenish sides. This should be a sufficient guide to the angler, but in some waters where this and the next species exist there are anglers and fishermen who do not separate them, or if they do they call the larger species mascalonge when they are simply pike.

In the three species of which this paper will treat the shape and position of the fins is the same. Except in large specimens there is no aldermanic abdomen, the lines of the back and belly being nearly parallel, with the soft dorsal fin set far back, near the tail, and but slightly in advance of the anal fin, which, with its fewer rays, comes out about even behind.

The pickerel is called "jack" in Virginia and Southern waters, and as they have no other species there we can get on understandingly. It is found in the clear, grassy streams and ponds of the Atlantic coast from Maine to Alabama, but not west of the Alleghanies, nor in the Great Lake region. It was introduced into the Adirondacks from Fulton county, N. Y., in 1842, and they have spread from the "south woods" north to Meacham Lake, ruining many good trout lakes and streams, for worms, insects and their larvæ do not enter into the diet of this family to any noticeable extent; they live on fish and are the sharks of fresh water. The pickerel seldom exceeds 6 pounds in weight, and 8 pounds is believed to be the limit of its size.

Pike.

The pike grows to a weight of 40 pounds and over, and this fact makes some fishermen confound it with its big brother, the mascalonge. Its color is a bluish gray, with oval white spots about the size of a white bean. As the mascalonge is black spotted, plain or slightly barred the confusion in names can only exist among those who have not seen both species. The fact that it has no scales on its cheek and none on the lower half of its gill cover would not be noticed by the average angler.

The pike, *Lucius lucius*, has probably the greatest range of any fresh-water fish. It is found throughout northern Europe and as far south as Italy. It occurs in Asia, and we would not be surprised to find it scooping in the smaller fishes in some of the lakes and streams of Africa, when the British angler explores that continent in search of new fields and fishes. Ah me! if I were only twenty now, with the spirit of adventure that once raged, and the geographical knowledge and possibilities of travel of to-day, the streams of Siberia, South Africa and India would be a mine of fishy wealth to explore.

In America the range of this fish was originally from Lake Champlain to northern Indiana and the northwest to Alaska, according to Jordan. It has been extended to the Adirondacks of New York by vandals who placed it in the trout lakes there for reasons best known to themselves; let us hope that it was in ignorance of the destructiveness of the fish. In places where the pike occurs it is commonly mistaken for the mascalonge because it is larger than the pickerel, the exceptions being where both of the larger species are found. How any man who has once seen these two great pikes can confound them is a great puzzle.

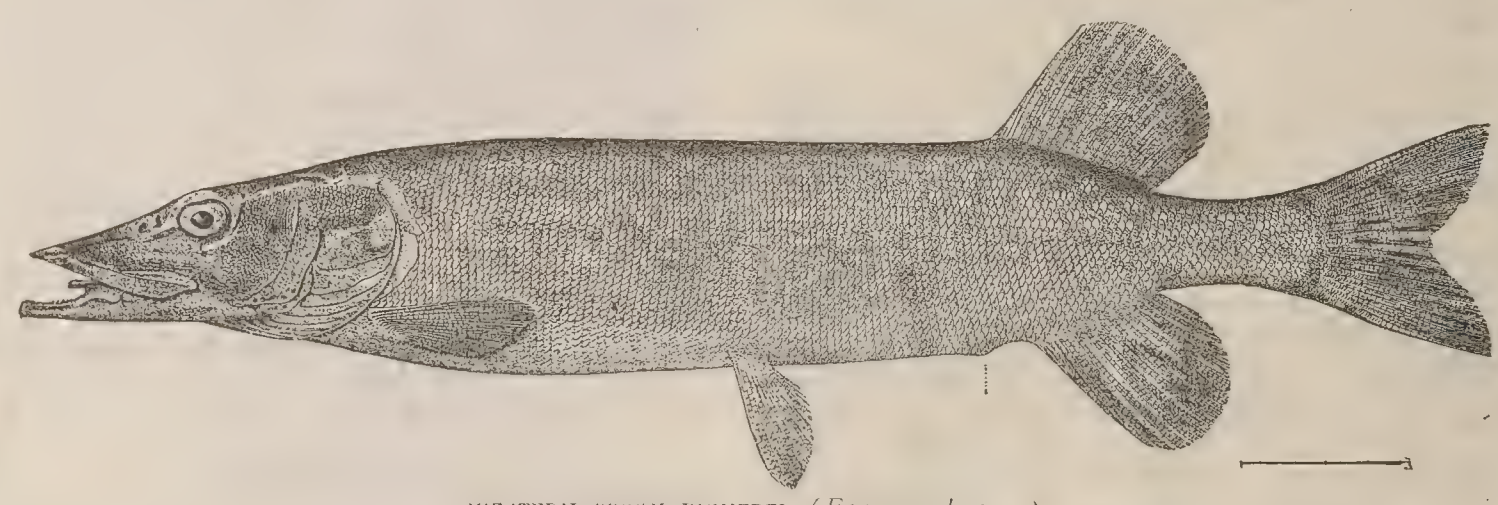
The Mascalonge.

The range of the mascalonge is quite limited. It does not exist in the Adirondacks, although the St. Lawrence River and Lake Ontario are its home. It is found in the Great Lakes and in Chautauqua Lake, in the southwest corner of New York, which, although near Lake Erie, drains its waters into the Alleghany River through Conewango Creek, and thus the fish gets into the Ohio Valley. Curiously, this isolated branch of the species is not spotted, nor does it grow as large as in the Great Lakes, where there are legends of its having obtained a weight of 100 pounds. I have seen this fish among the Indians about Crow Wing and Mille Lacs, Minn., in the fifties, but never saw one that would weigh over ten pounds with them. These were black-spotted, and as these waters flow into the Mississippi River, the only reason that they differ from their brothers of the upper Ohio Valley seems to be that there must be impassable water in the rivers before they join.

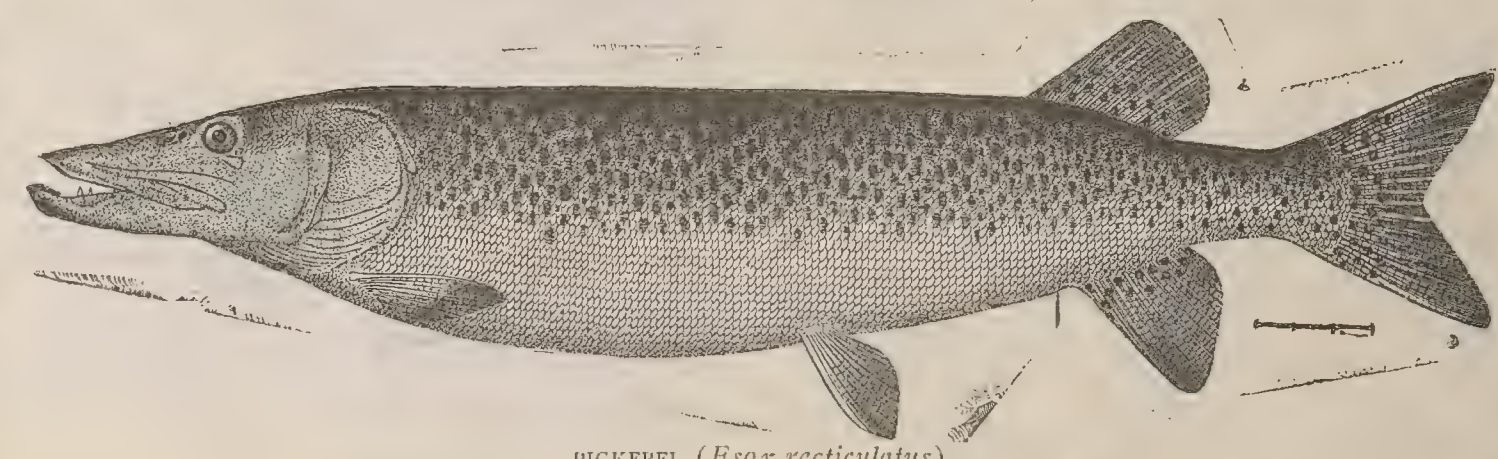
The pike will go on mud flats in spring freshets, and in hot weather is found in shallow, warm water among the weeds, while a mascalonge loves deep, cool lakes or swift, clear waters. Floods do not tempt him to roam over lands that are temporarily flooded, and with this knowledge we may find a key to the problem of distribution and of the isolation of some members which by interbreeding have lost the spots. The Wisconsin fish are spotted.

Pickerel Fishing.

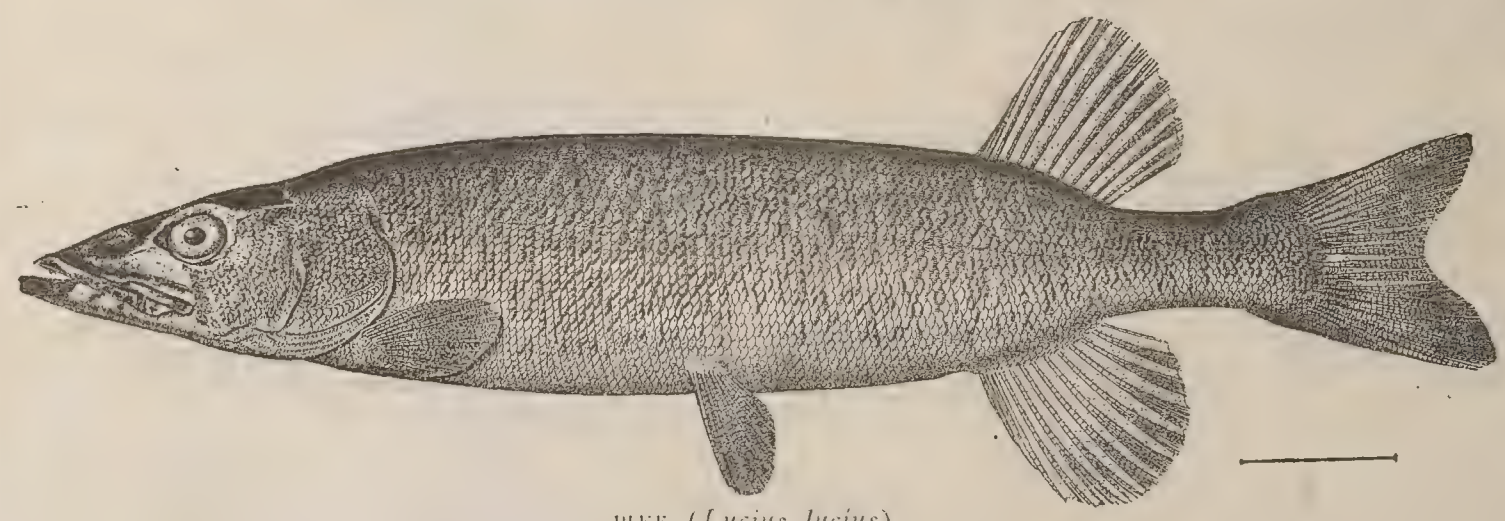
The angler for pickerel may take his fish in many ways,



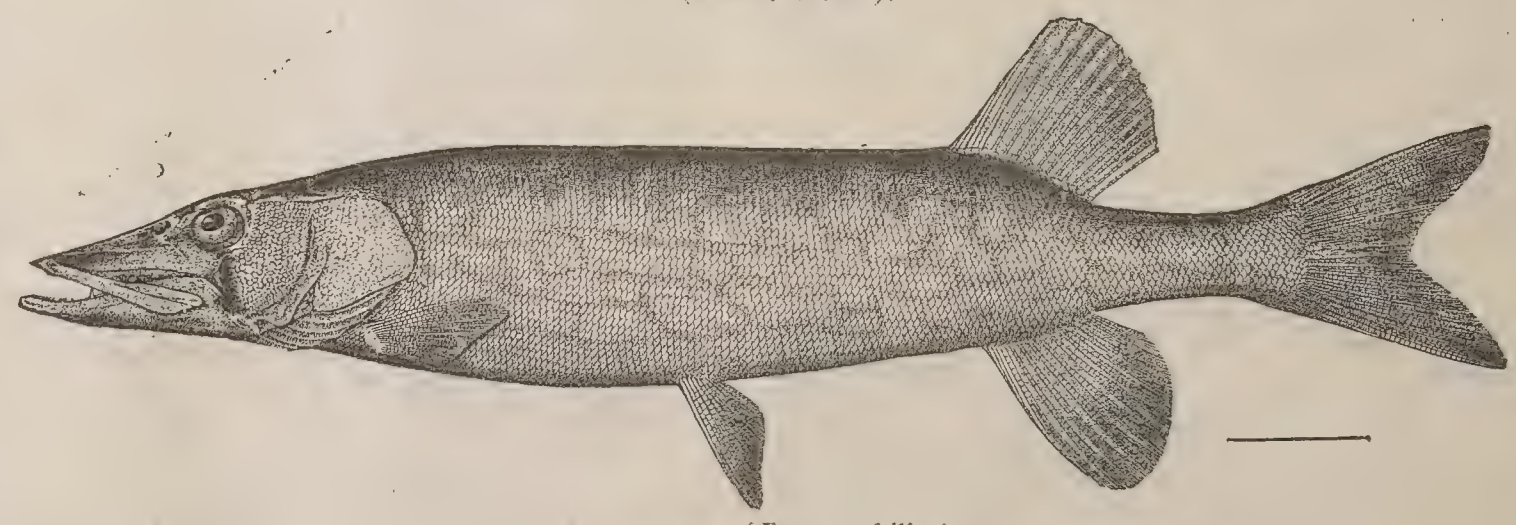
WESTERN BROOK PICKEREL (*Esox umbrosus*).



PICKEREL (*Esox reticulatus*).



PIKE (*Lucius lucius*).



MASCALONGE (*Esox nobilior*).

and with as little consideration for his game as the pickerel has for a toothsome trout. The fish is the worst kind of a cannibal, and one that weighs twice as much as another thinks of his smaller relative merely as something to decorate his interior. This is the best trait in the character of this whole family—they destroy each other—and as a fishculturist I wish they would emulate the famed Kilkenny cats. The world would be better without them. Therefore any kind of a mouthful of steel is pardonable to use on the brutes. I took one of about four pounds weight which had three small trout in its pouch, and which wanted my chub to add to its collection. Three trout to feed a durned pickerel! From my point of view these three trout were sadly misplaced in the economy of nature, for they should have met a better fate; they were "lads of high degree," and they went to sustain a fish which Adirondack guides call a "snake-eater."

In trolling for pickerel, if you use a spoon, and it is as good to troll with as a minnow gang, and less trouble, let it be suited to the size of the fish which you may reasonably expect to strike. A pickerel has an eye for fish which will fill his bill, and seldom makes the mistake of tackling a fish which is too big, although in the South Kensington Museum, London, I saw a plaster cast of a twenty-pound pike which had choked to death in trying to swallow one too near its size, and had been

captured and set up as a horrid example of greediness. Therefore, let your spoon or minnow be in proportion to the game which you expect to get. This is something which the beginner must learn, and perhaps there is no better way than to consult a first-class tackle dealer, but it is better to err on the side of smallness, whether of spoon or minnow.

In trolling from a boat, use an ordinary trout or bass bait rod—a fly-rod is hardly the thing if the fish are large. Row slowly, with just enough motion to spin the spoon well, and you can judge of this by putting it over the side and watching it. The slower the better, if the spoon spins and glitters well.

These remarks apply to all of this family, and therefore there is no need of repeating them for the pike and mascalonge. Having fed all these fishes in the confinement of aquaria, and watched them take live minnows, it may be pardoned if I say just how all the pike family approach and take their prey. When they are very hungry they will make a sudden rush from below and seize the living minnow and then retire with it to consider the next move. Then, if it has been taken crosswise, or tail first, it is ejected and turned so as to be taken head first, when the fins and scales lie in the proper manner to slip down easily.

If, however, the pike or pickerel is not hungry, but would take a little something if it looked tempting, the tactics are different. There is no sudden rush; the game is pointed as a setter points a woodcock. There is no motion of the body, nor of that propeller which we call a caudal fin, but a wary motion of the dorsal and anal fins sends the fish slowly ahead, while its eye glitters with suppressed excitement. The distance is gauged, there is a rush, a flash, and the minnow or spoon is engulfed.

If using a spoon the angler knows whether his game is hooked or not, and that the fish cannot eject the bait if it would; and then, after a short struggle, the fish yields. In describing how a pickerel, which is not hungry, approaches a fish, the only object is to warn the angler not to row too fast and thereby pass too quickly from the field in which a pickerel or other member of the family wishes to approach its prey.

There is a gang on gut or gimp, consisting of a lip hook for the minnow and a hook to be carried over its back and inserted under the dorsal fin, and then one of a triplet is hooked into the tail in a way to bend the minnow and thereby give it a semi-rotary motion. It is a most murderous combination, but none too severe for this cannibalistic family.

A stiff cane is used for this work, and should be from 18 to 20 feet long in order to cast 30 feet, and then "skitter" a minnow on the surface of the water. I have used a ringed Limerick hook, size 4-0, but do not know why this has been preferred further than that it was the first hook I used for the work, and so to use it has become a habit. To-day, if a change was made, it would be for the more modern turn-down eye Pennell hook of that size, or of a size larger. A foot of gimp or of piano wire should connect the hook with the line. The minnow or frog should be hooked through both lips, and it is merciful to pierce the brain with a knife, because the bait is as good dead as alive, and it is cruel to kill it by such rough usage as skittering.

From the shore the bait should be cast into open places among the weeds, but from a boat the angler should stand in the bow and cast ahead into unbroken water.

A good bait rod and reel are the proper tools, and a live minnow hooked just under the dorsal fin, or a frog hooked firmly in the muscle of a hindleg, near the backbone, is the best of baits. If a float is used it should allow the bait only three feet to go down, unless the water is over ten feet deep, because all of this tribe seek prey that is above them, as is denoted by their lower jaw being longest. A float is a nuisance when a reel is used, but is one of those evils which we sometimes term "necessary."

When a pickerel seizes a spoon hook it is either well hooked or lost at the moment of contact, as the fish knows at once that it has made a mistake, and will get rid of the combination of steel and other ingredients if possible. With a minnow or frog it is different. The pickerel may take it crosswise in its mouth and run to cover with it. Let him run and have time to gloat over his prize, eject it, and take it head on and pouch it. This may consume some minutes, during which there is no sign of life at the far end of the line. Wait. After the bait is fairly down the pickerel moves and finds itself fast, and then the angler may begin the fight with no danger of drawing the bait away and alarming its game by a premature movement.

Pike Fishing.

The same methods are used for pike as for pickerel. Their habits are much the same, and they are found in similar waters. For the larger fish we must use larger hooks and baits. Where pike of ten pounds may be looked for, a 7-0 hook or larger is the right size, and the minnow should be five or six inches long, frogs in proportion. Spoons are made in so many shapes (and the makers have a scale of sizes of their own) that the angler must work out this problem of size.

There are spoon baits in great variety, and all of them will catch weeds, some more than others, and the angler must reel up occasionally to look for weeds, since a bit of green weed on spoon or minnow tells your game that it is an undesirable morsel, for the fish knows that no living minnow or frog drags weeds with it.

Both pike and pickerel are taken through the ice with live baits, and this is the only winter sport of the freshwater angler. Many holes are cut and the lines are attached to "tip-ups," which signal the fact that a fish is hooked.

Mascalonge.

It is in the Great Lakes where this king of the pike family grows to its greatest size, but with an increased population they do not live long enough to attain their maximum weight. The clear waters of the Thousand Islands, at the head of the St. Lawrence River, is a famous place for them, but their numbers have greatly decreased in late years. It is a gamier fighter than its relative, the pike, and coming from clearer waters it is a better table fish.

It is mainly caught by trolling the minnow or the spoon, with an eight-foot bait rod, a multiplying reel, and 100 yards of good cuttyhunk bass line. The best seasons for mascalonge are in June and again in September and October. All fish weighing over ten pounds should be gaffed; the landing net is too light for them.

Maine and Elsewhere.

BOSTON, July 11.—George J. Raymond, J. J. Munroe, S. R. Raymond and F. N. Ganong recently made up a Boston fishing party to Sunapee Lake. They caught about thirty bass; all on the fly; none were very large, but "it was rare sport to catch the gamy fellows." They also caught a number of the aureolus trout, for which Sunapee Lake is celebrated. They describe these trout as very beautiful and weighing from ¼ of a pound to 3 pounds. The fishermen were much pleased with boatman I. P. Rawson, who took them out. They found him a boatman or guide worth having. This is written to give other guides a hint, if they desire to please their patrons. The boat was large, roomy and very steady; painted pure white and most scrupulously clean. The whole inside was lined with stout canvas. The seats were armchairs, with legs sawn off and mounted on springs, with spring bottom under the cushions. In the lockers that were under the seats was to be found everything to make the sportsman happy. Rubber clothing was ready in case of a storm. One of the boys suggested that he wished he had brought a straw hat, as the sun was hot. Behold the locker came open and there were straw hats. All sorts of fishing tackle were on the boat; rods, with neatly arranged rod rests, for trolling. Guide Rawson was suggestive, but not officious. If the fish did not take a certain fly after a fair trial, he would say: "Now let us try this fly." Then, if the fisherman was agreed, he would deftly make the change. For all this service, boat and all, with four in the boat, his charge was the very moderate one of $3 per day. Verily, it is in the power of the guide to make the sportsman happy.

Mrs. Frank L. Hosmer, of Baldwinsville, Mass., has just made the champion bass catch of the season—a beauty of 4 pounds weight, from Queen Lake in Templeton. At the Upper Dam Mr. L. A. Reese recently landed in one and a half hours 43 pounds of fish; three trout and the balance salmon, fifteen fish in all, including one of over 5 pounds. Mr. Eugene Lynch, of Boston, is back again from the Upper Dam with a record of ten fish, all taken on the fly. J. S. Doan, of Boston, and J. C. Morgan, of Norwich, have both made good records.

Mr. N. G. Manson and Mrs. Manson, of Weston, went up to Camp Leatherstocking, Richardson Lake, last week, where they make their summer home. About the first morning in camp Mr. Manson rose at 4 o'clock to look at the weather. What was his surprise to see a big bull moose, not 75 feet away, quietly nibbling the grass and twigs in front of the camp. Watching the ungainly beast did not seem to alarm him in the least, and all hands were aroused and had a good look. Mr. Manson writes that "he looked the property all over leisurely, with the suggestion from his big eyes that he might come again. Then trotted quietly away and into the woods."

BOSTON, July 14.—Mr. Felix Taussig, a Boston fisherman who lives at Sharon, fished Lake Massapoag on the Fourth, and as the result took over to the store of his firm four bass, one of 2½, one of 3½, one of 4½ and one of 5½ pounds. Mr. F. A. Perry had his Fourth of July fishing at Black Brook, Lake Road, above Andover, Me. Sportsmen who formerly went into the Rangeley region by way of Andover, will remember this brook as one of the best trout brooks in Maine. Though in the deep woods, it is near to the Lake Road for nearly eight miles. Large and full of pools and deep gorges, it is naturally full of trout, but excessive fishing had reduced it to almost utter depletion, till up to six or eight years ago, when it was legally closed to all fishing for all but three days in a week. This amount of protection has seemed to partly restore the trout. Mr. Perry fished from the Bridge up to the Devil's Den, about three miles, and took thirty-five handsome trout. Some were up to ½ pound weight. He hears of trout being taken from that brook this year of over 1 pound, and a good many of them. But Andover has a good many trout fishermen, beside a country for miles below, from which fishermen drive with teams in great numbers. Even the women of that section are fishing the brooks. One Andover woman has a record of 1,000 trout taken at different times this year; mostly from Sawyer Brook, which comes into that town. Mr. L. O. Crane and Mrs. Crane, of Boston, at the Megantic Preserve, write that the fishing is good, though the water is still high from constant rains. At L Pond Mr. Crane had a catch of thirty trout at one trip, nearly all of which were returned to the water.

The Maine Sportsmen's Fish and Game Association spent the most of last week in a session at Kineo, Moosehead Lake. The most important feature of the session was the meeting of Monday evening when the question was discussed, "How Shall Money Be Raised for the Protection and Propagation of Fish and Game?" This opened the hunters' license question full blast, and nobody was there to say much in opposition to the imposing of such a license. The Hon. J. F. Sprague read a paper in which he pointed out all the necessity of more money and what seemed to him to be the utter impossibility of raising any more from taxation. He then attempted to show how admirably a system of taxing outside sportsmen would work. He forgot to suggest that it is optional with a sportsman, who does not live in Maine, whether he goes to that State for hunting or not; that already the tax is tremendous on those who have been in the habit of going there; that thousands are now kept out of that State by the cost; that the imposition of a further tax, especially in the form of an obnoxious license, that must be paid whether the hunter is successful or not, will tend to keep thousands more away. He seemed to forget that the great majority of those who have heretofore gone to Maine to hunt are not bondholders and aristocrats with "money to burn." If he could be thrown among sportsmen outside of Maine as I am thrown among them, through meeting them in a business away almost every day in the year, he would soon learn that the only sportsmen of that class who favor a license system in Maine are the few who happen to have wealth and are willing to pay for a license to hunt themselves in order to keep the rabble of hunters away. He did not touch upon the fact that Maine's worst enemies of her fish and game dwell within her borders, whom he does not propose to touch with his license system. What would Mr. Sprague think of a Boston dry goods store that should, with a body of keepers at the doors, attempt to tax everybody who came in to look at goods, simply because through mismanagement or otherwise, the store was not paying? He would say, better by far let everybody come in freely and get the needed money from the goods sold; that is, tax the sportsmen, residents of the State, not living in the immediate locality, as well as non-residents, for the game actually obtained. If Maine wants to get revenue from her big game, for greater protection, then let her go about it in a business-like way. Let her great men look thoroughly into the license systems of other States and see that as a system for producing revenue they have proved almost an utter failure.

It is a curious fact that the proposition discussed somewhat at the Kineo meeting, to make a law not permitting the carrying of firearms into the woods in close season did not meet with favor. One man argued that a rifle is just as necessary at a camp as a frying pan or water bucket. Necessary for what?

The summer boarder and tourist are more in order at many of the Maine fishing resorts now than the fisherman. Still, there are reports of good fly-fishing at Moosehead. Some good catches are being made at some of the Rangeley resorts. At Bald Mountain camps and at the new camps on the Decker Purchase there are a number of expert fishermen. Mr. C. A. Robinson, of South Windham, formerly a devotee of Sebago salmon fishing, has built a fine cottage on that purchase this year. His last record was two salmon, one of 5½ and the other 5 pounds. He has also a trout record for the same days, four, from 2½ pounds to 4 pounds. Mr. E. B. Newton, of Boston, has a camp there, built this year. His trout and salmon record is good. Mr. L. A. Reese, of Philadelphia, has lately made another fishing record at the Middle Dam, Richardson Lake: Trout, 2 and 3¼ pounds; salmon, 2, 3¼, 3, 2½, 2, 2, 2¾ and 4 pounds. Other fishermen are making good records there. The Pond-in-the-River is proving a good fishing ground with the present high water.

SPECIAL.

The Kennel.

Some Canine Epitaphs.

HERE are some epitaphs and elegies of departed dogs. Others will be given in later issues; and the series, as indicated by the present installment,, covers a wide range of time and place:

I.—The Dog's Grave.

Soft lie the turf on those who find their rest
Here on our common mother's ample breast.
Unstained by meanness, avarice and pride,
They never flattered and they never lied;
No gluttonous excess their slumber broke,
No burning alcohol, no stifling smoke.
They ne'er intrigued a rival to displace,
They ran, but never betted on a race;
Content with harmless sports and moderate food,
Boundless in love, and faith, and gratitude.
Happy the man, if there be any such,
Of whom his epitaph can say as much.

—Lord Sherbrooke.

II.—Bush.

In memoir of a true friend, pure and honest, an example to humanity, more honorable than the Star or Garter, a simple canine whose remains are interred at the root of this maple trees, by its owner, G. F. Dyer.

Here lies a dog that was almost a man, murdered by a man who was almost a brute. This faithful dog—

"Hath borne his faculties so meek, hath been
So clear to his that his virtues
Will plead like angels, trumpet-tongued, against
The deep damnation of his taking off."

His name is Bush, a dutiful companion of his owner, murdered by a Fiend

July 26th, 1889.

The Dog was superior to its Assassin. It had a Pedigree.

G. F. D.

III.—Poor Little Boxer.

In the pets' cemetery of Marlborough House, where are buried several of the pets of the King and Queen:

A true friend! Man or dog, what name
Could more win love or more enhance his fame?
Through burning desert and the midnight fray,
Where his fond master led the glorious way,
He bravely followed, and with mute caress
Cheered both his labors and his idleness.
A miscreant slew him, none were near to save;
Let kindly tears bedew his honored grave,
And fairest fingers twine his funeral wreath;
A faithful comrade is at rest beneath.

IV.—At the Burial of a Dog.

Small friend, of faithful heart and liquid eyes,
We give thee to our Mother Earth again,
And thank thee for thy friendship. We are men
Who pride ourselves that we are very wise;
We throw our glances upward to the skies,
Yet cannot tell what death is. Even when
Thy little spark of life escapes our ken,
We're left to grope in sad and blind surmise,
Dear dead companion, would that thou couldst know
What human tears are shed above thy grave!
How human-like we felt thy love to be!
How much to us thou wast, in weal and woe!
Thou merry, curious, willing little slave,
Half human, wondrous, wond'ring mystery!

—Arthur Ransom.

V.—Vite.

(From the New York Commercial Advertiser.)

A tragic story of a dog's devotion and faithfulness to his master, even unto death, is graven deep in a tablet hewn in the face of a rock beside the Kaaterskill Falls, at the time of the occurrence thirty-three years ago. It has interested many thousands of visitors to this beautiful and romantic region of the Catskills, who have made the descent into the wood-lined abysm where the falls plash and murmur and extend in a crystal brook that serpentines among the boulders to a more level course in Sunset Gorge at the foot of High Peak Mountain.

The epitaph is as follows:

To the Memory of
VITE,
The Bayard of Dogs,
Sans Peur et Sans Reproche.
Killed
June 19, 1868, by Leaping from the
Platform Above the Falls to
the Rocks Beneath.

This Epitah is Inscribed to His
Memory by His Friends
J. S. McK.—W. E. P.—J. K. M.

Vite was a spaniel. His master, with his friends, went to the foot of the falls, leaving the dog above. The animal could not see them, as they made the precipitous descent, and was in great distress, when at last they emerged from the woods into the open on the rocks, nearly 280 feet below. As his master appeared, Vite barked for joy, and perceiving no other way to reach him, unhesitatingly made the fearful leap.

VI.—Tiger Afterward Called Friend.

(From the London Field.)

In the middle of the garden of Eling Vicarage there is a life-size figure of a Newfoundland dog resting on an oval plinth, the monument altogether being about 6 feet high. On the sides of the plinth are inscriptions, one in Latin, the other in English. In the English version some slight gaps are owing to the stone having perished and been filled up with cement at some time or other. The following is the inscription:

In memory
Of a Newfoundland dog,
Formerly called Tiger, afterward Friend,
Eminently qualified
By acuteness of scent, quickness of eye,
Strength of body, peculiar sagacity,
For every duty of his species,
Who on the fourteenth day of October, 1789,
When one to whom he was yet a stranger,
But was in a short time to be his master,
Had unconsciously been carried out of his depth
While bathing in the sea at Portsmouth,
And being unable to swim
His strength became exhausted and his senses overpowered
By long struggling with the waves,
Rushed spontaneously to his assistance
Seized him by the hair,
Brought him cautiously and steadily to the shore,
And thus rescued him from imminent death,
From gratitude
. . . the preserver . . .
. . . guardian of . . .
Who . . . age the 6th . . .
. . . Phillips
Caused this monument to be erected
Over his remains which are here deposited
A.D. 1810.

From these dates it appears that the dog was in the possession of his new master, whose life he had saved, for twenty-one years, and obviously must have been something more than a puppy at the beginning of that time. T. THISTLE.

VII.—Toby Tone.

OXFORD, Mass.—*Editor Forest and Stream:* The inclosed lines were printed fifty or sixty years ago, evidently from an English source. Can you tell where they can be found, and the author? Or can you give the missing line beginning the last stanza? The rest are fresh in mind, but this one seems to have vanished utterly.
F. G. DANIELS.

There's howling in the kennel, Dace,
There's mourning in the hall,
For Toby Tone has run his race,
Lamented by us all.

He ranged the stubble yesterday
With little Mike at side,
Then laid him down all quietly
And died at turn of tide.

The boys were quite disconsolate,
Nor deemed that it could be;
They placed a partridge by him straight
And fired volleys three;

But cold alike to scent or sound
He moved no tail nor head,
And so they laid him in the ground
Convinced that he was dead.

? ? ? ? ? ?
Since little Mike would swear
He'd flush a woodcock in the corn
And stand it in the clear;

And I myself, and scorn to cog,
Will say beneath the sun,
That Toby was as good a dog
As ever followed gun.

Canoeing.

Western Canoes.

Western Division Meet.

CHICAGO, Ill., July 5.—It is the expected which happens once in a while, about ten years later than it was expected. We have always expected that the Western Division of the A. C. A. would one of these bright days have a meet of its own, and now the expected is to happen. On July 12-26, at Ballast Island, this heroic little band of Western canoeists will once more assemble and do things to each other as well as to the rippling waves of Lake Erie and the circumambient atmosphere which is superimpendent thereupon. We are confidently advised that delegations will be on hand from Chicago, Toledo, Cleveland, Detroit, Dayton, Cincinnati, Oshkosh, Madison, Wis.; South Bend, Ind.; Springfield, Ill.; Springfield, O.; Bloomington, Ill.; Columbus, O.; Jackson, Mich.; St. Paul, Minn.; Fremont, O.; Wyandotte, Mich.; Rochester N. Y.; Hamilton and Kingston, Ont.; Pittsburg, Pa.; Rome, N. Y.; Des Moines, Ia.; Peoria, Ill.; Sault Ste. Marie, Mich.; Buffalo, N. Y., and other seaport towns. It would indeed be very gratifying did al lof these delegations appear. Perhaps one-tenth of them may appear, but even so, if these be of the old faithful guardians of the honor of the little craft in the West, then assuredly the meeting must be a success. If it is such, then let credit go where credit is due. The meeting of the Western Division of the A. C. A. at Ballast is due to the effective interest and the personal work of Mr. F. B. Huntington, Vice-Commodore.

These Western men have clung with great tenacity to their interest in the beautiful sport of canoeing. Hard times and many vicissitudes wrought the ruin of the old W. C. A. The Western Division of the A. C. A. is nothing better and nothing much bigger than the old W. C. A. The reorganization makes little difference. The men who make the organization in this, that or the other part of the country stand for the character of the sport itself. These men are drawn together at Ballast not by the wish of winning cups so much, I am convinced, as by the honorable and very beautiful feeling of fellowship which has so long existed among them.

As to Ballast Island itself, it is by no means a name with which to conjure. High, rocky, restricted, offering no sport at all excepting in the nature of sailing, Ballast Island never appealed to me personally. I like localities less civilized. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Announcement and Programme of Meet at Ballast Island

Lake Erie, July 12 to 26, 1902.

For the first time in the history of its existence, the Western Division of the A. C. A. will hold a meet. There is every indication and assurance that it will be a good one. A canvass of clubs and members of this and adjoining divisions indicates a large attendance from the following cities: Milwaukee, Wis.; Chicago, Ill.; Detroit, Mich.; Toledo, O.; Cleveland, O.; Dayton, O.; Cincinnati, O.; Oshkosh, Wis.; Madison, Wis.; South Bend, Ind.; Springfield, Ill.; Bloomington, Ill.; Springfield, O.; Columbus, O.; Jackson, Mich.; St. Paul, Minn.; Fremont, O.; Wyandott, Mich.; Rochester, N. Y.; Toronto, Hamilton, Ont.; Kingston, Ont.; Pittsburg, Pa.; Rome, N. Y.; Sault Ste. Marie, Mich.; Des Moines, Ia.; Buffalo, N. Y., and Peoria, Ill.

LOCATION.

Ballast Island, Lake Erie, the birthplace of canoeing in the West, and for many years the home of the Western Canoe Association, has been chosen as the location of the present meet.

DATE.

The meet will open Saturday, July 12, and continue for two weeks, or until Saturday, July 26. We have arranged for moonlight during this time.

CAMP SITE ARRANGEMENTS.

Mr. C. J. Stedman, of Cincinnati, and Mr. J. R. Bartlett, of Fremont, O., constitute the Camp Site Committee, and have charge of the details of all camp arrangements. Members are requested to communicate with Mr. Stedman at once, announcing the probable date of their arrival, their requirements in the way of tents and tent floors, whether or not they are to be accompanied by members of their family; in short, a statement of their plans as far as possible, in respect to attending the meet.

Board for those occupying tents, $1 per day. Board for those occupying cottages, $10 per week. Ice water free in camp. Ice to members, 20 cents per 100 pounds.

A few cottages or rooms in same may be available for those who wish them.

Members are requested to bring their own cots, bedding and tents.

Mail should be addressed to Canoe Camp, Ballast Island, Lake Erie, via Put-in-Bay, Ohio.

ENTERTAINMENT.

Mr. G. H. Gardner, of Cleveland, O., and Mr. W. H. Yardley, of St. Paul, Minn., constitute the Entertainment Committee, and all arrangements for entertainment are in their hands. An attractive programme has been prepared by them for the edification of members, their wives and families. Bring your musical instruments, jokes, ping pong, games, and aid the committee in its efforts to provide amusement.

TRANSPORTATION.

Ballast Island is reached by steamer from Put-in-Bay. Put-in-Bay is reached by steamers from Cleveland, Sandusky, Toledo and Detroit. The following are the one way rates from points named to Sandusky, O., which is the nearest railroad point:

Chicago, Ill., $8.25; Peoria, Ill., $11.25; Springfield, Ill., $12; Bloomfield, Ill., $10.60; Milwaukee, Wis, $10.80; Madison, Wis., $12 17; Oshkosh, Wis, $13.22; Cincinnati, O., $5.85; Springfield, O., $3.90; Dayton, O., $4.15; Fremont, O., 70 cents; Columbus, O., $3.30; Cleveland, O., $1.80; Toledo, O., $1.45; Detroit, Mich, $2.75; Jackson, Mich., $3.59; Ypsilanti, Mich., $3.34; Wyandotte, Mich., $2.60 St. Paul, Minn., $19.75; Minneapolis, Minn., $19.75; South Bend, Ind., $5.90; St. Louis, Mo., $13.30; Davenport, Ia., $12.87; Des Moines, Ia., $18.40; Buffalo, N. Y., $6.80; Rochester, N. Y., $8.18; Rome, N. Y., $10.56; Pittsburg, Pa., $5.80.

The Detroit and Cleveland Navigation Company name the following rates: Cleveland to Put-in-Bay, and return, $1.25; Toledo to Put-in-Bay and return, $1; Canoes, Cleveland or Toledo to Put-in-Bay, $1 each.

The Ashley & Dustin Line steamers name the following rates: Detroit to Put-in-Bay, and return, $1. Canoes, Detroit to Put-in-Bay and return, $1.

The Sandusky and Island Steamship Company will make rate: Sandusky to Put-in-Bay and return, $1. Canoes, Sandusky to Put-in-Bay and return, $1 each.

Capt. E. J. Dodge, steamer Ina, will make rates between Put-in-Bay and Ballast, one way, 15 cents; round trip, 25 cents; trunks, 25 cents; canoes, 50 cents.

It is suggested that members make inquiry of their ticket agent in respect to excursion and tourist rates to Cleveland, Sandusky, Toledo and Detroit, and take advantage of such reduced rates as may be in effect.

RACING PROGRAMME.

Mr. J. R. Stewart, 3535 Euclid avenue, Cleveland, O., chairman of the Regatta Committee, makes the following announcement in respect to the racing:

The regatta will begin July 21 and be run off as fast thereafter as wind and weather conditions will permit. In addition to the Gardner cup, W. C. A. trophy, and Gardner trophy, an attractive line of prizes has been secured.

CAMP RULES.

1. A member will be appointed by the commodore daily to act as Officer of the Day, who will have charge of the camp, and will be obeyed accordingly. He will appoint pickets to assist him.
2. Members will register and pay their camp dues of $1 at purser's tent immediately upon arrival.
3. The commodore or purser will be at headquarters for the transaction of business from 9 until 11 A. M., and 1 until 3 P. M. each day, but will be immediately available at all other hours.
4. Tents may be located by owners, subject to the approval of the Camp Site Committee, and with due regard for the thoroughfares and lines. Daily before 10 o'clock tents and grounds must be put in order; all refuse, papers etc., must be ready for removal by the camp cart. Members will be held responsible for the appearance of their tents and the surrounding grounds. Due regard to dress while at meals is requested.
5. Camp will be open daily from 10 A. M. to 5 P. M. Guests may be invited by card, obtained of the Purser. Before 10 A. M. and after 6 P. M. no guests will be expected in camp, except by invitation for occasions specially announced on bulletin board.
6. Visiting boats must land at the steamboat wharf, unless otherwise directed by officers in charge.
7. Reveille will be sounded at 7 A. M. The United States Army bugle calls will be used.
8. Flags will be raised at 8 A. M. and lowered at sunset. Last post will be sounded at 11 P. M., after which quiet will be maintained in camp. Hours for meals will be noted on the bulletin board and called by bugler.

The observance of these rules will greatly facilitate the officers in the discharge of their duties.

The Inter-Lake Yachting Association will hold their annual regatta at Put-in-Bay July 20 to 27, and through their commodore, Mr. C. C. Warren, have kindly extended their courtesies to the members of this Association.

The original Gardner cup, last sailed for at the Mullet Lake meet in 1896, has been lost, and diligent inquiry has failed to disclose it. If this circular reaches the eye of any one having knowledge of its whereabouts it is requested that they communicate with the vice-commodore.

The annual meeting of the Division for the election of officers and transaction of appropriate business will be held during the second week of the meet.

F. B. HUNTINGTON, Vice-Com.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

JULY.

19. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
19. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
19. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
19. South Boston, club handicap, City Point, Boston Harbor.
19. Stamford Corinthian, Y. R. A. of L. I. S., open. Stamford, Long Island Sound.
19. Duxbury, club, Duxbury, Massachusetts Bay.
19. Winthrop, club, Winthrop, Boston Harbor.
19. Corinthian, club championship, Marblehead, Mass. Bay.
19. Beverly, club, Monument Beach, Buzzard's Bay.
19. Manhasset Bay, club, Port Washington, Long Island Sound.
19-26. Larchmont, race week, Larchmont, Long Island Sound.
19-31. Royal Canadian, L. Y. R. A. circuit, Toronto.
21-26. Interlake Y. A., an. regatta, Put-in-Bay, Toledo, Lake Erie.
24-26. Hull-Massachusetts, midsummer series, Y. R. A., open, Hull, Boston Harbor.
26. Quincy, club, Quincy Bay, Boston Harbor.
26. Winthrop, club, Winthrop, Boston Harbor.
26. Duxbury, club, Duxbury, Massachusetts Bay.
26 to Aug. 2. Corinthian, annual cruise, from Delaware River to Long Island Sound.
26. Beverly, third Cor., Mon. Beach, Buzzard's Bay.
26. Manhasset Bay, club, Port Washington, Long Island Sound.
26. Beverly, third Corinthian, Monument Beach, Buzzard's Bay.
26. Mosquito Fleet, club, City Point, Boston Harbor.
26. Atlantic, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
26. Corinthian, club championship, Marblehead, Mass. Bay.
26. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
26. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
26. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
28. Wollaston, M. Y. R. A., open, Quincy Bay, Boston Harbor.
28-29. Boston Y. R. A., open, Marblehead, Massachusetts Bay.
29, 31 and Aug. 2. Kennebec, commodore's cup series, Bath, Me.
30-31. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize $50.00
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.
2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.
3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.
4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.
5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Atlantic Y. C. Cruise.

FIRST SQUADRON RUN—LARCHMONT TO MORRIS COVE.

Monday, July 7.

THE Atlantic Y. C. fleet gathered in Larchmont Harbor on Sunday preparatory to making an early start on Monday.

The first run was from Larchmont to Morris Cove. Mr. George Hill, chairman of the Regatta Committee, used his auxiliary sloop Akista as the committee boat, and after starting the fleet headed directly for Morris Cove, in order to be on hand and take the boats' times as they finished. The wind was from the E. and quite light. The smaller classes were sent first. Class L started at 9:15, class K at 9:20 and the balance of the boats at 9:25. The course was E. by N., ½ E., thirty miles to the Red Spar Buoy off Stratford Point, leaving it on the port hand, thence E.N.E., eleven miles, to the finish, between the breakwaters at the entrance to New Haven Harbor.

It was slow work beating against the light wind, but when off Oyster Bay the wind came out of the S. and W., enabling the boats to carry ballooners and spinnakers. Before the wind shifted the sloops held in the lead, but as soon as light sails could be used the schooners did better, and Emerald was the first boat to finish.

Neola and Yankee had a pretty race all during the day. Neola held her lead until she was off Stratford Shoal, when Yankee, showing more speed, got slowly by her and won by nearly 10m. All the boats in the fleet, with the exception of Maraquita, Ondawa and Narika, finished by 7:30.

Yankee went aground in Morris Cove, but came off on the flood tide without injury. The summary:

Schooners—Class A—Start, 9:25.

	Finish.	Elapsed.
Emerald, W. E. Iselin	5 39 08	9 14 08
Schooners—Class B—85 to 90ft.—Start, 9:25.		
Sachem, F. T. Adams	6 21 31	8 55 31
Varuna, F. F. Ames	5 46 39	9 21 39

Schooners—Class F—Under 65ft.—Start, 9:25.

Loyal, R. P. Doremus	6 45 50	9 20 50

Sloops—Class H—70 to 80ft.—Start, 9:25.

Yankee, J. R. Maxwell	5 59 26	8 34 26
Neola, G. M. Pynchon	6 10 39	8 45 39
Eelin, F. J. Rodewald	6 32 54	9 07 54

Sloops—Class J—51 to 60ft.—Cruising Trim—Start, 9:20.

Mariquita, H. B. Shaen	Withdrew.	
Isolt, C. W. Nason	6 51 19	9 31 19
Eclipse, L. J. Callanan	8 03 27	10 25 27

Sloops—Class L—36 to 43ft.—Start, 9:15.

Narika, F. T. Cornell	Withdrew.	
Rondinella, F. H. Davoll	7 02 00	9 47 00
Heron, F. C. Swan	7 24 36	10 09 00

Sloops—Class K—43 to 51ft.—Start, 9:20.

Ondawa, H. J. Robert	Withdrew.	

The winners were Emerald, Sachem, Loyal, Yankee and Rondinella.

SECOND SQUADRON RUN—MORRIS COVE TO NEW LONDON.

Tuesday, July 8.

When Tuesday broke the weather conditions were anything but promising. The wind was strong from S.W. and from the overcast sky the rain fell in torrents. About 9 o'clock it began to clear, and as there was a nice S.W. breeze blowing, the preparatory signal was made at 9:30 on the committee boat. The starting line was off the lighthouse at the western end of the east breakwater. The course was E. by S., twenty-five miles to Cornfield light vessel, then E. ½ N. to Bartlett Reef light vessel, then N.E. by E. two miles to the finish, off Sarah's Ledge.

The boats in class L were started at 9:45. Mira allowed 1h. each to Rondinella and Heron, and 1h. and 45s. to Narika.

Yankee allowed Neola 18m. and Eelin 26m. All the boats got away on the starboard tack, and most of them were carrying baby jib topsails. Yankee held close in to Thimble Island and got out of the tide, while the others stayed out in the Sound.

Just before reaching Faulkner's Island, Emerald drew into the lead, which position she held up to the time she finished. The boats passed Cornfield Lightship in the order named: Emerald, Sachem, Yankee, Neola, Varuna and Loyal. Sheets were eased well off here and spinnakers were set to starboard. When Bartlett's Reef Lightship was passed, Emerald was still in the lead, but Yankee had moved into second place. At this point spinnakers were doused and booms gybed over to starboard, as it was a broad reach to the finish line.

Com. Robert E. Todd's schooner Thistle accompanied the fleet, and was the fourth boat to finish, having started at 9 o'clock. The summary:

Schooners—Start, 9:55.

	Finish.	Elapsed.
Emerald, W. E. Iselin	2 31 24	4 39 24

Schooners—Class B—85 to 90ft.—Start, 9:55.

Sachem, F. T. Adams	2 46 54	4 51 54
Varuna, F. F. Ames	3 21 29	5 26 29

Schooners—Class F—Under 65ft.—Start, 9:55.

Loyal, R. P. Doremus	3 34 15	5 39 15
Uncas, Jas. Weir, Jr	4 12 52	6 17 52

Schoners—Match Race—Start, 9:55.

Varuna, F. F. Ames	3 21 29	5 26 29
Loyal, R. P. Doremus	3 34 15	5 39 15

Sloops—Class J—51 to 60ft.—Start, 9:50.

Isolt, C. W. Nason	4 16 41	6 26 41
Eclipse, L. J. Callanan	4 20 58	6 30 58

Sloops—Class L—36 to 43ft.—Start, 9:45.

	Finish.	Elapsed.	Corrected.
Mira, C. L. Poor	4 09 04	6 24 04	. . . .
Narika, F. J. Cornell	Not timed.		
Rondinella, F. H. Davoll	4 28 40	6 43 40	5 43 40
Heron, F. C. Swain	4 31 48	6 46 48	5 46 48

Match Race—Start, 9:45.

Rondinella, F. H. Davoll	4 28 20	6 43 40	. . . .
Heron, F. C. Swain	4 31 43	6 46 48	. . . .

Sloops—Classes H, L and J.

	Start.	Finish.	Elapsed.	Corrected.
Yankee	1 00 00	2 38 35	4 38 35	4 38 35
Neola	9 50 00	3 07 43	5 17 43	4 59 43
Eelin	10 00 00	3 46 38	5 46 38	5 20 38

The winners were Emerald, Sachem, Loyal, Varuna, Isolt, Rondinella and Yankee.

THIRD SQUADRON RUN—NEW LONDON TO SHELTER ISLAND.

Wednesday, July 9.

A fresh S.W. breeze made the run from New London to Shelter Island an interesting one. It was a beat across and Yankee led the fleet.

The boats were started off Sarah's Ledge and the preparatory signal was made at 10 o'clock.

Yankee was the last boat to start, but she walked through the fleet in great style.

The boats passed through Plum Gut in this order: Yankee, Mira, Isolt, Sachem, Eclipse, Varuna, Uncas, Loyal and Maraquita. Some of the boats got caught with little or no breeze in the Gut, and were delayed some time. Yankee and Mira were the first boats through.

It was now a long leg and a short one across Gardner's Bay to the finish line off Long Beach Point. Yankee was first to finish, followed by Mira, Eelin, Sachem, Uncas, Isolt, Loyal, Eclipse, Varuna, Rondinella and Heron. The summary follows:

Schooners—Class B—Start, 10:25.

	Finish.	Elapsed.
Sachem, F. T. Adams	2 15 16	3 50 16
Varuna, F. F. Ames	2 35 00	4 10 00

Match Race—Start, 10:25.

Loyal, R. P. Doremus	2 19 00	3 54 00
Varuna, F. F. Ames	2 35 00	4 10 00

Schooners—Class F—Start, 10:25.

Loyal, R. P. Doremus	2 19 00	3 54 00
Uncas, Jas. Weir, Jr	2 27 01	4 02 01

Corrected time, Uncas, 3.55.01.

Sloops—Class H—Start, 10:30.

Yankee, J. R. Maxwell	1 41 26	3 11 26
Eelin, F. L. Rodewald	2 00 16	3 30 16

Corrected time, Eelin, 3.10.16.

Sloops—Class J—Start, 10:20.

Eclipse, L. J. Callanan	2 31 45	4 11 45

Sloops—Special Race—Start, 10:20.

Isolt, C. W. Nason	2 23 05	4 03 05
Mariquita, H. B. Shain	3 02 20	4 42 20

Sloops—Class L—Start, 10:15.

Mira, Chas. L. Poor	1 55 19	3 40 19

Sloops—Class M—Start, 10:15.

Heron, Frank Swain	2 50 33	4 35 33
Rondinella, F. H. Davoll	2 55 38	4 40 38
Narika, F. T. Cornell	3 37 00	5 22 00

Match Race—Start, 10:45.

Heron, Frank Swain	2 50 33	4 05 25
Rondinella, F. H. Davoll	2 55 38	4 10 44

The winners were Sachem, Loyal, Eelin, Eclipse, Isolt, Mira and Heron.

Yacht Racing Association of Gravesend Bay.

Saturday, July 12.

THE fourth regatta of the Yacht Racing Association of Gravesend Bay was held on July 12 under the auspices of the Marine and Field Club, Bath Beach, L. I. Twenty-four craft started. Three did not finish and one was disqualified. The winners in the different classes were Sunol, Caribou, Cockatoo, Bronco, Kelpie and Boozie. Vivian and Opossum scored sailovers.

The race marked the advent of a newcomer in class V for catboats, which it is hoped is but the forerunner of other additions. She administered a defeat to the hitherto unbeaten Martha M., although the victory was by only 6s. The new craft is from Patchogue, L. I., and belongs to C. D. Durkee, of the Brooklyn Y. C. Her name is Boozie.

Gravesend Bay never saw a better racing day. The yachts were started off in a two-reef breeze, which held true and did not lighten until just before the finish, and there was almost a whole-sail breeze.

The preparatory signal was sounded at 3 o'clock, and the different classes were sent away at 3m. intervals, beginning at 3:03. The start, on the whole, was very satisfactory. The signal for a reversal of the course, in which all marks are left on the port instead of the starboard hand, was flown, according to the regulations by which the Association races are governed. None of the starters in class N or above saw the red flag, and they covered the course out to West Bank Light and return in the usual way.

As all of them started the same, however, rather than throw out their entries, the Regatta Committee decided to allow the records to stand.

Of the smaller boats, which sail the regular inside Association course, Song and Dance started over the wrong way, and only after she saw the other craft sailing a different course, did she come back and start aright. Karma, another class P boat, failed to cross inside the starting line, and returned to do so quite a bit after the start.

At one time the gun used by the Regatta Committee went on a temporary strike, and although the signals were displayed at the proper time, the absence of the accustomed boom confused the yachtsmen somewhat.

All these circumstances, no doubt, were responsible for the finishes, which, excepting in class V, were of the procession variety. There were few changes in the order of the craft after the first round. A strong ebb tide was running and the Corinthian, who coped with this successfully, providing he had started aright, in most cases found himself in the lead.

In special class M, cruising trim, Sunol won from Bonito. The latter did not finish. Before the race Sunol and Bonito were tied on points, but the result of the contest put the former ten in the lead.

Caribou defeated Squaw in class N by 2m. and 15s. elapsed time. Indian did not finish. Cockatoo led Streak in class P by 6m. 37s. Song and Dance and Karma made poor showings because of the mistakes in starting.

In class Q Bronco led Wraith by 2m. and 23s. at the finish. Wraith was disqualified for fouling a mark, and second place went to Trouble. This puts the latter ahead on points for the series to date, with Bronco second and Wraith third.

The former class R boat, Opossum, has been recently measured and is found to be long enough for class Q with three men aboard. Because of the recent action of the Association regarding her entry in the class, she was raced as a special.

Kelpie led the Marine and Field boats from the start. She defeated Stinger, her nearest rival, by 35s. In the second round Stinger passed Quinque, and Vixen got ahead of Flying Fox. It was the first start of the year for the latter.

Beside points on the Association series, Kelpie's victory gives her a leg on the Cuyler cup. The series for this trophy now stands a tie between Kelpie and Stinger, each having captured one leg. The two boats will sail off for the cup at some future date.

Boozie won in the class for catboats. Rascal protested Martha M. for crowding and eventual fouling at one of the marks. The protest has not been decided, and figuring the standing to stand in the different classes, the protest, for the present, is disregarded.

The next Association race occurs on July 26, under the auspices of the Atlantic Y. C. Each club in the organization has now held one race. The summaries follow:

Class M—Special—Start, 3:03.

	Finish.	Elapsed.
Sunol, J. Abbey	6 03 37	3 00 37
Bonito, Haviland Bros.	Withdrew.	

Sloops—Class N—Start, 3:06.

Caribou, F. Nicholson	6 21 08	3 15 08
Squaw, H. J. Heath	6 23 23	3 17 23
Indian, Menton Bros.	Withdrew.	

Class N—Special—Start, 3:06.

Vivian, S. E. Vernon	6 06 05	3 03 05

Sloops—Class P—Start, 3:09.

Cockatoo, Hendon Chubb	4 24 28	1 15 28
Streak, Speidel Bros.	4 34 05	1 25 05
Song and Dance, E. F. Luckenbach	4 35 50	1 26 50
Karma, J. C. Erskine	4 37 45	1 28 45
Corona, J. E. Beggs	Withdrew.	

Sloops—Class Q—Start, 3:12.

Bronco, F. C. Moore	4 36 00	1 24 00
Trouble, W. H. Childs	4 42 04	1 30 04
Wink, W. A. Barstow	4 43 50	1 31 50
Wraith, Calvin Tomkins	Disqualified.	

Class Q—Special—Start, 3:12.

Opossum, R. P. Doremus	4 44 00	1 32 00

Marine and Field Class—Start, 3:18.

Kelpie, W. K. Brown	4 46 12	1 28 12
Stinger, A. P. Clapp	4 46 27	1 28 47
Quinque, L. H. Smith	4 48 12	1 30 12
Vixen, Mahoney & Chandler	4 48 40	1 30 40
Flying Fox, Cone & Buckman	4 53 20	1 35 20

Catboats—Class V—Start, 3:24.

Boozie, C. D. Durkee	4 55 03	1 31 03
Martha M., Richard Moore	4 55 09	1 31 09
Rascal, D. G. Whitlock	4 57 45	1 33 45

Points to date in different classes of Y. R. A. G. B. series: Mariquita, 5; Sunol, 28; Bonito, 18; Kangaroo, 12; Vivian, 15; Caribou, 35; Squaw, 24; Indian, 6; Cockatoo, 34; Song and Dance, 32; Streak, 12; Karma, 20; Trouble, 24; Bronco, 20; Wraith, 16; Opossum, 15; Wink, 10; Spots, 2; Flying Fish, 2; Kelpie, 38; Stinger, 34; Quinque, 10; Jig-a-Jig, 6; Vixen, 4; Flying Fox, 2; Martha M., 28; Rascal, 22; Boozie, 10.

Western Yachts.

La Rita Wins Lipton Cup.

CHICAGO, Ill., July 8.—As telegraphed Monday evening. La Rita won the third race straight in the series for the Lipton cup. Arab IV., dissatisfied with the percentage accorded her in the earlier race, withdrew, and Sprite, Dr. Pinkard's well-handled boat, was the only competitor to start with La Rita in the third race of the series.

The race was run over the rectangular course, twelve miles, and Sprite left it by no means a walkover for the Gloucester boat, the margin at the finish being but 3m. 25s. in favor of La Rita. The start was unconscionably delayed, and the breeze at 3:10, when the preliminary gun was fired, had dropped considerably. For a time it was thought that the boats would not finish within the time allowance.

The boats went away under balloon jibs. Later, on the windward work, Sprite had the better of it and cut down the lead. La Rita, however, led by 25s. at the first stake, and in the beat and reaching which followed, maintained a lead at one time of nearly 5m. The last leg of the course showed some interest, as Sprite began to close, though not at any time strictly dangerous, La Rita winning with a good margin and demonstrating its superiority over the local fleet in this series.

It is to be regretted that a more general interest and a larger entry did not appear in the contest for this interesting trophy. Owing to the small entry and the decisive wins of La Rita, the matter here did not assume the importance which it otherwise would have done and ought to have done. The following are the times in the last race, start 3:20:

	1st stake.	2d stake.	3d stake.	Finish.	Elapsed.
La Rita	4 08 50	4 55 50	5 25 30	5 55 35	2 35 35
Sprite	4 08 15	4 59 30	5 30 05	5 59 00	2 39 00

The judges were A. T. Bliss, George A. Martin, C. E. Kremer and E. C. Berriman.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Twenty-one Foot Class at Islesboro, Maine.

THE raceabout, although being succeeded at Marblehead by the 21-footer, and on Buzzard's Bay by the 30-footer, still holds sway at Islesboro, and is even gaining, rather than losing, in popularity on this part of the coast. Small and easily handled, this boat makes an ideal craft for the smooth waters of Penobscot Bay. The prospects for good racing in this class for the coming summer at Islesboro are better than ever before. In addition to the eleven starters of last summer, there will be three new boats, Idol, Persimmon and Jilt, although the last named has been a starter in the Islesboro class off and on for the last two years. Following is a list of the starters for the coming season: Raider, Messrs, Derby; Mongoose, Messrs. Starr; Peterkin, Mr. Kissel; Bagheera (knockabout), Messrs. Greenough; Opitsah I., Mr. Daniels; Betsy, Mr. Platt; Day Dream II., Mr. Minturn; Loafer, Messrs. Shattuck; Mist, Messrs. Lawrence; Pirate, Messrs. Metcalf; Cross Patch, Mr. Silsbee; Idol, Mr. Lyman; Persimmon, Mr. Dodge; Jilt, Mr. Gay.

In addition to these 21-footers are two 25-footers—Flirt, owned by Mr. Bond, and Chewink, owned by Mr. Scull.

There have already been several cups offered for the coming season. One offered by Dr. Derby, is for the boat winning the greatest number of points in four consecutive races. Each boat gets one point for finishing, and one point for each boat she beats, and in addition there is a premium of five, three and one points for first, second and third place, respectively. Another cup has been offered by Mr. Scull in the 25ft. class, in which the same system of scoring holds good. The Tarratine Club has also offered a cup, in the 21ft. class, for the boat making the best record through the season. Several other cups have been promised, but not yet offered.

For the last two summers the courses over which the season's races have been sailed have been a small triangle, a mile and a half to each leg, sailed over twice, and a five-mile course to windward and return, down toward Owl's Head, both in the West Penobscot Bay. But the close proximity of the Camden Hills makes the sailing in the West Bay most puffy and treacherous, and it is more than likely that many of this season's races will be sailed over a course in the East Penobscot Bay, especially if it proves feasible to get the boats around the head of the island to the start.

The season's racing began with the first race for Dr. Derby's cup on Saturday, July 12.

New York Y. C. Cruise.

COM. LEWIS CASS LEDYARD, of the New York Y. C., has issued General Order No. 2, dated Flagship Corona, July 1, as follows:

The squadron will rendezvous at New London, Aug. 4, 1902. Captains will report on board the flagship at 5 P. M. The programme for the cruise, weather permitting, will be as follows:

Tuesday, Aug. 5, squadron run, New London to Newport.

Wednesday, Aug. 6, race off Newport for the Astor cups.

Thursday, Aug. 7, squadron run, Newport to Vineyard Haven.

Friday, Aug. 8, squadron run, Vineyard Haven to Provincetown.

Saturday, Aug. 9, squadron run, Provincetown to Marblehead.

The Regatta Committee will furnish details for the runs from port to port, and for all other racing events. The Commodore's cup will be sailed for on the run from Vineyard Haven to Provincetown. Captains are requested to supply their vessels with N. Y. Y. C. night signals. The captains and their guests will be welcome on board the flagship at any time. Attention is called to the new routine as published in the club book.

Indian Harbor Y. C. Midsummer Series.

GREENWICH, LONG ISLAND SOUND.

July 10, 11 and 12.

THE first of the three days of racing opened on Thursday, July 10. The programme was rather an unusual one, as the racing was confined to one-design classes. Twenty-one boats started, representing seven different clubs.

The day was a most unsatisfactory one for boat racing; at the start the wind was light from N.W., accompanied by showers, afterward shifting to S.W., and later getting back to N.W. The larger boats sailed over a ten-mile course, while the smaller boats covered a six-mile course. The Regatta Committee was made up of Messrs. F. B. Jones, C. F. Kirby, F. C. Henderson, C. E. Simms and R. Babcock. The summary:

American Y. C. Raceabouts—Start, 2:05.

	Finish.	Elapsed.
Jolly Tar, S. Howland	6 18 44	4 13 44
Rascal, S. C. Hopkins	6 11 20	4 06 20
Howdy, S. Wainwright	6 04 49	3 59 49
Hobo, Trenor L. Park	6 03 26	3 58 26

Larchmont 21ft L.W.L. Class—Start, 2:05.

Adelaide, J. J. Dwyer	6 39 40	4 34 40
Houri, J. H. Esser	6 30 57	4 25 57
Dorothy, L. Spencer	6 27 34	4 22 34

Manhasset Bay One-Design Class—Start, 2:15.

Lambkin, S. W. Roach	6 58 05	4 43 05

New Rochelle One-Design Class—Start, 2:15.

Knave, R. N. Bavier	6 32 09	4 17 09
Ace, W. N. Bavier, Jr.	7 00 24	4 45 24

Ardsley One-Design Class—Start, 2:10.

Scoot, H. S. Shonnard	6 54 38	4 44 38
Ping Pong, S. Deming and N. A. Campbell	Withdrew.	
Midget, Edwin Gould	6 37 06	4 27 06

Indian Harbor Raceabouts—Start, 2:20.

Betty, E. F. Swords, Jr., and W. M. Hyde	6 23 08	4 03 08
Queenie, Frank Tulford	6 08 03	3 48 03
Cero, Charles Mallory	6 07 57	3 47 57
Noggin, C. S. Somerville	5 56 30	3 36 30

Lark Class—Start, 2:25.

Wasp, I. H. McKenna	5 59 06	3 34 06
Askme, G. G. Tyson	5 43 05	3 18 05
Lobster, Abbott Brush	6 08 25	3 43 25
Crab, T. Roosevelt Pell	Withdrew.	

The winners were Hobo, Dorothy, Lambkin (sailover), Knave, Midget, Noggin and Askme.

Friday, July 11.

The light breeze that prevailed the day previous continued on the second day's racing. There was a good list of boats on hand, and thirty-nine started. The wind chopped around from N.W. to S. and while most of the time it was light, it was occasionally quite puffy. The larger boats sailed twice around a ten-mile course, while the "little fellows" went once around.

Leda sailed a pretty race in the 36ft. class, starting some time after the other boats in her class, she cut down their leads in great shape and finished only a few seconds behind Spasm, the winning boat.

Mimosa, in the 30ft. class, again finished a winner, adding another winning flag to her already good list.

The American Y. C. one-design raceabouts were bunched in with the regular raceabouts. The old Larchmont 21ft. one-design class was started with the regular 25ft. class. The Manhasset Bay one-design class and the Ardsley one-design class sailed in the regular 18ft. sloop class. The 18ft. catboats and the Indian Harbor Y. C. sailabouts also sailed in one class. The summary follows:

Sloops—36ft. Class—Start, 2:05.

	Finish.	Elapsed.
Leda, H. L. Maxwell	4 58 57	2 53 57
Spasm, E. D. King	4 58 32	2 53 32
Cymbra, F. C. Henderson	5 00 51	2 55 51
Bubble, H. A. Weatherton	Withdrew.	

Sloops—30ft. Class—Start, 2:10.

Mimosa, T. L. Park	4 55 51	2 45 51
Enpronza, A. Peats	4 56 39	2 46 39
Alerion, A. H. Alker	4 58 04	2 48 04

Raceabout Class—Start, 2:15.

Jolly Tar, Slocum Howland	5 26 55	3 11 55
Rascal, S. C. Hopkins	5 19 17	3 04 17
Howdy, S. Wainwright	5 13 13	2 58 13

Crab, T. R. Pell	5 11 40	2 36 40
Louie Bell, J. M. Williams	4 45 29	2 10 29

The winners were Spasm, Mimosa, Rogue, Dorothy, Montauk, Flim-Flam and Askme.

Saturday, July 12.

The annual race of the Indian Harbor Y. C. held on Saturday, July 12, proved to be a most successful regatta. Not only was the list of starters large, but the wind had sufficient strength to make the racing interesting. The 43, 36 and 30 footers sailed twice over a nine-mile triangle. The raceabouts, 25ft. sloops, 25ft. catboats and Larchmont 21-footers, covered a six-mile course twice. The 21ft. sloops, 18ft. sloops, 18ft. catboats, New Rochelle, Manhasset and Ardsley one-design boats sailed over the nine-mile course, while the Indian Harbor sailabouts, small catboats and special 18ft. sloops sailed over a six-mile course.

Out of sixty-five entries, fifty-three boats started and fifty-one finished, a very excellent showing.

In the 43ft. class, Challenge, sailed by Mr. Wilmer Hanan, got her first race, beating Dorwina by a small margin.

Leda had things her own way in the 36ft. class, beating Spasm, the second boat, by over 7m.

Mr. T. L. Park's Mimosa won again in her class, although Alerion showed up better than she has been doing this season, and finished a close second.

Viper showed wonderful speed in the raceabout class. She started over 15m. behind the boats in her class and won by 1s. Jolly Roger was second.

In the 25ft. class for sloops, Chingachgook and Robin Hood were 20m. late in starting, but picked up Snapper in good shape, and finished only a short distance behind her.

Owing to the light breeze that prevailed during the morning, a number of the boats were late in getting to the starting line. As the day wore on, however, the breeze freshened and up to the time of the finish was blowing strong from the S.W. The summary:

	Finishd.	Elapsed.
Sloops—43ft. Class—Start, 12.10.		
Dorwina, C. V. Brokaw	3 33 08	3 23 08
Challenge, W. T. Foote	3 32 38	3 22 38

Wiwaf, H. E. Sayre	3 39 50	2 14 50
Chipmunk, T. S. Young, Jr	Withdrew.	

The winners were Challenge, Leda, Mimosa, Viper, Snapper, Penguin, Eos, Flim-Flam, Louise Bell, Adelaide, Knave, Lambkin, Midget, Cero, Askme and Spud.

New York Y. C. Newport Series.

NEWPORT, R. I.

July 10, 11 and 12.

EARLY Thursday morning there was little promise of a race. There was hardly any air stirring, and the sky was heavy and overcast. About 10 o'clock a squall of wind and rain came out of the N.W., and after this had passed over there was a slight breeze, and preparations were made on the different boats to get under way. Messrs. Newbury Lawton, Nicholson Kane and Edw. H. Wales, the Regatta Committee, were on board the tug Storm King, and at 11:30 they signaled that the course for the large boats would be S.S.E. twelve miles and return, and the smaller craft six miles S.S.E. and return. The starting line was between Brenton's Reeef Lightship and the committee boat.

Mr. H. B. Duryea not having any competitor for Humma, was allowed to go up a class and sail against Neola and Weetamoe. The starting gun for this class was given at 11:50, and Humma was on the line just at gun fire. It was a run to the outer mark, and Humma set her spinnaker to port and moved off in good shape. Neola was next to cross with Weetamoe close behind, both these boats gybed over and dropped their spinnaker booms to port. It was 10m. before their spinnakers were broken out, as they got into a lively luffing match, Weetamoe getting a shade the best of it. In the meantime Humma had kept on her course and had a substantial lead, when the long rolling sea caused the jaws on her gaff to give away. This thrust the spar forward of the mast, and the sail was lowered while temporary repairs were made. In the meantime she was kept going under her spinnaker and club topsail.

At 11:55 the starting signal for the big yawls was given. Ailsa was first across, breaking out her balloon jib as she crossed. Vigilant, with her spinnaker and balloon drawing, came down close behind her.

The schooners were the next boats to start, with Elmina close to the light vessel, Amorita in about the middle of the line, and Muriel at the other end. Muriel and Amorita set their spinnakers to port, while Elmina broke hers out to starboard.

At 12:15 the Buzzard's Bay 30-footers were sent away. They came down on the line in a bunch, all having spinnakers set to port. Quakeress II. was first over, with Zingara, Mashnee, Pontiac, Wahtawah and Lariken following in the order named. Five minutes later, 12:20, the Newport special thirties got away, with Esperanza in the lead, Wawa, Breeze and Barbara following. All had

SEAWANHAKA CUP TRIAL BOAT SEERESS.
Photo by James Burton, New York.

spinnakers set to port. It was slow work running down to the outer mark, and it took the smaller boats nearly 3h. to cover the six miles. The times at this mark follow:

Wahtawah	2 47 00	Mashnee	2 59 06
Esperanza	2 52 00	Breeze	3 14 30
Lariken	2 55 20	Barbara	3 14 45
Zingara	2 56 30	Wawa	3 18 30
Quakeress II.	2 57 15	Pontiac	3 18 35

After rounding they had a little windward work, but in a short time the breeze hauled to S.W., giving them a reach to the finish.

The big boats in the meantime were making slow progress against the long swell, and with hardly enough air to keep their sails filled. Elmina was gybed over and her spinnaker set to port; at this time she was well in the lead of Muriel and Amorita. Weetamoe had a good lead over Neola, and Mr. Duryea finding that the gaff on Humma would not stand, decided to withdraw, and he started back to Newport.

When about two-thirds the distance to the mark Amorita and Muriel had pulled up on Elmina, and there was no great distance between any of them. The time at the outer mark follows:

Weetamoe	4 06 40	Muriel	4 18 15
Vigilant	4 09 38	Neola	4 29 50
Ailsa	4 10 40	Amorita	4 40 02
Elmina	4 12 50		

As the wind had hauled to S.W., it was a twelve-mile reach to the finish line. The boats had the wind slightly forward of the beam. The boats finished in the following order: Elmina, Weetamoe, Muriel, Ailsa, Vigilant, Neola and Amorita.

The surprise of the day was the manner in which Ailsa beat Vigilant, in what was supposed to be the latter's weather.

Weetamoe beat Neola as handily as Neola beat her on July 4 at Larchmont. The summary:

Schooners—Class D—Start, 12:02.

Schooners—Class D.	Start.	Finish.	Elapsed.
Elmina, F. F. Brewster	12 02 00	6 12 25	6 10 25
Muriel, C. Smithers	12 02 00	6 16 26	6 14 26
Amorita, T. M. McKee	12 02 00	6 27 30	6 25 30
Yawls—Class G.			
Ailsa, H. S. Redmond	11 55 59	6 17 11	6 21 12
Vigilant, Percy Chubb	11 57 00	6 19 51	6 22 51
The Ailsa's corrected time is 6.19.34.			
Sloops—Class J.			
Weetamoe, H. R. Lippitt	11 52 00	6 13 54	6 21 54
Neola, G. M. Pynchon	11 51 45	6 22 27	6 30 42
Humma, N. Duryea	11 50 15	Withdrew.	
Sloops—Class Y.			
Wahtawah, A. Rogers	12 15 00	5 20 27	5 05 37
Zingara, E. Farnsworth	12 15 00	5 21 19	5 06 12
Quakeress II., W. F. Harrison	12 15 00	5 23 35	5 08 35
Larriken,	12 15 00	5 24 12	5 09 12
Pontiac, J. M. Beebe	12 15 00	5 26 57	5 11 57
Mashnee, R. W. Emmons	12 15 00	5 32 24	5 17 34
Sloops—Class Z.			
Esperanza, H. O. Havemeyer	12 20 00	5 19 36	4 59 36
Barbara, W. Rutherfurd	12 20 00	5 28 45	5 08 45
Breeze, W. Roelker	12 20 00	5 29 16	5 09 16
Wawa, R. Brooks	12 20 00	5 34 04	5 14 04

Yawls—Ailsa beat Vigilant 1m. 39s. elapsed time, and 3m. 17s. corrected time.

60ft. Class—Weetamoe beat Neola 8m. 48s.

Schooners—Elmina beat Muriel 4m. 1s. and Amorita 15m. 5s.

Buzzard's Bay Class—Wahtawah beat Zingara 35s.; Quakeress, 2m. 58s.; Lariken, 3m. 35s.; Pontiac, 6m. 20s.; Mashnee, 11m. 57s.

Newport 30-Footers—Esperanza beat Barbara, 9m. 9s.; Breeze, 10m. 40s.; Wawa, 14m. 28s.

Friday, July 11.

When the contesting yachts reached Brenton's Reef Lightship they found the fresh N.W. breeze that was blowing in the inner harbor had not reached out into the bay, and that there was little air out there. The committee boat Storm King anchored to the S.E. of the light vessel, and sounded the preparatory at 11:40. Signals had previously been displayed, showing the course to be as follows: The first leg was S.E., the second leg W.S.W. ½ W., and the third leg N. by E. ½ E. These legs were of nine miles each for the schooners, the seventies and the sixties and of five miles for the 30-footers.

Weetamoe and Neola having been measured, were found to belong in class J instead of class I. Weetamoe measured 60.04ft. and Neola 60.74ft.

Humma not having any competitor in her own class, again went up and sailed against Weetamoe and Neola. The wind was N. by E. at the start, and the first leg was a reach. Class J was started at 11:50, Weetamoe being first, followed by Neola. Humma was handicapped 22s. Neola and Weetamoe carried reaching jib topsails, while Humma had on her baby.

Mineola and Rainbow were started at 11:55, both being late in getting to the line. Mineola was handicapped 22s. and Rainbow 51s.

The schooners were started at 12:00, Muriel going across on the smoke of the gun. Elmina was late and was handicapped 3s. and Amorita 31s.

The Buzzard's Bay 30-footers were sent away at 12:15, and they crossed in the following order: Wahtawah, Mashnee, Zingara, Quakeress II. and Pontiac.

At 12:20 the Newport special thirties started, with Esperanza in the lead, followed by Barbara, Carolina, Wawa and Breeze.

After a luffing match lasting some fifteen minutes, Mineola and Rainbow finally kept away on their course. Rainbow had rather the best of having Mineola under her lee.

Muriel and Elmina had also had a luffing match on, and while they were fighting it out Amorita had been sliding away for the first mark.

Humma had been getting away from her competitors while they were indulging in a luffing match.

It was slow work reaching out to the first mark, and the boats were almost becalmed when only half way out. About 2:30 a little breeze came out of the S.W. and sheets were flattened down and all headed for the mark. The times were there:

Rainbow	2 42 20	Neola	2 57 39
Mineola	2 48 35	Amorita	2 59 27
Elmina	2 51 25	Humma	2 59 30
Muriel	2 52 12	Weetamoe	3 00 10

It was a beat to the second mark, and all started off on the starboard tack. Mineola, with her new suit of Ratsey sails, was doing beautifully, but Rainbow was giving her a good fight. Mineola split tacks with Rainbow, but never got far away from her. Muriel and Elmina fought it out tack for tack all the way to the second mark. Neola, Weetamoe and Humma, after making several short tacks, finally made a long leg to the W., Neola in the lead. The times at the second mark were:

Rainbow	4 29 24	Muriel	4 55 28
Mineola	4 32 18	Weetamoe	4 58 48
Elmina	4 52 24	Humma	5 00 26
Neola	4 52 50	Amorita	5 01 50

It was a run to the finish line, and balloon jibs were carried and spinnakers were set to port. The schooners carried their main top staysails. Mineola cut down Rainbow's lead somewhat and Muriel pulled up on Elmina. Humma also drew up so far as to almost get the race on time allowance. The summary:

Schooners—Class D—Start, 12:00.

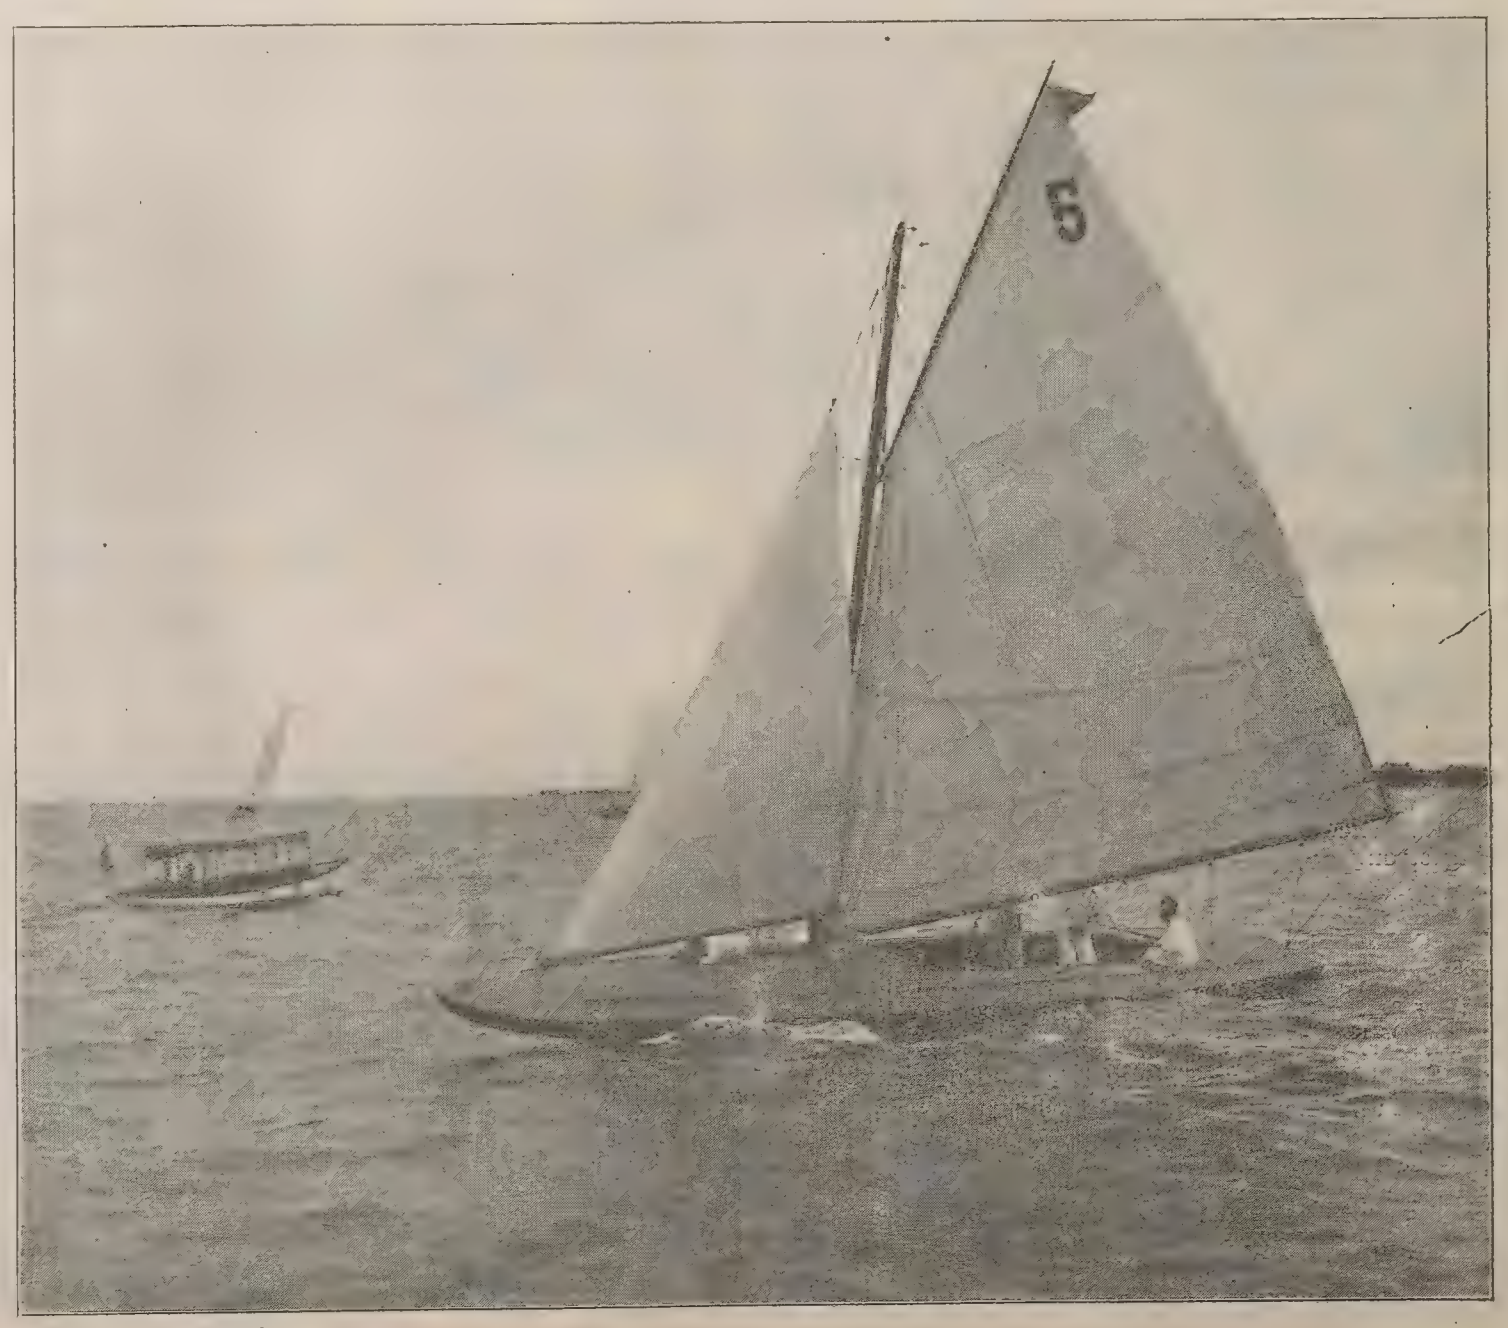
	Finish.	Elapsed.
Elmina, F. F. Brewster	6 05 28	6 03 28
Muriel, C. Smithers	6 06 32	6 05 52
Amorita, T. M. McKee	6 14 15	6 12 15
Sloops—Class H—Start, 11:55.		
Rainbow, C. Vanderbilt	5 53 23	5 56 23
Mineola, A. Belmont	5 54 33	5 57 33
Sloops—Class I—Start, 11:50.		
Neola, G. M. Pynchon	6 10 04	6 19 04
Weetamoe, H. R. Lippitt	6 13 09	6 22 37
Humma, N. Duryea	6 14 39	6 22 39
Buzzard's Bay 30-footers—Start, 12:15.		
Pontiac, J. M. Beebe	1 44 36	4 29 36
Quakeress II., W. F Harrison	4 47 20	4 32 20
Mashnee, R. W. Emmons	4 20 44	4 05 44
Zingara, E. Farnsworth	4 33 34	4 18 34
Wahtawah, A. Rogers	4 22 44	4 07 44
Newport 30-footers—Start, 12:20.		
Carolina, P. Jones	Withdrew.	
Esperanza, H. O. Havemeyer	4 43 01	4 23 01
Wawa, R. Brooks	4 44 37	4 24 37
Barbara, W. Rutherfurd	Withdrew.	
Breeze, W. Roelker	4 44 38	4 24 38

Schooners—Elmina beat Muriel 2m. 24s. and Amorita 8m. 47s.

Sloops, Class H—Rainbow beat Mineola 1m. 10s.

Sloops, Class J—Neola beat Weetamoe 3m. 33s.; Humma,; 3m. 35s.

Buzzard's Bay Class—Mashnee beat Wahtawah 2m.;



SEAWANHAKA CUP TRIAL BOAT FRONTENAC.
Photo by James Burton, New York.

Zingara, 12m. 50s.; Pontiac, 23m. 52s., and Quakeress II., 26m. 36s.

Newport 30-Footers—Esperanza beat Wawa 1m. 36s.; Breeze, 1m. 37s.; Carolina and Barbara withdrew.

Saturday, July 12.

The last day of the racing under the auspices of the New York Y. C. was marked by some very spirited contests and some unfortunate accidents. Elmina, when rounding the outer mark, broke her foremast off about half way up from the deck. Her main topmast was soon after carried away, and she was almost as much of a wreck as Muriel when the latter was dismasted off Race Rock while on the New York Y. C. cruise last year. No one was injured. It is really remarkable considering the large number of big yachts that have been dismasted during the last few years that no personal injuries have attended them.

The wind was S.W. and blowing a nice sailing breeze when the committee boat went out to the starting line at 10 o'clock. The course for the 60 and 70ft. sloops and the schooners was twelve miles to windward and return, and for the 30-footers six miles to windward and return. The windward mark for the big boats was three and one-half miles northeast of Block Island whistling buoy, and for the small boats it was one and one-half miles southeast of the whistling buoy off Point Judith.

The preparatory signal was made at 11:30. The 60-footers were the first boats to start, and they set baby jib topsails in stops. Neola was in the weather berth, and although doing the best, Weetamoe could not get away from the leeward position. Both boats gybed twice in the maneuvering, but Neola still held her position. Neola was first across, with Weetamoe under her lee, but the latter's skipper brought his craft around and recrossed handicapped 26s., but having clear wind. Weetamoe tacked off to the E., while Neola held over toward the Narragansett shore.

At 11:45 the 70-footers started. Both stood for the line on the starboard tack, Mineola in the weather berth. As the boats ran down the line toward the committee boat, Mineola bore away and immediately Rainbow was luffed across Mineola's stern. Rainbow did not hold this position long, for the wind was blowing out of Mineola's headsails, so she went on the port tack and followed Neola. Mineola soon followed.

The schooners got away at 11:50. Muriel was first across, followed by Amorita, who had Elmina under her lee. Muriel and Amorita went on the port tack after crossing, and Elmina followed a little later.

While Neola was holding in shore, Weetamoe was staying outside, and apparently doing well. Mineola was leading Rainbow when they took the starboard tack. When Muriel tacked inshore she crossed Elmina's bow, and then stood inshore again. When Amorita came out, Elmina crossed her bow and went after Muriel; these two boats had a fine struggle inshore, while Amorita held out off shore.

Mineola was well ahead of Rainbow, and Neola was in the lead of Weetamoe.

Muriel and Elmina approached the mark on the starboard tack, while Amorita came down on the port tack. Amorita gave way for Muriel and went under her stern, and by a wonderfully pretty piece of handling shot across Elmina's bow and went around the mark first. The timse at this mark were:

Mineola	1 31 34	Amorita	1 52 02
Rainbow	1 34 30	Muriel	1 53 55
Neola	1 40 25	Elmina	1 54 10
Weetamoe	1 42 45		

It was at this point that Elmina's rig went out of her. The tug C. P. Raymond, that had been with the Atlantic Y. C. fleet, took her in tow and brought her in to Newport.

After rounding sheets were eased off and spinnakers were set to port. Balloon jibs were also broken out. Mineola continued to improve her lead, and Neola drew steadily away from Weetamoe. Muriel was surely overhauling Amorita, and if she had not parted the throat halliards her foresail would surely have won the race.

Humma had not been able to start, as she carried her topmast out before the race.

Elmina will probably be towed to City Island for repairs and new spars, rigging and sails. The summary follows:

	Start.	Finish.	Elapsed.
Schooners—Class D.			
Amorita, T. McKee	11 51 25	3 17 45	3 26 20
Muriel, C. Smithers	11 50 35	3 17 00	3 26 25
Elmina, F. F. Brewster	11 51 47	Disabled.	
Sloops—Class H.			
Mineola, A. Belmont	11 46 56	2 49 15	3 02 19
Rainbow, C. Vanderbilt	11 47 00	2 52 46	3 05 48
Sloops—Class I.			
Neola, G. M. Pynchon	11 40 19	3 03 11	3 22 52
Weetamoe, H. F. Lippitt	11 42 00	3 07 16	3 25 16
Buzzard's Bay 30-footers.			
Pontiac, J. H. Beebe	11 05 00	2 14 20	2 09 20
Wahtawah, A. Rogers	11 05 00	2 16 05	2 11 05
Quakeress II., W. Harrison	12 05 00	2 20 30	2 15 30
Zingara, F. Farnsworth	12 05 00	Withdrew.	
Newport 30ft. Class.			
Esperanza, H. O. Havemeyer, Jr.	12 10 00	2 22 03	2 12 03
Carolina, P. Jones	12 10 00	2 22 51	2 12 51
Barbara, W. Rutherfurd	12 10 00	2 29 49	2 19 49
Asahi, L. Warren	12 10 00	2 29 47	2 19 47
Wawa, R. Brooks	12 10 00	Withdrew.	

The winners were:

Schooners—Amorita beat Muriel 5s., and Elmina.

Sloops, Class H—Mineola beat Rainbow, 3m. 29s.

Sloops, Class I—Neola beat Weetamoe, 2m. 24s.

Buzzard's Bay 30-Footers—Pontiac beat Wahtawah, 1m. 45s.; Quakeress II., 6m. 10s., and Zingara.

Newport 30ft. Class—Esperanza beat Carolina, 48s.; Asahi, 7m. 44s.; Barbara, 7m. 46s., and Wawa.

Seawanhaka Cup Trial Boats.

WE publish this week half-tones of the eight boats that competed in the Seawanhaka cup trial races at Bridgeport a short time ago. While the boats were all of the same type, still they were widely different in design. The races satisfied all concerned that the design of the boats' hulls counted about 40 per cent., while good sails and good handling made up the balance of the result.

Mr. Frank N. Tandy has sold for Mr. John R. Buchan the 35ft. waterline sloop Rondinella to Mr. F. H. Davol.

Tarratine Y. C.

ISLESBORO, ME.

Saturday, July 12.

THE second race of the season for a prize offered by Mr. Brown, of Dark Harbor, was sailed on Saturday, July 12, at 3:09 in the afternoon. The wind was blowing almost a reefing breeze from the south'ard, kicking up a rough sea against a strong ebb tide. The course, laid in the West Penobscot Bay, was two and one-half miles to windward and return, to be sailed over twice. Just before the first gun the Persimmon unfortunately carried away her bowsprit and was forced to retire from the race.

The following boats crossed the line on a one-gun start in the order named: Jilt, Daydream, Opitsah, Raider, Loafer. Jilt, Daydream and Opitsah stood off shore, whereas Raider and Loafer tacked immediately under the islands in hopes of finding smooth water. Jilt and Daydream soon followed suit, closely followed by Opitsah. Seeing that Raider and Loafer were doing good work in the smooth water, Daydream, pointing higher and footing faster than Jilt, soon worked out a considerable lead, especially when the shelter of the shore was left, and the fleet struck out into rough water. Raider hammered out a lead on Opitsah, but seemed unable to gain on either Jilt or Daydream. All five boats were rapidly approaching the windward mark, and were well out in the rough water, with an ever-increasing breeze. Daydream seemed to like the conditions, and slowly increased her lead. She rounded the mark at 3:46:00, closely followed by Jilt, 3:46:20, and Raider at 3:46:50. Opitsah did not allow enough for the mark and was forced to tack under it, thus losing much time. She rounded at 3:48:10. Loafer rounded at 3:50:20, a poor fifth.

The run was uneventful, the boats gaining and losing little. At the finish of it, however, Daydream unfortunately made a mistake about the course, and started home, thinking it was only to be sailed over once. This mistake put her out of the race, and Jilt took the lead. After rounding the mark she stood off shore, while Raider tacked around and sought calm water under the islands. Opitsah followed suit, and Jilt soon also stood in in a commanding weather berth. Opitsah gained considerably in the smooth water on Raider, but lost all she had gained, and more still, in the rough water. Jilt made short tacks and Raider followed suit, holding her fairly well. Opitsah struck out into the bay and was much slowed up by the heavy sea. The wind dropped a bit, but the chop was still sharp, and it was heavy going for all hands. Jilt increased her lead, if anything, and rounded the windward mark at 4:42:35, followed by Raider at 4:44:03, and Opitsah at 4:45:45. Loafer again rounded a poor fourth at 0:48:50. Jilt and Opitsah gybed and set their spinnakers to port. Raider, however, set hers to starboard. The run in was not exciting, as the boats were well separated. Jilt won handsomely by 1m. 29s from Raider.

The beauty of the finish was much enhanced by the presence of Vice-Com. Sloane, of the Seawanhaka Y. C.'s schooner Idler; Mr. Lay's 70-footer, Athene; Mr. Steele's steamer, Laurita, which acted as judges' boat, and Dr. Derby's 40-footer Petrel.

The summary of times follows:

Start, 3:09.	Finish.	Elapsed.
Daydream, J. W. Minturn	Withdrew.	
Jilt, W. O. Lay	5 01 51	1 52 51
Raider, R. Derby	5 03 20	1 54 20
Opitsah, E. A. Daniels	5 04 23	1 55 23
Loafer, L. Shattuck	Withdrew.	

The fact that only five boats started can be explained, for Pirate had a mishap with her rudder just before the start; Persimmon carried away her bowsprit, and Idol and Peterkin were not in racing shape. All four of these boats are creditable performers, and in such conditions as Saturday's race, can be expected to finish close together. Peterkin, formerly Cyrilla, of Herreshoff design, so successfully raced by Robert Emmons in Buzzard's Bay, won the championship at Islesboro last summer. She is an excellent all-round boat, but seems to prefer smooth water to rough. Idol, designed by Burgess, and formerly raced at Marblehead, is a new boat at Islesboro. She won the first race of the season, which was little more than a reaching match in smooth water. She appears to be fast on the wind in light airs, but is considerably slowed up by a chop. Her rig is high and narrow, as is Peterkin's.

Little is known about Persimmon, a Purdon design formerly raced on the Sound. She is a smart-looking boat, but her rigging seems to be too light for the severe winds of Maine. Pirate, a former Marblehead champion, of Crowninshield design, is a fair all-round performer, but prefers a moderate wind and sea. She at times shows bursts of speed, but seems a hard boat to get the best out of. Jilt, designed by Herreshoff, and winner of Saturday's race, is one of the top boats of the raceabout class, and has one of the most wonderful racing records. In moderate winds she is a difficult boat to beat, but she appears too short to batter through a heavy seaway. Daydream, a Crowninshield design, clearly outsailed Jilt in every particular on Saturday's race, and would have won had it not been for her unfortunate mistake. She is a long, clean-cut, thoroughbred-looking boat that works to windward in rough water like a charm. She is capable of pointing very high and footing with any other member of the fleet. She appears a bit logy in calm weather or moderate breezes.

Opitsah is a Purdon design, and much resembles Persimmon, although it is doubtful if she is as fast. Her new sails this year do not appear to be satisfactory. Raider was designed by Crane three years ago, and raced with fair success on the Sound. She sails well to windward in a breeze and rough water, and also in a very light air. In all conditions between these she is not more than average. Loafer, designed by Crowninshield, much resembles Daydream, but is not as fast. She has possibilities, however, and if she can be gotten into really good shape should prove a winner. Cross Patch is a Lawley boat, but is seldom raced, as she only begins to wake up when a young hurricane is blowing. Then, however, she can show her heels to any other boat in the bay. Mongoose is another old Marblehead champion, and is a production of Crowninshield. She, as is Mist, also of Crowninshield design, is completely outclassed, and it is doubtful if either will be raced this season. Betsy, formerly a good performer in these waters, is also out of the game.

The weather at Islesboro is on the whole rough. A southerly wind generally draws up the bay during the afternoon, and if it meets an ebb tide kicks up a nasty quick chop that puts an end to the windward abilities of any scow-built boat. The Regatta Committee is very fond of laying out a windward and leeward course, and gives more of them on the average than of triangles, it being hoped to encourage the more or less heavy rigging of the boats rather than the use of light rope and wire. A fast season is looked for, as many prizes have been offered and the owners of the boats are showing a keen, sportsmanlike attitude that bids well for the future of the sport at Islesboro. RICHARD DERBY.

Seawanhaka Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, July 5.

FOUR of the Seawanhaka Club knockabouts started in the third series race for the Centre Island cup. The boats sailed over knockabout course 3. The wind was variable and light. The summary:

	Finish.	Elapsed.
Gowan, F. G. Stewart	6 55 11	3 15 11
Bobs, W. A. W. Stewart	6 58 18	3 18 18
Wyntje, C. Hoyt, Jr.	7 01 45	3 21 45
Lucille, H. H. Landon	7 13 50	3 33 50

Saturday, July 12.

On Saturday, July 12, the Seawanhaka knockabouts sailed a special race over knockabout course 3. The breeze was fresh from the south. The summary, start, 3:20:

	Finish.	Elapsed.
Lucille, H. H. Landon	5 15 55	1 55 55
Marcia, J. de Forest	5 18 22	1 58 22
Heron, F. R. Coudert, Jr.	5 19 21	1 59 21
Gowan, F. G. Stewart	5 21 12	2 01 12
Bobs, W. A. W. Stewart	5 23 00	2 03 00
Wyntje, C. S. Hoyt and C. Hoyt, Jr.	Withdrew.	

Lucille won.

In the morning of the 12th the Seawanhaka knockabouts Gowan and Bobs sailed a race for the Leland Corinthian Challenge cup. The wind was very light from the south at the start, but freshened at the finish. Gowan finished a winner. The summary follows, start 11:01:

	Finish.	Elapsed.
Gowan, F. G. Stewart	1 59 55	2 58 55
Bobs, W. A. W. Stewart	2 04 53	3 03 53

Newport Special Thirties.

NEWPORT, R. I.

Monday, July 7.

ONLY two of the 30-footers started in the first race for the Paget cup, which was sailed on Monday, July 7, over a triangular course eight miles in length. The wind was light from the S. Esperanza won by 41s. The summary, start 3:21:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	4 30 41	1 09 41
Barbara, Winthrop Rutherfurd	4 31 22	1 10 22

Tuesday, July 8.

In a fresh S.W. breeze Barbara, Breeze and Esperanza sailed an interesting race on Tuesday, July 8. The course was to Dyer's Island and return, making the first leg a run and the second a beat. Barbara won by nearly 2m. The summary, start 3:30:

	Finish.	Elapsed.
Barbara, W. Rutherfurd	6 05 31	2 35 31
Breeze, W. G. Roelker, Jr.	6 07 26	2 37 26
Esperanza, H. O. Havemeyer, Jr.	6 10 04	2 40 04

Wednesday, July 9.

Esperanza, well handled by her owner, Mr. H. O. Havemeyer, won the race sailed on Wednesday, July 9. The course was to Dyer's Island and return, same as on the day previous. The wind was fresh from the S.W. Esperanza was 40s. ahead at the turn, and won by 2m. 21s. The summary, start 3:10:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 32 08	2 22 08
Barbara, W. Rutherfurd	5 34 29	2 24 29
Wawa, R. Brooks	5 35 06	2 25 06
Breeze, W. G. Roelker, Jr.	5 35 37	2 25 37
Carolina, P. Jones	5 37 58	2 27 58

Corinthian Y. C. Cruise.

THE fleet of the Corinthian Y. C. of Philadelphia will rendezvous for the annual cruise at Glen Cove, Long Island, N. Y., on the afternoon of Friday, July 25, 1902.

The squadron runs will be as follows:

Saturday, July 26.—Race from Glen Cove to Oyster Bay.

Sunday, July 27.—Fleet to remain at anchor at Oyster Bay.

Monday, July 28.—Race from Oyster Bay to Morris Cove.

Tuesday, July 29.—Race from Morris Cove to Shelter Island.

Wednesday, July 30.—Race from Shelter Island to New London.

Thursday, July 31.—Fleet to remain at anchor. Gig and dinghy races for yachts' crews, and races for small boats belonging to yachts of the fleet, will be held in the afternoon. Entries to be made to the fleet captain.

Friday, Aug. 1.—Race from New London to Newport.

Saturday, Aug. 2.—Disband.

Manchester Y. C.

WEST MANCHESTER, MASS.

Friday, July 4.

A SPECIAL open race for 16-footers was sailed off West Manchester on Friday, July 4, in a fluky northwest breeze. Rikki Tikki finished first by a big margin. The summary:

	Elapsed.
Rikki Tikki, A. P. Loring, Jr.	0 53 00
Jap, Lawrence Wigglesworth	1 03 00
Witch, George Wigglesworth	1 08 41
Kotik, Miss Esther Williams	1 10 30
Devil, C. L. Rumsey	Withdrew.

Witch was disqualified for fouling a buoy.

Newport Y. R. A.

MR. H. B. DURYEA, chairman of the Regatta Committee of the Newport Y. R. A., announces that owing to the poor list of entries, their races will be postponed until after the New York Y. C. cruise.

YACHTING NEWS NOTES.

We are indebted to Mr. Everett Paine, Secretary of the Corinthian Y. C., of Marblehead, for a copy of its club book.

Mr. F. W. Sykes, of Leith, Scotland, has sold to Mr. William L. Harkness, of Cleveland, O., through Messrs. Gardner & Cox, the steam yacht Gunilda. She was designed by Messrs. Cox & King, and was built by Messrs. Ramage & Ferguson, of Leith, in 1897. Gunilda is 166.5ft. on the waterline, 24.65ft. breadth and 14.15ft. deep. The yacht is built of steel throughout, and has six watertight bulkheads. She is lighted by electricity and is equipped with triple expansion engines.

Hon. Edward H. Blake, of Bangor, Me., has sold his steam yacht Aria to Mr. John R. Rhodes, of New Bedford, Mass.

There was launched on Monday, June 30, from the yard of the Holmes Shipbuilding Co., West Mystic, Conn., the sloop Vayu II., built for Mr. R. H. Harte, of Philadelphia, from designs by Mr. Fred D. Lawley. She is 54ft. 6in. over all, 35ft. waterline, 12ft. breadth and 7ft. draft.

The Board of Trustees of the New Rochelle Y. C. have accepted the resignation of Clendenin Eckert as Commodore, and the following appointments were made. Vice-Com. Lloyd M. Scott to be Commodore, Rear-Com. P. E. Reville to be Vice-Commodore, Lawrence Dunham to be Rear-Commodore.

The yacht brokerage firm of Messrs. Huntington & Seaman has been dissolved by mutual agreement. The business will be carried on at the same address, 220 Broadway, by Mr. Stanley M. Seaman.

The Lake Yacht Racing Association has announced the dates for the racing circuit for this season. They are as follows:

July 21.—Royal Hamilton Y. C., Hamilton.
July 23-24.—Royal Canadian Y. C., Toronto.
July 26.—Citizen's Regatta, Cobourg.
July 29.—Rochester Y. C., Charlotte.

On July 9 the 38ft. launch Abiel Abbot Low left New York for Falmouth, England. The boat is in charge of Capt. William C. Newman, who will be accompanied by his sixteen-year-old son Edward. This is the first time that a small power boat has attempted the voyage, and it is expected she will take about thirty days to make the trip. The boat is 8ft. wide and draws 3ft. 8in., and is equipped with a 10-horse-power motor, which drives her in smooth water about seven or eight miles an hour. Eight hundred gallons of kerosene was stored in the tanks, and in addition to sufficient provisions for sixty days, 200 gallons of water is stored in tanks. The boat was built by the New York Kerosene Engine Co.

A new yacht club has been organized at Sayville, L. I., to be known as the South Side Y. C. The directors for the first year will be Messrs. Regis H. Post, Walter L. Suydam, John E. Roosevelt, John R. Suydam and Robert B. Roosevelt. Arrangements are being made to hold a regatta this season.

Rifle Range and Gallery.

Fixtures.

Aug. 26-Sept. 6.—Sea Girt, N. J.—Annual tournament of the National Rifle Association of America, New Jersey State Rifle Association and United States Revolver Association.

Long-Range Shooting.

Editor Forest and Stream:

Your article on "Long-Range Shooting" is more optimistic than the facts will warrant. I do not know what Col. Bruce is doing, but for myself, the only "youngsters" I am teaching is my son. The Long Range Club is too thoroughly military in its composition to give any hope of revival of old-time glories through it. Very few military men have any more time to give than they want for their own arm, and the more expert they are with that the more likely to make mistakes when they switch to the other gun.

As the files of the FOREST AND STREAM will show, I had a considerable measure of success with former style of rifle and ammunition, and after twenty years without seeing a rifle, was able after a week's practice last summer to do fairly well with the new tools. As ever "like causes produce like effects," and the only change is that "causes" are greater than they used to be, and consequently greater changes in effects.

You have hit the nail squarely on the head in your last paragraph. Discharge your cartridge at the same temperature every time, and it will send its bullet to the same place, if wind conditions are same. But you must make greater allowances for wind changes with the swiftly flying light bullets now used. To show what changes of temperature will do, I will mention results of some experiments made last fall. Shooting from a fixed rest at 200yds., with the rifle hot from rapid shooting, a cartridge left in the rifle fifteen seconds longer than usual sent its bullet 8in. higher. This, if shot at 1,000yds., would have been one of those "unaccountables" the boys talk about.

The Palma has gone to Canada, and is going to stay there, so long as the powers that be try to retain it by making a team with a week's practice.

The beautiful cup presented by Mr. Haskell for an international army rifle prize, and which I think none of our marksmen beside myself has ever seen, is defended in Ireland by veterans of from ten to thirty years' constant practice. What hope is there for our bringing it home if we wait till two weeks or two months before sending for it before organizing a team? We should be getting ready for next year now. FRANK HYDE.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

July 16-17.—Wabash, Ind.—Wabash Gun Club's tournament.
July 16.—Algona, Ia.—Algona Gun Club's tournament.
July 16-17.—McConnelsville, O.—First annual tournament of the McConnelsville Gun Club. J. F. Dover, Sec'y.
July 16-17.—Allentown, Pa.—Two days' target tournament under the auspices of the John F. Weiler Gun Club.
July 16-18.—Titusville, Pa.—The Interstate Association's tournament, under the auspices of the Titusville Gun Club. T. L. Andrews, Sec'y.
July 17-18.—Pensacola, Fla.—Two days' tournament of the Peters Cartridge Co., under the auspices of the Dixie Gun Club; $150 added. V. J. Vidal, Sec'y.
July 19.—Freehold, N. J.—Contest for the E. C. cup between Neaf Apgar (holder) and W. S. Burtis (challenger); also all-day shoot, open to all, under auspices of the Freehold Gun Club.
July 21-23.—Winnipeg, Man.—Sixth annual trapshooting tournament of the Winnipeg Industrial Exhibition Association. F. W. Henbach, Gen'l Mgr.
July 22.—Brooklyn, L. I.—Open target shoot and fish dinner of the Hell Gate Gun Club, Dexter Park.
July 22-23.—Greenville, Miss.—Mississippi and Louisiana Trap shooters' League target tournament. C. W. Walton, Sec'y Natchez, Miss.
July 23-25.—Bay Ridge A. A. Co., Md.—J. R. Malone's eighth annual midsummer tournament; $200 added money; two days prise Gun Club. Geo. W. Mains, Sec'y.
July 24.—Pottstown, Pa.—Opening shoot of the Shuler Gun Club on its new grounds; open to all.
July 24-25.—Ann Arbor, Mich.—Third tournament of the Michigan State Trapshooters' League, under auspices of the Ann Arbor Gun Club. Wm. Corson, Sec'y.
July 25.—Salem, O.—Salem Gun Club's tournament.
July 25-26.—East Alton, Ill.—Wann Gun Club's amateur tournament.
July 28-30.—Atlanta, Ga.—Peters Cartridge Company's tournament, under auspices of the Atlanta Gun Club.
July 29-31.—Newton, Ia.—Southeastern Iowa Shooting Association's third annual amateur tournament.
July 28-Aug. 2.—Atlanta, Ga.—Peters Cartridge Company's tournament.
Aug. 4-5.—Moberly, Mo.—Inanimate target tournament for amateurs.
Aug. 5-8.—Asheville, N. C.—Tournament given by Col. J. T Anthony and Maj. E. P. McKissick.
Aug. 6-7.—Lafayette, Ind.—Lafayette Gun Club's annual tournament.
Aug. 6-7.—Litchfield, Ill.—Amateur tournament of the Litchfield Pioneer Gun Club.
Aug. 6-7.—Marietta, O.—The Interstate Association's tourna ment, under the auspices of the Columbian Gun Club. Chas. Bailey, Sec'y
Aug. 7.—Leamington, Can.—Annual tournament of the Leamington Gun Club.
Aug. 12-13.—Bowling Green, O.—Merchandise tournament of the Bowling Green Gun Club, for Wood county shooters.
Aug. 12-13.—Birmingham, Ala.—Third annual Alabama State target tournament, under the auspices of the Birmingham Gun Club. R. H. Baugh, Sec'y.
Aug. 13-14.—Brunswick, Me.—The Interstate Association's tournament, under the auspices of the Brunswick Gun Club. L. C. Whitmore, Sec'y.
Aug. 14-15.—Greenville, Pa.—Alexander's annual target tournament.
Aug. 14-16.—Hamilton, Can.—Dominion Trapshooting and Game Protective Association's tournament.
Aug. 19-20.—Vicksburg, Miss.—Mississippi and Louisiana Trapshooters' League target tournament. C. W. Walton, Sec'y, Natchez, Miss.
Aug. 20-21.—Kane, Pa.—Kane Sportsmen's Club's amateur target tournament.
Aug. 20-21.—Ossining, N. Y.—Two days' shoot of the Ossining Gun Club; first day handicap (100 targets, 14 to 21yds. rise, open to all) and R. I. clam bake; second day, regular programme.
Aug. 26-29.—Okoboji, Ia.—Amateur shooting tournament, under management of Messrs. C. W. Budd and E. C. Hinshaw.
Aug. 27-28.—Peru, Ind.—Peru Gun Club's sixth annual midsummer tournament, at Bass Lake. Frank Dunbar, Sec'y.
Aug. 27-28.—Haverhill, Mass.—The Interstate Association's tournament, under the auspices of the Haverhill Gun Club. S. G. Miller, Sec'y.
Aug. 27-28.—Ruffsdale, Pa.—Ruffsdale Rod and Gun Club's first annual two-day target tournament. Added money, $30. Rose system. Lloyd H. Ruff, Sec'y.
Sept. 1.—Battle Creek, Mich.—Amateur tournament of the Battle Creek Gun Club. M. E. Hensler, Sec'y.
Sept. 2-3.—Tiffin, O.—Second annual tournament of the Tiffin Gun Club; $75 added. L. D. Arndt, Sec'y.
Sept. 3-4.—Nappanee, Ind.—The Interstate Association's tournament, under the auspices of the Nappanee Gun Club. B. B. Maust, Sec'y.
Sept. 3-5.—Richmond, Ind.—Handicap tournament of the Richmond, Ind., and College Corner, New Paris and Oxford, O., gun clubs.
Sept. 3-5.—Richmond, Ind.—Richmond Gun Club's handicap shoot.
Sept. 3-5.—Erie, Pa.—Erie City Rod and Gun Club's handicap tournament at targets. Open to all; $200 added. A. N. Aitken, Sec'y.
Sept. 9-11.—Du Bois, Pa.—Three days' target tournament of the Du Bois Rod and Gun Club; added money, $200. L. S. Munch, Sec'y.
Sept. 9-12.—Battle Creek, Mich.—Tournament of the Indians; open to the world; $1,000 added. John Parker, Mgr.
Sept. 15-20.—Blue River Park, Kansas City, Mo.—Twenty-fifth tournament of the Missouri State Fish and Game Protective Association. Targets and live birds. Paul Franke, Sec'y.
Sept. 16-17.—Nebraska City, Neb.—Tournament at Nebraska City.
Sept. 16-18.—Williamsport, Pa.—Tournament of the West Branch Rod and Gun Club.
Sept. 16-19.—Detroit, Mich.—John Parker's annual tournament.
Sept. 23-25.—Cincinnati, O.—Second annual handicap target tournament of the Cincinnati Gun Club. Charles F. Dreihs, Sec'y.
Sept. 29-30.—Lewistown, Ill.—The Interstate Association's tournament, under the auspices of the Lewistown Gun Club. H. H. McCumber, Sec'y.
Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.
Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.
Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.
Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.
Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.
First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park. Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

At the club shoot of the Sistersville (W. Va.) Gun Club, July 14, the president of the club won the championship trophy with the excellent score of 24 out of a possible 25. Mr. Ed O. Bower and C. I. Hall tied for the second medal on 23, the former winning in the shoot-off.

There will be an all-day shoot at Freehold, N. J., on Saturday of this week under the auspices of the Freehold Gun Club. The main event is the contest for the E. C. cup, emblematic of the championship of New Jersey.

The Ossining (N. Y.) Gun Club has issued the programme for its tournament of Aug. 20 and 21. On the first day there are four 15-target events, $1.30 entrance, followed by the main event, the handicap at 100 targets, 14 to 21yds. rise, high guns, entrance $5, which includes a ticket to the clam bake. The latter will be made by Mr. George Hunt, under the direction of Capt. George Washburn, and will be more than the name indicates, as there also will be chicken, lobster and other good things. On the second day there are ten events on the programme, of which five are at 15 targets, $1.30 entrance; four at 20 targets, $1.50 entrance, and one, the merchandise event, at 25 targets, 50 cents entrance; 180 targets, with a total entrance of $13. The Rose system will govern. Professionals may shoot targets at 1 cent each and may shoot for prizes in the merchandise event, which is an open one. Added money for two highest amateur averages. Shooting commences at 10 o'clock. Ossining is thirty miles from New York, on the New York Central & Hudson River Railroad. Loaded shells and lunch can be obtained on the grounds. The captain is Mr. Chas. G. Blandford.

Dr. Silas B. Keith, of Palmer, Mass., writes us as follows: "Plans are being made in the State of Massachusetts for the broadening of the Massachusetts Shooting Association, and which is expected to take in the entire State. The Association will be divided into three or four divisions, each division being composed of four or five clubs. Each division will hold shoots about four times during a season and will finish the season with a State shoot, which will bring all the clubs together. Each division will hold team shoots as well as sweepstake shooting, and it is expected that the winning club in each division will constitute the teams for the final state shoot. The following committee is appointed by the Association to make final preparations for next year: Dr. S. B. Keith, Palmer, secretary of Association; Mr. E. Menett, Springfield; Mr. H. Lawrence, Winchendon; C. L. Rundlett, Jr., Worcester: Leroy Woodard, Boston; H. Federhen, Boston. It is expected the committee will have a meeting at some time in the near future."

The programme of the Interstate Trapshooting tournament, given for the Columbian Gun Club, Aug. 6 and 7, at Marietta, O., can be obtained of the club's secretary, Mr. Chas. Baily, 106 Front street, Marietta, or Mr. Elmer E. Shaner, manager of the Interstate Association. The events are alike each day, namely, five at 15, four at 20 and two at 25 targets; entrance $1.50, $2 and $2.50; $3 added to each of the 15-target events, and $5 added to each of the others. Lunch will be served on the grounds each day. Targets, 2 cents, included in entrance. The grounds will be open for practice on Aug. 5. Percentage system, five moneys, 30, 25, 20, 15 and 10 per cent., will govern the division of the purses. Guns and ammunition, express prepaid, sent to the secretary, will be delivered on the grounds free of charge. High average prize for agents, $8; and the same for amateurs. Shooting will commence at 9 o'clock.

We acknowledge with pleasure the receipt of the Inanimate Bird Shooting Association's programme and rules which govern its tenth annual clay pigeon open championship meeting, to be held under the management of the Middlesex Gun Club, Welch Harp, Hendon, S. W., London, July 17 to 19. Some of the general conditions, as set forth in the programme, are of special interest, of which we note the following: "All guns must be kept open at the breech until the referee, having satisfied himself that the shooters are in their places, calls, 'Line ready?'" "A shooter from any cause whatever who shall discharge his gun otherwise than in accordance with the regulations shall be excluded from taking part in any further competitions during the day." "No person is allowed to make any noise or disturbance likely to affect the competitors."

The two days' tournament under the auspices of the Providence (R. I.) Gun Club, July 25 and 26, has ten events on the programme each day. On the first day the events are alternately at 15 and 20 targets, entrance $1.30 and $2.40. On the second day there are four events at 15 and two at 20 targets, and four events at 25 targets, $2.50 entrance, these four events being the five-man team race between teams from Maine, New Hampshire, Massachusetts and Rhode Island for a purse and the championship of New England. Targets 2 cents. Rose system, 8, 5, 3, 2. Shooting commences at 9:15 each day. Lunch served on the grounds. Send shells care of C. F. Pope Co., 33 Weybosset street. Any pertinent information will be furnished by Secretary R. C. Root, Providence.

Capt. E. B. Wadsworth, of Boston, renowned in the trapshooting world, under the nom de fusil of "Puck," sends us, under date of July 11, the following interesting item: "I want to inform you of a little affair that occurred at Wellington last night. Our old friend, Mr. O. R. Dickey's fiftieth birthday occurred yesterday, July 10, so I started a paper among his shooting friends, and last night at his residence presented him with an elegant diamond stud and his good wife with an elegant cut-glass vase and a silver-mounted mirror stand and a bouquet of fifty elegant roses. Mr. Dickey invited eight of his friends to dine with him on his fiftieth birthday, and the result was as above stated. I sent him a watermelon weighing 54 pounds, and I told him I came out to cut a watermelon. The evening was spent with a great deal of enthusiasm."

The members of "The Wanderers," the old, old club, which has been revivified, received a notice this week as follows from the secretary, Mr. Edward Banks: "The Wanderers will meet next Saturday, July 19, at Freehold, N. J. An all-day shoot will be provided, the main feature being the match between Neaf Apgar (holder) and W. S. Burtis (challenger) for the E. C. cup. Take the 8:30 A. M. train from foot of Liberty street, over the C. R. R. of N. J., or the 7:25 A. M. train on the Pennsylvania from the foot of Cortlandt street. Central train preferred. If you cannot attend, notify me by Thursday, the 17th, or you will be fined 25 cents for the good of the cause."

At a meeting of the Du Bois (Pa.) Rod and Gun Club, held recently, it was decided that the club will hold a three days' target tournament, Sept. 9, 10 and 11, on the local fair grounds. The citizens of Du Bois have liberally donated both cash and merchandise prizes. A silver cup, valued at $100, will be a prize for a four-man team match, open to members of Pennsylvania clubs. Much energy has been evoked by the visit of Mr. Frank Lawrence, of the Winchester Repeating Arms Co., who was elected an honorary member.

Under date of July 12 Mr. C. F. Lambert, from Haverhill, Mass., writes us as follows: "The Haverhill (Mass.) Gun Club, at its coming Interstate Association tournament, are arranging for some features that should prove attractive to the shooters. Most every one, shooters included, while not specially looking for or trying to get something for nothing, will at this particular shoot have that opportunity offered them. To fully learn what this means they should watch these columns closely for the next few weeks."

The Schenectady Gun Club's team defeated the Boston Athletic Association's team in a trophy contest, at Riverside, Mass., July 12. This is the second and final win by the Schenectady team. The first contest was won by a margin of 30; the second by 24, or 54 to the good in the total of both contests.

Keep in mind that Mr. Jim Malone's eighth annual midsummer tournament will be held next week, July 23 to 25, at Bay Ridge, A. A. County, Md., where the ocean breezes play freely, where the fish bite on opportunity, and where there is good trapshooting competition for the world.

Mr. F. C. Riehl, who recently entered the employ of the U. M. C. Co., is distinguishing himself as an excellent shot. He won high average recently at Sioux City, Ia., and he was also in the first flight at the Chamberlain (S. D.) Gun Club's tournament, July 10 and 11.

The North River Gun Club, of Edgewater, N. J., has most pleasant quarters on the shore of the North River, opposite 125th street Ferry, New York. It holds shoots regularly every Saturday, and extends a hearty welcome to visitors to participate in its sport.

The Hampshire (W. Va.) Sportsmen's new club house was formally opened on July 4, with a housewarming of large size. A special Pullman car conveyed a large number of the members to the station, whence they journeyed by carriages to the club house, with which they were greatly pleased. Fireworks engaged the attention of some of the guests in the evening, while dancing was the preference of others.

Mr. Lloyd H. Ruff, secretary of the Ruffsdale (Pa.) Gun Club, writes us that his club will hold its first annual target tournament on Aug. 27 and 28. There will be $30 in added money, and the Rose system will govern the division of the purses.

Aug. 27 and 28 are the dates fixed upon for the sixth annual midsummer tournament of the Peru, Ind., Gun Club, and Bass Lake the place. Mr. J. L. Head is the president, Mr. Frank Dunbar the secretary.

The Hell Gate Gun Club will hold a target shoot, open events, and have a fish dinner on July 22, at Dexter Park, Jamaica avenue and Enfield street, Brooklyn. Targets 1½ cents. Fish dinner, $1.

We are advised by Mr. T. H. Keller, the energetic and popular manager of the Peters Cartridge Company, Eastern Branch, that Mr. John Parker won the Michigan State live-bird championship.

At Mr. F. C. Whitney's July 4 shoot, Des Moines, Ia., Mr. C. W. Budd did some phenomenally skillful shooting, scoring 166 out of 170 targets shot at, an average of nearly 98 per cent.

Mr. B. Leroy Woodard, at a recent shoot of the Montello Gun Club, did some extraordinary target smashing by making a run of 130 straight. He also scored 142 out of 144 shot at.

Mr. I. W. Morrow, secretary, informs us that the Northside Gun Club, of Allegheny City, Pa., claims the dates Oct. 1 and 2 for a two-day target tournament; $100 added money.

At the midsummer tournament of the Sistersville (W. Va.) Gun Club, July 10, Mr. Luther Squire made highest average, breaking 185 out of a possible 200.

BERNARD WATERS.

Boston Gun Club.

BOSTON, July 2.—The usual weekly shoot of the Boston Gun Club was held on their grounds, at Wellington, to-day, and a small number of shooters were in attendance, due to the fact that another shoot day is coming in a few days. However, the usual good feeling prevailed, and those who did attend had a royal good time. As is usual, Leroy took the lead both in handicap events, as well as 16yds., and there is no use talking, something will have to be done so that some of the rest of us can have a chance. First in the match was Leroy with 21 at his usual distance of 21yds., followed by Kirkwood, 18yds., with 19. Frank Spencer and Bullard tied for third place with 17. Scores:

Nos. 1, 3, 4, 6, 7, 9 and 10 were magautrap; Nos. 2, 5, and 8 were Sergeant system.

Events:	1	2	3	4	5	6	7	8	9	10

North River Gun Club.

New York, July 12.—The North River Gun Club, of Edgewater, N. J., had its regular Saturday shoot on their beautiful grounds at Edgewater. The weather being clear, with a southerly wind, made the shoot all the more pleasant. The only incident that marred the shoot was the firing of a revolver by an idiot who was passing by in a row boat, who thought that the members were firing at him and promptly pulled out a large revolver and fired five shots in succession. Capt. Cathcart and Chief Marshal Geo. Allison, of Edgewater, in the former's launch, quickly overhauled the row-boat and towed man and boat to shore, where he was put under arrest, but Chief Allison, yielding to the entreaties of the ladies present, allowed the man to go, and the shoot then again proceeded.

The Glaser trophy, a club event for members only, was at 50 targets, handicap allowance. It was won by Mr. F. Truax with a score of 49, allowance added.

The allowances and scores were as follows: Eickhoff (7) 37, Richter (5) 42, Allison (9) 35, F. Truax (8) 41, Annett (5) 38, Merrill (10) 19, Morrison (5) 29, Cathcart (7) 34.

JAS. R. MERRILL, Sec'y.

IN NEW JERSEY.

Carlstadt Gun Club.

Carlstadt, N. J.—The shoot of the Carlstadt Gun Club, held on July 4, had several prize events, first of which was won by A. Roemer; second by H. Krug, who also won third, fourth and fifth prizes, which were shot for miss-and-out. The scores:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	10	10	10	10	10
Wm Rasmus, 1	3	4	7	..	5	..	..	..	5	7

T Gunpp	..	..	..	..	6	5	6	3	5

Dover Sportsmen's Association.

DOVER, N. H., July 12.—Seven members and two visitors took part in the regular shoot to-day. The hard, westerly wind gave some difficult targets. Messrs. Langley and N. C. Wentworth negotiated one straight each. The scores:

	Shot at.	Broke.		Shot at.	Broke.
F F Wentworth	75	56	Miller	60	27
St Evens	75	51	Meseroe	30	15
Langley	110	92	Smart	60	27
N C Wentworth	100	66	Henry	20	4
Hallam	70	56			

F. C. Whitney's Tournament.

DES MOINES, Ia., July 5.—At F. C. Whitney's Fourth of July tournament, the shooting was done from one set of traps, Sergeant system. Events 4 and 5 were at doubles. A nice lunch was served by Mr. Whitney, and a very pleasant day was enjoyed by all present.

Budd made high average, losing but 4 targets out of 170 shot at. In the amateur class Famechon was high with 94.4 per cent; Kessler second with 85.7. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

HAWKEYE.

Boston Athletic Association.

BOSTON, July 12.—A return match between the Schenectady Gun Club and B. A. A. Gun Club was shot off at the grounds of the B. A. A. at Riverside, Mass., this afternoon. The matches were for a trophy, the grand total on the two to count. As Schenectady team won by 30 birds at home and by 24 this afternoon, they were rather easy winners.

The conditions were perfect, and some of the scores, especially those of Messrs. Wagner, Green, Warnick and Leviston, of the New York team, and Messrs. Baxter and Dickey, the B. A. A., were exceedingly good, inasmuch as the targets were thrown very hard and fast. It was an eight-man team match, 50 targets to each contestant.

As our team have been shooting remarkably well all through this spring and summer, our defeat on our own grounds was a surprise to us all, and the very low scores made by most of our team is simply unaccountable. Following are the scores of the team shoot:

Boston Athletic Association.

H Baxter	11111010001111111111111111—21

Tie on 50 targets: Ahlers (19) 34, Randall (18) 37.

Cincinnati Gun Club's cash prize contest, July 5: R. Trimble (19) 46, Gamble (18) 41, Van Ness (18) 41, Herman (16) 41, Day (17) 41, Ahlers (18) 40, Randall (18) 40, Osterfeld (19) 38, J. B. (16) 38, Butts (16) 38, United (16) 37, Falk (17) 37, Coleman (19) 36, Faran (19) 36, Davies (18) 35, Ackley (15) 35, Boyd (15) 35, E. Trimble (17) 34, Roll (18) 34, Corry (17) 33, Captain (16) 32, Boeh (15) 29.

The Verbosity of Match Making.

AUBURN, Me., July 13.—No doubt the readers of FOREST AND STREAM who read brother Stark's comment on the Wellington shoot, have decided he is a kicker long before this. Now I can show you that he is also a squealer.

You probably noticed what he said about the stranger from Skowhegan or somewhere trying to inveigle him into a match on his "grandpa gray head" challenge. Now this is a surprise to me, being called a stranger to C. M. Stark. Why, I have known him (through FOREST AND STREAM) these many years, and if he doesn't know me, he can get acquainted mighty easy by accepting my offer to make a match between Maine and New Hampshire. He tells me he and his pard's combined ages are 115 years. We can furnish two shooters whose ages will make 118 years. When I read Mr. Stark's challenge, I said to myself he isn't one of those "narrer minded critters" who will insist on living inside New Hampshire boundary, and a match between the two States will set the young men to thinking and training, so they can take their places in a "grandpa grayhead" match when they get old enough.

So when I met Mr. C. M. Stark at Wellington, I proposed that when the return match was shot in Maine, if he would bring down his side pard, we would have our men ready for a friendly match for fun or marbles, as he liked. He said we will make it for just enough to be interesting. This, I thought, was an acceptance of the proposition, details to be arranged later.

He asked me who was to make one team, and I told him Prof. Moody was one of them, and the other was not there, but was all right. Now here is where I made a mistake in not giving Prof. Moody a tip not to shoot too well, and he kept right on smashing the asphalt crockery at a 90 per cent. gait, which, I think, took the wind out of Brother Stark's sails, for he came to me in about an hour and said, "You are from Maine, are you? Well you read my challenge again, and you will see that it was confined strictly to New Hampshire. I don't want no part of you Maine shooters. I was down there once and paid a guide money enough to buy the county we were stopping in, and only got one shot at a caribou [didn't say what the result was], and I swore I would never go there again. My challenge was for New Hampshire, and if I ever make another it will only include Dunbarton, Weare and Heniker, and as there isn't a shooter in Weare, and only one in Heniker and he is most blind, I shall feel pretty safe."

Now, I hope that a man who can shoot as well and dress as sporty as Mr. Stark, won't crawl into a hole like New Hampshire and pull the hole in after him. He likes fun, and that is what we are all after in this game, and as there is to be a match in each State in the Interstate contest, it will cost nothing to bring about this side match. It would create a lot of interest in trapshooting, for there is nothing pleases me more at our shoots that to see an elderly gentleman at the score with gun in hand and enjoying himself. Let's see if Brother Stark is mad when he reads this. The comment on elderly gentlemen, which includes him, ought to cool him off, and I hope it will—if not, brother, take revenge at the traps.

SEE E. SEE.

Sistersville Gun Club.

SISTERSVILLE, W. Va., July 11.—The midsummer target tournament by the sistersville Gun Club yesterday was quite a success, although the attendance was not up to expectations, in all probability because of the very heavy rain in the early morning, which continued during the greater part of the forenoon. It, however, cleared up about 11 o'clock, and from that time on until evening, it was a delightful day for the sport, and afforded those present great enjoyment.

Mr. Luther Squire, representating the Dupont Powder Company, was here from Cincinnati; P. Schlicher, Jr., and John M. Speary from Marietta; John B. Garden and C. H. Dowler, from Wheeling, and F. C. Percival, Esq., from St. Marys. The local club was represented by Curt I. Hall, Frank Dunlap, Geo. Wolfe and Ed O. Bower.

The best shooting of the day was done by Mr. Squire, his score being 185 out of a possible 200. Of the other visitors, J. M. Speary and P. Schlicher, Jr., of Marietta, O., did some excellent shooting. Of the locals, Dade had a little the best of it, and landed not far from the top, he and P. Schlicher, Jr., tieing for third place. After the completion of the regular programme an extra race at 25 targets was shot, which was won by Dade, who went out with 24. P. Schlicher, Jr., followed closely with 23, J. M. Speary and C. I. Hall each broke 22, Cole and John B. Garden 21.

F. C. Percival, Esq., president of the West Virginia State Association since its organization, was a most welcome visitor. He has not been well for several weeks, and considering the condition of his health, and shooting a new gun, his scores were exceptionally good. He is known among the shooters as Cole.

The rag time flight of the targets, caused by the heavy wind, was quite a proposition for John B. Garden and C. H. Dowler, who were present from Wheeling, and their scores were far below their usual average. They promise ti do better next time, however. Tabulated scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	15	15	15	20	15	15	20	15	15	20	15	20	25
L Squire	15	14	13	19	15	14	18	14	13	16	15	19	..
J. M. Speary	13	14	14	17	14	12	18	11	13	16	13	20	22
Dade	12	14	13	17	12	10	18	12	14	18	12	18	24
P Schlicher, Jr.	14	12	14	15	15	11	18	18	13	17	12	15	23
Cole	12	13	12	18	10	12	12	12	13	17	13	12	21
C I Hall	14	13	13	14	12	12	12	11	14	13	10	15	22
J B Garden	11	10	12	16	15	11	11	8	15	15	9	18	21
J G Wolfe	8	12	13	..	11	14	13	12	11	12	12	17	14
C. H. Dowler	6	11	6	14	8	12	12	7	10	14	9	16	15

July 14.—The regular club shoot of the Sistersville Gun Club was held on their range Saturday afternoon, and Mr. Jos. Y. McNaught, the club's genial president, walked off with the championship trophy in his inside pocket on the very creditable score of 24 out of a possible 25, from the 20yd. mark. C. I. Hall and Ed O. Bower were following closely, and went out with 23 each for second medal, which, in the shoot-off, was won by Mr. Bower. Mr. J. G. Wolfe, one of our new shooters, did well by breaking 21, considering that he had to shoot a strange gun. He is a comer. The scores in detail follow:

Event No. 1, 25 targets, for practice: Bower 20, McNaught 21, Hall 22.

Event No. 2, 25 targets, for championship trophy: McNaught 24, Hall 23, Bower 23, Wolfe 21.

Event No. 3, 25 targets, the score of Hall and Bower to count as shoot-off for second medal: McNaught 19, Hall 21, Bower 22.

Event No. 4, 25 targets: McNaught 22, Hall 23, Bower 24.

LERANZO.

St. Paul Rod and Gun Club.

ST. PAUL, Minn.—Herewith find scores made at our regular weekly club shoot, held Saturday afternoon, July 12. Weather bright and clear. As the magautrap was in perfect running order, the shooting was fast and furious from 1 P. M. until dark:

Events:	1	2	3	4	5	6	7	8

Hunt	..	..	..	..	24	..	..	..
Smith	..	..	..	..	12	..	..	..

Wilkinson wins the cup for the third time, and it becomes his property. It is a solid silver trophy; cost, $50.

SECRETARY.

Birch Brook Gun Club.

LYNN, Mass., July 12.—The seventh shoot of the series was held at their grounds by the Birch Brook Gun Club on Saturday afternoon, July 12, and during the shooting there were some individual contests. Hilliard and Riley, shooting at 10 targets, broke 9 each. On the shoot-off Hilliard broke 10 and Riley 8.

Hebbard and Straw ended their bout with Hebbard 9, Straw 8.

Hastings was high man in merchandise and medal events.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	30	50	10	10	10	5p	5p	10	10	15	10	10	10	15	15
Riley	20	33	8	..	5	6	5	4	..	..	..	9	8	..	..
Hilliard	23	33	7	10	8	6	7	7	10	12	10	9	10	12	13

Everett	..	..	..	..	4	..	..	..	..	..	4	..	..	12	9

Event 1 was merchandise. Event 2 was the medal contest.

HENRY ROOD, Sec'y.

East End Gun Club.

RICHMOND, Va.—The second annual merchandise tournament of the East End Gun Clum, which was pulled off on the club grounds July 4, was the most successful one-day shoot ever held in the State. There were sixty-three entries, representing all the clubs in and around Richmond, and several shooters from a distant part of the State. Among the latter was that whole-souled, good-natured sportsman and shot, Mr. T. F. Stearns, of Newport News.

Two sets of traps, Sergeant system, were used. The office was in charge of Mr. Banks, brother of Edward Banks, of the All-American team fame, ably assisted by Mr. Franklin Stearns, the most popular shooter in the State.

Mr. L. D. Thomas, representing L. & R. Powder Company, was present, and shot through the entire programme. He, by his affable ways, made many friends. Programme carried six 25-target events, ten prizes in each.

Probably the most exciting contest of the day was the five-man team shoot between the four teams from Richmond and Ashland. The result of the team shoot at 50 targets was a victory for West End with the following shooters: Franklin Stearns 41, Hammond 37, Boyd 47, Tignor 38, Hawes 41; total 204.

East End second: Anderson 41, Hechler 40, P. J. Flippant 39, Purdie 39, Boudar 41; total 200.

Other clubs were: Deep Run—T. F. Stearns, Buckner, Johnson, Coleman, Venable; total score 188. Ashland Club—Saunders, Hutchins, Fox, Cox, Trevillian; total 196.

The last event was 10 doubles, and was won by J. A. Anderson with 16 out of 10 pairs. This carried a prize of $5 worth of laundry tickets, and the winner now claims the championship of the State at pairs.

Scores in this event: Hammond 11, Stearns 11, Mills 12, Baker 8, Williamson 7.

High average for the day was won by Mr. Horace Hawes with 135 out of 150. Mr. Boyd was a close second with 133. Hawes used 24grs. L. & R. powder, 1¼oz. shot in U. M. C. shells. Anderson shot 3¼drs. Robin Hood powder, 1¼oz. shot.

Scores as follows:

Events:	1	2	3	4	5	6	Total.
V Hechler, 7	16	12	14	14	17	15	88

Team race, at 50 targets:

West End—F. Stearns 41, Hammond 37, Boyd 47, J. C. Tignor 38, Hawes 41; total 204.

Deep Run—T. F. Stearnes 35, Buckner 33, Johnson 41, Coleman 33, Venable 46; total 188.

Ashland—Saunders 40, Hutchings 46, Fox 35, Cox 42, Trevillian 33; total 196.

East End—Anderson 41, Hechler 40, Flippen 39, Purdie 39, Boudar 41; total 200.

The winners of the merchandise prizes in the handicaps are as follows:

First event: Atkinson first, Hawes second, Smith third, Hammond fourth, Venable fifth, Cox sixth, F. Stearns seventh, Allison eighth, Fairlamb ninth, Tiller tenth.

Second event: Atkinson first, Harrison second, Houghton third, Jackson fourth, Allison fifth, Thompson sixth, Boudar seventh Peebles eighth, Thurston ninth, Ford tenth.

Third event: Allison first, Cuchman second, Wiltshire third, Boyd fourth, Lorraine fifth, Cox sixth, Talman seventh, Doswell eighth, McSweeny ninth, Woodcock, tenth.

Fourth event: Atkinson first, Cox second, T. F. Stearnes third, P. J. Flippen fourth, J. A. Anderson fifth, Saunders sixth, Hutchings seventh, Arwood eighth, Houghton ninth, Peebles tenth.

Fifth event: Thurston first, J. A. Anderson second, Talman third, Hillsman fourth, Boyd fifth, F. Stearns sixth, Harrison seventh, Purdie eighth, Tignor ninth, Coleman tenth.

Sixth event: Hillsman first, Burnett second, Southward third, Smith fourth, Hammond fifth, Thurston or Houghton sixth, Coleman seventh, Buckner or Lorraine eighth, Lorraine ninth, Woodcock tenth.

Michigan Trapshooters' League Matters.

DETROIT, Mich., July 11.—*Editor Forest and Stream:* In your issue of July 12 I notice an article reflecting on the Michigan Trapshooters' League and the handicap committee appointed at the League shoot held in Jackson, July 1 and 2. The writer was unfortunate enough to be placed on the handicap committee, perhaps because he knows at least two-thirds of the trapshooters belonging to the State League.

The programme read, "Sweeps open to all; amateurs will be handicapped 16 to 18yds." I will admit that the programme was rather loosely drawn, but on its title page it plainly read "Michigan Trapshooters' League."

The article mentions that a lot of professionals and semi-professionals shot in the tournament. So far as I know, there is but one professional shooter in Michigan, who does any shooting. There may be others who would have to shoot with the professionals if they shot; that is to say, ones who receive their shells for nothing, or guns, or whatever it is that makes a man a professional; but they did not shoot with the Michigan State League. The only one that we know of is Jack Parker. He is a charter member of the State League. He always shoots with us. He can shoot no better than a number of us. He is willing to shoot and will shoot from the 40yd. mark if you put him there. He will shoot for targets; in fact, he will do anything and never kick. We have always considered him one of our own, and treated him as such, and the writer doubts if he ever took a cent from one of our shoots more than he brought. This does not pertain to what he may do in other parts of the country. He has done more for the State League than any other one man; consequently, with us, he is not considered a professional.

The Trapshooters' League is composed of a class of sportsmen made up of farmers, clerks, business men, almost entirely, and so far as we know, gentlemen. When we find one that is not, we immediately fire him. We shoot three or four times a year for our own pleasure, but are always glad to see outsiders, if they are gentlemen, and will comply with our rules—i. e., shoot an even game with us—but when people come whom the writer thinks could not make five shooters of any note in the United States believe that they are amateurs, regardless of what they say, and kick on our rules, we can't use them. The writer does not believe that J. M. Hughes is an amateur, neither does he believe that Kit Shepardson is an amateur. Mr. Lang we know nothing about, and I personally would feel like apologizing to him, so far as I am concerned.

We asked these gentlemen to shoot at 20yds., and they refused for a long time. It was the sense of the members to give them back their money if they did not want to shoot. They went in and shot. Mr. Hughes, from the 20yd. mark, got the first average of the day. Mr. Shepardson held his own, so far as the killing of the number of birds went until his gun got out of order. There were but three men at the whole tournament who got their entrance money back, and Mr. Hughes was the only man who made any money. It was simply a case of "shark." They thought they had a soft thing, but we would not have it that way. Personally, I care nothing about it, as I do not care to travel with that class of people—"soft snap hunters."

They tried to injure the State League, but I wish to say that at a meeting held the evening of the first day it was the voice of this meeting that we never want to see such people on our grounds. We cared nothing about whether they stayed or not. We consider them no good to any tournament, and know that such people have no influence with the true sportsmen either at the trap or elsewhere.

We also wish to state that we did not include Mr. Lang in this class, and wish your readers to make exception of him, as he was an entire stranger. Had we been given a little more time before leaving the grounds to look up his record, we no doubt would have modified his handicap. The other two gentlemen we are very well acquainted with, and should have shot them from the 22yd mark instead of the 20.

J. A. MARKS.

Shooting in South Dakota.

THE Chamberlain, S. D., Gun Club gave a two-days' tournament July 10 and 11. This is a new club, with a membership of active game shooters, who have hit upon this means of filling in the time until chicken and quail shooting time. The boys have a good equipment of expert traps and convenient grounds, and while the attendance upon this meet was not large, the game was lively and some good scores were made. Shooting was according to the Sergeant system, and moneys divided on the percentage plan. Riehl won first average for the two days; Trotter second, and Hogue third. Scores in detail are here given:

First Day, July 10.

Events:	1	2	3	4	5	6	7	8
Hogue	13	12	12	12	13	10	11	14
Johnson	10	11	12	11	14	..	9	12

KILLMORE.

The Rod and Gun Club.

PITTSFIELD, Mass., July 4.—A Field day was held on this date, and recently having put in a new magautrap, considerable interest has been manifested by our club in shooting bluerocks. The day being perfect, we all enjoyed a very fine time. The scores were fairly good for beginners. The scores:

Events:	1	2	3	4	5	6	7	Total
Targets:	10	10	10	10	10	10	10	Broke.
Shearer	8	7	8	6	8	8	8	53

A. C. GRAVES, Sec'y.

Roman Gun Club.

ROME, N. Y., July 4.—E. B. Smith, who is a member of the Carlstadt Gun Club, made at one time a run of 38 straight, and another at 23 straight. Mr. Smith was at Rome to represent the Carlstadt Club.

Events:	1	2	3	Events:	1	2	3
Targets:	20	20	25	Targets:	20	20	25
E B Smith	18	20	23	J Servey	10	9	13

W R Rayland	12	12	18				

Erie Gun Club.

Carlstadt, N. J., July 9.—The Erie Gun Club held a shoot at Outwater's place to-day. Only three were present. A 7-bird event resulted as follows:

P Finnigan.....2122012—6 P Mohrman.....012221*—5
C Runge.....2101211—6

Raleigh Gun Club.

RALEIGH, N. C., July 10.—Our regular weekly shoot was held to-day under unfavorable weather conditions—very cloudy, windy and rain, a combination not desirable to make a good record. The following scores were made out of 50: Johnson 35, Whitaker 31, Gowan 31, Gray 30, Parker 28, Stark 28, Mitchell 28, Ferrall 25, Pearce 24.

R. T. GOWAN, Sec'y.

Holiday Shoot.

HOLT, Mich.—The glorious Fourth was celebrated at this burg in a very appropriate way, in so far as noise is concerned, as there was a tournament held here under the management of R. C. Thorburn. He proved that he was the man for the place, as he had the grounds arranged in admirable manner. Could have accommodated fifty shooters. The ground under foot was very moist, owing to the heavy rains, but the overhead shelter was of the best, even an awning was stretched over the shooters' stand.

The manner of shooting was calculated to carry an oldtime shooter back many years. The traps were arranged five in number and set known angles. You will wonder why the scores were not larger. Let it be known that the shooters were local country boys who have not had much practice. The best shot on the ground was the oldest man present.

Those present whose names were taken were F. C. Hess and R. C. Thorburn, Mason, Mich.; E. Stopple, Wm. Bascomb and W. W. Wigmon, Lansing; F. Bates, Diamondale, Mich.; W. E. Wagoner, A. Aldrich and A. Henniker, Holt; C. J. Raines and E. B. Phillips, Mason. Scores:

Events:	1	2	3	4	5	6	7	8	9

SECRETARY.

Fremont Gun Club.

FREMONT, O.—The Fremont Gun Club had an all-day shoot at their grounds Tuesday, July 8. The day was a scorcher, but not hot enough to keep the good-natured representative of the Hazard Powder Company, Phil, from breaking 179 targets out of 195 shot at. The hot sun made the targets hard to break, and low scores were in order. It was suggested that Phil was shooting BBs.

Snow was delayed in getting to Fremont, but nevertheless arrived in time to make it snow pieces of targets, especially in the miss-and-out shoots which followed the regular programme.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Nos. 3 and 11 were at 10 pairs each.

LOST.

Winchester Gun Club.

DETROIT, Mich.—The regular shoot July 12 was well attended and enjoyed by all. Brodie was precise and very steady again, coming within one of lifting the straight score silver cup and breaking 57 out of the 60 shot at. Guthard's work in the short turns was also brilliant, and his 19 in the club event was sufficient for the Class B medal. Ford's 17 landed the Class C medal.

Following are the scores, the last event being the club event:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	15	15	10	10	10	25	25
Brodie	10	9	14	..	..	..	..	..	24
Shiell	8	5	12	..	4	..	..	..	23
Guthard	9	10	14	..	9	9	10	20	19
Hitchcock	..	7	13	..	7	9	8	19	16
McAdam	..	..	8	11	..	..	..	..	15

Barthel	3	..	8	..	..	3	5	..	11
Bachmann	..	6	..	3	5	..	..	..	13
Whitmore	6	..	9	..	6	7	8	13	..
Johnson	..	5	7	..	..	8	..	..	..

Ossining Gun Club.

OSSINING, N. Y.—Though the attendance was rather slim, we managed to use up a couple barrels of bluerocks at our regular Saturday afternoon shoot, July 12. Next Saturday there will be a larger attendance, as a handsome prize has been offered by a club member, the possessor of which is to be decided by a 25-bird handicap match, 14 to 20yds. A game carving set with buckhorn handles is the prize, and all of the hot stuff of the club will try and capture it. The sweeps to-day were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	15	10	10	10	10	10	10	10	25	25	25	25
Frew	11	7	6	7	6	5	..	..	..	..	..	..

C. G. B.

Cheapeake Gun Club.

NEWPORT NEWS, Va., July 9.—The Chesapeake Gun Club had an interesting shoot yesterday afternoon. Two visitors were present as guests of the club. These were Messrs. P. J. Gallagher, of the Portsmouth Club, and Capt. A. W. du Bray, a representative of the Parker Gun Company.

Mr. Harry Westacott has donated a handsome watch fob to the club to be shot for by the members. The one making the highest score at three consecutive shoots will win the fob. Mr. Thomas F. Stearnes was high man yesterday, but he will have to maintain his position at the next two shoots in order to retain the trophy:

P. J. Gallagher	20	23	22	22	F Palmer	18 22 19 ..
A W du Bray	21	22	23	..	G B James	21 18 22 ..
B B Semmes	18	21	22	22	E S Robinson	23 21 20 ..
Dr J. Charles	17	19	16	..	J de Pass	14 14 23 18

DOG BREAKING.

With Odds and Ends for Those Who Love the Dog and Gun. By Gen'l W. H. Hutchinson; 42 illustrations; tenth edition. Cloth, 359 pages. Price, $3.00

FOREST AND STREAM PUB. CO.

HITTING VS. MISSING.

By S. T. HAMMOND ("Shadow"). Cloth. 170 pages. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and, as it was successful in his own experience, the publishers are confident that, being here set forth simply and intelligibly, it will prove not less effective with others.

GENTLEMAN DESIRES engagement for his guide. Good moose hunting. J. N., 459 W. 47th St., N. Y. 3

Routes for Sportsmen.

TROUTING IN MICHIGAN.

The streams of this State afford the best sport with the

Speckled Brook Trout,
California (Rainbow) Trout,
German Brown Trout

Of any section of the country West of the Alleghenies. The rivers and brooks have their source in cold, clear springs, and flow through a country fairly well cleared of down timber and brush.

Millions of Fingerlings

And Fry are planted in the streams every year, insuring a continuation of the Good Fishing for which the state is famous. The best fishing points are easy of access, the accommodations are good, reliable guides can be engaged at reasonable prices, and splendid sport is assured.

The Pere Marquette Railroad

Reaches the best fishing territory in the state. Write to H. F. MOELLER, G. P. A., Detroit, Mich., addressing your request "F. 3", and a 32-page booklet, illustrated from photographs taken on the streams, and telling of the Fishing and Hunting in Michigan, will be mailed free to your address.

COLORADO

The way to get the best accommodations is via the

GREAT ROCK ISLAND ROUTE.

WHY? It is the only direct line to Colorado Springs and Manitou.

It is the popular route to Denver. It has the best Dining Car Service.

It has the finest equipment and most satisfactory schedule and in the

Rocky Mountain Limited

offers the best train, only one night, Chicago to Colorado.

It leaves Chicago daily at 5.45 p. m., and arrives at Denver 8.45 p. m., Colorado Springs (Manitou) 8.30 p. m.

Another inducement to use the *Rock Island* will be the round trip rates of **$25** Chicago to Colorado and **$15** Missouri River points to Colorado effective this summer by that line. Ask for details and free books.

"Under the Turquoise Sky" gives the most fascinating description of Colorado.

"Camping in Colorado" has full details for campers.

Property for Sale.

IRELAND—on the Shores of Lough Derg.

The Valuable Residential Sporting Property, known as TINARANA ESTATE, held in fee, free of rent and all charges whatsoever, comprising a Handsome Modern Mansion, standing in 65 acres of old pleasure ground and wooded demesne, with 335 acres of pasture land, part let under grazing and other agreements, reserving annual rents amounting to £460, picturesquely situated on the lake side, together with 200 acres of woods, valuable for the growing timber and as game coverts, the inclusive turbary of 30 acres of bog and sporting rights of 700 acres of mountain and bog, affording magnificent rough shooting.

MESSRS. ARTHUR JONES and SON are instructed to SELL by Auction on WEDNESDAY, JULY 30th, 1902, at two o'clock, at the Salesrooms, 135 Stephen's Green, Dublin, Ireland. the Valuable and Attractive Residential Estate, situated by the magnificent lake, connected to broad Atlantic by the noble Shannon river, half an hour's drive from Killaloe, which is only four hours' rail to Dublin. The value of the property as a nobleman's or country gentlemen's Residence is evident; the noble mansion, built in 1877, at a cost of £12,000, a well designed and handsome structure, well sheltered, commanding the lake view for 20 miles Should the purchaser not require adjacent land, the tenants residing elsewhere do not interfere with privacy of the demesne. To the sportsman the attractions are well known, excellent rough shooting over 1,300 acres, with 200 acres of woods for preserved game, and free access to the second largest lake in the British Isles. where wild duck, snipe, plover, etc., abound. The fishing of Lough Derg needs but little advertisement, and Tinerana Bay affords the best sport of the lake—salmon, trout, etc, and excellent rough fishing. For conditions of sale, illustrated particulars, rental, permits to view, apply to the Auctioneers, or MESSRS. LEE and PEMBERTONS, 44 Lincoln's Inn Fields, London. 3

A Big Bargain.

ADIRONDACK CAMP and one share of stock (value $1,000) in Adirondack League Club. House beautifully rustic. 15ft. above the lake shore. Large entry hall with double stairways, open fireplaces, main room 20 x 30, hard wood finish; second floor five sleeping rooms, three with bay windows. Completely furnished and ready for immediate occupancy Boat house with two boats and gasoline launch. Less than 10 hours from New York. Three club houses, numerous camps, membership restricted. Club owns 94,000 acres, filled with trout lakes and deer Magnificent deer shooting and trout fishing. All conveniences. Cost $18,000. Owner needs money quick. Price, $8,000. Part may remain.
For details and photographs address
OWNER, 138 West 34th Street, New York. 3

FOR SALE.

By the Boiling Springs Gun Club, their well equipped club house and grounds situated at Rutherford, N. J., 30 minutes from City Hall, N. Y., by the Erie R. R. to either Rutherford or Carlstadt, 5 minutes' walk from either depot. Two lines of trolleys from Newark, Hackensack, Paterson and Hoboken pass the grounds. Valuable charter allowing perpetual shooting on these grounds. Six acres of land and complete outfit for target or live bird shooting. For particulars apply to A. W. VAN WINKLE & CO. Rutherford, N. J.

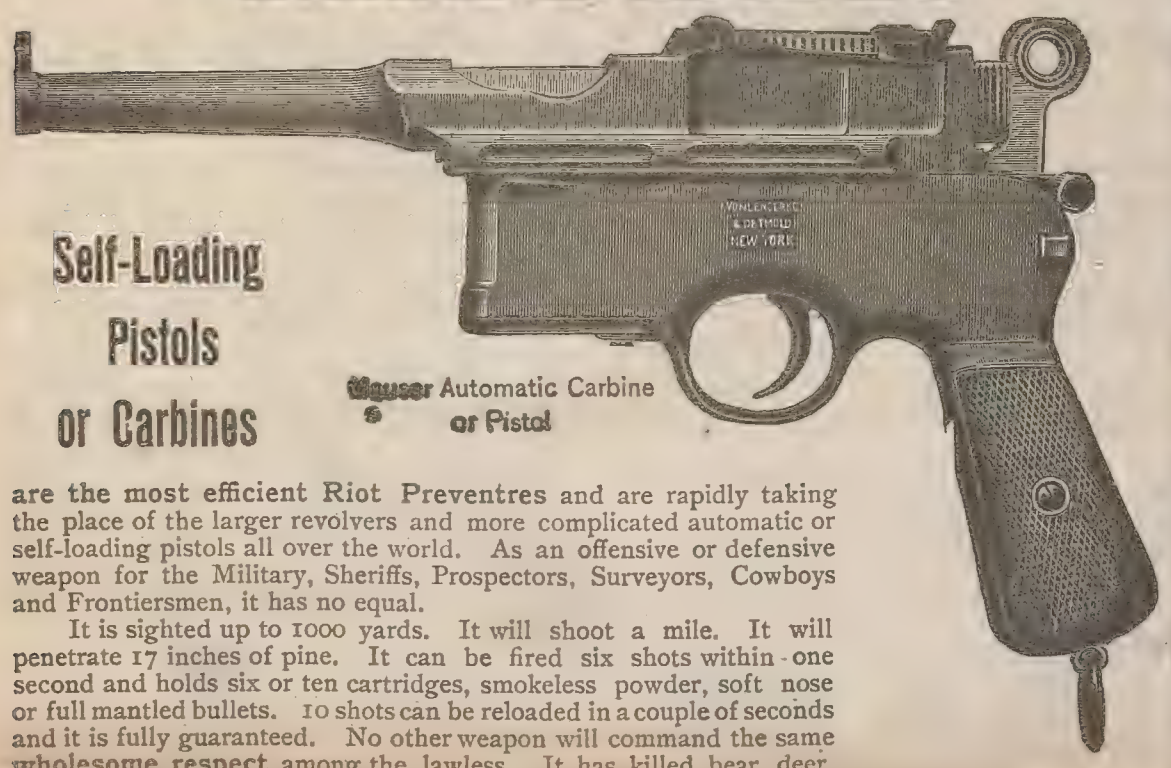
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

WINCHESTER

METALLIC CARTRIDGES

DURING our 30 years of gun making, we have discovered many things about ammunition that no one could learn in any other way. Our discoveries in this line, together with years of experience manufacturing ammunition, enable us to embody many fine points in Winchester Metallic Cartridges for rifles and revolvers which make them superior in many ways to all other brands upon the market. Winchester cartridges in all calibers are accurate, sure-fire and exact in size. They shoot when you want them to and where you want them to; being made and loaded in a modern manner by exact machinery under the supervision of skilled experts. Remember this, and insist upon having Winchester Cartridges, and you will get the best.

CANOE CRUISING AND CAMPING.
By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.
This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

FOREST AND STREAM PUBLISHING CO. NEW YORK.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.
Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.
A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

Yacht and Boat Sailing
By DIXON KEMP, Associate Institute of Naval Architects. Price $12.
This edition has been largely re-written, and contains a great number of new subjects, and the lines of many boats never before published, the total number of plates exceeding 100, besides more than 350 woodcuts in the text. Contents: "Selecting a Yacht," "Examination of the Yacht," "Building a Yacht," "Equipment of the Yacht," "Seamanship," "The Management of Open Boats," "The General Management of a Yacht," "The Rules of the Yacht Racing Association," "Yacht Racing," "Handling a Yacht in a Match," "Centerboard Boats," "Centerboard Boats for Rowing and Sailing," "Sails for Centerboard Boats," "Small Centerboard Yachts," "Mersey Sailing Boats," "Clyde Sailing Boats," "Belfast Lough Boats," "Dublin Bay, Kingstown Boats," "Cork Harbor Boats," "Itchen Boats," "Falmouth Quay Punts," "Thames Bawley Boats," "Lake Windermere Yachts," "Yachts of the Norfolk Broads," "Small Yachts and Boats of Y. R. A. Rating," "Singlehanded Cruisers," "Types of Sailing Vessels," etc.

THE BLOOMING OF THE CHESTNUT.

WITH the coming of mid-summer comes also, in these temperate climes of ours, the beginning of maturity for all growing things. The time of adolescence is at an end. It is true that before the process of ripening is complete months may elapse; nevertheless the period of growth is well nigh over, and one feels that henceforth, until the coming of the autumnal frost, animal and vegetable life alike are but preparing for that time of bitter cold which pinches and kills. If early spring is the time when life first starts into being, and May and June are the months of increase, July and August may be called those of pause and rest, while the months of early autumn are those of fruition and the garnering of the fruits of the earth.

Who does not know the signs of this season—so evident to him who walks or runs or rides—visible by every bit of roadside, in every field, along each hedgerow or bit of woodland.

Meadows are shorn of their once waving crops of grass, or in billowing grain fields the yellow wheat or rye or oats stand ready for the reaper's cradle—or that more modern but less poetic engine, the reaper and binder. Asters, daisies and milk weed bloom along the roadside or in brushy fence corners, and crowning the tops of the chestnuts in the woodland are seen the feathery blooms which always appear after the summer's solstice has passed and gone.

Already many of the birds have reared their first and second broods, and their young are well able to take care of themselves. Even the chimney swifts, late breeders as they are, have young almost large enough to leave the nest, which make their presence known throughout the house by harsh grating cries, as they hungrily call for food. The number of robins on the lawn has mightily increased since the spring, for those of the new generation are not less busy now in digging worms for themselves than were their parents when the first nests were building in April. Now from many quarters of the landscape comes the mellow call of Bob White, sometimes near, again further off, the different birds answering each other in exultant emulation, yet each no doubt contented with his lot and calling for the ear of his own dear mate. The kingbirds are beginning to get together for the autumnal flight, and woe to the unlucky hawk whose course brings him near to one of these gatherings. Snapped at, buffeted and dismayed, he is only too glad to hurry on heavy wing to the shelter of the nearest woods.

Over the wet meadows along the rivers and the shore the whetstone clinks merrily against the ringing scythe, and already the notes of blackbird and bobolink, preparing for their southward journey, may be heard as the birds swing on the tall stems of the maturing wild rice.

Is there any connection between the blooming of the chestnut and the getting out the gun? In old times—happily now past for most of the country—the woodcock shooting opened when the flowers of the chestnut appeared. At that time, too, the bay birds were wont to show themselves in numbers along the shore, and there was much shooting under the hot sun of summer. The work was hard. Low shoes, a pair of linen trousers, a shirt and a straw hat were all too heavy covering as one waded through the woodcock swamps, dripping with perspiration, stung by mosquitoes and flies, and scratched by the briars, getting now and then a shot and stopping to pour in powder and shot and to ram the load and put on the cap. In those old days we suffered indeed what would be hardships from the point of view of the sportsman of to-day, but also we had joys of which the modern sportsman scarcely knows, for then there were birds. The bower of branches, the green umbrella, and the various other devices which the beach bird shooter used as shelter are unknown to the present generation. Unknown, too, are the great bags of rail which formerly were boated; 30 or 70 for a good day, 100 or 125 or 150, or even more, for a great tide. Indeed, if in those days of rail plenty we had had also the guns of to-day, how many might we not have killed. But we charged our muzzleloaders from two cigar boxes, one containing powder, the other shot, each having its measure, while the loading rod lay in the bottom of the boat, one of its ends resting on a thwart.

Surely it is well that in his killing the gunner of to-day is forced to be more moderate than him of forty years ago. It will be well, too, if this moderation shall be continued until a time when birds shall have so increased as to be found in something like their old-time plenty. In many, even of our most thickly settled, States, there is much to encourage us. The ducks of northern New York, protected in some localities, have there bred in numbers. Even in some New England States, where, though the law permits, public sentiment forbids spring shooting, black ducks and wood ducks are breeding this season. In many parts of New England, too, quail are singularly abundant, as they are in many portions of the West. We may hope for a good shooting season.

Let us be glad that the blooming of the chestnut no longer marks the opening of the shooting season.

THE YACHTING SEASON.

THE season of 1902 will go down in the annals of yachting as the most successful one ever known. This healthy condition of affairs is due in a great degree to the fact that there has been no America's Cup race this year. The popular impression has always been that the Cup races have helped the sport, but the contrary has proven to be the case. The thousands of people who attend the Cup races are not yachtsmen, but rather represent the crowds that gather at baseball and football games and horses races or at any event of public interest. Another reason for the unusual prosperity in yachting circles is to be found in the growing popularity of the smaller yacht, for it is in these boats that the best type of yachtsmen is developed.

It is well that such is the case, because of the tendency toward luxury and extravagance in the larger craft. During these latter years many wealthy men have abandoned the larger boat and built in the smaller classes. This is easily accounted for, as boats are outbuilt almost every year, and it therefore becomes necessary for the racing man who desires to be in the front rank to build a new and faster boat every season. The cost of construction of the modern large boat is very large, and to this must be added the great difficulty of securing able and reliable paid hands; hence it is that the smaller boat is looked to for a solution of the problem. The attitude of the New York Yacht Club toward the smaller boat is perhaps the best evidence of the change of public sentiment on the subject. For the first time in years the club has offered prizes for boats of 30 feet waterline length. During the recent races at Newport prizes were offered for the Newport special thirties as well as for the Beverly Yacht Club one-design class; and there is every indication that next year the club will give an open regatta on Long Island Sound for all classes. If the New York Yacht Club can be persuaded to do this it would prove of the greatest benefit to yachting, as it would not only stimulate the sport, but would create a new following. This club is the one to do this, because it is the largest organization of the kind in the United States, and its action carries great weight in yachting circles, both at home and abroad.

Unusual interest has been shown the past few years in the one-design classes, and to-day nearly every club on Long Island Sound has made this a special feature. Since the Larchmont 21-foot one-design class was introduced in 1894, there has been a number of others started, including the Newport special thirties, Manhasset Bay 15-footers, American Yacht Club 21, 18 and 15 footers, the Seawanhaka Corinthian Yacht Club 21-foot knockabouts, Marine and Field Club 15-footers and a great many others. The unsettled condition of the measurement rule question has done much toward developing the one-design class. Last winter the Yacht Racing Association of Long Island Sound and the Larchmont Yacht Club adopted a rule which has proven most satisfactory to boats of over 30 feet waterline length. The conditions of this rule are not easily evaded, and the result is that the boats produced under it are of a wholesome type. The rule is a vast improvement over the old Seawanhaka rule, which has prevailed since 1882, although many yachtsmen have been skeptical regarding it, owing to the complicated formula that is embodied in it, but on close examination the conditions are found to be simple and fair in every way. The committee selected by the New York Yacht Club to examine the matter of measurement rules went into the subject thoroughly and will make its report in the fall.

The change in the construction of yachts during the last two or three years has been very noticeable, there having been a reaction in favor of heavier building, with the result that the racing and cruising boat of this year is better able to stand the strains to which it is subjected than has heretofore been the case. There is yet much to be done in improving and strengthening the rigging, however, the experience this year has shown alarming weakness in this particular. Hardly a race has been sailed without a mishap, and the fact that no serious accident has resulted is a matter of congratulation. In two instances large yachts have been dismasted in consequence of the light rigging.

The season opened very early this year, the spring weather being most favorable for fitting out, consequently the racing has been good everywhere all along the coast. With Larchmont race week under way the height of the racing season is therefore here. The cruise of the New York Yacht Club is the next event of importance, and it promises to be of great interest, the owners of a larger number of boats having signified their intention to participate than ever before. The Seawanhaka cup trial races held at Bridgeport early in July also created much attention; eight boats competed for the honor of being sent to Canada. It now remains to be seen whether or not Tecumseh, the boat selected, can beat the production of the hitherto invincible Canadian, Duggan. An event of much interest will be the races for the Quincy cup, which are to be held at Manchester early next month. The type of boat which is to compete in these races is most abnormal in that the only restriction in design is on the waterline length, which must not exceed 21 feet. The three boats that have been built for this purpose are about 53 feet over all, 15 to 17 feet breadth, and carry in their mainsails and jibs from 1,500 to 2,000 square feet of canvas. Such extreme craft will never be seen again, as the clubs all over the country are sure to legislate against them. It was never thought that boats of these dimensions would ever be constructed. Interest in yachting on the Great and Inland Lakes in recent years has been very great, and the strength of these Western yachting organizations is a matter of surprise to the Eastern yachtsmen. These men are, as a rule, good sportsmen and splendid boat sailors, and they are doing a great deal in their different localities to increase interest in the sport. Reports from Kiel, Germany, state that the success of American-built boats in those waters has been marked. Navahoe and Virginia II. (ex Oiseau) have done remarkably well, the former having won eight first prizes out of nine races sailed. The latter having done equally well. The little boat, Uncle Sam, designed by Crowninshield, beat all her competitors with the greatest ease. Meteor, the German Emperor's new American-design and built schooner, has so far made but an indifferent showing with the English and German boats, but she will undoubtedly show up to advantage when she is in better shape, and her crew become acquainted with her.

MEAT AND DRINK.

IT is a well-known fact that at all seasons of the year the majority of men eat and drink much more than their actual physical needs require. In winter, when the body needs abundance of fuel, the ill effects of overeating are not to any important degree in evidence. In summer, however, when bodily comfort is largely a problem of keeping cool, what and how much one eats, and what one drinks, are of paramount importance for the best well being of mind and body. While the fields and streams, beside their witcheries of beauty, give, to those who will take, a balm for minds aweary and a restorative for bodies worn by business labor, one may nullify all by overindulging his palate and his stomach. In the torrid season it specially behooves him to eat sparingly and plainly, to drink nature's wholesome drink, pure cold water. In summer, alcoholic drinks are specially abhorrent to the system, though, whether in winter or summer, the person who indulges habitually in alcoholic drinks, as shown by statistics, has incomparably less power of resistance and endurance than has one who eschews them. Eat lightly and plainly, drink all that is required, but drink water or mild, thirst-gratifying but unstimulating beverages, and at this torrid season comparative comfort will be secured. To those who fish, or camp out or sail, the benefits of the outing will be many times multiplied by observing abstemiousness in food and drink.

The Sportsman Tourist.

Through the Parsonage Window.

III.—The Winter Camp.

AFTER my partners had gone I set about the construction of the camp. With the spade I shoveled the uneven face of the embankment at the first bench to a straight wall six feet high. In the center of this I carved out a fireplace, digging it wide and deep. In the top of the bank near the face of the wall I then dug down and connected with the fireplace. Around this connecting link I next built a sod chimney, and the fireplace was done.

Next I set two posts against the wall twenty feet apart on each side of the fireplace, and two more opposite, twenty feet out, forming a square. The sides I built up with poles, willow brush and a thatch of blue stem. The roof I made in the same way, using three heavy logs for ridges and plates, and covering the whole with dirt; the front was left open with only a thicket of willow to protect it. It was a slight deviation from the usual dugout, but when lined with dried buffalo hides, fur side in, made a very comfortable place to drop into of a stormy night when aweary with the day's hunt. So comfortable indeed was it that many came that way and tarried long, and did literally eat us out of house and home, as it cost four hundred dollars to provision it for the winter, with meat for the finding.

After supper, at the close of my first day's work on the camp, I took the Sharps and strolled down the ravine below the pool. Sitting on a knoll to rest, for I was tired, I watched the sun set and the red glow of the sky after it was gone. Alone in the solitude of the hills the coloring of the sky or passing cloud meant more than it did when one was closely associated with his fellows. In dense populations man is apt to forget the works of the great Over-ruling Power and see only his own conceited efforts. Colonel was my constant companion. He was good company, listening with rapt attention to the minutest details of any exploit I was minded to recount, a quality I have seldom found in men.

I was about to get up and start back to camp, when a queer-shaped shade in the blue stem two hundred yards down the ravine attracted my attention. The shade was the shape of a deer, but motionless. I watched it for some time, but could make nothing out. It was perhaps only a shade in the grass, but I leveled the half-breed on it and pressed the trigger. When the smoke cleared the shade was gone. It was deep dusk and the shade might have run off without my seeing it, yet I walked down, and there found a fine whitetail buck stretched in the grass.

Two days finished the camp, and I had, presumably, three days' leisure before the fellows were likely to get back. Hunting would be mere wasteful slaughter, as game would certainly spoil in the warm weather that prevailed, and I had seen only one deer and a few antelope. Not a buffalo had been visible since the stampede. There were ducks and geese flying about all the time, and quite a number of ducks made their home on the pool near the camp.

I had never shot a white swan and resolved to put in the next day trying for one. The fellows had taken the shotgun on the return trip with them, so that I had to depend on the Sharps and a Remington revolver. This revolver was a heavy-weight of .44 caliber, and would shoot as accurately as any of the rifles. I carried it in a holster attached to a belt, and it was a great nuisance, with its constant thumping when riding or walking. In stalking game on foot it was still worse, and I usually unbuckled the belt and left all on the prairie until the stalk was over. This caused many long side trips to retrieve it, and I finally traded it to a passing hunter for a nice briar-root pipe.

This was the best trade I ever made, as the pipe took fire and burned up the first time I filled it, and forever relieved me from owning the two greatest nuisances ever invented—a revolver and a pipe.

There were at least a hundred swans in the big basin, together with thousands of ducks and geese. These latter increased the difficulty of getting a shot at a swan by fifty per cent. The tall grass made a complete girdle round the lake, and I had no trouble in getting into it without alarming the birds, but the swans were in the center nearly half a mile out. Ducks and geese were all about, but no swan. I must wait for something to turn up, and concluded to while away the time by doing a little sharpshooting.

The birds were to windward, with quite a gale blowing, and there was little danger of the swans becoming alarmed at the report of my gun and leaving the marsh. I fired several shots at the white bank, but could not locate the planting of the bullets on account of the constant splashing of the water in the wind. After half a dozen shots, a commotion among the birds showed that I must have landed somewhere near them, as there was considerable squawking and a number of swans rose and made several circles before they settled again, sending their distance-withering cry far over the water. A half-dozen more shots failed to raise any further disturbance, and I gave it up and lay waiting and listening to the wild tales of the blue stem as it whistled and gesticulated in the wind.

I had lain thus perhaps three hours, when a rush of wind overhead attracted my attention, and looking up I saw four swans passing not twenty yards above me. With a shotgun I might have been sure of a double, but I was slow in getting the half-breed leveled. When I fired a jet of feathers flew from the side of one of the swans and huried off down wind, but the bullet had not raked deep enough to do any damage.

Soon after this I noticed something white drifting across the water. I watched it closely and soon made it out to be a dead swan. It was coming toward me, but lodged 200 yards away. Colonel had been lying beside me all day, and I ordered him to get it. He was a fine retriever, and soon laid the great bird at my feet. I estimated its weight at thirty pounds. A rifle ball had passed through its body and it was fresh killed. It had evidently been hit by the shot that had raised the disturbance among the birds.

Colonel seemed to suffer no inconvenience from a cold bath. During the winter I shot a mallard on the pool near camp, and broke its wing. Except for a few rods of open water in the middle, the pool was covered with ice. The duck, falling on the ice, slid into the water. Colonel saw it and plunged in after it. Round and round the pool went duck and dog. The dog could swim faster than the duck, but when he came close the duck would dive. After being foiled in this way a number of times, Colonel took to diving after the duck. Then an interesting diving match took place. He easily worsted the duck at this, and after several efforts caught it deep under water.

Unfortunately for me, when he came up with the duck it was under the ice. The ice was thin and clear, and when I saw him struggling beneath it, I was not long in landing on it with both feet. It broke and I caught Colonel by the collar, and, getting under, boosted him out on solid ice.

But when it came to getting out myself, I met with obstacles. The ice was smooth as glass and slippery as a trout's tail. I could only raise myself a certain height and then would slide back again. At length I got out my pocket knife and opening it reached back as far as I could and drove the blade through the ice. By this aid I climbed out. Colonel came out of the scrimmage as happy as a clam at high tide, but I got a disagreeable cold bath.

When I got back to camp with my swam, there were two more on the pool near camp. One of these I shot, and emptied several shells at the other as it circled about, but failed to hit it. In the morning the swan was back on the pool again. I had heard that a swan losing its mate would mourn itself to death, and thought I would anticipate such a melancholy event with a bullet. This time I succeeded in laying its back open from wing to wing, cutting it half in two.

I skinned the swans and treated the skins with a solution of alum, and the next winter a young lady of our settlement disported herself in swan-skin cape and muff.

It was six days before my friends got back, bringing with them four extra teams and half a dozen men. I had scarcely made a start toward eating the deer I had killed, but with this addition to the eating force, only the skeleton remained after breakfast next morning, and it was necessary to get meat before dinner.

Pete and one of the new men volunteered to bring in an antelope in time, but they failed even to bring themselves. They lost their bearings, and were out till midnight. After that some one was lost almost every night, and a signal lantern hanging on a tree was seldom taken down except to be refilled and lighted. More ammunition was wasted in firing signal shots in a week than we fired at game all winter. But no game was brought in, and we went without meat for four days.

With so many enthusiastic hunters in the hills, even the antelope were soon driven away. Yet one there was that remained. He came one morning to take a survey of our camp. Eight rifles spoke to him at once, and some spoke several times, and the poor antelope fell with both forelegs broken. One ball broke both legs, two inches above the ankle, but we had fresh meat for a couple of meals.

In the gray of dawn a few days later the hills were again discovered to be a living mass of buffalo. It was the signal for a busy day, and before night fifteen buffalo had been killed and everybody was in good humor. Nathan and myself did most of the execution, having strayed off by ourselves and got into a pleasant little mix-up, where nine big fellows were dropped in a bunch. Nathan in particular was in high feather that night in camp, and went so far as to compliment my performance. He said I faced the music bravely and kept the Sharps spitting fire to the tune of Fourth-of-July firecrackers.

"For a beginner," said he, "Darby kept his nerve splendidly."

It was pleasant to be thus flattered, especially by one whose position was assured, the more so that I had a secret suspicion the half-breed had accounted for eight of the buffalo, with probable lead from it in the ninth. Take it all round, it was a very pleasant evening, and the cards were not once mentioned. It took all next day to get the meat in and cut up and the hides stretched, which was done by turning the hair-side to the grass, spreading them on the prairie, cutting holes round the edge of the hides and driving sharp sticks through and into the ground. When the hides were all staked out and the meat cut up and spread round in quarters on the little smooth strip of tableland just back of camp, it made quite an imposing show. I can see Colonel strutting round among the quarters yet, as a dog will at butchering time. I went out after a while and caught him eating from one of the quarters, and took a switch to him. Afterward I gave him a piece of meat for his own, and he never again helped himself, though the ground was covered with meat.

Colonel and I never got the camp to ourselves again that winter. There was always some Kansas sufferer, none too well fed at home, who volunteered to keep us company while the teams were on a trip. Five times, I think, the teams made the round, and always got more or less meat. The buffalo were a great help to the settlers; without them the march of civilization across the plains would have been much slower and likely a great deal better founded. It was with a pang of regret that I packed the things belonging to the camp and went out with the teams one day in February. They were coming back no more.

The night before starting a dispute arose as to the distance between the camp and the settlements. One old settler, who had hunted buffalo in that country for several years, said it was one hundred and fifty miles. This was generally accepted as the distance, though several declared it was nearer two hundred. It had finally come to take eight days to make the round trip, and every man knew his team could make fifty miles a day. The country had all been newly surveyed, and there was a corner stake near camp.

I went out and got the numbers from it. I knew the numbers of the land I had located, and it was a simple matter of a few figures to tell how far it really was. The figures showed it to be just ninety miles. There was a hoot of derision when I announced this, and a good many sarcastic remarks were made about boys who thought they knew it all. However, two men in the party understood something of the survey system and backed me up. A riot was barely averted. If there is anything that will make a would-be plainsman hot it is to hint that he does not know distance or direction. Of course I had not disputed with any one, but had simply gone to the figures for my facts and was surprised at the result myself.

The first night out on the return trip we camped in a bewildering jumble of small hills, and in the morning a snowstorm was upon us. Six inches had already fallen. A strong wind was blowing and the snow was being swept almost horizontally across the plain. There had been little snow during the inter, and this took us completely by surprise. Nothing could be made out in the misty whiteness at any great distance ahead. The teams had not followed the same trail in their trips back and forth to the settlements during the winter, but had struck off to the right and left in attempts to find a better route. The faint trail we had been following the day before was entirely lost under the snow, and our course was now wholly a matter of guesswork.

When the teams started out it seemed to me as if they turned almost at right angles to the course we had been keeping. Knowing the fate of the boy who presumed to knowledge superior to his elders, I kept still as long as I could. But at length our lives seemed to hang in the balance, and I broached the subject of my fears. My audacity won me a hearing and the wagons stopped for council. I argued that we were traveling due north. Some claimed we were moving almost east, others had no opinion. One man said he had been on the plains for years and had never been turned round; we were going directly northeast, which was the proper course.

At this juncture there was a rift in the clouds and the sun shone through. It was directly over our left hind wheel; we were going due west. We had made nearly a half-circle in less than two miles. So much for the homing instinct of man. Relying on instinct, man is much less sagacious than the brute. Reason is his true guide, if only he could be brought to exercise it.

The fleeting glimpse of the sun gave us our course, but I knew it could not be kept unless by the exercise of great caution. I now started to walk ahead of the teams, taking an object as far in front as I could see, and going straight toward it, singling out other objects as we advanced, with my gun, which was coated with snow, for a pointer. At night all we could do was to cower down in the snow and wait for morning. We had no wood for fuel.

I marked our course by the bearings of one of our wagons. In the morning the men were all thoroughly at sea, and there was no dispute about direction. I took the lead as before. It was still snowing furiously, though not cold; about twelve inches of snow had fallen. Our progress was slow through the drifts, but by 3 o'clock we came out on the Arkansas River. Fuel was plentiful. We soon had a great fire roaring, and perhaps you think its warmth was not grateful to a lot of tired men—far too tired to argue over who had brought us through.

I have seen much of the unerring instinct of the plainsman in the wandering imbecility of some of the great trails of the old-time West. Even in a much-traveled thoroughfare like the Santa Fé trail, I have noted a half-circle when a better grade could have been had by taking a direct course. Mainly, the trails were laid out by taking the high ground between streams, between the heads of the draws running either way, and by following the bottoms along the streams. This made crooked trails, but on level tableland I have seen the trails just as crooked as if nature had compelled their making in corkscrew fashion. This was the work of instinct, and it resulted just as badly there as it does in letting it guide in politics, religion or business. Close application of reason is what made great plainsmen as well as great engineers in any line.

THE PARSON.

Fishing Rod vs. Toy Pistol.

TAKING of inventory at the close of the business year is to the merchant always an occasion of more or less anxiety, but it is not in any sense to be compared with the anxiety of the mother of the growing boy as she sits in dread all day and prays that when an inventory of fingers and eyes are made at bedtime that there will be found no shortage in the stock.

The advent of the mud can and the blank shooting pistol has added a thousand fold to the terrors of the day when only firecrackers, "nigger-chasers" and torpedoes filled the measure of happiness of the growing and patriotic boy.

The only remedy for a situation that involves the possession of pistols by every boy in the block, helped out by a programme of mud can and potash-sulphur abominations, was to offer a counter attraction, and I offered my boy a fishing trip. Well, going fishing was, of course, good enough, but it had no flavor of the glorious Fourth in it. So as a compromise and a further inducement, I promised to take a small rifle and a supply of cartridges along. This closed the bargain. Then there were my nephew and niece, and I included them in the party, and early Fourth of July morning we took train and off we went.

It was somewhat of a proposition to turn over to those children your rods and reels, but I did so, and braved the outcome. We intended to try for bass, but concluded that wall-eyed pike would perhaps be more in order, as it involved trolling well down toward the bottom. Casting would hardly have proven a success. My boy sat up well forward; next came the oarsman, then the writer, and in the stern seat sat the two other children. It took some time to rig them all up, and once their lines were in the water I laid fresh hooks within easy reach and drew the minnow and crayfish bucket close up.

And then the trouble began! What with baiting hooks, unsnarling tangled lines, unloosening or tearing hooks loose from snags, supplying fresh hooks, baiting lines and removing fish, I certainly had a busy time of it.

The fish were not voracious, but by noon we had a couple of nice bass and some goodly sized wall-eyed pike,

more than sufficient for our camp-cooked dinner. It was a great experience for the children, and the playing of the larger bass certainly worked them up into a frenzy of excitement as he leaped clear of the water and did his best to pull the rod from the owner's hands.

It was near noon time, and we pulled for the shore. The clouds were forming, but we felt that good fortune might favor us yet and but a passing shower would result. Before we could gather our firewood, down came the rain in torrents, but we did not propose to give up. We shaved off some chips from the inner surface of some pine driftwood and when a match was called for but two solitary matches were forthcoming. The first one miserably hissed and went out. Here we were with but a single match between us and starvation. Gathering from the pocket of my shooting coat some paper as dry as tinder, I poked this under the shavings, struck my match and at once the paper blazed up, then the shavings ignited slowly, and with a little care we soon had a blaze strong enough to warrant fresh additions of more or less damp wood.

The rain kept up and for a time the dripping from the trees overhead threatened to wash our fire away, but it had now gotten a good start and bade defiance to the rain.

The frying of the bacon over the coals, the cleaning and skinning of the fish and its cooking was enjoyed by the children, who, when they were not gathering fresh wood, stood around in more or less of a bedraggled condition.

It was not a pleasant job to bend one's back to the pelting rain and stoop over that more or less smoking fire with the fat in the pan sizzling and spluttering as the beating rain flew into it. But the fire held out and the bacon was tried out and laid one side upon a sheet of pine bark taken from the river (the guide had forgotten the tin plates) and cooled off in the rain. The fish was dusted with damp corn meal and in time was cooked, during all of which process my broad back proved a goodly watershed for the pelting rain that ran in rivulets down my spine, finding final lodgment in my shoes. But then it was all done in a good cause, and the children were getting lots of fun out of it. Improvised plates of additional pieces of pine bark were secured, the steaming coffee was poured out and bread—a little moist, undoubtedly—was cut and buttered, and so they ate their hot fried fish and laughed and enjoyed the novelty of the situation, while between spells I ruminated over my prospects for a good attack of lumbago or rheumatism "after the Fourth."

The children cared not for the rain; in fact, I think they had more real fun out of the fact that they were camping out during a pelting rainstorm than had the sun been shining brightly. It was a novel experience, a new sensation to them.

And when I moved about, drenched to the skin, my clothes sticking to me like a porous plaster, I consoled myself with the fact that unless the boat capsized we should not be numbered with those helping to swell the accident columns after the Fourth. Yet the fish was good and the coffee warming, and the judges, the children, voted the dinner a great success. In due course the clouds brightened, when we again rowed out upon the river, the blistering sun and warm breeze made us soon forget it had rained only a short time ago.

And when we reached home, a little late, of course, because of Fourth of July travel, we took inventory and found all members present or accounted for.

CHARLES CRISTADORO.

Down the Magnetawan.

In Two Parts—Part Two.

A FEELING of dread, almost of fear, of what lay before us was curiously mingled with our regret on leaving Deer Lake, for we felt that we were leaving every vestige of civilization behind us, and we knew only vaguely of the dangers ahead. Soon after leaving the lake and entering the river again we heard the roar from the Canal Rapids, and keeping to the right, we crossed a glance boom into a large bay. As we turned into the bay I had a feeling that we were going down hill.

What there was in our surroundings to give me this impression I do not know, but I felt that it was down grade to the portage landing at the head of the bay. This portage is a tote road about three miles long that the river drivers use, but we did not carry more than a mile and a half. The road is through a beautiful forest and some distance back from the river. The soft ground on the road was covered with footprints of deer. They were all sizes, from the tiny ones of the little fawn up to some very large ones where a big buck had crossed from the river into the forest.

We saw a flock of six or eight ruffed grouse, and while we were not more than fifteen feet away from them, they paid no attention to us, but went about their business hunting their dinner, as if no one was near.

The Canal Rapids are a mile long. From the Government dam at the head of the rapids the water rushes through a gorge about twenty feet wide with perpendicular walls of rock varying from forty to eighty feet in height. In places the faces of these walls are broken and great masses of boulders lie in the water at their foot, while at other places they are absolutely straight and clean cut to the water's edge. The current is very swift, the waters rough and broken by masses of rock. We cooked and ate our dinner on a rock-strewn beach at the end of the portage. Back of us was a bank of shale about fifteen feet high. Clear, cold water was trickling from all the cracks and crevices, over the little shelves and running in tiny streams on to the beach. We caught a bucket of water while we cooked our dinner. The bank was covered with delicate green moss and small ferns. Growing on top of the bank just over the spring was a large maple tree which leaned slightly toward the river. We were sitting in the cool shadow of the maple, enjoying the beauty of our surroundings, when Bennett broke the silence by saying, "Bah Jove! I like this Canadian country. If I owned it I would build a barbed-wire fence around it and leave it just as it is."

Below this the river makes several sharp elbow bends, and we let the canoes down over a short rapids and then had a long stretch of clear, open water ahead. A small stream flowing into the river on our left attracted us and we paddled up it to a log chute. Here we left our canoes and, following a winding path some distance through a pretty bit of woods, came out on the shore of a beautiful lake. We had beached our canoes on the shore of an eddy about twenty feet across, and when we returned to them we put out a troll to see if there were any fish. In passing the foot of the chute five times, we hooked five bass and landed four, weighing from two to three pounds each. This was enough fish for supper, and we pulled out into the river, where we found a stiff breeze blowing up stream, and when we came into Trout Lake the water was quite rough. Rounding a bend in the river where the South Branch breaks off, we came to the river drivers' camp with a river of floating logs ahead of us. The wind had been blowing the logs up stream for several days, but a boom stretched across the river below the camp kept the logs from scattering, and for two miles below this boom the logs were packed together as close as a high wind could pack them. Captain Beasley, the foreman of the drive, received us very cordially. He said that about 300,000 logs had gone down the river that summer. After quite an interesting talk he invited us out to the kitchen tent to have supper. It was not yet supper time, but the cook had prepared supper for us, and how we did enjoy it. We had good bread and butter, tea, fried potatoes, ham, cheese, pickles, stewed prunes, pie, small sweet cakes and fruit cake that was simply delicious. When we were ready to start, the foreman sent three of the drivers with pike poles to help us through the logs. So, bidding good-by to the men who had treated us so royally, we started for the logs, accompanied by three "Knights of the Spike-sole Boots."

It was wonderful to see the men walk on the logs and with their pike poles open up a way for our canoes. The soles of their shoes being full of small nails or spikes about one-half inch long, kept them from slipping off the logs, but they had to be very quick when a log would turn, or go down under the water. No wonder these men become reckless and daring. Their life is one of continual hardship and danger.

Working our way through a log drive was a new experience, and if we had been compelled to do it unaided, we would have looked a long time before we could have seen the funny side, but as it was, we had lots of sport. When at last we were through the logs, the sun was almost down, and we were still two miles from a place where we could land and pitch our tents for the night.

It was dark by the time we reached a camp ground, and to cut poles and put up the tents was all we could do—the beds had to go unmade. A camp-fire was started and we made coffee, for we were chilly. No one was in a hurry to retire that night, and we sat in the cheerful glow of the camp-fire till quite late. I was very tired, and was afraid to go to our tent, but I did not want any one to know it. I knew we were camped just above the mountain chute, and we could hear the falls in the distance, but it was dark when we landed; I had not seen the place in daylight, and beyond that charmed circle of firelight all was shrouded in mystery and gloom. We had heard a lynx away off in the distance, and occasionally I would hear the rustling of leaves as some small animal made its way through the underbrush, which did not increase my desire to go to the tent that lay just outside the circle of light.

I believe the others sat up because they felt that sleeping on the bare ground was getting a little too close to nature for comfort; a fact that I fully realized before morning. If the floor of our tent had not had such a beautiful slope I would have slept fairly well even though I could not keep the ground under me warm, and the lumps seemed to increase both as to size and number toward morning. We went to bed with our feet down hill, for I thought if I should start to roll I would perhaps land in the camp-fire. As it was, my head had completed a quarter-circle when I awoke in the morning and my pillow was lying where I put it when I went to bed. The early hours were not wasted in slumber the next morning, and one man who is usually averse to early rising was quite anxious to get up and start the fire.

The guides had pared potatoes and boiled them for breakfast, and when they were cooked I took a tin cup and mashed them, adding butter, pepper and salt, and we found this a great improvement on plain boiled potatoes.

We had been told to stop on Carved Island, which is somewhere in this part of the river, but we failed to see it. All the river drivers that can carve anything have for years left specimens of their work on this island, till there is now quite a collection, and among them some very beautiful things. We were very much disappointed when we found that we had passed the island without seeing it.

The portage around the Mountain Chute is short, but we had to go through some logs in the river just above it, and there were more logs in the river below. About a mile below this chute we crossed a glance boom into a bay on our left, which we followed to the head, where we made a short portage into an arm of the Lake of Many Islands. This lake is connected with the river about two miles further down, and by taking this route we were avoiding a stretch of river that was full of logs. We camped on a point commanding a good view of the lake and made comfortable beds, for, this being Saturday, we would not break camp before Monday.

Dinner over and our tents in good shape, the guides cut down some small pine trees and set them up around our table, which was not well shaded. The table was made with pieces of board we had picked up, and two short pieces of logs served as seats. We were about out of bread, and after dinner I mixed up some more biscuit dough, which we baked in the skillets. I had made the cakes the size of the skillet and quite thick, but they burned before they baked through. They should be rolled very thin, of if thick, the size of biscuit. To bake both sides, of course, they must be turned. We have found boiled dumplings to make a very good substitute for bread.

After the baking was done we went out in a canoe with one of the guides to explore the lake. Just as we were starting the other guide called to us to bring in enough wall-eyes for supper, but said he did not want any bass. We found the fishing in this lake about what we think it must have been a hundred years ago. There are no cottages or camps on it, and but few tourists come down the river. Market-fishermen could not get fish out, for there is nearly five miles of carrying to be done. We could decide what kind of fish we wanted for a meal, go out and in a short time catch all we needed, putting back the ones we did not want. We had wall-eyes for supper Saturday, bass for breakfast Sunday, and catfish for breakfast Monday.

About sundown we were on the lake and could catch fish as fast as we could bait our hooks, but such fishing was not sport. We caught no very large ones, for the smaller ones would take the bait, even our largest troll, as soon as it touched the water.

Looking over the lake in any direction we could see the fish jumping, and we saw some very large ones, so we knew the big fish were there. I do not know whether they were feeding or not, but it was a wonderful sight to see them jumping all around us, sometimes quite close to the canoe. One of our guides, who was a fisherman, said he had never seen anything like it before. As the light died out of the sky, the fish became quiet again, and we returned to our camp, but the same thing was repeated in the morning about sunrise. The first thing I heard when I awoke was the splashing of water, and I opened the tent and looked out and could see the fish jumping on the lake. We saw this repeated each morning and evening we spent on this lake.

We returned to camp with three wall-eyes, which the guide cleaned, and cutting each one into four pieces put them in the skillet with four or five sliced onions and a pint of water.

When the onions were well done he added salt, pepper, butter and a little flour. He called it "à la ———" (some unpronouncable French name), but we thought we had never eaten anything better.

For our Sunday dinner we took some boiled rice and spread it about one-half inch thick on the center of a small square of clean muslin, and in the center of this we put a spoonful of stewed prunes that had been seeded. Gathering up the corners and edges of the muslin and tying them with a thread, we had a dumpling ready to drop in boiling water. It only required a few minutes to make one apiece for each of us, and fifteen or twenty minutes in boiling water to cook them. They were served with a dressing made of the sweetened prune juice, and were always a welcome addition to our bill of fare. They are delicious if fresh berries can be had to use instead of prunes. In the afternoon we boiled a piece of shoulder with beans for our supper. We should have poured the water off the meat when it commenced to boil and put on fresh water before putting in the beans, for they were salty enough to make us very thirsty. We cooked a large piece of meat, for according to our chart we would "hit the trail" over a three-mile portage the next day, and that meant work enough without cooking. That evening the sunset was gorgeous, and the sunrise next morning was even more brilliant. The glow, the profusion of color, the wonderful radiance was simply marvelous. A small division of the river drivers were camped at the Three Snaith Dam, about two miles below the lake, and we got bread from them on Sunday. Monday morning we were up early, for the wind was coming from the east and the logs were already moving down the river. We hastened our packing, for there were more than enough logs in the river ahead of us to make work without waiting for those above to come down.

One of the guides had robbed the sunset of part of its sentiment the evening before by saying, "That is a dirty sky; we'll have rain to-morrow," but the gray clouds that were now settling down proved him a good prophet. Nothing but the alternative of working our way through or carrying around acres and acres of floating logs would have induced us to break camp that morning.

While we were eating breakfast I spoke of having heard a dog bark in the night, and the guides laughed and said that it was a fox. I had entirely forgotten that we were miles away from a settlement. While the tents were being taken down, I sliced the boiled meat and filled a bucket with ham sandwiches for our dinner. When we came out into the river it was full of scattered logs. After traveling some distance we all at once found ourselves in a very swift current, and seeing that the logs were being rapidly drawn into it, we hastily steered out of danger.

We learned afterward that the current had been caused by letting the water off the dam. In one place the logs had become wedged across the river, holding back those above and leaving a clear space below. Bennett started ahead with his little canoe, but the guides told him he could not get through there, and they kept closer to the shore, but he would not follow. His canoe became wedged in among the logs, and he could make no headway, so taking a paddle he stepped out on a log and was meeting with more success when the log turned and he landed astride of it. He sat still and continued to work his way through till one of the guides asked him if he was going to leave his canoe and go to Bing Inlet on the log. He had forgotten all about his canoe, which was wedged in among the logs twelve feet or more behind him.

The whole performance had been so absurd that we could stand no more, and the guides just shouted, while I laughed till I could hardly sit up. With some difficulty he worked his way back and got in his canoe, but we could see he was very angry.

After making our way through these logs we had no more trouble till a half-mile above the dam, where we had to beach our canoes and carry what we could the rest of the way. The river water was cool and palatable, until we reached the logs, when it became very warm, but as soon as we got beyond them the water was again cool. The heat is no doubt due to some chemical action.

We had heard what we thought was thunder soon after entering the river, but it had gradually grown louder, until at last we began to realize that it was the noise made by the logs as they went thundering down the chute below the dam. We had a hard, rough carry and a drizzling rain was falling, but we reached the dam without any serious difficulty. The river drivers helped the guides take the canoes down through the logs.

There are three dams across the river here, but the logs were only going over one, a glance boom keeping them away from the others. We had never seen the drivers at work before, and we stayed here a long time watching the two men on the glance booms, one on each side of the opening in the dam, guiding the logs through end first; many of them came up in the eddy below looking the worse for the trip. By the time the guides had everything over the portage, the cook had dinner ready

for the drivers, and they kindly asked us to take dinner with them, an invitation we gladly accepted. They took our flour and gave us bread enough to last us the rest of the trip, and filled a two-gallon bucket full of crisp, fresh cookies. Wherever we met any of the river drivers we found them exceedingly kind, and they did everything they could to add to the pleasure of our cruise. If the river below this dam is full of logs the three-mile portage commences at the dam, but the foreman said we would have no trouble with logs, and by making two or three short portages we could save a mile of carrying. Bidding the drivers good-by, we launched our canoes a short distance below the chute. The first portage was rather difficult, for the logs had drifted in along the shore, but the next one, over an island, was not hard. We were now in a very large eddy, almost a lake, the center filled with slowly moving logs. Making our way around the logs we crossed the eddy and beached our canoes on the left bank at the end of a two-mile portage.

Bennett, who was still angry, had pushed on ahead of us and we had not seen him for some time, but when we were part way over the portage we saw him with his canoe on his head, struggling up the steep bank through a dense growth of underbrush. We learned afterward that he had attempted to go through the Thirty-Dollar chute, but had been compelled to give up, and not being able to get back to the portage landing, had carried his canoe and duffle up that steep hill through the bush. It commenced to rain soon after we landed, but we thought it would be only a shower, such as we had been having all day, and we each took what we could carry and turning the canoes over what remained, started over the portage, which is a tote road, and I believe, goes to Bing Inlet.

The first part of the way was through the woods, and the bushes along the sides of the road poured their share of the rain down upon us, while the weeds that grew on the pathway added theirs. It was now raining hard, with every indication that it would continue all day; everything about us was dripping and we were just about as wet as we could be. Nothing turned the water; my hat, shoes, even my storm coat leaked. When we reached the level plateau a more desolate prospect could not be imagined; there were no trees nor bushes; nothing but a gray, desolate waste of bare rocks with here and there a charred and blackened stump, and the rain pouring down from a leaden sky. If any one had looked on it from a distance, they would have seen four little black specks creeping, one after the other, slowly across the plateau, all of them wet and miserable and one of them miserably cross. We had lost sight of the river, but could hear the roar from the falls, and walked over to the edge of the cliff to see what the river was doing.

This is a terrific gorge, two miles long, with broken walls varying from eighty to a few feet in height, and is a continual series of falls and rapids throughout its entire length. The river drivers call it the Thirty-Dollar Chute. On our way back to the path we saw a bark shelter that one of the drivers had put up to protect himself while he watched the chute, for there was danger of the logs forming a jam at the Thirty-Dollar Falls.

Our tramp was not without interest, wet and disagreeable though it was. Looking over this desolate plain toward the west, the gray fog was more dense and we began to realize that we were not far from the Georgian Bay. On our right was the gorge with the river boiling and surging from 100 to 150 feet below the level on which we stood, and a similar plain beyond.

When at last we reached the end of the portage around the Thirty-Dollar Chute, we found the guides with everything ready to put up our tents. The tote road was some distance back from the river along the edge of a dense growth of young maple and birch trees that extended down to the river bank. Our tent was pitched on the lower side of the road in the edge of the bush. The rut worn by the sled served as a drain to carry off the water.

I reached the end of the portage wet through; the rain was dripping off my chin and ears and slowly trickling down the back of my neck, and with the feel of wet shoes and stockings, I thought nothing could add to my discomfort; but when I saw the guides put our tent up over those wet leaves, the rain dripping off the bushes all around, it was too much. It was still raining hard; I was wet, tired and cross; I could not see the river and had seen no pine, and the thought of those wet leaves for a bed was not cheerful. I looked for some place to sit down, but everything, even the logs, were sopping wet. If I had found a dry place I would probably have sat down and wept, but there is no comfort in crying if you have to stand up.

About this time some one remarked how much good the trip had done me, I was looking better every day. I know I just looked ridiculous in my wet and bedraggled clothes, but I had not the courage to even smile. Completely out of heart I turned to go down to the river. A road had been cut through the bush, and the rain falling from the branches that met overhead made a very wet, disagreeable walk. At one side of the path, near the shore, was a large arbor vitæ tree that made an excellent shelter, for the rain was not coming down through its branches. Just at the foot of the tree was a natural range with a wall of rock from one to four feet high around three sides, leaving an opening for the fire about five feet across. I began to feel more hopeful and went to the tent for matches. The guides had gone back over the portage for the provisions. Our blankets were perfectly dry, and the Doctor had found balsam and was making a bed. I got the matches and went back to the river. By pulling dry bark off the arbor vitæ tree and gathering up some small twigs, I soon had a fire, and there was an abundance of fuel. I took off my storm coat and jacket and hung them on the limbs of the tree above the fire, then I sat down on the rock with my feet in the fireplace. I was perfectly happy. I could look out over an eddy in which logs were arranged like spokes in the wheel of a wagon and the great wheel was slowly turning round and round. These eddies were very fascinating; I could watch them by the hour. The great wheel, like some huge monster, would release its hold on one log to grasp another, which would slowly adjust itself into place.

Before long the Doctor came down, and I thought I saw a look of relief on his face when he found there were no tears. The coffee pot was filled with water and put on to boil, and when the guides returned we had ham sandwiches, cookies and hot coffee, and how we did enjoy our supper. It stopped raining about dark, and when we went to bed our clothes were quite dry, even our shoes and stockings. That was one of the most comfortable nights we spent on our trip.

When we awoke the next morning the sun was shining, the sky was a deep intense blue, nature was in her most charming mood. The path to the river was a beautiful green archway. The sunlight spilled down through the leaves and fell in great patches on the ground and the birds were singing in the branches overhead. Oh! the joy, the pleasure of living in this beautiful world and breathing the pure, clean air. Surely this is God's country where,

> "Away from the toil and strife of our daily life,
> Let us pause awhile in silence and adore."

The guides had breakfast ready, and we did it ample justice. After breakfast they went for the canoes, we washed the dishes, put beans on to cook for dinner, hung our blankets out in the sun and then went back over the portage to get a better view of the chute. Following the road which ascends gradually to the plateau, we turned to our left down a gentle slope to the edge of a cliff fifty feet above the surface of the water. Following along the cliff we came to a more broken place and succeeded in getting down to the water where we could get a good view of the Thirty-Dollar Falls. The logs were coming down and occasionally one would come over the falls, plunge entirely under water, then slowly rising, end first, it would stand straight up, fully two-thirds of it above the water, when it would balance for an instant, then fall and continue on its way down the gorge. If Bennett had gone down the Thirty-Dollar Chute he would have fared worse than the man who went through the "Hulling Machine." After an hour or more spent watching the logs, we returned to camp, ate our dinner, packed up and continued on our journey. Shooting some rapids as we followed the beautiful winding of the river, we came to a long stretch of straight open water, sometimes called Long Lake. We caught a pike on a troll here; it was the only one we caught on the river. We saw a porcupine feeding on the branches of a young tree about 20 feet high, and a deer on the shore. Reaching what is known as the Fourteenth Chute, early in the afternoon, and finding a good camp ground, we put up our tents. There is a dam here and quite a fall, from which we could see the mist rising when we were still some distance up the river. The river is very wild and full of boulders below the falls. The water falls over the dam and is dashed into foam, while a rainbow suspended in the mist hangs over it all day long. It is a wild, beautiful place.

After supper the guides took the canoes and we went up the river about two miles, hoping to see some deer. A short distance above our camp we came upon the most perfect and beautiful reflection we had ever seen. It was a grove of red pine on a slope that rose gradually from the shore, and was free from underbrush and fallen trees. Here were two beautiful groves, one sloping from the sky down to the water, and the reflected one from the water back till it met the reflected sky, the light falling through the trees on both, and thrown over all was the brilliant color from a gorgeous sunset.

We thought we had seen wonderful reflections before, but this one was a revelation to us, even the guides were astonished. In the first place a more beautiful bit of nature than that grove is seldom seen, and when we add to this the fact that it lay in exactly the right position to get the best possible light from the setting sun, which was very brilliant, we could account for the unusual beauty of the reflection.

The guides saw two deer and tried to point them out to us, but we had not learned to see things at a distance. On our way back we heard a splash on the shore ahead of us, and one of the guides pulled over in that direction. After quite a scramble and splashing in the water, a deer struck out across the river.

The other canoe came up on the other side, and we drove the deer down the river between the two canoes, almost to the landing, when we held back and let it swim ashore, for if it had been caught in the current it would have been carried over the dam and killed. At times we were so close to it that I could have touched it with my hand.

I was up early the next morning, for I wanted to see the falls as the sun came up, and while standing on the shore a duck flew over, scarcely ten feet above my head.

We walked up along the shore of the river a short distance, and saw a little ground squirrel making its winter home. It was not the least bit afraid of us, but worked away, carrying out dirt and piling it up around the door while we stood but a few feet away. The guides were preparing breakfast, and we left the squirrel and went back to camp. We were standing by the fire when one of the guides called us to come and see a deer. We rushed along the path, and not fifty yards from where we were cooking breakfast was a deer drinking at the river. About all we saw was a red streak and a white flag waved as it went over the rocks at the top of the hill, but the red streak was quite exciting while it lasted.

We were going to make rice dumplings for dinner, and hoping to get some fresh berries, we climbed the steep hill back of our camp to the level plateau above. We found no berries, but had a delightful tramp, and enjoyed the dumplings made with prunes.

We had expected to get berries whenever we wanted them, but owing to the dry season, there were none on the river. After an early dinner we were again on our way. Shooting a small rapids we came to a portage on the right. The landing was very close to the falls, but the carry was short. The next portage was on the left and was rather hard. We let the canoes down with ropes part of the way, but everything else had to be carried, and the path was narrow and along the side of a hill. The next portage is on the right bank around a falls of about two feet, and is short. While we were making this portage two Indians from the reservation near Bing Inlet went over the falls in their heavy fishing boat. After we had crossed the portage the baggage was put aboard and Bennett and the guides, each in his own canoe, paddled out into the rapids. We walked along the shore to get a picture of the falls.

The canoes had gone safely through the rapids and were in quiet waters, when we heard a call for help, and looking around saw Bennett struggling in the water, his canoe bottom up and well under water, and his duffle bag floating down stream. No one had seen his canoe capsize, for we had been watching the Indians shoot the falls, but we supposed he had turned around in his canoe to see them, and leaning a little to one side the canoe tipped over.

He was not far from the shore, but was so frightened he did not know what to do, and climbed on top of the canoe. One of the guides paddling quickly to him, made him take hold of the bow of his canot and took him ashore. The other guide rescued his duffle bag and paddle, and the Indians brought back his canoe.

Learning from the Indians that we were but a short distance from Bing Inlet, we decided to push rapidly on and take the Wednesday instead of the Friday boat to Parry Sound. We had no more carrying to do, but shot several rapids, and reached Bing Inlet about 3 o'clock, a few minutes before the steamer came to the dock. As it lays here an hour taking on fuel, we had ample time to get everything on board and see the town.

We had a delightful trip down the bay, arriving at Parry Sound about 10 P. M. We spent the night at a hotel and reached the Iron City Camp on the Moon River on Thursday.

A. W. C.

One Thousand Miles for Rest.

LAST summer my business was such that I was unable to leave town. Later it seemed as if I must have some rest for a few days at least. So taking the last day of August, that being Saturday, and the first two days in September, the latter being Labor Day, I had three days at my disposal. With another weary toiler I discussed various plans for a canoe trip. At last the course was settled. The chart was nearly worn out with the numerous lines we had drawn while measuring distances.

Leaving Boston at 4 o'clock on Friday afternoon we awoke next morning in Winn, a small town in the northern part of Maine. Here we ate a hearty breakfast at the local "hotel," engaged a team to carry the canoe to Bottle Lake, where our real trip began. Paddling across this we encountered a half-mile carry to Lake Dobsis, a picturesque sheet of water, studded with wooded islands of various sizes from a few hundred feet to two miles in length. Late in the afternoon we arrived at Shaw's Camp, situated at the other end of the lake. Here we remained all night. An early start the next morning carried us through a small lake into Grand Lake, and thence to its outlet, where we ate dinner. Here we found another carry of a quarter of a mile to Princeton Lake, and arrived at the town of that name in time for supper. The following day we went down the stream into the St. Croix River, passed Calais and spent the night at St. Andrews. It was only a short paddle from here to Eastport, where we took the Boston and Halifax boat, arriving home Wednesday morning. The round trip by rail, water and steamer is about 1,000 miles, and its total cost was only $22 apiece.

It would be useless to attempt to enumerate the benefits to be derived from such a trip. Its results are miraculous. Any one who has been in the woods even for a day knows how much better one feels afterward. Combine with this the panorama of ever-changing scenery, the delightful exercise of paddling, the long sea voyage home, and you have in a nutshell the remedies for more ills than a year of medical treatment.

A. L. S.

BOSTON, June 22.

French—Montagnais Dictionary.

THERE has recently been published by Messrs. W. B. Cabot and P. Cabot, of Boston, a volume that possesses not a little interest for all sportsmen who visit those portions of northeastern North America inhabited by Indians of Algonquin blood. Its title is "Dictionaire Français-Montagnais, by Father G. Lemoine, a priest of the O. M. I." The volume is one of considerable size, the French-Montagnais portion occupying 261 pages, while the Montagnais-English vocabulary has a dozen, a list of geographic names 3, and the Montagnais grammar 63.

The angler or big-game hunter who visits Maine or Canada can hardly fail to feel a considerable interest in the guides of Indian blood whom he meets there; and many a man, visiting the region year after year, picks up from these Indians a good many words of their language. It was precisely in this way that Mr. W. B. Cabot became interested in this language and in Father Lemoine's studies in it. Mr. Cabot encouraged the father to pursue these studies, and at last with his brother went to the very considerable expense of publishing the dictionary. In doing this Mr. Cabot has performed a genuine service to science, and we believe has also done much to stimulate among his brother sportsmen an intelligent interest in these Indians, and in other allied tribes. From Maine all through southern Canada and quite to the Rocky Mountains, the Indians speak some dialect or other of the Algonquin language, though these Montagnais and Naskapis occupy only the country lying between the Gulf of St. Lawrence, the Straits of Belle Isle, the North Atlantic Ocean and Hudson's Bay. Nevertheless, in all these dialects there is much similarity, and a copy of this dictionary might profitably form a portion of the luggage of every man who expects to employ Canadian Indians as guides.

Pack-Horses and Their Packs.

ASHEVILLE, N. C., July 19.—*Editor Forest and Stream:* We read with interest the article in one of your recent issues on "Camp-Fire Flickerings from the Miami Valley." The incident mentioned of one David Petigrew, who in the early days packed salt from Kentucky to Dayton, O., with a pack train, gives one the impression that the men or the horses of those days were entirely different from what they are now. David Petigrew must have had wonderfully strong horses, or else he must have been a very weak man. It hardly seems possible these days that any one would put two packs, "each of which was so heavy that a man could not lift it," upon a horse and not remove the packs for two days and a night. Any packer of to-day would be considered a very inhuman man who would turn his pack horse loose at night without removing the load. After considerable experience with pack trains in the West, I have yet to find a packer who is not exceedingly careful of his pack animals, and who does not

upon every occasion possible remove the load and look carefully after the backs of the animals.

It would be interesting to hear if any of your numerous readers know of instances occurring to-day where heavily loaded pack horses are turned loose at night without their loads being removed. C. P. A.

[The Miami Valley stories, we assumed, were given as they have come down and are current; and are not to be judged by the strict standards of historical records.]

Natural History.

St. Augustine Tame Birds.

ST. AUGUSTINE, Fla., July 18.—*Editor Forest and Stream:* I feel somewhat elated to find myself the target of such a cloud of compliments and cusses as I have brought upon my innocent head by merely saying I'd rather bag a woodcock than a moose, though the cusses, I am happy to say, are all of a mild and gentlemanly type, while the compliments do me proud, especially when coming from such model sportsmen as Jacobstaff and Lewis Hopkins.

I'm always delighted when I'm able to get up a little sparring for pastime without staining the pages of FOREST AND STREAM with blood, but the simple stuff that follows this heading will not admit of even the mildest opposition.

I have been stirred up to this by reading the account of Mrs. McKenna's wonderful work in taming what I supposed to be the untamable grouse.

My wife and I sit here on our wide piazza day after day enjoying the delightful sea breeze, and to make time pass more pleasantly, we cultivate the company of several kinds of birds.

For a long time we had a pair of cardinals, but an ill-natured mockingbird drove them off.

Then we turned our attention to a beautiful red-winged blackbird, and soon got him very tame, but the beforementioned bully fell foul of him and refused to let him come near the house. This was a trifle too much for my angelic nature, and I put a squib in my "scatter gun" and killed him as dead as Homer. Since then sweet peace has reigned among our birds. The banished red-wing has returned and brough two of his children, and now, while my wife is sewing and I am reading, two or three of them are feeding on the table at once apparently unafraid. They are quite entertaining, but our most interesting little pet has gone to parts unknown.

Every summer I tame hummingbirds when the young ones appear, from the first to the middle of June, but this year the mother bird found the bottle at the same time with the young one, the result being that the youngster had to leave.

They are intensely selfish, on account of which only one can be tamed, with satisfaction, at a time, and as the old birds are difficult to tame, I paid but little attention to this one, though she would feed from my hand. To my surprise, the male bird, a perfect beauty, which we called Ruby, came to the bottle—which was pretty good proof that he was a pet of the year before—but his wife was boss, and sat on a tree near by from morning till night to keep him from meddling with her bottle, though once in a while he would slip in on the sly.

As this was not to my liking, I refused to let her have anything to eat, and she left. I fed Ruby every time he came, and he soon got so tame that he would hunt for me in search of his bottle.

(To digress—a beautiful "nonpareil" is feeding on the grass seeds just before me.) To tame hummingbirds so that they will come to me anywhere about the place is an easy matter, but how Mrs. McKenna tamed that grouse is a mystery to me. About the first of July the flowers have almost disappeared from this region, and nearly every hummer leaves, but why our well-fed pet should leave I can't imagine, unless his wife commanded him to go with her. The male is a trifle smaller than the female, and she appears to be always boss. DIDYMUS.

The Snake Skin in the Bird's Nest.

AN inquirer asks the Outlook: "When a boy, I was told that an atheist was turned from the error of his way by seeing the parent birds carrying in their bills leaves of the white ash and placing them upon their nest of young to protect them from a climbing snake reaching out for them. The leaves instantly drove the snake away. Please inform me through your weekly whether there is positive proof that such a protection is used by birds, or is it only to be found in Sunday school books, but not in authoritative natural history works?"

To this the Outlook makes reply: "It would seem that there are many miracles evident out of doors that might turn an atheist from the error of his way.' The incident recited by our correspondent—namely, the use of the leaves of the white ash by parent birds for protecting their young from climbing snakes—possibly has some foundation in fact. In a long experience as a field ornithologist, Mr. William E. D. Scott, a trained naturalist, says he has observed nothing of a like nature. He adds, however, that the great crested flycatcher, which builds in deserted woodpeckers' domiciles as well as in natural cavities in trees, habitually does something quite as extraordinary. A cast snake's skin almost always figures as a part of the lining of the nests of this kind of bird. Presumably this may be to prevent intrusion on the part of enemies, as well as of other birds seeking similar localities for nesting or sleeping."

This purpose has more than once been suggested to explain the use of the snake skin, and by observers whose opinions carry weight. But after all, we know nothing about it, and the explanation seems somewhat fanciful. Here are some quotations on the subject, however, and any observations by readers of FOREST AND STREAM will be very gladly published if sent in to us.

On this habit Miss Florence Merriam, in her "Birds of Village and Field," says: "Whatever may be the historic reason for this peculiar habit, the lamented Mr. Frank Bolles watched two nests in which the skin was apparently used to scare away intruders. The morning he found the first nest it had one egg and no snake skin, but that evening he was startled to be met by the raised head of a snake (skin) in front of the nest, and on examination found that the body of the snake—six or seven inches long—was coiled around the eggs. The second year the birds built in the same place, and after each of Mr. Bolles' visits to the nest fresh pieces of skin were added. This was done with an eye to his intentions, Mr. Bolles believed, from the evident disapproval of the birds, for they scolded him severely whenever he came, and as long as he remained in sight. A similar use of the skin is suggested in the instance quoted by Major Bendire, in which the skin was arranged to hang out of the hole. Mr. Burroughs throws a side light on the question by stating that he has found onion skins, fish scales, and even oiled paper in nests where there was no snake skin. If originally protective, the instinct seems to have run to seed as a morbid taste for the grotesque in house furnishing."

The case noted by Major Bendire is mentioned in his "Life Histories of North American Birds (Parrots to Grackles)," p. 261. He says: "Exuviæ of snakes seem to be present in the majority of the nests of this species; they are sometimes incorporated in the nest proper and again they are placed around the sides of it, in all probability for protective purposes, and are changed and rearranged from time to time. But few nests are found which do not contain more or less of this material, occasionally whole skins enter into their composition.

"Mr. W. E. Loucks, of Peoria, Ill., writes me: 'I found a very remarkable nest of the crested flycatcher some years ago. The curious feature about it was that the birds had taken an enormous snake skin, probably that of a black snake, and had so arranged it within the entrance of the cavity that the greater part of it hung outside. What other motive could the birds have had than that of alarming intruders?' "

The Mexican crested flycatcher (*Myiarchus mexicanus*) while also commonly using bits of snake skin as nest material, does not, it is said, use it as generally as does its more northern relative (*M. crinitus*). On the other hand the Arizona form (*M. mexicanus magister*, Ridg), is reported to use "bits of snake and lizard skin" as nest lining, and one observer speaking of a nest he found, says: "It was entirely similar in construction to that of *Muscicapa crinitus* even to the traditional snake skins."

Wild Animals of the North.

The Arctic Fox.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

THE Arctic fox, as is well known, has two color phases, the one white the other bluish or brownish slate color. This was originally believed to be the result of a seasonal change, the white being the winter dress, and the dark the pelage of summer. It is known, however, that not all—perhaps not even a majority—of these foxes change their color with the seasons; and since the breeding of blue foxes has become an industry in Alaska, it has been learned that these animals, if brought to the south, remain dark in color throughout the year, one which is white, or partly white, being only occasionally found among the many litters of dark animals. The Arctic fox is smaller than the red fox, the weight usually being about eight pounds, while some are as low as seven, and a few as high as nine and a half. Dr. Richardson quotes at length, as to the habits of this species, from Capt. Lyon, who, during two winters passed on a Melville peninsula, studied with care the manners of several of these interesting animals, which were taken alive and kept as pets. He says:

"The Arctic fox is an extremely cleanly animal, being very careful not to dirt those places in which he eats or sleeps. No unpleasant smell is to be perceived, even in a male, which is a remarkable circumstance. To come unawares on one of these creatures is, in my opinion, impossible; for even when in an apparently sound sleep, they open their eyes at the slightest noise which is made near them, although they pay no attention to sounds when at a short distance. The general time of rest is during the daylight, in which they appear listless and inactive; but the night no sooner sets in than all their faculties are awakened; they commence their gambols, and continue in unceasing and rapid motion until the morning. While hunting for food, they are mute, but when in captivity or irritated, they utter a short growl like that of a young puppy. It is a singular fact that their bark is so modulated as to give an idea that the animal is at a distance, although at the very moment he lies at your feet. Although the rage of a newly caught fox is quite ungovernable, yet it very rarely happens that on two being put together they quarrel. A confinement of a few hours often sufficed to quiet these creatures, and some instances occurred of their being perfectly tame, although timid, from the first moment of their captivity. On the other hand, there were some which, after months of coaxing, never became more tractable. These we supposed were old ones.

" 'Their first impulse on receiving food is to hide it as soon as possible, even though suffering from hunger, and having no fellow prisoners of whose honesty they are doubtful. In this case snow is of great assistance, as being easily piled over their stores and then forcibly pressed down by the nose. I frequently observed my dog-fox, when no snow was attainable, gather his chain into his mouth, and in that manner carefully coil it so as to hide the meat. On moving away, satisfied with his operations, he, of course, had drawn it after him again, and sometimes with great patience repeated his labors five or six times, until in a passion he has been constrained to eat his food without its having been rendered luscious by previous concealment. Snow is the substitute for water to these creatures, and on a large lump being given to them, they break it in pieces with their feet, and roll on it with great delight. When the snow was slightly scattered on the decks, they did not lick it up as dogs are accustomed to do, but by repeatedly pressing with their nose, collected small lumps at its extremity, and then drew it into the mouth with the assistance of the tongue.' In another passage Capt. Lyon, alluding to the above-mentioned dog-fox, says 'He was small and not perfectly white, but his tameness was so remarkable that I could not afford to kill him, but confined him on deck in a small hutch, with a scope of chain. The little animal astonished us very much by his extraordinary sagacity, for during the first day, finding himself much tormented by being drawn out repeatedly by his chain, he at length, whenever he returned to his hut, took this carefully up in his mouth, and drew it so completely after him, that no one who valued his fingers would endeavor to take hold of the end attached to the staple.'

"Hearne says that when taken young, the Arctic fox may be domesticated in some degree, but he never saw one that was fond of being caressed; and they are always impatient of confinement. Notwithstanding the degree of intelligence which the anecdotes related by Capt. Lyon show them to possess, they are unlike the red fox, in being extremely unsuspicious, and instances are related of their standing by, while the hunter is preparing the trap, and running headlong into it the moment he retires a few paces. Capt. Lyon received fifteen from a single trap in four hours. The voice of the Arctic fox is a kind of yelp, and when a man approaches their breeding places, they put their heads out of their burrows, and bark at him, allowing him to come so near that they may be easily shot. They appear to have the power of decoying other animals within their reach, by imitating their voices. 'While tenting, we observed a fox prowling on a side hill, and heard him for several hours afterward in different places, imitating the cry of a brent goose.' They feed on eggs, young birds, blubber and carrion of any kind; but their principal food seems to be lemmings of different species.

"The Arctic fox is an inhabitant of the most northern lands hitherto discovered, and in North America their southern limit appears to be about latitude 50 degrees. They are numerous on the shores of Hudson's Bay, north of Churchill, and exist also in Behring's Straits; but the brown variety, mentioned in the following pages, is the more common one in the latter quarter. They breed on the sea coast, and chiefly within the Arctic circle, forming burrows in sandy spots—not solitary, like the red fox, but in little villages, twenty or thirty burrows being constructed adjoining to each other. We saw one of these villages on Point Turnagain, in latitude 68½ degrees. Toward the middle of winter they retire to the southward, evidently in search of food, keeping as much as possible on the coast, and going much further to the southward in districts where the coast line is in the direction of their march. Capt. Parry relates that the Arctic foxes, which were previously numerous, began to retire from Melville Peninsula in November, and that by January few remained. Toward the center of the continent, in latitude 65 degrees, they are seen only in the winter, and then not in numbers; they are very scarce in latitude 61 degrees, and at Carlton House, in latitude 53 degrees, only two were seen in forty years. On the coast of Hudson's Bay, however, according to Hearne, they arrive at Churchill, in latitude 59 degrees, about the middle of October, and afterward receive reinforcements from the northward, until their numbers almost exceed credibility. Many are captured there by the hunters, and the greater part of the survivors cross the Churchill River as soon as it is frozen over, and continue their journey along the coast to Nelson and Severn rivers. In like manner they extend their migrations along the whole Labrador coast to the Gulf of St. Lawrence. Most of those which travel far to the southward are destroyed by rapacious animals; and the few which survive to the spring, breed in their new quarters, instead of returning to the north. The colonies they found are, however, soon extirpated by their numerous enemies. A few breed at Churchill, and some young ones are occasionally seen in the vicinity of York Factory. There are from three to five young ones in a litter.

"The Esquimaux take the Arctic foxes in traps, which are described by Capt. Parry as being 'extremely simple and ingenious. They consist of a small circular arched hut built of stones, having a square aperture at the top, but quite close and secure in every other part. This aperture is closed by some blades of whalebone, which, though in reality only fixed to the stones at one end, appear to form a secure footing, especially when the deception is assisted by a little snow laid on them. The bait is so placed that the animal must come upon this platform to get at it, when the latter, unable to bear the weight, bends downward, and after precipitating the fox into the trap, which is made too deep to allow of his escape, returns by its elasticity to its former position, so that several may then be caught successively.' They are also taken in the wolf traps of ice, described on page 65, and all the rocky islands lying off the mouth of the Coppermine River are studded with square traps, built of stone by the Esquimaux, wherein the fox is killed by a flat stone falling upon him when he pulls the bait.

"The fur of the Arctic fox is of small value in commerce when compared with that of any variety of the red fox. Its flesh, on the other hand, when particularly young, is edible; while that of the red fox is rank and disagreeable. Capt. Franklin's party agreed with Hearne in comparing the flavor of a young Arctic fox to that of the American hare. Capt. Lyon considered it to resemble the flesh of a kid."

Canada Lynx.

Loup-cervier is a name familiar to most hunters in the north, and this is one of the best known—by name at least—of our North American mammals; yet, when Richardson wrote the list of synonyms of this cat, it was a short one. He says that the Canada lynx is "rare on the sea coast and does not frequent the Barren Grounds, but it is not uncommon in the woody districts of the interior, since from seven to nine thousand are annually procured by the Hudson's Bay Company. It is found on the Mackenzie River as far north as latitude 66 degrees. It is a timid creature, incapable of attacking any of the larger quadrupeds, but well armed for the capture of the American hare, on which it chiefly preys. Its large paws, slender loins, and long, but thick, hind legs, with large buttocks scarcely relieved by a short, thick tail, give it an awkward, clumsy appearance. It makes a poor fight when it is surprised by a hunter in a tree, for, though it spits like a cat, and sets its hair up, it is easily destroyed by a blow on the back with a slender stick, and it never attacks a man. Its gait is by bounds, straightforward, with the back a little arched, and lighting on all the feet at once. It swims well, and will cross the arm of a lake two miles wide; but it is not swift on land. It breeds once a

year, and has two young at a time. The natives eat its flesh, which is white and tender, but rather flavorless, much resembling that of the American hare.

"The early French writers of Canada, who ascribed to it the habit of dropping from trees on the backs of deer, and destroying them by tearing their throats and drinking their blood, gave it the name of *Loup cervier*. The French-Canadians now term it indifferently *Le Chat*, or *Le Pesshoo*."

Of late years, as is well known, the Canada lynx has been accused of killing calf moose in Maine and Canada, as well as of killing calf elk in the Yellowstone Park; but we do not know that any actual evidence of such acts has been secured by any one. It is conceivable, of course, that this might happen, but, on the other hand, it is to be remembered that at the season of greatest stress, when food for the lynx is most difficult to obtain, the calves of moose and elk alike are well grown, strong, and hardy animals, perhaps too much so to be destroyed by a small creature like the lynx. While ferocious enough in appearance, the power of the lynx is limited. Its total length is less than three and a half feet, and its height, at the shoulders, less than a foot and a half. At the same time the lynx is not devoid of courage; we have known of its coming up to a camp at night and boldly carrying off a ham of meat, and then defeating and driving away two small dogs that were set upon it.

The Doom of the Mosquito.

From the Paterson (N. J.) Chronicle.

THE present State administration is taking gigantic steps toward covering itself all over with glory several inches deep. The mosquito, which has added so much to the renown of New Jersey, is to be exterminated to the great relief of suffering humanity and a material reduction in the usual volume of profanity. Physically and morally the human species within the borders of this State is to be improved.

The first step toward the attainment of this desirable end was the dissemination of useful information in regard to the enemies of mosquitoes, and people were informed that sticklebacks and minnows subsisted to a great extent upon the larvæ of mosquitoes and upon the fully developed insect, the latter being placed within reach of the fish whenever the mosquitoes attempt procreation of their species. The result was a number of applications to the Board of Fish and Game Commissioners for consignments of sticklebacks and minnows. Unfortunately, sticklebacks live only in salt water; if transfertred to fresh water they would show about as much activity as smoked herring, but a little mistake like this should not be noticed when the great end to be attained is remembered. It is to be hoped that the fish and game authorities will fill every requistion for minnows, if not for sticklebacks, for such a course would not only tend toward the extermination of the insect pest but would also start up a new industry in New Jersey. There is no doubt that minnows are fond of young and tender mosquitoes; the fact that the fish and game authorities would have to take their supply of minnows from one insect-breeding water in order to supply another is hardly worthy of consideration, for the relief the mosquitoes would obtain in one place would be counterbalanced by the warfare to be waged on them in the water where they are to be placed. The new industry which would be developed by this plan of killing mosquitoes would be the establishment of canning factories in numerous places, giving employment to hundreds of hands. Mosquitoes breed only during a short period of the year, and consequently it would be necessary to supply the minnows with mosquitoes during the spring, fall and winter months. For this reason it would be necessary to can a lot of mosquitoes during the summer months in order to prevent minnows from starving to death during the rest of the year. Then people would have to be employed to feed the canned mosquitoes to the minnows, and care will have to be taken not to give them too much food, for mosquitoes are a rich food for fish, apt to develop dyspepsia, gout and similar diseases. But just think of the millions of mosquitoes that would be killed both by the minnows and by the canning process!

Having settled this matter to their satisfaction, the State mosquito authorities have now applied to the fish and game authorities for a permit to kill certain kinds of birds, the object being to ascertain what birds devour the most mosquitoes. It will be seen that in the wisdom of the mosquito authorities the insects are to be attacked both in the water and out of it. They will not be given any rest until they have been exterminated. The fish and game authorities have no more right to grant permits for killing insectivorous birds than has the Board of Aldermen of Paterson a right to issue permits for horsestealing, but when the constitution is set aside for the attainment of great objects, a little thing like granting a permit to kill birds ought not be deemed worthy of consideration. The State mosquito authorities evidently intend to secure their information first hand, from the stomachs and crops of birds; they evidently do not intend to rely on the extensive investigations into this subject made for some years past by the Department of Agriculture of the United States. From these reports it might be learned that the swallows devote most of their lives to killing mosquitoes, but there is nothing like knowing a thing by direct information and not depending on hearsay. After the State authorities have killed a few thousand birds and analyzed the contents of their crops and stomachs, they will probably inform the public what steps they expect to take next. There will be no use in passing a law prohibiting the killing of these birds, for such a law has been on our statute books for many years. The chances are that they will invent some artificial method of propagating these birds, just as scientists propagate trout. Whether the birds will be permitted to die when their usefulness for the season has expired or whether they will be fed on canned mosquitoes for the rest of their sojourn in New Jersey will be a matter for subsequent consideration.

Great is science, especially as developed by the State mosquito authorities, and what a fortunate thing it was that we have a governor who has kindly given the use of a part of the $10,000 fund in his hand for the noble purpose of ridding New Jersey of mosquitoes! In the meantime the world is waiting with bated breath for the next step to be taken by the State mosquito authorities.

Locked Antlers.

BOSTON, July 20.—Fish stories are good, but they should have some shadow of truth. Stories of hunting and game animals should not be surrounded with impossible conditions. The latest comes from Maine, concerning the finding of the bodies of a couple of buck deer, with antlers interlocked. So firmly were the heads locked together that it was not possible to separate them, and the story says that the heads are being mounted in that position. To a well-known Maine guide the find is attributed. Now the story is all right, if told at the proper season, and the fact that buck deer do get their antlers locked together and die in that position is well known, but when such a find is made in late July, conditions are somewhat at contraries. In the first place, the deer and moose of Maine all shed their antlers not later than the middle of January, and in July the new horns are but mere knobs, a few inches in length, "in the velvet." If the deer of the recent find had locked their horns when they had them last fall, and died in that position, their bodies would have decayed at the first approach of spring weather, even if every shred of flesh had not long before been eaten by foxes and other animals. This story has appeared in several papers, but if buck deer are to lock their horns and die in that position, let us have them do it at the season when they have horns.

SPECIAL.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

An Adventure with Buffalo.

This story is taken from the British Naval and Military Gazette of 1835. It is a sturdy tale such as they knew how to tell in those days.

THE extraordinary adventure and miraculous escape of Lieutenant Clerk, of the Bombay Army, from death by the jaws of the lion, is one of the many astonishing interpositions of Providence, and strikes not only religious and reflective people, but the most thoughtless, with awe, admiration, gratitude and wonder. Such narratives are not only entertaining, but useful in a moral and religious point of view. They instruct mankind how much, under all and every circumstance, their lives are in the hands of the Creator of the Universe.

When I was a lieutenant in the Fifteenth Regiment, Bengal Native Infantry, I experienced almost as miraculous an escape from death from a wild buffalo. There was a long, though inaccurate account of it given in the Bengal papers at the time, and again copied from them into some of the London journals. An authentic narrative, however, even at this distant period, may be amusing to your readers, and if you think so, you are welcome to the following statement of facts, to which I pledge myself:

I was at breakfast one morning, in March, 1813, the battalion of the Fifteenth Regiment, N. I., to which I belonged, then being stationed at Kissenjunge, when an orderly of the commanding officer of the regiment and station, Lieutenant-Colonel Morgan, came with the Colonel's compliments desiring to see me. I sent word back that I should be with him as soon as I had breakfasted. The orderly returned a second time with the Colonel's compliments, desiring that I should repair to his quarters instantly, and breakfast with him. The Colonel, when I entered the room, said: "What the d—l did you stay for your breakfast for; did you suppose there was none here?" adding, "there was a whole herd of wild buffaloes in my compound or back lawn." "Come," said he, "sit down and eat your breakfast and we will talk to them afterward." I replied: "Stuff, sir, you are gammoning!" To which he said, "No, by Jingo! come and see for yourself." I accompanied the Colonel to the back of his house, and upon the plain, at a distance of about 200 yards, was a herd of seven buffaloes, and a three-parts grown calf. I was so astonished I could hardly believe my eyes, and expressed myself that they must be tame buffaloes. The Colonel replied, "Tame buffaloes, indeed! Where were the like ever seen before?" Upon my asking how he could account for their being there at such a long distance from the forest (about thirteen miles), he said that the only way he could account for it was their having wandered in the night; and daylight having broken upon them, they were lost. We retired to the breakfast table, and the Colonel sent his orderlies round the cantonments to call the officers to his quarters.

Most of the officers having arrived, and expressed their surprise at the extraordinary visit of such company, the Colonel wished to know what was to be done. The Colonel stated that his elephants, and also the company's, were gone for charra, or food. The other two private elephants, one mine, the other that of another officer, were also gone. The Colonel then said the only way to attack them and prevent their escape was that of hunting them on horseback and spearing them. No one seemed to relish the Colonel's ideas of encountering so formidable an antagonist with a mere hog spear on horseback. The Colonel, however, to stir up our pluck, said: "There was time when I would not have looked at them before I had been at them; I am now too old and too heavy to ride" (about 17 stone); and returning to me, who had professed to be a sportsman, added, "Come, send for your horse and set them an example." I felt very little relish for this, and to get off, made some excuses as to the strength of my horse and its incompetency; but this was overruled by the offer of horses of other officers, one of which I accepted. After some persuasion several others sent for their horses, and when mounted, we consisted of five—Capt. Cooper, Lieut. Stirling, Lieut. Shuldham, myself and Dr. Swiney. Armed with spears, we advanced upon the herd, who immediately set off at full speed. After a chase of about a mile and a half, the calf being unable to keep up with the herd, separated from it; we rode it, and having despatched it, continued our pursuit after the herd. We had very hard riding before we came up with them. They were almost immediately lost in a grass jungle, but through which we followed them, and once more drove them out upon the plain. Their speed had hitherto been so great we had not been able to close upon them so as to deliver a spear. We had ridden about seven miles, when all on a sudden a very large male about 17 hands high, with horns at least six feet long, the leader of the herd, turned round, and having allowed the herd to proceed on, he charged most furiously, first one horse, then another. He was not, however, able to come in contact with our horses, and after the herd had proceeded at least a mile and a half, and could only be traced by the clouds of dust they raised from the burning sands over which they traveled, he set off at a full gallop after them. Now was the time when our spears first began to have effect. He was closely pursued for nearly two miles, and, although the spears, which had been delivered, had very severely cut his hind-quarters, he still kept up his pace. Seeing that the system pursued was not likely to bring him down and that we should lose him, I called out to the other huntsmen to "keep off," to "keep clear," and I would "job him," a system sometimes resorted to by first-rate hog hunters, and which consists in not delivering the spear from the hand, but to wait until the horse is sufficiently near to the hog to drive it through him, holding the shaft in the hand. Very few sportsmen, however, will venture upon it, as it is attended with much danger to the horse from the tusks of the boar. I rode in upon the buffalo, who was most eagerly continuing his course in chase of the herd, which he was fast closing up on. He took no notice of the horse—not even when neck and neck together.

In that situation, not being able with single hand to drive the spear far in, I dropped the reins upon the neck of my horse, and with my two hands drove the spear with my utmost force in between his ribs. When I found I could get it no further, I laid hold of the reins and endeavored to wheel the horse to the left, to make way for the other sportsmen to close in; but the horse, instead of answering the bit, made a quarter wheel, and stood still, refusing the spur. The buffalo missing the horse, halted, turned round, and faced the horse. Immediately I saw this, without looking round to the sportsmen, who were close upon my heels, I called out to them—"For God's sake, keep off, for I am gone." As I spoke these words, I saw the buffalo preparing to charge; his ears were drawn close to his neck, he tossed his horns back, sunk his head, took his level, and with his eyes flashing like two balls of fire, down he came with a tremendous crash to the charge, and threw me and the horse a considerable distance. I alighted upon my back, and the buffalo ran up to my feet. There he stood, with the spear in his side, the blood flowing in torrents from his wounds. My companions were sitting upon their horses at a respectful distance, exclaiming: "My God! he is killed." "Poor fellow," said another, "It is all over with him." A third exclaimed: "I would not have come and seen this for all the world!" A consultation was shortly held as to what was to be done to get my body, one observing that they could not return without it. Upon this a certain gallant cock, whose name, perhaps, it may be as well to withhold, said: "I will go back and get a gun and shoot him." So saying, off he went; but, alas! never more to return.

I had begun to get exceedingly tired of my situation, and to think very seriously of having to wait until my friend should reach the cantonment and come back with a gun. Indeed, I was fearful that when arrived in cantonments, he would be fatigued; and if he once got in company of Hodgson's pale ale or saw the Tiffin table smoking with the savory curries and chicken cutlets, his senses would be so absorbed in gastronomic reflections that he would forget the object of his journey, and we should see no more of him. So it turned out. He had been very shy all the day of the monster. Circumstanced as I was I felt a great delicacy in doing anything which might offend His Majesty of the Plain; however, after a little consideration, I resolved to raise my hand, and beckon therewith to the remaining hunters, to indicate that I was alive and to draw the buffalo off from me. I accordingly waved my hand. This was replied to by exclamations. "Good God, he is not dead!" "See, he moves his hand!" "Get up and run away, for God's sake, or you will be killed." This, I thought pretty advice; easier given then followed; and if followed, sure almost of meeting with death. The sun was now in the meridian, very powerful, burning my face and eyes sadly. After some further consideration I rolled over from my back to my belly. I then cast my eye behind me and found my fierce companion still quiet. I then began seriously to think of escaping from him, despairing of being extricated by the assistance of my companions. After a little hesitation, by way of experiment to see how the buffalo would take my movement, I rose gradually upon my hands and knees, keeping my eye over my shoulder upon him. In a second he went through all his former evolutions of ears, horns and eyes, took his level, and made another furious charge; the dreadful consequences of which I escaped by prostrating myself flat upon the ground as soon as I saw that he had taken his level. By this maneuver his horns merely grazed my back. The force of his head broke on the ground off my left shoulder, he rolled head over heels and lay upon the ground upon his forefeet close to me, we looking at each other in the face.

It was now time to think seriously of getting away. I felt I had been much bruised; but I experienced but little pain. I thought the moment favorable to try and escape, and I calculated that before he could get up I could lie down again. Up I got but with difficulty, the pain in my loins was so great; I supported them with both my hands. He permitted me gently to walk away, for fast I could not, and rejoin my companions. The buffalo never offered to move. My companions were full of sympathy, such as exclaiming: "Make haste, make haste!" "Look, look at the blood," and at last, "What can we do for you?" Irritated and vexed, I said: "Go

and pick up my hat," which lay at the buffalo's feet. This they declined; I vented my spleen and anger in volleys of abuse at their cowardly conduct throughout, and said: "If you will not do it, I will do it myself." In vain they endeavored to restrain me by riding between me and the buffalo. I was determined to accomplish it, after daring them to do it, if it cost me my life. I went and picked up my hat, my old acquaintance never offering to take the slightest notice of me. We retired to a village about 300 yards distance, to where my horse had retreated, and several hundred people were collected.

The buffalo missing his own and new companions, shortly after got up upon his legs, appeared to be quite revived, and for some time amused himself, to the great entertainment of the spectators, with galloping after several pariah dogs that were traversing the plain. At length he walked into and immersed himself, all but his head, in a large tank. The other sportsmen had rode up to the tank and were quietly sitting on their horses upon the banks, the buffalo not taking the least notice of them. Seeing the tranquil state of the animal, I mounted my horse, which was very lame from the effects of the violent blow he had received, and rode up to the tank. Before I had time to pull up my reins the buffalo immediately selected my horse out and furiously rushed out of the water after him. I had but time to get to the right about and into a smart gallop, retreating, when I found my old companion following close to my heels. He continued the pursuit for 150 yards and gave it up. After looking about him for a few minutes he started off across the plain at a furious rate. He had proceeded about half a mile when we observed an object, at some distance ahead of him, crossing the plain; he directed his course toward it, speedily came in contact, knocked it over and proceeded on. The other sportsmen and a number of the villagers immediately went to give assistance, but it was of no avail. The unhappy creature proved to be a middle-aged woman. She was killed and dreadfully mutilated; her arms were broken in several places, her ribs driven in and her head smashed. She was on her return home from a neighboring village. This awful spectacle strongly impressed us all, but none more particularly than myself, with a most powerful feeling of wonder and gratitude to Providence at the miraculous escape I had a few minutes before experienced by Divine interposition, for it appeared a perfect miracle how I could have escaped. We now went our way home. On our arrival we found the little Captain snugly at home, three sheets in the wind, or half seas over, with a large party assembled most anxious to hear the fate of myself and the issue of the day's sport. On the following day some peasants came into the cantonments to inform us that the buffalo had traveled about two miles from the spot, had taken refuge in a large lake, and was found dead in the morning.

The "Massacre" at the Alders.

It was a hot, sultry afternoon, succeeding a term of intense heat of long duration. The mountain streams were either very low or entirely dry, the remaining pools looked green and uninviting. The long curled corn was loosening its sun-baked coils in anticipation of an approaching storm. The potato vines were sun-dried and brown before maturity; and Lewis' "spuds" were all new potatoes in their miniature development. The fields looked dust colored and yellow through lack of nourishment. The cows could only find pasture in the neighboring meadow, and this was equally true of the woodcock. They had left their accustomed haunts and followed the cows.

In those cowpaths between the tussocks, where the "coboss" wended her way, clipping the rank growth as she went, the woodcock would follow, boring for the coveted worm. During the hot hours of the day cow and woodcock alike would seek the short growth of alders, seemingly strangely planted in an oblong path entirely alone in that long, narrow tussock-ridden lowland, too low to drain, too uneven to mow. It was only good for what it was now being used for, sort of auxiliary refuge for the surviving descendants of the ark, planned so very many years ago by a far-seeing, all-knowing wise Providence for just such emergencies. Such places are the storage reservoirs, the unleaking basins of time, the safeguard in the time of drought of thousands of well-regulated farms; they are the haunt of the artist, the inspiration of song. We can all recall the chorus at night; the early heralding of spring emanates thence; we have been lulled to sleep by its awkward-gaited inhabitants, and have longed to hear its croakings and chattering again. We have been "in swimming" in the "Old Run," and killed the water snake on the driftwood. That tender age has, however, multiplied itself by two, three, and yes, four for some, until now, only in fancy can we dream those innocent dreams.

Again, in the full maturity of age, and as graduates in the knowledge of local woodcraft, we entered once more the old meadow, followed by Jennie, her tongue hanging low and dry from the side of her mouth. The heat was oppressive, but in the distance could be heard the roll of thunder proclaiming relief to all. We struggled and stumbled from tussock to tussock, and were drenched in perspiration until the "greenhead" flies slipped. We came to the alders; there I took up my position in imitation of "the Colossus of Rhodes" overlooking and covering (with my gun range) that little lonesome swamp, while John N. mounted in excellent imitation to the left of opposite me. I pointed to the brush and commanded Jennie to enter, which she did with glad alacrity, and disappeared entirely. All that could be heard was the patter of her feet in that oozy bottom, and the noise of the coming storm. All that could be seen was the moving alder tops as she forced her way beneath them. The pattering ceases; the bushes are motionless—a point, unseen, but still very still, a point. I call, "Go on, Jenn, go on." She moves, the branches part to fluttering wings, and reveal a woodcock at twenty-yard rise. A kill. I call, "Fetch, Jenn; dead bird," and soon the bushes at my feet are parted and my little mottled beauty appears, black with mud, but with the coveted prize. She returns to the cover. Again the pattering feet stop, and although she is hidden from view, I know she is on three feet, her lip drawn in and held by her teeth lest its escape be heard, and her brave heart's action suppressed nearly to bursting. Again she is urged on by a kindly word, which those ears know so well; and another woodcock comes into view, is killed and retrieved. The first act is repeated, the second rehearsed, and repeated again, and the third opened to the tune of the first with the characters of the second. Business is good, and we go on playing at the old stand. But darkness comes on, flashes of lightning gild the alder leaves with gold, the territory has been covered, crossed and covered again, and not a living woodcock remains. The "massacre at the alders" is complete; and the crashing thunder renders a weird applause. As we enter the farmyard gate the storm bursts in all of its pent-up fury and the drought is broken.

THOMAS ELMER.

California Duck Notes.

LOS ANGELES, Cal.—*Editor Forest and Stream:* It is with a feeling of satisfaction that one lays down Grinnell's "American Duck Shooting," after reading its interesting and instructive pages. The volume is well gotten up, and its completeness makes it a most desirable book for the sportsman's library. The reproductions of Audubon's plates of the canvasback, redhead, black duck and shoveller add materially to the work.

In the article on the shoveller (called on this coast the spoonbill) it is said that "the note of the shoveller is a weak quack, somewhat like that of the greenwing teal." This has not been my experience. Often I have seen a single spoonbill swing over the decoys and drop into the water a hundred yards or so from the stool, and then while swimming slowly about call at frequent intervals—a loud, harsh qua-a-ak, fully as loud as that of the mallard, and more discordant. When come upon suddenly and flushed, the spoonbill quacks loudly and vociferously, much as the mallard does.

In the chapter on the widgeon, there is a quotation from Elliot's "Wild Fowl of North America," where one reads: "The widgeon is one of the wariest of our ducks, suspicious of everything, and not only is unwilling to approach any spot or object of which it is afraid, but by keeping up a constant whistling alarms all the other ducks in the vicinity and consequently renders itself very disagreeable, and at times a considerable nuisance to sportsmen." On the Pacific coast, and particularly along the coast of Southern California, the widgeon are very plentiful during the winter months, and, with the greenwing teal, form the mainstay of the shooting. With us the above description does not fit the widgeon at all, for here it is one of the least suspicious of ducks, coming readily either to decoys or whistle, and frequently by its boldness leading in other ducks that would not otherwise come in. The widgeon is one of the easiest ducks to kill, owing to the fact that they do come in so well to decoys.

The wariest birds we have are the mallard and pintail (called here the sprig), except during the early fall, when shooting is had on young pintail and mallard, which then decoy readily. Later in the season, however, it is only after repeated circling that sprigs will drop to decoys, and then only if the flock be small, for large bands are very suspicious and wary, and will rarely come to decoys.

A method of calling canvasback within range that is employed by some of the market-hunters in California is by thumping with one's boot heel on the bottom of a wooden skiff or platform, which will give forth a dull, hollow sound. This was told to me by an old market-hunter, a man who has bagged thousands of canvasbacks, and I afterward tried it with success. This method rarely fails to call in a single bird or small band, and once last season I called in a flock of fifty or more birds, which otherwise would not have come in at all, by thumping on the platform on which I was standing.

At the commencement of last season, in October, the fulvous-bellied tree ducks were seen in large numbers, and many were killed on some of the grounds. The birds are slow, labored fliers, when compared to other ducks, and are lacking in watchfulness, and their flesh is exceedingly poor.

ROBERT ERSKINE ROSS.

Memories of Northeastern Wisconsin

IF you will leave the railroad where the large jagged rocks line the road bed, climb the cut bank on the west and follow your compass westward about two miles, you will come to two small lakes, which in their relation to each other, resemble a pair of nose glasses. You will not only come to the lakes, but you will stand on the nose of the giant that wears the glasses. To your right and left glitters the glassy surface of the lakes, bordered with native forest. The ridge on which you stand, tapering for all the world like a gigantic nose, leaves the timber line near the middle, ending in shrubbery and finally a sand bar that connects with the shore line on the west.

I stood on this nose of an imaginary old man of the forest. The sand bar was cut up with deer tracks, while the stillness of death was relieved by the soughing of the topmost branches of the pines, and the more cheerful sounds from chattering pine squirrels and occasional drumming of the great northern woodpecker. There is beauty in nature no artist nor poet can paint. The sportsman, who in the depths of the forest is alone but not lonely; who feels that he is just where he would wish to be, with no occasion to hurry nor worry; can enjoy the fullness of nature's blessings. Thus, I reasoned; then picking my way eastward, I stopped near a hemlock whose youthful companions were sheltering its decaying roots, and speculated on its probable age. I had not speculated long, however, before I lost all interest in the dead tree, except as a means of concealment, for down through a hollow came a buck, his nose sniffing the breeze, and then again pointing to earth in order to catch up the scent of the doe he was trailing.

He stopped to listen and look. An enemy might be lurking near. Possibly he scented danger. His instinct taught him to be ever watchful and apprehensive, but his amorous nature mastered his caution and spurred him on. Unfortunate love affair!

There was thunder and lightning on the hilltop and a sting in his shoulder. He lost his interest in the trail as suddenly as I had lost interest in the dead tree, and, turning to the right, bounded off through the dense forest. We had, each in turn, done foolishly. He in running into danger and I in reckless shooting. He was hard hit, as the blood trail evidenced, but managed to keep going for a mile and a half before lying down. I trailed carefully and slowly, and when he jumped took a snap shot and then followed the fresh trail to within an eighth of a mile of the railroad, where I lost it in the fast disappearing snow and innumerable tracks, blood having ceased to flow soon after the shot. Since the trail had led me near the railroad and directly toward a deer crossing, I went straight out to it and was much surprised to see our neighboring camp of hunters from Milwaukee loading a deer on a hand-car preparatory to going to camp. They invited me to ride, and while standing over the deer, I had time and opportunity to notice the similarity between the deer shot by Mr. Brown and the one I had shot at, and not only the similarity of the two bucks in size, color, antlers and other characteristics, but I noticed also that the bullet wound was in the left shoulder, and, to be frank, had these men told me that he was my buck, that he had run to the railroad and dropped dead, I would not have disputed the statement.

But it was a day of sport, and as I look back at this picture of the old man of the forest with his nose glasses and watery eyes, I wish I was there to count the deer tracks on his pointy, sandy old nose.

G. W. CUNNINGHAM.

CHICAGO AND THE WEST.

The Minnesota National Park.

CHICAGO, Ill., July 13.—So we are, after all, to have a national park in the Middle West. The patient efforts of the unselfish advocates of this enterprise are to receive at least some reward, and we are to have left to us, at least, a part of that beautiful pine forest which was once the glory of the upper West, but which, of late, has come to be a glory paling and diminishing.

We are all glad we are to have a park in Minnesota. It will be useful to all of us, a delight to those who will follow us. We do not realize how big a thing has been done here. Even the men most interested do not know. No one has ever been able to dream big enough for America. No crazy real estate dreamer has ever dreamed half big enough as to the swift march of American civilization, the swift passing away of American wild life, wild things, wild country. It is a tremendously significant thing that Congress has passed an irrigation act, whose purpose is to reclaim for the clamoring settler, at great expense, lands which ten years ago were scoffed at. The country is overrun. There is no West.

Then it is a tremendous thing that Congress has at the same time given us a little oasis to keep forever; that Congress has said, Here, in the midst of change, is a part of the West which should not be changed, which remains forever as a sign of the West that was.

It must be a proud day for Col. John S. Cooper, of Chicago. This park ought to have been called the Cooper Forest Park. The name Minnesota does not belong on it, for the whole State of Minnesota is part recreant, in part traitor, in part inefficient, in part lukewarm, and only in part loyal and earnest, allowed itself to be overshadowed in all essential and desirable qualities by the energy and staying qualities of one man. There were cheap hangers-on in this work, a lot of men who were out for what notoriety they could get, but they did nothing in the way of actual aid. The pluck and the brains and the needed funds came from one man, he did little asking of anyone else. If he had wanted anything—and it is impossible to make the hangers-on believe that he did not want anything—if he had sought for any political capital, as plenty of the hangers-on did, then I would be the last man to add a word of praise, for practical politics is something I detest. It would not do for me personally to add any word of praise at all were it not fit that the public should know the facts from one who has exceptional opportunities for knowing Col. Cooper's real attitude throughout the long fight. It wasn't a land deal—there was no steal and no graft to it. It wasn't done because Col. Cooper wants to go Congress. He doesn't have to go to Congress to make a living. He didn't want anything. He was unselfish. He wanted this park and nothing else. He wanted it primarily because he had a sportsman's soul and sportsman's imagination. It is hard to believe this, isn't it? But it is true.

The Closing Scenes of the Fight.

It was a fight to get this park—a fight, not all of whose details in print would redound to the credit of certain of our public men. Of the latter, a few big men, such as Theodore Roosevelt, stood to their guns on principle, knowing what was right. For the others, the politicians, the lumbermen who produce funds for the politicians, the hangers-on who cut up the game and serve as stool pigeons for lumbermen and politicians, it makes little difference, anyhow. The first stages of the fight have been faithfully reported in these columns. The last scenes ran somewhat as follows:

After the failure of the friends of the Minnesota Park in getting any recognition from the Speaker of the House of Representatives at Washington, so that the matter of the Joint Commission might be brought on for decision, and after Governor Roosevelt, of New York, had gone to Washington to see the speaker, and then had written him, all to no purpose, and the friends of the park movement had rather become discouraged and lost heart and hope, Congressman Tawney and Col. Cooper began to work on the lines of getting such of their adversaries as were fair men, especially those at Cass Lake and Duluth, to make some kind of a compromise by which they might introduce in the treatment of the forests in the four Indian Reservations around the headwaters of the Mississippi, in Northern Minnesota, the elements of forestry, as applied for generations in Europe, and in this country to some extent, through the influence and services of the Hon. Gifford Pinchot, Forester of the Department of Agriculture, Dr. Schenck and other foresters.

Last fall Col. Cooper went with some friends to Cass Lake and met the most effective opponents of the park there, viz., the Hartley brothers and Mr. Bernard. Mr. Tawney, Mr. Pinchot and Col. Cooper kept in communication on that line, and finally in January the latter re-

ceived a telegram from Mr. Tawney that if he would come to Washington immediately a compromise could perhaps be made. Col. Cooper got some lawsuits postponed, put his business out of the way and went. He persuaded one of his companions on the trip to Cass Lake last fall, Hon. Ferdinand W. Peck, to accompany him, and they arrived the night before the day on which, at 3 o'clock P. M., the meeting of the Minnesota delegation was to be held. Mr. Tawney having said that it was very important that Col. Cooper should see Mr. Pinchot and go over the matter with him before the meeting, he, fortunately, was able to spend the evening with Mr. Pinchot. The result of it all was that Col. Cooper found if the matter could be carried through as he and the Hon. Page Morris, Congressman from Duluth, had talked, that it would be very much better than half a loaf, which we know, is better than no bread.

The great thing, in Col. Cooper's mind, was to get a part of this region out from under the control of the Indian Bureau and Public Lands Department, and he could see, from what Mr. Pinchot told him, that Judge Morris had come around to that conclusion, and that the Forester of the Agricultural Department, Mr. Pinchot, was to have charge under the plan of the proposed law as an amendment to the Nelson Law. We can be very sure that Col. Cooper left Mr. Pinchot's residence that night pretty happy. The next day, between 11 and 12 o'clock, he met the President and told him something about what was in the wind, and he was delighted. He said several complimentary things, and urged Col. Cooper by all means to get the best for the public he could out of the matter on the lines of forestry and a natural park.

At 3 o'clock that afternoon all assembled in Mr. Tawney's committee room. There were present Senator Clapp, of Minnesota, Congressmen Morris, Tawney, Stevens, Fletcher, Eddy and others, also Mr. Pinchot and several people from Cass Lake. They all had their talk, and if ever one saw what is called a "practical" man turned down cold, and big enough to admit it, it was Congressman Eddy at the hands of Mr. Gifford Pinchot, the Government Forester. At the last, Judge Morris, in a little talk very complimentary to Col. Cooper, asked him what he thought of the measure proposed, and requested that he tell the meeting his judgment. Mindful of the fact that there were in the meeting two of the close friends and representatives of such men as the Hon. Thomas H. Shevlin (the Minnesota traitor who pretended friendship), Col. Cooper was a little cautious, and not inclined to slop over with enthusiasm over the proposed arrangement. But he said in effect that it might be the best thing that the friends of the Park and Forestry Reserve could obtain, and so far as he was concerned personally, he would stand by it. And, to make a long story short, it was agreed to accept the terms of the compromise. Since then Judge Morris is thought to have done better for the Forestry end of the proposition than the compromise provided for.

What We Get.

We all know what we wanted. I shall let Col. Cooper give the details as to what we actually get. He says, in a communication now at hand: "No pine or other timber is to be cut on the islands in Cass or Leech lakes, or on the two great peninsulas in front of Walker. The extent of those amount, as near as I can figure, to about 17,000 acres. All the balance of the four reservations amounting to about 594,000 acres of land, are disposed of about as follows: The Indian separate allotments, it is estimated, will amount to 140,000 acres. That will leave 454,000 acres. That land is subdivided into 40-acre tracts, the 40-acre tract containing merchantable white or Norway pine, are called 'pine lands,' following the Nelson Law and the Rice Treaty thereunder. All the other tracts containing no merchantable pine, are called 'agricultural lands'; 206,400 acres of 'pine lands' are to be selected by the Forester of the Agricultural Department, and designated as 'Forestry lands,' which are to be under his charge, and upon which 95 per cent. of the merchantable white and Norway pine is to be cut, and the tops or slashings burned or removed, so as to prevent forest fires, and to be reforested with white and Norway pine. The other timber on each 40-acre tract is to be protected, and the whole region of forest lands is to be policed and protected from spoliation and forest fires under the direction of the Forester. In addition to the 206,400 acres of forest lands, the Forester is to select 25,000 acres of agricultural lands to aid in protecting the forestry lands, and as a part thereof, making altogether of 'Forestry lands," 231,400 acres; of natural forests where no trees are to be cut, 17,000 acres; altogether 248,00 acres; leaving after the Indian allotments are taken out, 226,000 acres of agricultural lands to be open to settlement under the Homestead laws.

The Great Game.

"The pine on all the reservations in Minnesota is to be sold under Scribner rules, the pine measured in the log on bank scales. But the great object that will be accomplished by the new law is the securing of 231,400 acres, or 360 square miles, of primeval forests, to be treated under modern forestry rules, the merchantable pine to be cut, and in such way, as not to injure the rest of the forest, and to be re-forested with white and Norway pine, and the whole region protected from forest fires.

"I wish to pay my tribute of respect to Judge Morris for his unswerving loyalty to the forestry and park proposition in all that has occurred since the compromise of last January; he has made it very much stronger on those lines than was even agreed to at that compromise. Mr. Pinchot and I both telegraphed Dr. Schenck to come up to Washington and look the matter over, I paying his expenses. He did, and he wrote me afterward, that while the terms of the conference were not everything that might be expected, they were so much better than had ever been done by the Government before, that it was very satisfactory to him."

Col. Cooper then adds a few personal words which I shall take the liberty of giving to his many friends:

"So all the labor of love, and the worry and fretting of the last three or four years have not gone for nothing. To get the Government of the United States committed through Congressional action to a system of this kind, the first in our history, is something; and to do something better for those forests around the headwaters of the Mississippi than any other of our public forests is something more. I am delighted with the result, and I trust you will be."

Forestry Idea Grows.

ST. PAUL, Minn., July 14.—C. C. Andrews, State Fire Warden, in charge of forestry in Minnesota, to-day made public a letter to General Land Commissioner Binger Hermann, recommending that certain townships in Cook and Lake counties, all public lands, aggregating 500,000 acres, be set apart by the President as a forest reserve. Ten of the townships are unsurveyed and all the lands are practically vacant, with specified minor exceptions.

HARTFORD BUILDING, Chicago, Ill.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Tarpon Fishing.

KANSAS CITY, Mo., June 8.—*Editor Forest and Stream:* Those of your readers who have waded through my series of papers on tarpon fishing (if there be any who have done so) may remember that I still owe a final paper on the subject of "allied fishing." This paper I have concluded not to write for the following reasons:

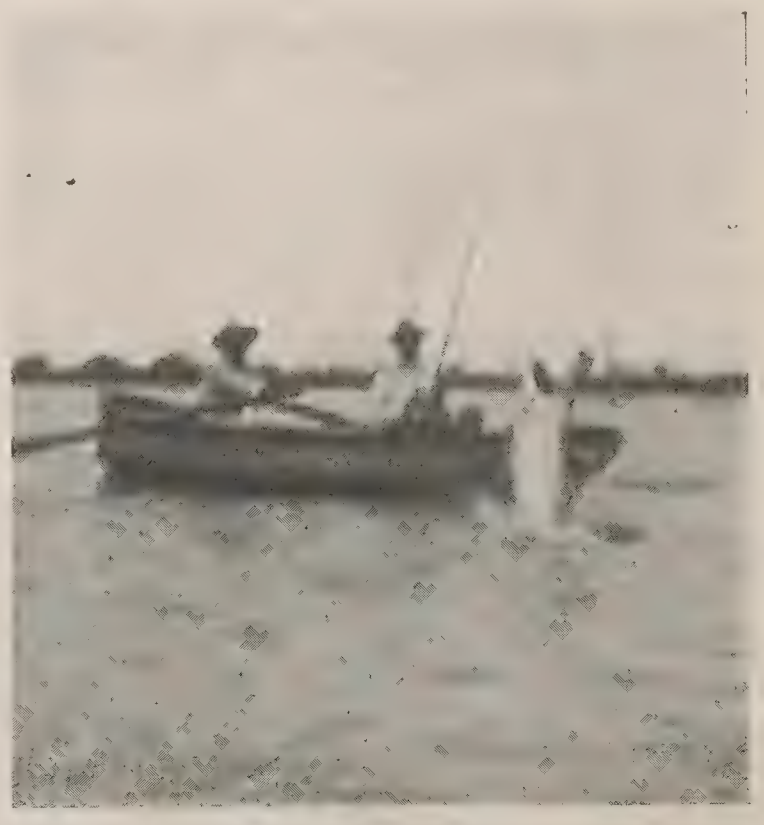
First. The lack of interest shown by your readers, in that they have almost without exception, failed to discuss the various points that I have raised, and to add to the general knowledge of fishermen concerning the habits, etc., of the king of game fishes.

Second. My series of papers is nearly complete without the said paper on "allied fishing; and,

Third. In a way I am not well fitted for writing on the subject, because, when angling in tarpon waters, I never try specially for any other fish than the silver king, when there is any probability of the latter striking. It is true that I catch a good many jackfish and an occasional jewfish, kingfish or shark; but these are always taken on tarpon tackle, except that once in a while, when jackfish are very plentiful, I use a comparatively light rod, fine line and smaller hooks, so as to make surer of hanging the fish and in order to obtain all the sport practicable. Sometimes, though, I merely change snells on my tarpon outfit, because the jackfish puts up, pound for pound, the hardest fight of all game fishes that I have ever encountered, and is, consequently, the most destructive on tackle of all fishes of its size.

One objection to the use of lighter tackle for jackfishing is the risk one runs of hanging thereon a tarpon too heavy for the outfit.

So much for the promised paper; but, as it is not to be written, why then this letter? Well, I have lately had a short outing at Tampico that I think is worth



LEAPING TARPON.
Photo by Dr. Howe.

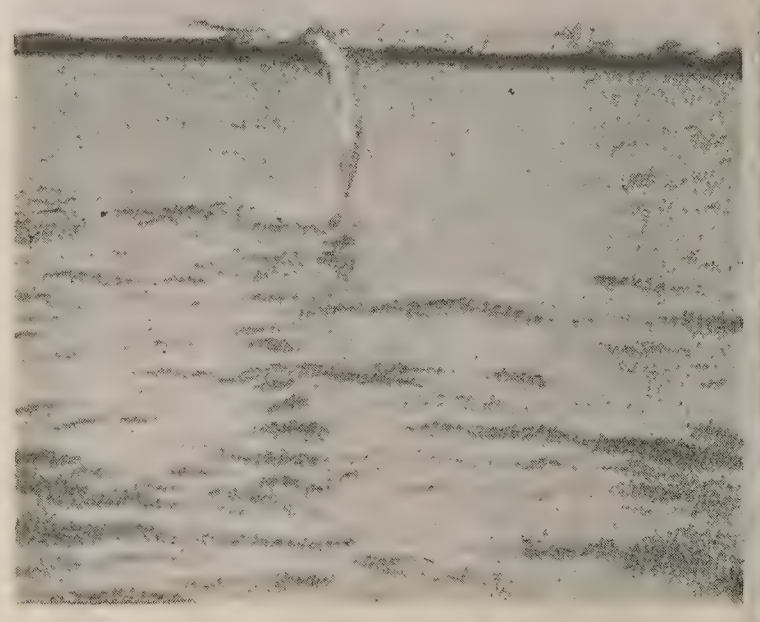
describing, and in the last twelve months I have learned a few things about tarpon tackle which I desire to tell to my brother anglers.

On the night of March 9 I arrived at Tampico and was met by my friend, Mr. A. B. Ross, the engineer in charge of the construction of the Government wharf, who had very kindly made for me all the necessary arrangements for a boat, boatman, chair, bait, etc. In consequence, I was able to make a fairly early start the next morning, Mr. Ross accompanying me in another boat. The weather was fine and the conditions for fishing appeared to be favorable. It was not long before I hooked a large jackfish and brought it to gaff, but the boatman muffed it three times and finally succeeded in knocking it off the hook. Soon after I hung a six-foot tarpon, which, after it had put up a brilliant fight, I drew belly-up alongside the boat. Fearing that my man would make another fizzle with the gaffing, I put a couple of bullets through it, then told him to gaff it in. He made an attempt to do so, but only succeeded in pulling the hook out of its mouth, after which he made a couple of unsuccessful lunges at it before it sank out of reach.

Unfortunately, my Spanish gave out just then, and he failed to comprehend the complimentary remarks that I made about him in English. However, Mr. Ross, who was near by and who was playing havoc among a school of jackfish, seemed to appreciate them, as I heard him repeat them that night to a select circle of his friends, including the British Consul, who all had met at their usual evening resort.

Luck seemed certainly against me, for I soon had two fine strikes and failed to hang.

We had started from the office of Mr. Ross and worked down stream about a mile to the mouth of the little river that flows into the Panuco, opposite the lower end of the city, then back. When I left my friend at eleven o'clock he had in his boat seven jackfish and two fair-sized tarpon, while I had nothing; and while opposite his office he struck another small tarpon and landed



LEAPING TARPON.
Photo by Dr. Howe.

it. Meanwhile, I was proceeding up stream, and when opposite "The Palms" (a grove of a dozen cocoanut trees on the south bank), I hooked a big fellow and succeeded in landing it inside of half an hour, on a muddy bank without permitting the boatman to use the gaff. It measured 6 feet 2 inches by 36 inches girth, and weighed, several hours later, after it had dried somewhat, 117 pounds. According to the standard formula, viz., weight in pounds is equal to square of girth in inches, multiplied by length in inches and divided by 800; this fish would have weighed when first caught 120 pounds, which it probably did.

After wasting an hour in going up town for luncheon, Mr. Ross and I started out again and had not gone more than 200 yards before he struck a tarpon, which he soon landed, then returned to his office for the rest of the day. His six hours' catch is shown on the accompanying photograph, the weights of the fish being as follows:

1	Tarpon	104 pounds.
1	"	84 "
1	"	55 "
1	"	45 "
7	Jackfish	94 "
	Total	382 pounds.

This is a catch large enough to satisfy any reasonable man, but it is a very easy matter for any skilled fisherman to equal or beat it on a good day at Tampico.

Leaving Mr. Ross struggling with his last fish, I proceeded up river, and when opposite "The Palms," I struck another, but did not hang it well, so it soon got off. Shortly afterward I struck another, and after about twenty minutes' fight beached it in the mud. It measured a little more than the one I caught at noon, and probably weighed over 130 pounds. I presented it to a native who resided near where I landed. Meanwhile, a rather stiff breeze had sprung up, which proved too much for my young oarsman, so we gave up fishing and pulled slowly back to the city against wind and tide.

About this time I was in an uncomfortable frame of both mind and body—six tarpon strikes and only two fish! It is true that I had actually killed one more and lost it through no fault of mine, but it did not count. Beside, I was so worn out physically with the unusual exertion that I actually feared that I had become too old to indulge in such strenuous sport, and that my tarpon-fishing days were fast drawing to a close.

However, a night's rest put a different aspect on affairs, so with another but still younger boatman, who, by the way, soon learned the business fairly well and was plucky enough to pull against a stiff breeze, I made an early start and succeeded that day in landing five large tarpon and one jackfish. One measured 6 feet 8 inches in length, but as the girth was only 36 inches, the estimated weight was only 130 pounds. The average length of the five tarpon was a little over 6 feet.

Strange to say, when night came I was feeling first-rate and not excessively tired, so I came to the conclusion that my dread of the effects of advancing years was unfounded.

As I had gotten only eight strikes on the second day, making fourteen altogether for seven fish, I had caught up to my usual average of 50 per cent.

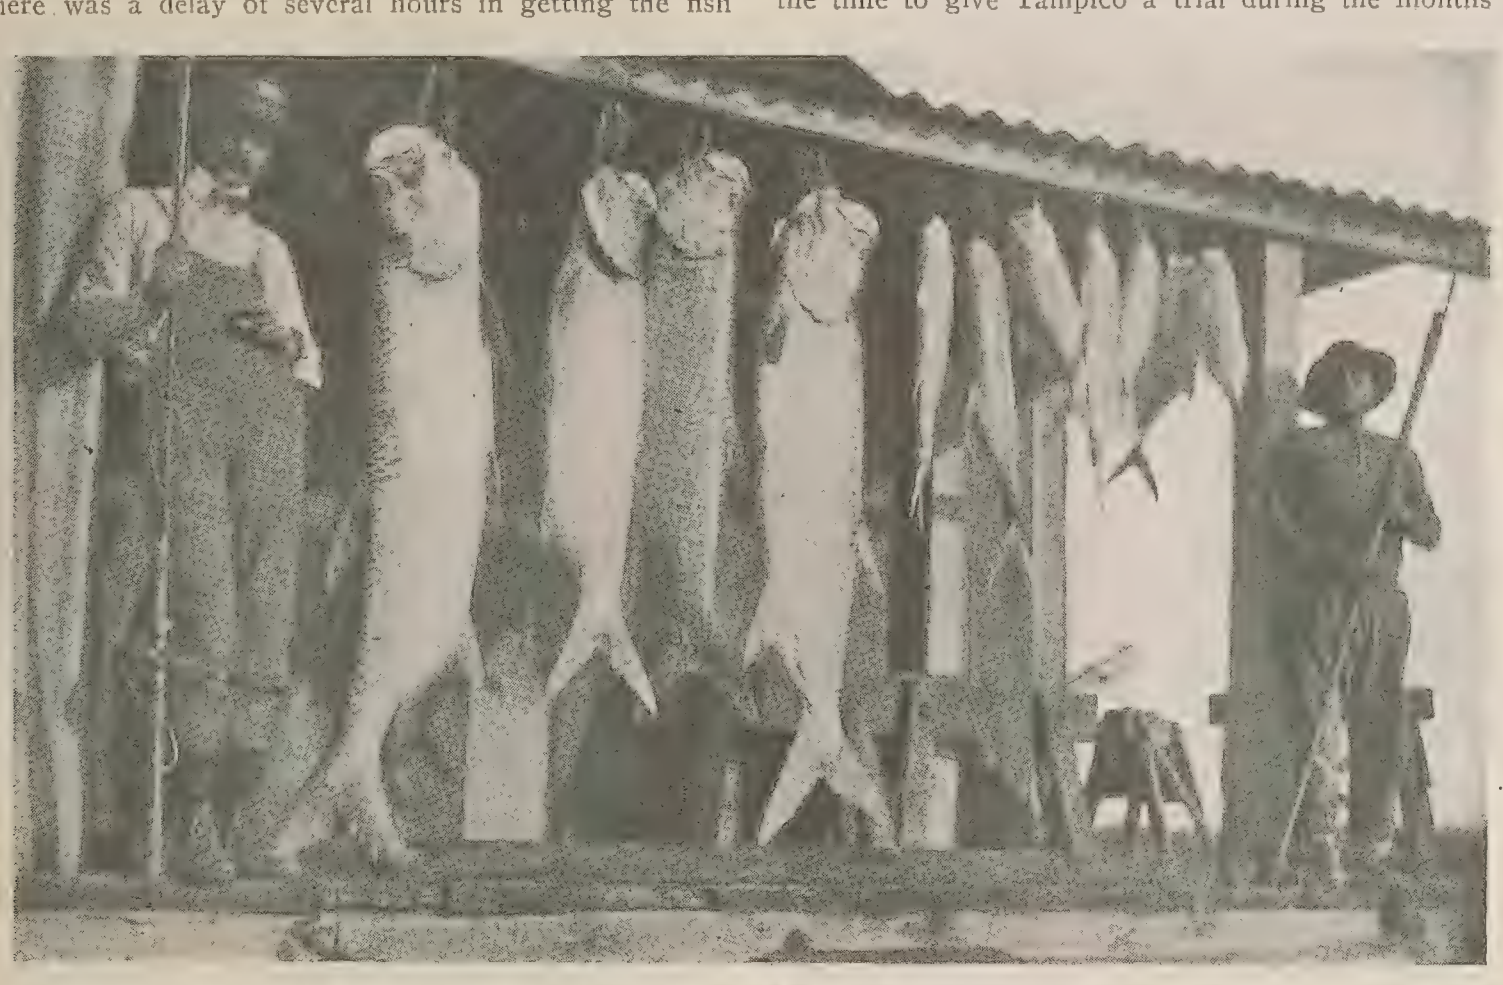
Next day I landed two out of three tarpon in the forenoon; but it blew so hard in the afternoon that I took pity on my little boatman and did not go out.

Next forenoon I was out of luck; for, in spite of two or three strikes, I failed to score, and in the afternoon I took a lady out with me, having promised to show her how to catch tarpon. The promise was a rather rash one, as the fish were not striking well, the water being

too smooth. Out of three strikes I managed to land one little fellow and one jackfish; but when trolling slowly in shallow water at the mouth of the river opposite the city, I hung a little jewfish and beached it. I guessed its weight at 45 or 50 pounds; but, when it was put on the scales it tipped them at 75 pounds. Unfortunately, I did not take the measurements, so am unable to state haw well the formula for weight applies to jewfish.

I had gone to Tampico with the intention of putting in there two solid weeks, but on the second day I received a telegram calling me to Texas on important business for the 17th, and the next day I received another stating that I was wanted in British Columbia, so had to leave on the morning of the 14th, thus giving me only five days, of which, as previously stated, I lost half a day on account of windy weather.

As the next day was to be my last, I got to work quite early and fished around "The Palms" in the forenoon, landing three big fellows and failing to hold several more. One of them was my record fish to date, measuring 6 feet 8 inches in length and 40½ inches in girth, and weighing exactly 160 pounds. The formula gives a weight of 164 pounds. As in the other case, there was a delay of several hours in getting the fish



MR. A. B. ROSS AND ONE DAY'S CATCH AT TAMPICO.
Photo by Dr. Howe.

to the scales, so it may have lost the four pounds by drying; or, perhaps, the girth measurement was not quite accurate, being made with a piece of tarpon line.

Dr. Howe took several photos of my two largest fish of this morning's catch; but they were all failures. A Mr. Sargent, of Chicago, who spent several days with me on this fishing trip, took a couple of shots at the same fish with a larger camera, and promised to send me prints therefrom, but has not yet done so. Perhaps this letter will jog his memory. If it does, and if the said prints be good ones, I shall send you one later on.

In the afternoon I went up stream some four miles to the mouth of the Tamise River, where I found many tarpon, getting six strikes and as many more bites, and landing but one. My line had become weak and failed me, thus losing a fine fish, and there was not sufficient time before sunset to put on a new one.

As the wind was blowing pretty stiffly up river, we went through a small canal over to a chain of lakes, then down the small river that flows through Tampico and empties into the Panuco, or main river, some two miles below the center of the city.

In the four and a half days I had thirty-six tarpon strikes and landed fourteen, beside the jewfish and the three jackfish previously mentioned. Had I had a strong and experienced boatman I could certainly have landed half a dozen more fish, as I had on several occasions to ease up on my small boy, and I could not trust him to gaff a fish into the boat, so had him haul them out on to the bank by the snell, generally after I had put a bullet or two into them.

On this trip I had with me Dr. Howe's gun-camera and an ample supply of films; but to my great regret all the photos taken with it before I left were failures, owing, probably, to the inexperience of the operators. Dr. Howe afterward took a number of shots at leaping tarpon, but with rather poor success. I send you three specimens thereof for illustration, if you see fit to use them. The fish were hooked by Mr. Sargent and photographed by Dr. Howe.

I secured also an excellent photograph of Mr. A. B. Ross with a 6-foot 8-inch tarpon caught earlier in the season. Its weight was only 125 pounds, which is very small for a fish of that length.

As a matter of curiosity, I would like to know how much a 6-foot 8-inch tarpon can weigh. The Tampico fishermen vow that there must have been some mistake made by Dr. Howe in weighing his 223-pound record fish, of which the length was just 6 feet 8 inches; for they say it is impossible for a fish of that length to attain such a great weight. In future the dimensions as well as the weight of all record fish should be taken.

The month of March is probably the best month in the year for fishing at Tampico, because the weather there is perfect, the thermometer ranging from 75 to 85 degrees Fahrenheit, and the heavy northers being about over.

This fishing ground is beginning to become known to sportsmen; for one day I counted seven boats, each containing a tarpon fisherman.

My friend, Dr. Howe, of Mexico City, arrived two days before I left; and Mr. Geo. Ross and two other gentlemen from the same city arrived while I was there. Mr. Farley, the taxidermist from Aransas Pass, did not go to Tampico last season, but expects to go there every winter in future.

It is probable that before next winter there will be a comfortable hotel at La Barra, mainly for the accommodation of sportsmen.

As soon as they begin to be numerous it would pay to put a small naphtha launch on the river to tow each day a fleet of boats to and from the best fishing ground, which varies with the wind and weather.

Sometimes the best sport is to be had between the outer ends of the jetties, and, again, it is to be found from seven to ten or twelve miles up river therefrom; and they say that in the neighborhood of Tamus, some nine miles above the city, there are more tarpon than at any other point on the river. Had I been able to remain the two weeks that I had counted upon, I certainly would have tried Tamus. It is conveniently located for sportsmen, as one could leave his boat there and could take the early morning train up and return just after dark by the evening train.

I strongly advise all tarpon fishermen who can spare the time to give Tampico a trial during the months of December, January, February and March. Probably December and March are best, but excellent sport can be had in January and February, and I understand that the fishing is fine in November and April or even May; but the weather is pretty hot after the middle of April and does not begin to cool off much before the middle of November. Beside, there is a little risk of fever before Dec. 1 and after April 1, although last year there was only one case of yellow fever at Tampico, and that was imported from Vera Cruz. Still, there are other fevers beside yellow fever, but there is no danger of contracting them during the four cool months, unless, perchance, one were to get caught out in the swamps after dark and let the mosquitoes bite him, in which case he would be likely to become inoculated with simple malaria.

It appears to me that the tarpon at Tampico average more in both length and pounds per foot than do those

LEAPING TARPON.
Photo by Dr. Howe.

on the Texas coast. Throwing out one little fellow that I caught, the remaining thirteen would average 6 feet in length.

Again, I am certain that the Tampico tarpon strike more voraciously than do those at Aransas, and I believe that they fight harder and jump higher. One that I had on this last trip jumped fully twelve feet high and afterward escaped, while never before had I seen a tarpon leap over ten feet high—these heights, of course, are merely estimated, but I believe they are quite accurate, because I judge the height by the length of the fish, and I can usually guess that within two or three inches.

In respect to how far tarpon travel up rivers, I have learned that many have been seen forty or fifty miles up the Panuco, and a small one was caught in a net in the Papaloapam River, where we have lately built a large bridge, about 125 miles from where it reaches the Gulf at Alvarado.

It is possible that good tarpon fishing will be found at Boca del Rio some ten or twelve miles south of Vera Cruz, where the branch line of the Vera Cruz and Pacific Railway crosses the combined mouths of the Rio Blanco and several other streams. Although I gave our assistants, who are working on the bridge there, instructions to make inquiries about tarpon, and spent three or four hours there myself last February, I have not yet learned anything very definite about the possibilities for good tarpon fishing at this locality. The boatmen informed me that there are a few tarpon in the river, but plenty of them just outside. Next November I purpose wetting a line there so as to obtain some reliable information on the subject.

At Coatzacoalcos, the eastern terminus of the Tehuantepec Railway, I do not think there will ever be good tarpon fishing, as the mouth of the river is infested with sharks. It was only a few months ago that a drunken boatman upset while crossing the river, struck out immediately for the nearer shore, and was torn to pieces before he had gone a dozen yards.

And now a few words about what I have learned concerning tarpon tackle and apparatus during the last twelve months.

The leather-butt socket for screwing on to the seat of one's chair is an excellent contrivance, and every tarpon fisherman should possess one and use it. Edward vom Hofe keeps them and charges for them, if I remember rightly, $2.50 each.

The patent handle drag offered for sale by Wm. Mills & Sons is the best thing of its kind yet evolved, although it needs a couple of improvements to make it perfect.

In the first place, the thumb screws should be taken out and replaced by ordinary screws like the others of the attachment, otherwise the skin will surely be taken off one's knuckles if the handle slips. I took this precaution before using the apparatus.

In the second place, the friction should be increased fully 100 per cent. by the insertion of washers. My handle gave an initial resistance of seven or eight pounds, which soon reduced to five pounds, which is not enough for tarpon fishing. I have since had the manufacturer increase the tension to ten pounds, but would like to be able to augment it to fifteen; and there is no reason why this cannot be done.

One great advantage of this brake is that with it no sound line can ever be broken. Another advantage is that when the fish pulls too hard it is not necessary to drop the handle and risk the skinning of one's knuckles.

I prefer to supplement this patent handle with the ordinary leather brake, so that when the fish is close to the boat I can put on more resistance than the apparatus affords, and thus stop the fish from getting any further away.

In order to prevent breakage of the line under such conditions, I double it for about twenty feet and take care to fasten it to the swivel by running the doubled line through same and fastening by a bowline knot.

The placing of this new brake on the market has incited Mr. Ed. vom Hofe to improve his patent drag, so that it can now be adjusted for any resistance up to the breaking strength of the line. I had suggested this to him several years ago, but he paid no attention to my suggestion. He has fixed one of my reels with this improved drag, and, as soon as I have had an opportunity to give it a test, I shall report upon the merits of the modification.

My tarpon fishing experience has convinced me that not only one's hands but also his legs need protection; for, when the fish pulls at right angles to the boat, one's leg gets pinched and bruised by the butt piece of the rod. To prevent this I am going to have made a pair of stiff leg-pads, each about eight inches long and six inches wide, and furnished with two broad straps to pass around the leg. The stiffening is to be effected by narrow longitudinal ribs of wood sewn into the padding.

As I am not patenting this device, anyone is at liberty to manufacture, use or sell it. Later on I shall report concerning its efficiency.

By this time I had hoped to be able to report finally upon the best kind of wire for snells, but cannot, as yet. Thus far I have tried fine steel wire (such as furnished by Ed. vom Hofe), coarse steel wire, copper, brass, phosphor-bronze and German silver, but not one of them is satisfactory. The fine steel wire soon gets too brittle, the coarse steel wire curves after being put under tension and is too stiff to bend back; the copper is too soft, the brass too brittle and weak, the phosphor-bronze, which is composed of fine twisted strands, is so refractory that it untwists at the connection, no matter how many turns may have been used, and the German silver breaks at the connection.

I have found a coarse, soft, Bessemer steel wire, which is sold in straight pieces of four feet length, and have mounted a number of hooks with this. It promises to prove satisfactory; but I cannot recommend it until after it has been tried.

The requisites for a good snell wire are as follows:

A. Straightness before being used.
B. Strength.
C. Pliability.
D. Resistance to corrosion.
E. Lightness.

The soft Bessemer steel wire has the first three properties, and on account of its comparatively large diameter has probably also the fourth; but its weight may be so great as to sink the bait too great a depth.

I am trying to arrange for a few days' tarpon fishing at Galveston next September, as I am anxious to experiment upon those, as yet, practically untried tarpon waters. If I find time to go there I shall report to you later, not only about the fishing, but also concerning the new wire and the merits of the improved brakes previously mentioned.

J. A. L. WADDELL.

Random Notes of an Angler.

The Passing of the Striped Bass.

THAT the striped bass is decreasing both in size and numbers no one who has followed the fish or observed or studied its habits, will deny.

In the memory of all of us who have used the rod a quarter of a century, the average size of the bass was in earlier days much greater than it now is, and it is no exaggeration to state that a day's catch was then at least double what it is at the present time.

The cause of this decrease cannot be attributed to overfishing with hook and line, for there are fewer anglers for it now than there were then; in fact, I believe I am safe in stating that there were double the number of bass anglers ten years ago than there are today. In fact, outside a few fishing clubs, such as the Cuttyhunk, there are but a small number of fishermen who devote much time to this species, preferring to follows others which are more certain to afford satisfactory catches. Time was when there were all along the New England coast favorite localities at which fishermen in parties of three or four made magnificent catches of this truly magnificent fish, the gamest, by all odds, of the salt water fishes of America, but they are mostly abandoned for the reason that there are no bass to be found there.

Of course the pollution of some waters in which they were formerly abundant affords a sufficient explanation of their disappearance from those localities, but they have become scarce in waters which have not been contaminated in any way.

For example, Thatcher's Island, a Government lighthouse station off Rockport, Essex County., Mass., the most eastern point of Cape Ann, used to be a famous locality for bass, and a number of enthusiastic anglers always made it their headquarters during the fishing season every year. The success they had was phenomenal, and good-sized fish, too, 15 and 20-pounders, being often taken. Those anglers have now, I think, all passed away, at any rate, I know of one that is left.

They were mostly artists and members of the theatrical profession, and many of them bore illustrious names, such as Junius Brutus Booth, John Gilbert and Thomas Barry. Like the anglers, the bass have also gone from that locality, a very few only being taken annually; in fact, one might say that the catch is merely nominal, the total number reported by the Massachusetts Commissioners of Inland Fisheries and Game for the four years prior to 1901, being only 35 caught in all the gill and sweep nets, and the pounds and weirs of Essex County! In my younger days we used to fish for the striped bass at the tide gates of the milldam between Boston and Brookline, using the scarlet ibis fly mostly, but sometimes changing to the shrimp and minnows, a sinker and float being used with the latter.

At that time the fish were so plentiful, a good catch was the rule.

They were of good size, 8 and 10-pound fish being not uncommon, and I have seen an 18-pounder taken there with a fly-rod and rather light tackle. When one remembers that the striped bass is as gamy and active as a salmon, the sport that the big fellow gave can be imagined. As the river became polluted by sewage and by the refuse of numerous mills along its course, the bass became more and more scarce, and finally they entirely disappeared from that locality.

In the Piscataqua River and in the vicinity of Biddeford Pool, Me., they were also formerly quite abundant, the Piscataqua River with its deep, cool and rapid tide being a particularly favorite abiding place with them.

The size of the fish was in that locality much greater than it is at the present time, there being records of bass weighing 52 and 70 pounds having been taken, while now a 10-pounder would surprise the angler who caught it.

In the waters of Nova Scotia I have never seen very large bass, and in the Baie des Chaleurs, where it is also found, I think it never attains anything like such a mammoth size as I have mentioned, the largest that I ever saw there weighing not over 5 pounds.

In the Baie, particularly about Chatham, they are often quite abundant, and in the Miramichi River they are taken as far up the stream as "Red Bank," but comparatively small sizes prevail. To show how great has been the decrease in numbers and size of this noble fish in our own waters, I will quote a portion of the evidence that was given at the great hearing in relation to food fishes, a report of which is given in full in Prof. Baird's U. S. report published in 1873. One witness, a Mr. Swan, stated that "About fifteen years ago, one Fourth of July, I trolled for bluefish while going out to my lobster pots and I got a striped bass that weighed 30 pounds. After I had hauled my pots I got two more, one weighing 19 and the other 21 pounds. On July 8 I went again, and after hauling my pots I cut up a little lobster and fixed my bait; that day I got eight that weighed in the aggregate 276 pounds after they were cleaned."

Nathaniel Smith said:

"There are no school bass here in the fall of the year. In old times, thirty or forty years ago, the bass were around in schools in September and would run until cold weather. I have caught them as late as Dec. 10. I would get from 1 to 200 a day. I used mackerel or menhaden for bait; I used dead bait, but of late years I fished with lobster bait. That would not answer, only when there was a heavy sea and the water was thick; I used to catch a boatload in a day in that way. I got sixteen one morning, four of which weighed 206 pounds, and the rest would weigh from 30 to 40 pounds apiece. Four or five years ago I could not catch any. The bass are very scarce now."

Mr. J. M. K. Southwick, in his argument printed in the same report, says: "At this writing, July 28, 1871, a boat is in the harbor with 9,000 pounds of bass, the result of one haul with a shore-seine, for which they will probably realize $900. One day this month one man caught with hook and line 1,000 pounds of bass in two hours! I know of a locality near Tappahannock, on the Rappahannock River, where there is good fishing for them. Have caught them there in January with troll lines, but they are most abundant in February. In February, 1867, I saw 6,000 pounds that had been caught there at one haul. There was one fish among them that weighed 80 pounds, the largest I ever saw. The smallest of this lot would probably weigh 10 pounds."

At the hearing the great weight of evidence was that the diminution in the numbers of the bass was chiefly attributable to the nets, pounds and weirs which were abundant long the shores.

Those engines of destruction continue to exist and at the present time they are looked upon with great disfavor by those who are interested in our food and game fishes.

In addition to these much stress has been laid on the rapacity of the bluefish which kill vast numbers of the menhaden and other fishes upon which the bass subsist.

But most of all the menhaden fishermen are blamed for the mischief that has been wrought; they not only capture immense quantities of the favorite food of the bass, but they also take vast numbers of the bass themselves, together with other valuable food fishes.

In the 1896 Transactions of the American Fisheries Society, there is a paper on the "Waste of Food Fishes," by L. D. Huntington, ex-president of the N. Y. Fish Commission, in which occurs the following:

"Mr. E. G. Blackford, the well-known fish dealer of Fulton Market, before same committee, stated that from his own knowledge every year those fishes which feed upon menhaden, grow more scarce, that there had been several instances which had been spoken of there of his own knowledge where the menhaden vessels have taken large schools of food fish and have brought them to market; the very large catch of 1891, just about that time of the year, was principally of weakfish. Some four or more vessels came up to Fulton Market with a cargo or quantity of at least 200,000 pounds, nearly all weakfish, and out of that 200,000 pounds about one-quarter were marketed; the balance of these cargoes was sent to the factories and rendered into oil and scrap. Mr. Blackford further stated that in his opinion the effect of the great amount of fishing that is carried on for menhaden all along the coast breaks up the schools of fish which are followed by the striped bass and bluefish, and has a tendency to make these fish seek other feeding grounds."

Now, if weakfish are destroyed in such great numbers, there can be no doubt that bass, with similar feeding habits to theirs and moving, as a rule, in the same waters, south of Cape Cod, should also be captured by the menhaden fishermen.

As for a remedy for the waste that is thus wrought, I have none to propose other than that the operations of the menhaden fishermen should be restricted to a three-mile limit from the shore. Mr. Huntington says of this:

"The indiscriminate use of the purse net by the menhaden fishermen within the three-mile limit is an abuse of the rights of all citizens. * * * There should be proper restrictions that would be just to all, to the menhaden industry, as well as to millions of hardworking citizens who depend upon the continual food fish supply for a livelihood, the many thousands who at times take fish for food for their families, the many thousands who, of choice, prefer to catch their supply of food fish from the waters adjacent to them, instead of from the market, as well as thousands who resort to the waters along our coasts for food fish as well as for recreation and health; the food fish should be protected within the three-mile limit before it is too late. If the use of the purse net was properly restricted, or prohibted within a reasonable distance from the shores, and used only in waters beyond the depth of the net used, it would go far to stop the present waste and to insure a continued supply now so seriously threatened."

Some idea of the destructiveness of the purse nets and by the menhaden fishermen may be formed when it is stated that a haul of one of them inclose about three and a half acres of water and capturing, of course, every fish within its limits.

Like the salmon, which it resembles in many respects in its habits, it comes into the fresh water rivers and ponds to spawn, and it will thrive perfectly if it is permanently restricted to them.

It is a most voracious fish and a promiscuous feeder, accepting almost any bait that is offered.

Its favorite food, however, is the herring or alewive, although it is very fond of shedder crabs, shrimp and minnows.

It seems to be attracted by gaudy colors and will take the scarlet ibis or other red and white fly in fresh or brackish water without hesitation. A bright spininng spoon or metal or natural squid is also readly taken.

The rod and tackle may be either that which is adapted to salmon fishing, or the heavier so-called bass rod, shorter and stiffer than the other and better adapted to bait-casting.

My best success has been with a split bamboo rod ten feet in length and weighing about fifteen ounces, on which I have used a multiplying reel carrying 100 yards of salmon line, the reel being placed on the grip about fifteen inches from the butt.

This tackle I have used for casting menhaden bait, for trolling with squid, spoon or eel skin, and for still fishing with float and sinker.

The tip funnel of the rod is made of cornelian and the guides are large enough to permit the line to run absolutely without friction.

In still-fishing I have found that a sinker which is barely heavy enough to carry the bait down in the flowing tide, is preferable to a heavier one, in fact, many fishermen dispense with a sinker when it can be done.

We used to have capital sport on the bridge at Wareham, Mass., using for bait either shrimp, shedder crabs or the belly of a soft-shelled clam. The tdie there flows with considerable rapidity, and on the quarter or half ebb it carried our bait and floats a considerable distance; in reeling up our lines we struck a bass at least one in three casts, which we considered was having very good success.

Mr. Robert B. Roosevelt, in his "Game Fish of the North," states that the scallop is an excellent bait early in the fall.

I have also taken many bass when using small crabs an inch or so in diameter for bait while fishing for tautog. On one occasion I took five very fine fish with this bait, and in a locality which I had no idea contained a single bass. This was in the Fore River, between Quincy and East Weymouth, Mass.

On the submerged piles of the bridge which spans that stream, are myriads of mussels upon which the tautog greedily feed.

I used the small crabs in preference to any other bait, and have always found that tautog will accept them when they will refuse everything else.

On this occasion, as I was moving my bait around which was well down toward the bottom, I felt a fierce tug quite different from the bite of the tautog and then my line was run out in a most lively manner.

I saw that I had a good fish on, but was puzzled as to its identity until after playing it a while I brought it to the landing net, when I discovered that it was a 4-pound bass.

That I was highly elated goes without saying. I supposed, however, that it was only a wanderer, and consequently had no expectation of taking any more.

Four others, however, came to my creel, and that locality became for a while an established bass station.

But before the summer was ended it came to grief, for the authorities, wishing to deepen the channel of the river in order that larger vessels and coal barges might ascend to the wharves, blasted a number of large rocks which lay at the bottom. Heavy charges of dynamite were used, and at the discharge great numbers of fish arose to the surface, killed by the concussion.

Among them were many large tautog and striped bass, one of the latter weighing 37 and another 32 pounds. I doubt very much if there are any bass there now, although there may be, but I will assure my Boston friends that there are a great many tautog left and probably there are some good-sized ones.

Casting for striped bass with the rod is really the most sportsmanlike method. Like fly-fishing, however, it requires considerable practice before one may become an adept at it. It has been described so many times that I will not enlarge upon it here. Casting without any rod is also practiced by many. The baited hook and sinker are whirled around above the fisherman's head until a proper impetus is obtained, and is then thrown as far into the ocean as possible, and is then drawn back to the fisherman, hand over hand, to be cast again and again until it is seized.

EDWARD A. SAMUELS.

[TO BE CONTINUED.]

Small Flies.

MR. FRANK M. TRAFTON, summering at Sharon, was out on Lake Massapoag the other evening, and brought home several good pickerel and a bass or two. Mr. Charles S. Robertson, of Boston, a gret lover of fly-fishing, was one of the many fishermen who were on hand at Grand Lake Stream the day the extended close-time law was off. In order to get ahead of the rest of the crowd, he and his fishing companion got up at 2 o'clock in the morning on the opening day. The moon had not set and the weather was clear; they could see to cast their flies only by the glint of the moonlight. But Mr. Robertson made the catch of his life, and that is saying a good deal. At breakfast time he had landed eighteen landlocked salmon, the united weight of which was forty-three pounds. All of these could not be kept, nor did Mr. Robertson want them. The smaller fish were returned to the water as soon as weighed. He says that never before has he had such fly-fishing. He remained for a week, and caught salmon every day, though the weather was cold and disagreeable. The fishing begun to flag by the end of the first day, as it naturally must with so many anglers whipping all the desirable water.

Fly-fishermen are much interested in the recent accounts of experts using small flies for salmon and trout in Maine. I have lately been questioned a dozen times concerning "those new flies." There is nothing new about them, except that they are being used for landlocked salmon and trout, and even sea salmon. They are on No. 8 to 12 hooks, and the only new feature is the small size. Mr. R. N. Parish caught his champion landlocked salmon at the Upper Dam the other day, weighing 12 pounds 9 ounces, on a No. 12 fly. Other experienced anglers are using small flies for both trout and salmon. Mr. Robertson, mentioned above, used smaller flies than ever at Grand Lake Stream; scarcely larger than No. 8. Bangor salmon anglers are using smaller flies. The bow of a No. 12 hook is but three-sixteenths of an inch across, and the hook itself is but one-half inch long. The whole fly, on a No. 12 hook, is almost covered by a dime, and completely hidden under a nickel. A No. 8 hook is but three-quarters of an inch long, and the bow is but a quarter of an inch across. The only question concerning these diminutive flies is the strength of the hook and snell to which it is tied. Both must be first class, and capable of standing a reasonable strain. No light fly-rod in the world will stand more than these hooks and snells will hold; say a strain of four or five pounds. Once a large fish is hooked, the elasticity of the rod, if in the hands of a skillful angler, keeps him hooked. If he makes a run, the reel takes care of that, if properly handled. The fish is carefully drawn, all the time on the elasticity of the rod, or humored with the reel when he runs, plunges or leaps, till he gives up in utter exhaustion. What greater skill than this; a ten-pound fish brought to net on a five-ounce rod, hooked on a No. 12 fly? Mr. Robertson mentions a singular experience or two. One salmon jumped squarely into the boat, when being drawn up to the net. Another plunged and went under the boat, coming up on the other side. The line was quickly passed around the bow of the boat, when the salmon leaped out of water again, striking the arm of the guide. This disengaged the hook and the salmon was free.

Pike, Pickerel, Mascalonge.

A Revised Illustration.

BY an extremely unfortunate, mortifying and regretted transposition of cuts and titles in the last issue, our well-intended effort to illustrate the characteristic markings which distinguish these three fish was rendered nugatory. We accordingly repeat the illustrations, with the titles now given as they should have been printed last week, and we trust that the correction may undo the confusion caused by the error.

The accompanying figures of heads show the characteristics that are constant in the mascalonge (which is sometimes called a big pickerel and great pike), the pike and the pickerel.

Without regard to color or other markings, each of the fishes named may be identified from the peculiarity of scale formation shown in the accompanying cuts.

The mascalonge, the pike and the pickerel have each the same number of fins, placed in the same position on each fish. The mascalonge has scales only on the upper part of cheek and gill covers, as shown in Fig. 3. The fish may be the mascalonge from the St. Lawrence River, with round brown spots on a light ground, or the mascalonge from Chautauqua Lake with blotches or splashes of brown, or it may be without spots of any kind, and it may be called Chautauqua pike, or Kentucky River or Muskingum River pike, and yet it will be a mascalonge and have scales on cheek and opercula, as shown in Fig. 3.

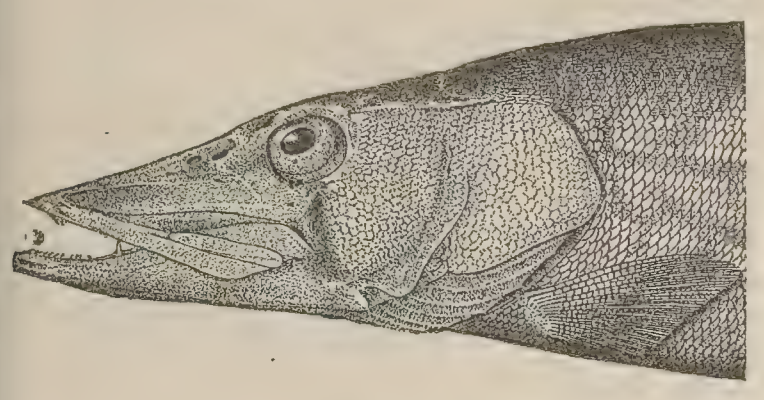

FIG. 1.—PICKEREL.
Cheeks and opercles completely scaled.

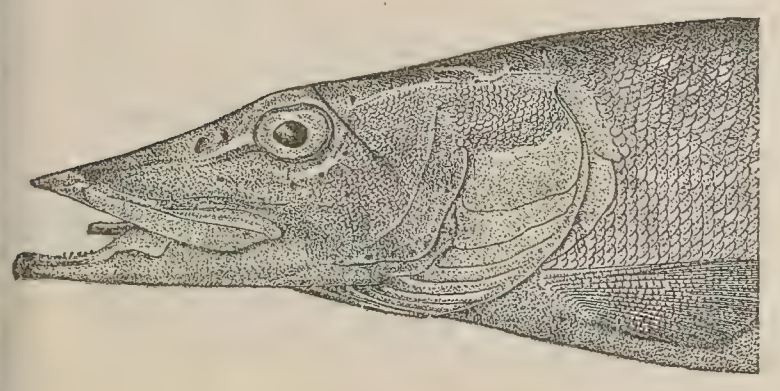

FIG. 2.—PIKE.
Cheeks scaly. Lower half of opercles naked.

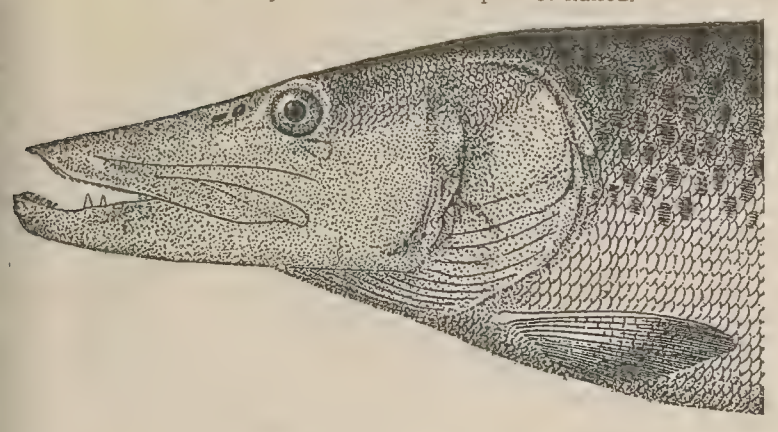

FIG. 3.—MASCALONGE.
Lower half of cheeks and opercles naked.

The pike is commonly called pickerel in New York State; there is a marked difference between the two fish. The pike grows to a weight of 50 pounds and more, as one was recorded from Ireland of 54 pounds in weight. Our pike and the European pike are the same. The cheek and gill covers of the pike shown in Fig. 2 will explain how the scales are placed; they cover the cheek and part of the gill cover. The pike is the fish sometimes called the great northern pike, although a claim was made a few years ago for this title for the unspotted mascalonge.

The pickerel, proper, is a small fish as compared with the pike, as it averages in weight from 1½ to 2½ pounds, and one of 5 pounds is a very large fish. Fig. 1 will show how the scales are placed on cheek and gill covers, extending over both.

The fish are of the same species, and exactly alike structurally, but one fish is spotted with spots that are nearly round, while the other has oblong spots, and the dark lines are more regular in the pond fish than in the river fish.

The Chautauqua Lake mascalonge, instead of having round brown spots on a light ground, has splashes of brown, quite irregular in shape, on a light ground. The Wisconsin fish, like the Ottawa River fish, is unspotted.

THERESA, N. Y., July 19.—*Editor Forest and Stream:* "Is it true there are no pickerel here?" The above question was asked me to-day by a party who had been told that I had said that the fish caught in this vicinity were not pickerel, but pike.

In answer I reached for the current number of FOREST AND STREAM and showed him the article under the heading, "Pike, Pickerel, Mascalonge" (which I had not read). In examining the illustrations given, we concluded that the names under the full-length cuts were as mixed up as is usually done by the typo. I do not claim to be an ichthyologist, nor even an angler, as FOREST AND STREAM well knows. But I could not make the head cut (mascalonge) fit only on the illustration of pickerel, which without doubt should be mascalonge; and the pike head would not go with pike (*L. lucius*), which I think must be intended for "western brook pickerel (*Esox umbrosus*)" (which I have never seen), while the head "Pickerel" would go only with the illustration "Mascalonge (*Esox nobilior*)," which should have been pickerel (*Esox recticulatus*), I think.

Only last week I had occasion to decide the identity of a mascalonge caught in Red Lake, near this village. A party of six, of which I was one, was spending the day on the lake at the Lotus Club house. About noon a man living on the lake brought some letters which he wished mailed at the village. I had seen some one trolling near his house all the morning, and asked him what luck he had fishing. He said that he had caught two "pickerel" (pike) and a thirteen-pound "muscalunge" (mascalonge). I asked him how much he would sell the mascalonge for. He said, "A dollar." I told him that I would take it. He then said that he had cleaned it all but cutting off the head. I got into his boat and went to his house. I was a little skeptical about the fish being a mascalonge (as I am not an ichthyologist nor an angler), and frankly told him so. He then brought the head of the two pickerel (pike) he had cleaned. I saw the difference between them and the head that was on the larger fish, and immediately gave him a crisp new $1 bill and took the fish, which I think was the smallest mascalonge taken from Red Lake in several years. More have been caught weighing over forty pounds than under twenty. Last year one of sixteen was taken. A few weeks ago a young friend of mine living on the lake found a dead one on the beach that measured four feet and three inches, that would have weighed nearly fifty pounds alive. I saw the lower jaw bone. The teeth were an inch long; the first tooth on the right side was gone and the bone seemed to be diseased; the fish had probably carried a trolling bait for some time. In 1882 about two hundred pike were put in Indian River here, which undoubtedly caused the extermination of the mascalonge and to a certain extent of the black bass, although there is very good bass fishing yet. A Mr. O'Harra, of Syracuse, came up from Red Lake yesterday with twenty-five good bass and "pickerel" (pike).

J. L. DAVISON.

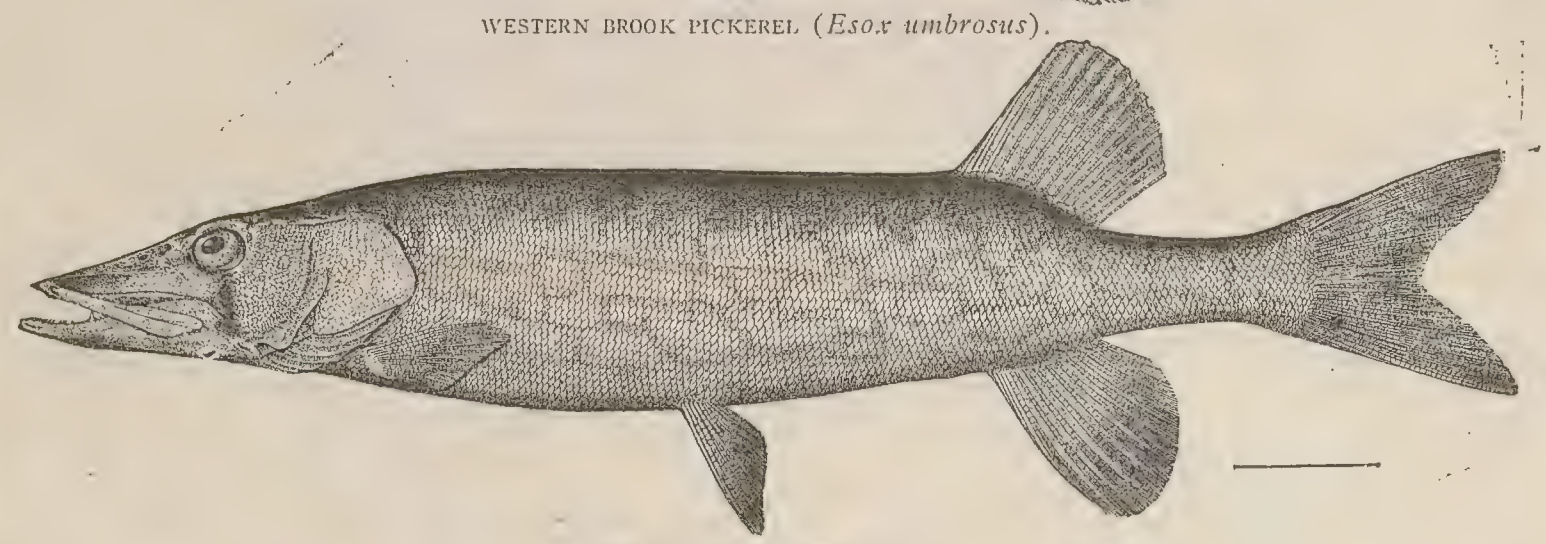
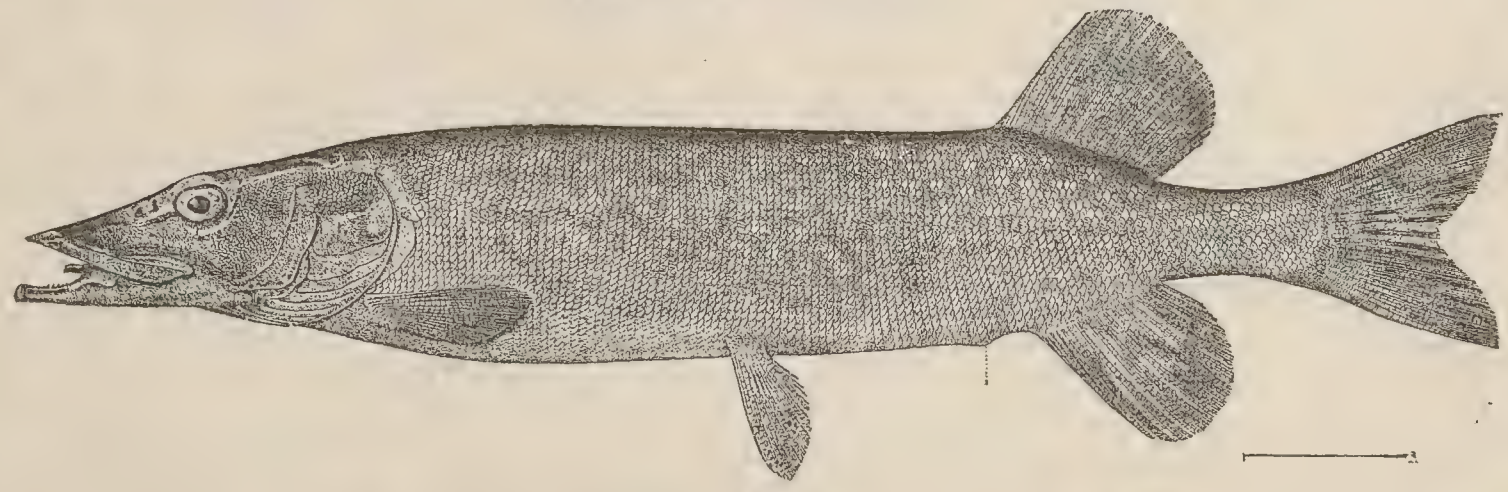
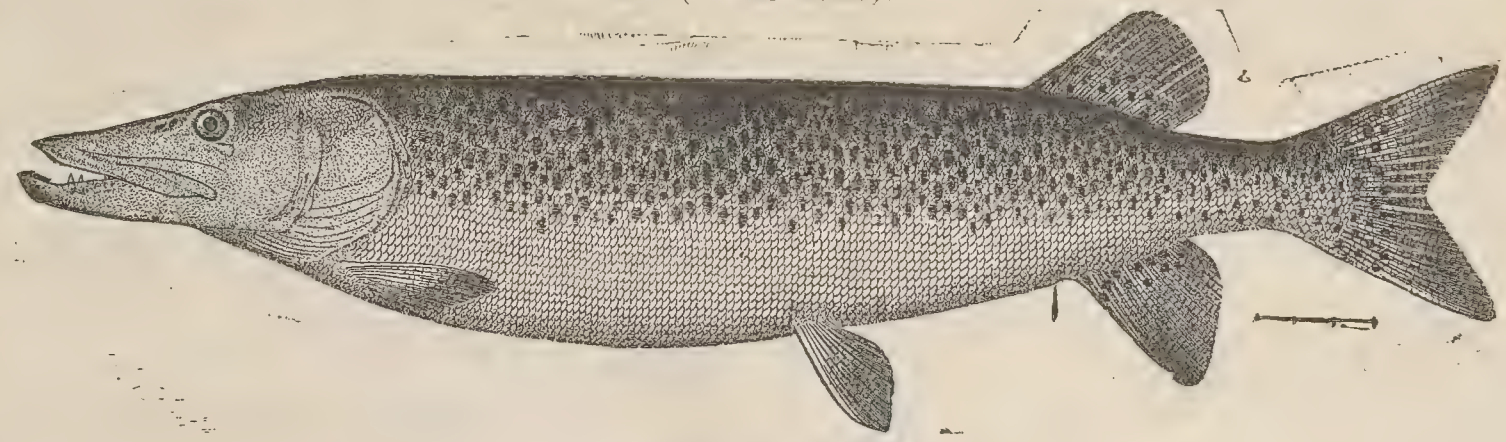
WESTERN BROOK PICKEREL (*Esox umbrosus*).



PICKEREL (*Esox recticulatus*).



PIKE (*Lucius lucius*).



MASCALONGE (*Esox nobilior*).

Jottings of a Fly-Fisher.

MANY anglers are delightful companions, not only those who can tell a good story, but others who narrate, when in congenial society, a few of their thoughts and experiences. Very few have time or inclination to write for publication, and the sporting press is thus deprived of much material of great value. I can think of no publication at present devoted exclusively to angling, but some of my friends complain of the comparatively small space given to this subject in our periodicals. This could easily be remedied by sending reports of interesting experiences to our favorite paper. Chat about rods, flies, new wrinkles, etc., would, no doubt, be welcome.

These remarks were suggested by one of the friends aforesaid, who, after complaining of the dearth of fishy news, proceeded to give me a few details of his own sport, which, if written down as told, would have made a very interesting article. How he lost two 4-pound trout, for instance. We always relish these stories of the big fish that got away.

This gentleman is one of the comparatively few who use Pennell eyed hooks for fly-fishing, but he has snells lashed to them. This seems entirely unnecessary, when a good knot would answer the purpose, and it does away with nearly every advantage possessed by the eyed hook. Convenience of storage and carriage in a small box, durability and strength, by reknotting gut when worn and using any strength of gut required for a particular occasion.

I had used these hooks for two years, both up-eyed and down-eyed. The former, Hall's eyed hooks, were made of very fine wire, and failed me several times with large fish (one glorious "rainbow" I shall never forget), as the wire sprung or broke. This may have been the fault of this particular manufacture, as in England these hooks are used for the largest chalk (limestone?) stream trout. The Pennell hooks gave perfect satisfaction when the real thing was got. Pennell's hooks should have his signature—H. Cholmondeley Pennell—on every package of 25, or box of 100. The eye is small, and the jam knot never failed me, as I left a scrap of surplus gut pointing downward in the hackle.

As dry fly-fishing is being more and more practiced every year, these hooks will probably become more popular, as there can be no doubt of their great ad-

vantage for this style of fishing. The body of the fly can be made much thinner and lighter, and if the hackle is not crushed in a book, the fly cocks up and floats much better.

Carry a little bottle of kerosene or a tin pill box of vaseline and just touch the wings and legs of the fly, if you wish to save yourself labor in drying it. This dodge will, however, ruin the bodies of many flies. I tie floaters with quill body usually, and have discovered a quill of which I expect great things. I have not tried it yet. Hackle flies float very well and are always in the proper attitude upon the water. If a soft hackle is tied or wound in front of the cock's hackle, it gives the effect of wings or of a fly just hatching out from the nymphæ case. No doubt more interest will be taken in entomology, and this certainly lends additional interest to the art of fly-fishing. The flies bred on the trout streams are most interesting and beautiful insects, and will some day be the subject of a great work fully illustrated in colors. The man to undertake it should be an artist as well as an entomologist. There are some English books on this subject, but climatic conditions are very different here, and my impression is that while we have insects closely resembling those found there, we have a greater number of species, much greater. We have, at least, two early browns, for instance, and a host of duns of various sizes and shades, which change into spinners of many colors.

Many stone flies are found, the common Eastern stone fly may be seen all through the season when the temperature is not too high. I have never seen this in great quantities, but there is a yellow stone fly that hatches out in immense numbers on some streams in May. I have reason to believe that this fly, or one like it, is found in the West and would like to hear from your Western readers on the subject, and, indeed, on that of the flies of Western trout streams generally. I think that we have many varieties of this species which only hatch out at night. One of the stone flies is known locally as the "May fly," but we have several true Ephemera approximating the May fly of Europe.

I have heard of several American grammarus, but only know one well. This rises abundantly in June.

The Ephemera are probably the most important family, with the stone flies a close second. The case worms or caddis, are very abundant of all sizes, with their houses of sticks, pebbles, sand and gravel. The big brown trout take in the big "stick bait," as it is called in Western North Carolina and Tennessee, case and all, the former can hardly prove nourishing. One becomes very much puzzled as to the life history of many species. Even in Europe they are in doubt on many points. The Ephemera are probably best understood, as they have been more carefully observed. First the egg is dropped on the water, sinks to the bottom and finds a lodgment among the sand and gravel. In a few weeks it hatches into a hungry larva, which feeds voraciously on minute organisms or particles of vegetable matter. Some observers say that it changes its shell or covering several times as it grows, but this is uncertain. It lives in this state from one to two years, then grows wing-cases, and is called a nymph. Then, when the temperature of the water is suitable and it has passed its allotted time as a lower form of life, it swims upward to the surface of the stream, splits down the back and appears as an imago or dun. Sometimes it takes wings immediately, at others it floats jauntily down its native element, until its wings dry and gain strength for a flight to the shore, where it clings to a leaf or twig. In from three to nine days it undergoes another transformation, shedding its whole outer covering and becoming a much brighter and more beautiful insect. The males may then be seen toward evening or when the weather is not too warm, dancing up and down in small swarms or companies. They are in wait for the females which are hidden in some leafy retreat, but which fly out from time to time. Courtship is not prolonged, and the female soon drops her eggs upon the stream, becomes a mere shell and dies. The stone fly drops her eggs in the same way, but the larva crawls out upon a stone to change its coat; then it seems to live under stones and gravel until its wings are fully developed, and does not undergo a second transformation.

There is so much to learn that we are discouraged sometimes, but I advise any one who has the opportunity or time to make such studies as he can. If the water is shut off from a race and he turns over the stones, he will be astonished at the numbers of larvæ of all colors and sizes (principally yellow, olive and brown). The caddis are very abundant in June. Duns of the Ephemera will be seen as early as March on some waters, and appear all through the season when the weather is sufficiently cool. They seem to be very hardy, and the early broods are the largest and darkest in color, though some of a dark brown and lead color appear later. I have seen large hatches of small duns with light blue and also with orange bodies as late as July, the former on pleasant days with cool breezes, and the latter on blustery days with gusts of wind and rattling showers.

I could go on for hours with my random and doubtless often inaccurate remarks, but will have mercy upon those who have been brave enough to follow me thus far. I would be glad to correspond with any who are interested in the subject of the flies that feed the trout, and means and ways of imitating them successfully.

I am particularly curious in regard to natural flies found in trout waters in the West. Some species seem to be quite local in their habitat, while others are common to all or nearly all, although you will find some large flies on small brooks. As a general rule, the bigger the water the larger the flies. Yet, again, many of the smaller flies will be found on the large streams. Now to conclude, tell your brother anglers what interests you, it will probably interest them, I am taking great chances. Relate your curious or rare experiences. Talk about flies is eagerly read by many anglers, I think. As a class they are as full of theories and fads as an egg is full of meat.

A fisherman I know caught and returned to the water, in one day, 300 black bass, in the presence of two witnesses. That must have been a wonderful experience. Many of our friends have at least hooked one of the immense brown trout now found in some of our rivers. The stories of these fights with light tackle, often 4-ounce rods and No. 10 or No. 12 flies, would be quite exciting. I know that the actual experience is very.

Large salmon have been landed with light trouting tackle, but these big German trout always seem to get away when hooked with small flies. About 3 pounds is the heaviest I know of as having been killed in this way. One or two 5-pound fish have succumbed to bass flies, and I heard of one weighing 8½ pounds being caught by a boy, 13 years old. But enough said.

Good luck to all the fraternity of genial fly-fishers.

BADGER HACKLE.

Fish and Fishing.

Royal and Select Anglers.

IN the mass of anecdotal matter which has appeared all over the world within the last few weeks concerning King Edward VII., it is not surprising to find lengthy reference to his career as a sportsman. Like President Roosevelt, His Majesty has an enviable record as a successful hunter of large game, though whatever may be the reason for it, we hear of few of his performances as a fisherman, compared with those of other members of the British royal family, and of many more, who, like him, are much in the public eye. Perhaps it is because he has been so very much in the public eye all his life long, that few opportunities were afforded him for the contemplation and retirement so helpful to the education of a successful angler. His eldest son, on the other hand, who has been styled "the angler-in-chief of the royal family," was so far removed from the throne in the days of his youth, that he had ample opportunities for careful study and frequent practice of the gentle art, and is recognized as quite a master of the salmon rod. As long ago as when his aunt, the Princess Louise, Duchess of Argyll, was living in Canada, the present Prince of Wales, then Prince George, enjoyed good salmon fishing while visiting her upon her salmon river, in company with his elder brother, the late Duke of Clarence. The Duchess was quite an accomplished fisherwoman when in Canada, and met with splendid success upon both the Ristigouche and the Grand Cascapedia rivers. The 54-pounder killed by her was not far from the record fish killed by rod and line in Canadian waters. She and her husband, then the Marquis of Lorne, Governor-General of Canada, erected a pretty fishing lodge for their own use, on the banks of the Grand Cascapedia. In those days the Government reserved the fishing of the waters controlled by it in the Cascapedia, for the personal use of the Governor-General and party. Now this fishing is leased for no less than $8,500 a year, including that of the estuary. On one of her fishing expeditions, H. R. H. had a very narrow escape from drowning. I think it was in the Rock Pool of the Ristigouche that the canoe in which the Princess was seated was on the point of capsizing, when one of the Indian guides leaped out of it into the water and held it upright.

Princess Louise is not the only keen fisherwoman of the British royal family. Her niece, the Duchess of Fife, one of King Edward's daughters, is an expert angler for both trout and salmon, both of which abound in the waters upon her husband's estates in Scotland.

Queen Alexander is no novice with the salmon rod, and the fact has lately been recalled, by an English sporting paper, that at the 1901 dinner of the London Fly-Fishers' Club, the late Sir Courtenay Boyle, who presided, stated that he had assisted her present Majesty in landing from the Blackwater her first salmon.

In the Highland Dee, the angling members of the royal family enjoy exceptionally fine sport, rising fish being found in some of its stretches throughout the entire season. The King is absolute proprietor of the right bank of the Balmoral water, and rents the fishing of the left bank from one of his neighbors.

When His Majesty visited Canada in 1860, every effort was made to afford him some good fishing in the Saguenay country. The late Senator David Price entertained the young prince at the famous Marguerite, but the fates were not propitious, and a few small trout were all the whole party had to boast of, beyond the experience that there is no royal road to fishing. Mr. Price hooked a large salmon and gave it to the Prince to land, but his attempt was not successful. The Prince had not had sufficient practice in salmon fishing to enable him to accomplish that most difficult of all feats to a beginner—that of landing a very large fish with a very small line. The historian of the expedition amusingly adds: "It was not for the want of advice, however; there was plenty of that. Every one called out what to do, and, as a matter of course, every one suggested a different mode from every one else, so that His Royal Highness was bewildered, and the salmon proved the truth of the old proverb, that 'in a multitude of counsellors there is safety', and, breaking the line, got clear away."

Marine Biological Station.

Every student of fish life in North Atlantic coastal streams and adjacent waters will rejoice to learn of the good work being accomplished by the comparatively new Marine Biological Station of Canada, which has just entered upon the fourth season of its operations. Its position is already established as the center of original marine and fishery researches for the Dominion of Canada, and an arrangement has been completed with Dr. C. O. Whitman, director of the Wood's Holl Biological Station, whereby an investigator's table at that station is placed at the service of a nominee from the Canadian station, in exchange for a similar courtesy extended at the latter to an American investigator. It was contemplated at the inception of the scheme for the establishment of the station, that the building should be floated to a different point each year. So fruitful a field for scientific research was found to exist, however, in Passamaquoddy Bay, near St. Andrews, N. B., that operations were continued there for two seasons, and now the staff of the station have entered upon their second year's work at Canso, on the coast of eastern Nova Scotia. Canso is a great center of the Gulf and Atlantic deep-sea fisheries, forming a connecting link between the fishing industries and marine fauna of the southern waters of the Dominion; as found in Passamaquoddy Bay, and the more northerly fisheries and fauna of the Gulf of St. Lawrence proper. The papers in course of preparation upon the work of the station are expected to be of peculiar interest. Trawling, tow-netting, dredging, line fishing and other methods of testing the neighboring sea and of procuring specimens are being adopted with great success, and experiments have been made with dynamite, for the purpose of securing accurate information as to the effect of the explosive upon schools of fish at different depths of water.

Summer Netting in the St. Lawrence.

PRIME MINISTER PARENT of Quebec, in whose department rests the control of the provincial fisheries, is nothing if not thorough and practical. The fishery department of the Dominion of Canada, with which rests the right to entirely prohibit fishing in any Canadian waters, lately asked his advice as to the propriety of enacting a partial or entire prohibitton of net fishing for two or three seasons, in that part of the St. Lawrence and Ottawa rivers extending from the foot of Lake St. Peter to the head of the Lake of Two Mountains. Before proffering any advice on the subject, Mr. Parent ordered a thorough inquiry into the matter. Mr. L. Z. Joncas, Superintendent of Fisheries, accordingly spent a fortnight going over the entire ground and taking the evidence of fishermen and others on the spot. Upon the two banks of these 140 miles of river and lake, it was found that some 270 families depended alone upon the result of the fisheries, and that the closing up of the industry for a couple of years would mean ruin and expatriation to them. It was established, however, that the principal waste of fish from these waters occurs in the months of July and August, when it is not easy to take the larger specimens, and when, consequently, millions of small and immature fish are captured and destroyed in the hot weather. Almost unanimously, these poor people urged the prohibition of netting during the months of July and August, fully realizing the fact that if the present slaughter of immature fish is persisted in there will soon be none for them to take. This recommendation will be forwarded to Ottawa, and will most likely to be acted upon. Over 10,000 pounds weight of these small fish, taken out of the waters in question, have been seized during the present season, mostly small pike-perch, bass, pike and maskinonge.

Reducing the Limit.

There is a move on foot in the Province of Ontario to reduce the limit of catches of bass and maskinonge. At present the law allows twelve bass and four maskinonge to each rod. District Overseer Thwaite, of Oshawa, recommends that the limit be reduced to eight and two, and he says that nearly all of the local overseers in his district would make it six bass and two maskinonge.

Dynamiting.

Several reports have been received of late that dynamiting was being resorted to in many of the inland waters of Canada, most of the complaints coming from the shores of the St. Lawrence. It is feared that the practice is much more general than supposed, and that it is not at all confined to poachers from the other side of the American line, though many undoubtedly cross the river at night in order to indulge in the forbidden work of destruction, under cover of the darkness. A scientific investigation into the effects of dynamite explosions upon fish life, not only upon adult fish, but upon fry, fish eggs and all other kinds of life found in the water near the spot of explosion, has been made by Dr. A. P. Knight, professor of Animal Biology, at the instance of the federal government, and his report upon his experiments is awaited with considerable interest.

A New Whitefish.

The Ontario department of fisheries was recently asked to identify a fish taken in Lake Simcoe, which resembled somewhat the common whitefish, though differing therefrom in some well-defined respects. Dr. Bensley, who made the examination, reported that "the specimen belongs to the genus *Coregonus,* but does not correspond to any of the species described by Jordan and Evermann in their 'Fishes of North and Middle America.' From *Coregonus clupeformis* it differs in the coloration, in the number of scales and in its more elongated form. The fact that it occurs in Lake Simcoe, with the common whitefish, makes it extremely probable that it belongs to a different species. Its characteristics approach more closely to those of *Coregonus labradoricus,* of which it may be a local variety. It shares with the Labrador whitefish the following characteristics: Color, dark bluish above, sides silvery, scales with dark punctulations on edges. Dimensions correspond very closely. Teeth on tongue present in both. The more important difference is in the number of the scales, of which there are 71—76 in longitudinal series in *C. labradoricus,* 83—88 in the specimen submitted. The characters are not intermediate between the common whitefish and the lake herring as has been suggested. The gill rakers, which are numerous in herring, are few in this specimen, even fewer than in the common whitefish, and the relationship of the jaws to one another is characteristically coregonoid. The occurrence of two distinct species of whitefish in such a small body of water as Lake Simcoe, is, in all probability, rendered possible by a difference in habits, or in the nature of the food. In the summer of 1899, I examined, at the St. Andrew's Marine Station, the stomachs of a number of whitefish obtained by Prof. Prince from fish caught in the northern part of Lake Huron, the contents of which were quite exceptional as whitefish food, consisting for the most part of small fish, sticklebacks and others. This is a matter of some interest, as I am told that these Lake Simcoe fish are taken with minnow bait. It is possible that the species is distributed over a certain area of the northern portion of the province, and that individuals reach a greater maximum size in the larger bodies of water. The largest specimen submitted was 13 inches in length and a little over 1 pound in weight."

E. T. D. CHAMBERS.

Maine July Fishing.

BOSTON, July 21.—At Belgrade Lakes, Me., though the trout season is considered over, twelve were caught last week. The largest, taken by A. B. A. Bradley, New York, weighed 4½ pounds. Bishop Paret, of Maryland, caught the largest bass of the week, weighing 4½ pounds. At Clearwater and Varnum lakes, near Farmington, Me., the camps are full of guests, with some fishing being done, and an occasional salmon or trout taken. Mr. E. C. Stevens, of Boston, is at Lake Dunmore, Salisbury, Vt., and the big pickerel, for which that lake is noted, may as well yield at discretion. At Moosehead Lake fishing is holding out well. A gentleman writes me, sending his letter through the care of the FOREST AND STREAM, concerning the prospects of "bass and pickerel fishing" there in late August and early September. The answer is positive, there are no bass nor pickerel in Moosehead Lake. Trout, togue and landlocked salmon are what that lake is noted for, especially brook trout fishing with the fly. All the near waters to that lake are supplied with the same sort of fish. The gentleman also desires the address of some one who will give him information concerning the chances for side trips to lakes, pond and streams, near Moosehead, and the facilities for stopping at camps away from the hotels. The chances are all that could be asked for, with side trips numerous and camps by the hundred. In fact this side trip business in the Moosehead region is one of the most common features in the late summer and autumn. The proprietor of the Kineo House will put our friend L. M. K. on the right track, even if he does not desire to stop at the hotels.

The Birches, Mooselucmaguntic Lake, now has about 100 guests, with a little fishing being done. Waldo B. Fay, of Southboro, Mass., took a salmon weighing 8 pounds there last week. Mrs. Fay got one of 4 pounds. The women anglers are making a good record at the Pool, Upper Dam. Mrs. J. S. Doane, of Boston, has made a record of two salmon in one day, on the fly, one weighing 4 pounds 3 ounces, and the other 3 pounds 4 ounces. Mrs. J. C. Dougherty, of Syracuse, N. Y., has lately caught a salmon weighing 5 pounds 3 ounces. Mr. R. N. Parish, the champion angler of that section, and who uses the wonderfully small flies, has just added to his record salmon of 9 pounds, 5 pounds 14 ounces, 3 pounds 11 ounces, 3 pounds 10 ounces, 3 pounds 10 ounces, and 3 pounds 2 ounces. The Rangeley Lake House is full of summer guests, and still angling is not wholly neglected. Mr. E. E. Allen, of Watertown, Mass., caught 10 pounds of salmon in one day's fishing last week. Mrs. J. H. Tower, of North Weymouth, Mass., caught a trout of 3½ pounds one day last week. The same day Mrs. L. B. Curtis, of the same town, landed a salmon of 3¼ pounds.

SPECIAL.

Massachusetts Fish and Game.

IT seems timely now that mid-summer is here and the trout season is passed in the four western counties, and within a few weeks of its termination in the rest of the State, while the hunting season is yet more than two months in the future, to take a glimpse at the fish and game conditions in this State, so far as that can be done from observations already made. A consideration of these matters may be all the more interesting at this time because it is not so long ago when there were grave doubts as to the feasibility of securing anything like desirable conditions in Massachusetts, so far as fish and game are concerned.

FOREST AND STREAM has already published more or less this year regarding the abundance of trout in the streams of this State, and therefore many of its readers will not be surprised that a prominent member of the Legislature became very enthusiastic a few days ago in discussing the condition in the streams in and near his town. Indeed, he declared with much positiveness that in some of those streams, which were practically barren of fish life three years ago, there is now better fishing than might be found in many of the brooks of northern New England. Naturally, he felt a pride and satisfaction in this, since he personally obtained the trout and stocked the brooks with them.

Mr. George Pogue, of Grafton, writing on July 15, made the following statement: "The trout fry we had are doing fine, and in the brooks stocked here a few years ago there have been some nice fish caught in one stream. A friend of mine caught eight fine ones one morning, which weighed from 14 ounces to 1¼ pounds, * * * and there haven't been any trout caught in the same brook for years. * * * We are beginning to think that the Fish Commission is doing a good work."

Statements like the above might be multiplied, and the chief difference of opinion regarding trout in this State is as to what the outcome may be in Berkshire county, where there is no protection either as to the catching or sale of trout of any size. The result of non-protection will be, of course, the catching of everything in the shape of trout that may be big enough to take a hook, and some believe that this may have a bad effect on the streams, in making it impossible to have trout of reasonable size in them. Some contend that trout will not grow much above six inches in the mountain streams of Berkshire, while others hold a contrary opinion and furnish facts to maintain it. A citizen of Berkshire, who is interested in this question, writing under date of July 12, made the following statement, which speaks for itself, and seems to indicate that there is more than the possibility of trout attaining fair size in the Berkshire brooks, declarations to the contrary notwithstanding:

"While out at So. Williamstown to-day I fished for trout for a little while in the New Ashford Stream, and out of one hole in about three minutes I caught three trout, each weighing one-half pound, and measuring eleven inches in length. And still they say there is no trout over six inches in length in Berkshire."

The most interest, however, attaches to the outlook for game next fall, when the shooting season opens on the first of October, and if the information which comes from all sections of the State can be relied upon as a basis for forming a correct judgment, it is undoubtedly true that the game conditions this year will far surpass anything seen in this State for many seasons. It is practicable to quote only a few of the many statements which have come to the Fish and Game Commission, all of which are precisely of the same tenor as those quoted below.

Mr. W. N. Prentiss, of Milford, in the central part of the State, who is a very keen observer, writing on July 4, says: "Quail are very plenty. As I sit here I can see three old cocks on the walls in as many directions, not one over ten rods from the house. * * * I have seen several broods of young partridge. There are at least two broods of pheasants on the golf links, about a half a mile from here, and the caretaker of the club tells me he sees them nearly every day. There is a deer in this neighborhood, but the dogs drive it more or less (it will be less if I catch them at it)."

Deputy Commissioner John F. Luman, of Palmer, who has been over nearly all of the four western counties, writing on July 13, makes the following remarks concerning the outlook for game in the western part of the State: "From every quarter comes the report that birds never were so plentiful. Big sport is in store for this fall. All compliment the State Commissioners on their endeavors to make good hunting and fishing." Writing on July 7, he said: "The woods and covers are filled with partridge, and you cannot go out in any direction in the country but you can see and hear the familiar Bob White. Hunters whom I have spoken with about the matter all say that this year promises to be a record breaker for all kinds of birds."

Mr. Henry A. Mower, of Worcester, in a letter dated July 15, says: "I was trout fishing July 4 and found three broods of young partridge. The partridge were all good size and apparently quite large broods. One nest I saw this year had 15 eggs in it, one 14 and one 11. From all reports I get, it bids fair for sport this fall."

Mr. Pogue, to whom reference has previously been made, writes: "There seems to be more birds than for years—especially partridge and quail, I mean."

Statements of this kind could be multiplied indefinitely, and they certainly indicate a most desirable outlook for the hunters and likewise demonstrate the wisdom of good laws well enforced.

J. W. COLLINS.

The American Fisheries Society.

THE thirty-first annual meeting of the American Fisheries Society will be held at Put-in-Bay, Ohio, Aug. 5, 6 and 7.

United States Fish Commissioner Bowers writes: "In connection with the meeting of the American Fisheries Society at Put-in-Bay, I shall be pleased to place at your service the steamer Shearwater for the purpose of taking the members of the Society about the islands, and also to assist in any other way that will contribute to the success of the meeting."

Put-in-Bay enjoys special advantages as to hotel accommodations, easy access, and, being an island in Lake Erie, a most cool and comfortable place. The waters surrounding the island are among the best for black bass fishing in America.

Correspondence intended for the president or secretary, mailed too late to reach their regular post office address before Aug. 1, should be mailed in care of Hotel Victory, Put-in-Bay, Ohio.

Every member is urged to be present at this meeting, and to bring as many candidates or names for membership as possible. Membership fee only one dollar per year. Intending members are invited to be present at this meeting.

The officers are: E. E. Bryant, President, Madison, Wis.; Geo. F. Peabody, Secretary, Appleton, Wis.

Prince's Bay Weakfishing.

PRINCE'S BAY, Staten Island, N. Y., July 18.—*Editor Forest and Stream:* I have noticed lately short notices of "Fishing Near New York," and as far as Staten Island was concerned the news only reached as far as Gifford's, but why not report about the weakfishing a little further on—say, Prince's Bay, for instance? We have just as good fishing here as anywhere just at present. Last evening I saw a man with a few flounders and some fine bluefish, and I asked him where he caught them. He said: "I just went out and got them off the 'bunker' boat (menhaden fisherman); they have got a ton of weakfish; going to take them to the city and sell them." And this is not one case, but the bay is full of sloops hauling their nets every day, catching barrels of food fish in an illegitimate manner. They sell the menhaden to fishing smacks and oil factories, but the weakfish and food fish in general they take off to market. If any one wants to get a good mess of fish, just come to Prince's Bay, S. I., and row out to the menhaden sloops and they will give you all you want to take home at a very low price. They are good-hearted fellows, kind and generous, and seem to want the good will of the people, but I am afraid before this goes to print that it will be over. I cannot say, as the workings of justice are sometimes peculiar. ***

Exhibition of Fishery at St. Petersburg.

CONSUL-GENERAL W. R. HOLLOWAY writes from St. Petersburg, June 21: "The official report of the International Exhibition of Fishery, which was held at St. Petersburg, Jan. 28 to March 9, 1902, has just been published. The countries participating were Russia and Finland, Austria, Belgium, Germany, Denmark, Egypt, India, Spain, Italy, Monaco, Norway, Persia, Roumania, Siam, France, Sweden and Japan, the first making much the best exhibit; but as a whole, the exhibit was not up to the standard of previous ones, the participants, Russia excepted, taking little or no pains to make a creditable display. Belgium was the onl ycountry that sent live fish."

European Grayling in America.

Editor Forest and Stream:

With present advanced knowledge of fishculture, there is no reason why the European grayling should not be naturalized here. With rainbow trout and grayling in the lower portions of our large trout streams, good fly-fishing would be possible until very cold weather. See the success of the rainbows in the Esopus and other large streams.

THEODORE GORDON.

Fishing on the Delaware.

FOR the past month or more the fishing on portions of the Delaware River has been very unsatisfactory on account of the heavy rains. Recently, however, conditions have changed and good fishing for bass and wall-eyed pike is regarded as assured.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 8-11.—Toronto, Can.—Twelfth annual show of the Toronto Industrial Exposition. Fred Jacobi, Sec'y.

Oct. 7-9.—Danbury, Conn.—Danbury Agricultural Society's show. John W. Bacon, Treas.

Oct. 8-11.—Dallas, Tex.—Fifth annual show of the Texas Kennel Club. Geo. W. Clayton, Supt.

Oct. 21-24.—Frederick, Md.—Frederick County Agricultural Society's annual bench show. J. Roger McSherry, Supt.

Oct. 21-24.—New York.—Ladies' Kennel Association of America's show. Miss M. K. Bird, Westbury, L. I., Hon. Sec'y.

Nov. 26-29.—Philadelphia.—Philadelphia Dog Show Association's show. M. A. Viti, Sec'y.

FIELD TRIALS.

Aug. 19.—Emmetsburg, Ia.—Iowa Field Trial Association's (member of the American Championship Club) fifth annual trials. Louis Stuehmer, Sec'y, Emmetsburg, Ia.

Aug. 26.—Salem, S. D.—South Dakota Field Trial Association's (member of the American Championship Club) third annual trials. E. H. Gregory, Sioux Falls, S. D.

Sept. 2.—Inaugural trials of the Minnesota-North Dakota Field Trial Association. Dr. W. A. Moore, Sec'y, St. Paul, Minn.

Sept. 4.—Carman, Man.—Sixteenth annual trials of the Manitoba Field Trials Club. Eric Hamber, Sec'y, Winnipeg.

Sept. 11.——, Man.—Fifth annual trials of the Brandon Kennel Club. Dr. H. James Elliott, Sec'y, Brandon, Man.

Sept. 11.—O'Neill, Neb.—Nebraska Field Trial Association's inaugural chicken trials. M. H. McCarthy, Sec'y.

Oct. 20.——, ——.—Western Field Trial Association's second annual trials. C. W. Buttles, Sec'y, Kansas City.

Oct. 27.—Paris, Mo.—Missouri Field Trial Association's (member of the American Championship Club), sixth annual trials. L. S. Eddins, Sec'y, Sedalia, Mo.

Oct. 27.—Washington C. O., Ohio.—Monongahela Field Trial Club's field trials. A. C. Peterson, Sec'y.

Oct. 28.—Whitby Island, Wash.—Pacific Northwest Field Trials F. R. Atkins, Sec'y, Seattle, Wash.

Nov. 3.—Robinson, Ill.—Illinois Field Trial Association's (member of the American Championship Club) fourth annual trials. W. R. Green, Sec'y, Marshall, Ill.

Nov. 3.—Lake View, Mich.—Michigan Field Trial Association's (member of the American Championship Club) fifth annual trials. C. D. Stuart, Sec'y, Benton Harbor, Mich.

Nov. 10.—Bicknell, Ind.—Independent Field Trial Club's (member of the American Championship Club) fourth annual trials. H. S. Humphrey, Sec'y, Indianapolis, Ind.

Nov. 11.—Hampton, Conn.—Connecticut Field Trial Club's trials. F. W. Smith, Sec'y, New Haven.

Nov. 10.—Ruthven, Ont.—North American Field Trial Association's (member of the American Championship Club) fourth annual trials. Richard Bangham, Sec'y, Windsor, Ont.

Nov. 11.—St. Joachim, Ont.—International Field Trial Club's fourteenth annual trials. W. B. Wells, Hon. Sec'y.

Nov. 17.—Glascow, Ky.—Kentucky Field Trial Club's (member of the American Championship Club) third annual trials. F. W. Samuel, Sec'y, Louisville, Ky.

Nov. 18.—Ruthven, Ont.—Fourth annual trials of the North American Field Trial Club. Alfred Wigle, Sec'y, Windsor, Ont.

Nov. 20.—Manor, L. I.—Pointer Club of America's (member of the American Championship Club) second annual trials. R. E. Westlake, Sec'y, Scranton, Pa.

Nov. 24.—Washington C. H., Ohio.—Ohio Field Trial Association's (member of the American Championship Club) fifth annual trials. C. E. Baughn, Sec'y.

Dec. 1.—Washington C. H., Ohio.—American Championship Field Trial Club's second annual trials. Chas. B. Cooke, Sec'y, Richmond, Va.

Dec. 1.——, —. —.—Interstate Championship Field Trial Association's second annual trials. C. D. Cooke, Sec'y.

Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

Canine Elegies and Epitaphs.

READERS are invited to send for this column any epitaph or elegy of departed dogs of which they may have knowledge. We continue the series from last week:

VIII.—Elegy on a Mad Dog.

Good people, all of every sort,
Give ear unto my song;
And if you find it wondrous short,
It cannot hold you long.

In Islington there was a man,
Of whom the world might say
That still a godly race he ran,
Whene'er he went to pray.

A kind and gentle heart he had,
To comfort friends and foes;
The naked every day he clad,
When he put on his clothes.

And in that town a dog was found,
As many dogs there be,
Both mongrel, puppy, whelp and hound,
And curs of low degree.

This dog and man at first were friends;
But when a pique began,
The dog, to gain his private ends,
Went mad and bit the man.

Around from all the neighboring streets
The wondering neighbors ran,
And swore the dog had lost his wits,
To bite so good a man.

The wound it seemed both sore and sad
To every Christian eye:
And while they swore the dog was mad,
They swore the man would die.

But soon a wonder came to light,
That showed the rogues they lied:
The man recovered of the bite;
The dog it was that died.

—Oliver Goldsmith.

IX.—Mad Dog.

(From the Chicago Herald.)

A dog goes trotting down the street;
"He's mad! He's mad!" they cry;
His temper may be mild and sweet,
His aspirations high;

He may be out to take the air,
But seven women see him there,
And rush to save their loved ones where
The monster saunters by.

He pauses, wondering what is wrong:
"He's mad! He's mad!" they shout;
A fool or two now comes along
And wildly dance about;
The children in their terror bawl—
"Mad dog! Mad dog!" the women call.
The culprit looks at each and all,
And backs away in doubt.

A boy with one suspender on
Runs in and throws a brick;
A hired man swoops o'er a lawn,
Armed with an ugly stick!
The gathering hoodlums wildly whoop,
The dog permits his tail to droop,
And, turning, tries to loop the loop
Upon the double quick.

They chase him through a vacant lot,
They raise the hue and cry,
And now and then a random shot
Makes dust and gravel fly;
Wild-eyed, he runs with all his might,
And nearly dead with sudden fright,
He hears them yell: "He's mad! He'll bite!"
And vaguely wonders why.

A dog lies dead beside the track;
One foot is shot away,
Another bullet broke his back—
There's little more to say.
A score of trembling mothers raise
Their eyes to heaven, giving praise
To Him "who in mysterious ways
Has shown his love this day."

X.—Rover.

(On a tablet in Ipswich, England.)

Poor Rover's dead;
His loss deplore,
Lament his early fall;
Pity he didn't die before—
Thank God, he died at all.

Reason, or What?

UP on the corner of the postoffice, with his back against an electric light pole, sits a blind old man. His sole companions are two small dogs, and his vocation is the soliciting of alms with the use of a dilapidated street organ and a wretched appearance.

I was standing in the postoffice yesterday at noon, and through the window saw him put one of the dogs in his box, rise to his feet and come tottering toward the postoffice door, his little dog Fannie preceding him and tugging at her chain with all her little might. She led him straight to the delivery window, and as soon as the clerk had informed him there was no mail, the little thing turned and led him back through the door and to his seat on the sidewalk. I asked the clerk how the little dog knew where her master wished to go. Her answer was—"He tells her." She further said that Fannie would slacken her chain when she came to the curbing or other stumbling blocks, and that was a sign to her master of some obstruction or uneven condition of his path. While we were talking the old man got up again and tottered off, Fannie tugging at her chain as before. I followed, and the little dog went straight to a restaurant, where she lay at her master's feet while he partook of soup. G. W. CUNNINGHAM.

F. O. De Luze.

The long-time treasurer of the Westminster Kennel Club, Francis Ogden De Luze, died on July 17, at his home at Southampton, L. I. He was 66 years old. He also belonged to the Knickerbocker, Metropolitan and Union clubs, the Downtown Association, the New York Yacht Club, the New York Whist Club and the South Side Sportsmen's Club of Long Island. He was the senior member of the firm of F. O. De Luze & Co., of 18 South William Street. He is survived by a widow and two daughters.

A Fisherman's Boy.

Down on the string-piece perhaps you'll find him,
Sturdy and brave and brown,
Leaving the world and its cares behind him,
Up in the fishing town;
Over and over his old hooks baiting,
Just for a flounder or two in waiting.

If he's not there, then he's in his glory,
Off in the outer bay,—
Paddling about in a patched-up dory
Half of a summer's day;
Proudest of captains and crews together,
Gathering cargoes in any weather.

Out before daylight in every season,
Down to the waterside,
Truly forecasting with sailors' reason
Weather, and wind, and tide;
Happy, contented and glad sea-rover,
Living the days of his grandsires over.

—Youth's Companion.

One of Washington's noted fishermen is Major "Dick" Sylvester, the Superintendent of Police for Washington and president of the National Association of Chiefs of Police.

The Major went fishing a few days ago and returned with a 5-pound black bass, which he sent to the President with his compliments.

Two of the Major's friends heard of his catch and asked about it a few days later when they were fishing at the same place. They met a country boy and said: "Is there good fishing up here?"

"Yep," replied the boy, "it's fair. Major Dick was up last week fishin'."

"He caught a 5-pound bass, I understand," observed one of the party, "and gave it to the President."

"I dunno nothin' about his givin' it to the President," the boy said, "but gran'pap, he caught the fish."

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

JULY.

24-26. Hull-Massachusetts, midsummer series, Y. R. A., open, Hull, Boston Harbor.
26. Quincy, club, Quincy Bay, Boston Harbor.
26. Winthrop, club, Winthrop, Boston Harbor.
26. Duxbury, club, Duxbury, Massachusetts Bay.
26 to Aug. 2. Corinthian, annual cruise, from Delaware River to Long Island Sound.
26. Beverly, third Cor., Mon. Beach, Buzzard's Bay.
26. Manhasset Bay, club, Port Washington, Long Island Sound.
26. Beverly, third Corinthian, Monument Beach, Buzzard's Bay.
26. Mosquito Fleet, club, City Point, Boston Harbor.
26. Atlantic, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
26. Corinthian, club championship, Marblehead, Mass. Bay.
26. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
26. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
26. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
28. Wollaston, M. Y. R. A., open, Quincy Bay, Boston Harbor.
28-29. Boston Y. R. A., open, Marblehead, Massachusetts Bay.
29, 31 and Aug. 2. Kennebec, commodore's cup series, Bath, Me.
30-31. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Larchmont Y. C. Race Week.

LARCHMONT, LONG ISLAND SOUND.

July 19-26.

FORTY-SEVEN boats started in the different classes on Saturday, July 19, the opening day of Larchmont race week. The strong wind that prevailed throughout the race made the contests exciting and interesting.

The preparatory signal was given from the committee boat at 11:30. At this time the wind was blowing about fifteen knots from the E.N.E. Triangular courses were selected. The course for the 70-footers, schooners and special class (cutter Isolde and schooner Katrina) was thirty miles, twice around a fifteen-mile triangle. The first leg was to windward, E. ¾ N. 6 miles; the second leg a run, S.W. ⅝ W. 6 miles, and the third leg a close reach, N.N.W. 3 miles. The boats in classes K, L, M and N sailed twice over an 11-mile tringle, and the rest of the boats went twice over a 5½-mile triangle.

Five minutes after the preparatory signal, at 11:35, the 70-footers were started. Rainbow was first away, some 30s. after the gun; next came Mineola, and Yankee last; both boats were handicapped by over a minute. These boats were swinging club topsails, and in the hard wind were moving very fast. Mineola began to cut down Rainbow's lead, and after a pretty bit of sailing rounded the weather mark first. It was a run to the next mark at the mouth of Hempstead Harbor. Mineola carried a balloon jib in addition to her spinnaker, the other two boats were content, however, without the big sail. Mineola increased her lead on this leg, and Yankee closed up on Rainbow. After gybing around the second mark it was a reach across the Sound, with the wind about abeam. Mineola and Rainbow tried carrying small jib topsails, but soon took them in. The times at the end of the first round were:

Mineola	1 16 05	Yankee	1 18 58
Rainbow	1 18 35		

The boats now hauled on the wind again for the second round. Mineola continued to increase her lead. The race was easily hers, and it was now a contest between Rainbow and Yankee. Small spinnakers were carried on the run across, Yankee being close up on Rainbow, but could not seem to pass her. Mineola won by over 5m.

The schooners and the special class started at 11:40. Elmina was first away in her class; Muriel was over a minute and a half late, while Quisetta was over 8m. behind. These boats also carried club topsails, but on board Elmina working topsails were substituted, and she seemed to do better under reduced canvas. It was Elmina's race from the start, and on the second round she increased her lead and finished a winner by 10m. 25s.

In the special race between Isolde and Katrina, the latter was to allow the former 8m. Isolde, however, found the weather just to her liking, and beat Katrina boat for boat over 10m.

The 43-footers were started at 11:50; just before this time Dorwina carried away one of her peak halliard blocks and was unable to start. Mira and Effort were the only starters, and Effort had matters her own way and won easily.

Leda as usual won in her class, beating Spasm and Possum without any difficulty.

Five boats started in class N, and Alerion won, after a very close race by 7s. At the end of the first round Mimosa was 1m. 30s. in the lead, but on the second round Alerion passed her and came in first. Empronzi carried away her mast and was towed into the harbor by the steam yacht Helenita.

Good sport was seen in the raceabout class, eight boats starting, and at the end of the first round Mavis was 43s. ahead, with Whistlewing second. On the second round Whistlewing passed Mavis on the second leg and won by 15s.

Three boats started in the class for Larchmont 21-footers, but only one boat finished. Dorothy was dismasted and Houri did not finish. The summary:

	Finish.	Elapsed.
Sloops—Class H—70 to 80ft. Racing Length—Start, 11:35.		
Mineola, August Belmont	2 57 56	3 19 56
Rainbow, Cornelius Vanderbilt	3 00 07	3 22 07
Yankee, J. R. Maxwell	3 00 44	3 25 44
Schooners—Class D—65 to 75ft. Racing Length—Start, 11:40.		
Elmina, F. F. Brewster	3 19 45	3 39 45
Muriel, Charles Smithers	3 30 10	3 50 10
Quissetta, S. C. Darks	3 47 30	4 07 30
Special Class—Start, 11:40.		
Katrina, J. B. Ford	3 35 16	3 55 16
Isolde, F. M. Hoyt	3 25 12	3 45 12
Sloops—Class L—36 to 43ft. Racing Length—Start, 11:50.		
Effort, F. M. Smith	2 52 56	3 02 56
Mira, C. L. Poor	3 05 42	3 15 42
Corrected time, Mira, 3.11.02.		
Sloops—Class M—30 to 36ft. Racing Length—Start, 11:55.		
Leda, H. L. Maxwell	3 04 30	3 09 30
Possum, E. S. Ballou	3 24 56	3 29 56
Spasm, E. D. King	3 10 07	3 15 07
Corrected time: Possum, 3.20.14; Leda, 3.09.09.		
Sloops—Class N—25 to 30ft. Racing Length—Start, 12:00.		
Mimosa, Trenor L. Park	3 29 57	3 29 57
Alerion, A. H. Alker	3 29 50	3 29 50
Marguerite, O. H. Jenning	3 32 57	3 32 57
Iroquois, J. C. Ayer	Withdrew.	
Enpronzi, Alfred Peats	Disabled.	
Raceabouts—Start, 12:05.		
Rogue, A. B. Alley	2 17 03	2 12 03
Whistlewing, H. M. Crane	2 03 51	1 58 51
Scamp, A. Pirie	2 10 23	2 05 23
Mavis, G. L. Pirie	2 01 07	1 56 07
Sis, F. T. Bedford, Jr.	2 15 16	2 10 16
Jolly Roger, T. B. Bleecker	2 09 20	2 04 20
Hobo, Trenor L. Park	2 09 35	2 04 25
Indian, J. R. Maxwell, Jr.	Withdrew.	
Larchmont 21-footers—Start, 12:05.		
Adelaide, J. J. Dwyer	2 09 45	2 04 45
Houri, J. H. Esser	Withdrew.	
Dorothy, H. T. Spence	Disabled.	
Sloops—Class P—21 to 25ft. Racing Length—Start, 12:05.		
Rochelle, F. J. Gould	2 02 29	1 57 29
Chingachgook, E. A. Stevens	2 08 45	2 03 45
Snapper, A. B. Alley	2 36 03	2 31 03
Sloops—Class Q—18 to 21ft. Racing Length—Start, 12:10.		
Quoc, A. D. Tappan	Withdrew.	
Gazabo, N. P. Vulte	2 35 17	2 25 17
Sloops—Class R—Under 18ft. Racing Length—Start, 12:10.		
Cricket, H. C. Pryer	2 21 23	2 14 23
Flim Flam, A. D. Prince	2 50 43	2 40 43
Microbe	Withdrew.	
Manhasset Raceabouts—Start, 12:10.		
Lambkin, S. W. Roach	Disqualified.	
Firefly, Guy Standing	2 41 35	2 31 35
Mist, J. W. Alker	2 50 52	2 40 52
Arizona, G. A. Corry	2 59 32	2 49 52
New Rochelle Raceabouts—Start, 12:10.		
Caper, P. L. Howard	2 52 21	2 42 21
Deuce, L. D. Huntington, Jr.	2 44 30	2 34 30
Ace, W. N. Baker, Jr.	2 41 50	2 31 50
Knave, R. N. Baker	2 38 00	2 28 00
Ardsley One-Design Class—Start, 12:10.		
Ping Pong, Denning & Campbell	2 53 55	2 43 55
Midget, Edwin Gould	2 53 10	2 43 10

The winners were Mineola, Elmina, Isolde, Effort, Leda, Alerion, Whistlewing, Adelaide, Rochelle, Gazabo, Cricket, Firefly, Knave and Midget.

New York Y. C. Meeting.

THE fourth general meeting of the New York Y. C. was held at the club house on West Forty-fourth street on Thursday afternoon, July 17. Vice-Com. Frederick G. Bourne presided, and there was a very fair number of yacht owners present. Aside from the general routine business transacted, a resolution was considered on changing Chapter I of the by-laws so as to make foreign members and members absent from the United States pay the usual dues, from which they have been exempt up to the present time. This amendment will come up for a final vote at the October meeting. The following members were elected: Frank W. McCullough, Capt. George C. Thorpe, U. S. M. C.; Read-Admiral Henry L. Howison, U. S. N.; Benjamin Seymour Ginniss, Naval Cadet Edward C. S. Parker, U. S. N.; Naval Cadet William Lee Pryor, U. S. N.; W. T. Helms, chaplain, U. S. N.; Sidney Dillon Ripley, W. C. Taylor, David L. Whittemore, Paymaster John H. Merriam, U. S. N.; Lieut.-Commander Frank A. Wilmer, U. S. N.; Lieut. Albert M. Beecher, U. S. N.; Lieut. Walter J. Manion, U. S. N.; Naval Cadet George Blair, U. S. N.; Surgeon Oliver D. Norton, U. S. N.; Alan W. Wood, Harold J. Pratt, George D. Pratt, Theodore D. Buhl, Charles M. Schwab, Surgeon Frank Anderson, U. S. N.; Lieut. Charles F. Preston, U. S. N., and Surgeon P. M. Wheeler, U. S. N.

Manhasset Bay Y. C.

PORT WASHINGTON, LONG ISLAND SOUND.

Saturday, July 19.

AFTER finishing the race at Larchmont, the Manhasset Bay raceabouts returned to Port Washington and sailed another race under the auspices of their own club over the inside course. Com. Stephen W. Roache's boat Lambkin, sailed by Mr. W. Swan, was the winner. The summary, start 3:40:

	Finish.	Elapsed.
Lambkin, S. W. Roache	5 12 15	1 32 15
Firefly, Guy Standing	5 13 16	1 33 16
Arizona, George A. Corry	5 14 23	1 34 23
Mist, G. W. Alker	5 15 24	1 35 24

Atlantic Y. C. Cruise.

NEWPORT TO SEA GATE.

July 14, 15.

AFTER arriving at Shelter Island on Wednesday, July 9, the fleet lay at anchor over the day following, so that the launch, gig and dinghy races could be held there on Thursday. On Friday the boats were to race from Shelter Island to Newport, but owing to the light breeze the fleet made slow time of it, being becalmed most of the way. The majority of the boats did not reach an anchorage in the harbor at Newport until late Friday night. Saturday and Sunday were devoted to putting the boats that were to race to Sea Gate, in the best possible shape for the contest.

Monday dawned clear with a light S.W. breeze stirring. The tug C. P. Raymond lay to the westward of Brenton Reef light vessel, which made the starting line. At 11 o'clock the starting signal was given and the topsail schooner Thistle, owned by Com. Tod, was first over the line. Thirty seconds after the gun the yawl Ailsa followed by the schooner Varuna. Next came Mira, and last, 15m. after the signal, came the schooner Endymion, her sailing master having made a mistake in the signal. The wind had increased in strength, and at this time was blowing about ten or twelve miles. The boats were to sail in cruising trim, and no light sails were carried. At the start all the boats were under lower sails and working topsails, with the exception of Mira, which craft was under lower sails only. Ailsa stood over under the Narragansett shore, while the rest of the boats held off shore. About half an hour after the start Varuna came about and going under Thistle's stern crossed ahead of Endymion and Mira. At this time Mira also tacked and stood over toward the shore in order to get into the smoother water.

Ailsa and Mira held along the Rhode Island shore as far as Point Judith, and they then took a long tack off shore going on the north side of Block Island. The rest of the boats went out to sea, going to the eastward of Block Island.

When near Montauk Point, just before night shut in, Ailsa broke down and withdrew from the race. She was picked up later and towed to City Island, where repairs will be made. About this time Mira also withdrew from the race. This left only three boats, Endymion, Varuna and Thistle.

The wind was blowing straight down the Long Island coast, making it a beat for the boats all the way, and the strong breeze had kicked up a big sea.

The night was an ideal one for the three big boats; there was a good moon, the weather was very clear and there was a strong breeze. In the early evening Varuna tacked and stood off shore, crossing Thistle's bows.

During the night the different boats lost sight of one another. Just before daybreak the wind had increased in strength and as it lightened up a little those on board Thistle could see that Varuna, which was to leeward of them, had lost her topsails, they having been blown to pieces. Shortly after 4 o'clock Varuna crossed under Thistle's stern, but when she was seen again two hours later she crossed Thistle's bows. At this time Endymion was made out several miles in the lead.

The wind continued to increase in strength and the boats were heading for Fire Island Light. Just before 9 o'clock the strain on Thistle's fore topgallant mast caused it to break, and it fell away to leeward. It was a big job clearing away the wreckage, and nearly two hours elapsed before everything had been snugged down in shape again. This accident greatly handicapped Thistle, as she was unable to carry her flying jib, and consequently Varuna immediately began to get away from her. At 10 o'clock Endymion was abeam of Fire Island Light, with Varuna some distance astern, and Thistle a mile behind Varuna.

Endymion drew away from her competitors fast on the beat from Fire Island Light Vessel to Sandy Hook Light Vessel, and after rounding the latter she eased sheets well off and raced up into the harbor. A thunderstorm broke as she was passing Roamer Beacon, and she was jogging along under reduced sail. Endymion beat up to the finish line and crossed at 3:21:05. The squall killed about all the wind and Varuna and Thistle made slow progress up the harbor. The wind finally freshened, and it reached Varuna first, and she finished nearly half an hour ahead of Thistle. The summary:

	Start.	Finish.	Elapsed.
Endymion, E. A. Thompson	11 14 15	1 30 00	26 15 45
Varuna, F. F. Ames	11 01 30	3 21 05	28 19 35
Thistle, R. E. Tod	11 00 30	3 50 30	28 50 00
Ailsa, H. S. Redmond	11 01 00	Disabled.	
Mira, C. L. Poor	11 03 00	Withdrew.	

Endymion won in 26h. 30m. The second boat was Varuna. She covered the course in 28h. 21m. 5s. Thistle's time was 28h. 50m. 30s.

A close race was looked for between Ailsa and Endymion, and it was very unfortunate that the former broke down, for the weather conditions were much to her liking.

The showing made by Varuna was rather a remarkable one, for she was built twenty years ago, and her performance with two modern boats, both larger than herself, was greatly to her credit.

Had the wind been from a different quarter, Thistle would have undoubtedly done better, for windward work is not her best sailing point, as she cannot carry her topsails and get any benefit from them. She also had fifteen tons of ice and coal on board, which tended to make her rather logy.

Newport Special Thirties.

NEWPORT, R. I.

Monday, July 14.

THE first race given by the Newport Y. R. A. for the 30-footers was sailed on Monday, July 14, in a strong S.W. wind and a rough sea.

The course was to leeward and return, the first leg being to Dyer's Island, and then a beat back to the finish line. Out of four starters two of the boats finished. Wawa carried away her spreaders soon after hauling on the wind and withdrew, Barbara being well behind at this time, also withdrew.

The boats got away in a bunch, but Carolina soon drew into the lead and rounded the outer mark 15s. ahead of Esperanza. The beat back to the finish line was an exciting one, both boats holding well over to the west shore. Carolina increased her lead on Esperanza slightly and finished a winner by 39s. The summary, start 3:17:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 25 42	2 08 42
Esperanza, H. O. Havemeyer, Jr.	5 26 21	2 09 21
Wawa, Reginald Brooks	Disabled.	
Barbara, Winthrop Rutherfurd	Withdrew.	

Tuesday, July 15.

The second race given under the auspices of the Newport Y. R. A. on Tuesday, July 15, proved to be the most interesting that the thirties have been in this year.

There was a two-reef breeze from the S.W., but the 30-footers swung all sail and carried it in good shape. The boats sailed over the Dyer's Island course, which made it a run up the bay and a beat back, same as yesterday.

Wawa was unlucky again, as she sprung her mast just before the start, and ran back to the harbor under her jib. The start was a very close one, Breeze having a shade the best of it. Soon after the start Esperanza pulled into the lead and continued to leave the rest, and rounded the mark nearly a minute ahead of the second boat. On the beat home Esperanza did still better, and finished a winner by 2m. 12s. The summary, start 3:27:

	Finish.	Elapsed.
Esperanza, H. O. Hevemeyer, Jr.	5 36 21	2 09 21
Breeze, W. G. Roelker, Jr.	5 38 33	2 11 33
Asahi, Lloyd Warren	5 40 02	2 13 02
Carolina, Pembroke Jones	5 41 29	2 14 29
Barbara, Winthrop Rutherfurd	Withdrew.	

Wednesday, July 16.

The Newport Y. R. A. was fortunate enough to have good weather again for their third day's racing. The breeze was from the N.W., and blew with considerable strength. The course was across to Jamestown, a distance of two and one-half miles and return, sailed over twice.

Breeze was first over the starting line, but Asahi pulled into first place, and at the end of the first round was 9s. in the lead. On the second round on the windward work Breeze again worked into first place. She was first around the mark, and was fast getting away from the rest of the boats and looked like a sure winner, when an accident happened to her spinnaker. The sail was taken in and she was withdrawn from the race. The summary, start 3:18:

	Finish.	Elapsed.
Asahi, Lloyd Warren	4 30 26	1 12 26
Esperanza, H. O. Havemeyer, Jr.	4 31 16	1 13 16
Barbara, W. Rutherfurd	4 31 51	1 13 51
Wawa, Reginald Brooks	4 32 04	1 14 04
Carolina, Pembroke Jones	4 34 29	1 16 29
Breeze, W. G. Roelker, Jr.	Withdrew.	

Thursday, July 17.

The 30-footers experienced all kinds of weather in the sweepstake race sailed on Thursday, July 17. At the start the atmosphere was clear, and the prospects seemed fair for a good race. Before the boats finished, however, a heavy squall was met, accompanied by rain, thunder and lightning.

The start was made from Brenton's Cove, and Breeze and Carolina got away slightly in the lead. The boats sailed over the Dyer's Island course. On the run to the first mark Esperanza soon left the rest of the fleet, and was 30s. ahead at the mark. The wind had increased and the boats had all they wanted. On the beat Esperanza increased her lead and finished a winner by 1m. 29s. The summary, start 3:30:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 45 19	2 15 19
Wawa, Reginald Brooks	5 46 48	2 16 48
Asahi, Lloyd Warren & W. S. Miller	5 47 22	2 17 22
Breeze, W. G. Roelker, Jr.	5 47 47	2 17 47
Barbara, Winthrop Rutherfurd	5 49 36	2 19 36
Carolina, Pembroke Jones	5 50 46	2 20 46

Friday, July 18.

The race sailed on Friday, July 18, was one of the closest of the season, the three leading boats crossing the finish line within eleven seconds of one another.

The wind blew fresh from the N.W., and the boats sailed twice over a triangular course, making the total distance covered about twelve miles.

At the end of the first round Asahi was in the lead, but on the second time around she was passed by both Esperanza and Wawa, the former finishing a winner 4s. ahead of Wawa, and 11s. ahead of Asahi. The summary, start 3:18:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 10 09	1 52 09
Wawa, Reginald Brooks	5 10 13	1 52 13
Asahi, Lloyd Warren & W. S. Miller	5 10 20	1 52 20
Barbara, Winthrop Rutherfurd	5 11 48	1 53 48

Saturday, July 19.

On Saturday, July 19, the 30-footers sailed twice over a windward and leeward course, two and one-half miles to each leg. The wind was light from the S.E. Barbara got into the lead soon after the start, and was never headed. She finished a winner by nearly 3m. The race was for a cup offered by Mr. Pembroke Jones. The summary, start 3:32:

	Finish.	Elapsed.
Barbara, Winthrop Rutherfurd	5 00 07	1 28 07
Esperanza, H. O. Havemeyer, Jr.	5 03 03	1 31 03
Asahi, Warren & Miller	5 03 27	1 31 27
Carolina, Pembroke Jones	5 03 41	1 31 41
Wawa, Reginald Brooks	5 07 58	1 35 58

Winthrop Y. C.

WINTHROP, MASS.

Saturday, July 19.

THE regular handicap class race of the Winthrop Y. C. was sailed on Saturday, July 19, but on account of the extremely light air there were fewer entries than usual. The summary:

21ft. Class.

	Elapsed.	Corrected.
Mineola, C. L. Haskell	1 26 15	1 11 15
Grayling, D. G. Langland	1 11 21	1 11 21

18ft. Class.

Hector, A. W. Hubbard	1 08 26	1 06 26
Zetes, John A. McKee	1 08 15	1 08 15
Henrietta, J. A. McCloskey	1 20 35	1 10 35
Louise, W. D. Allen	1 13 16	1 13 16
Favorite, Fred Bird	1 19 00	1 15 00

15ft. Class.

Elf, W. I. Kelly	1 14 37	1 14 37
Caper, W. W. Colson	1 20 23	1 19 23

15ft. Juniors.

Flash, W. H. Myrick	1 08 03	1 08 03
Eva, L. B. Flinn	1 08 22	1 08 22
Virginia, W. H. Traiser	1 11 55	1 09 55

Eastern Y. C.

MARBLEHEAD, MASS.

Saturday, July 19.

AN open race of the Eastern Y. C. was sailed off Marblehead on Saturday, July 19. As there were only three entries in the schooner classes, all sailed in the same class and received time allowance on their actual waterline length. There were two 35-footers in the seventh class sloops, Golden Rod, a Gardner & Cox scow, and Cossack, a cruising sloop designed by Crane. It was a fluky day all through, the wind holding true in neither direction nor force. Although there was not much prospect of a breeze at the starting hour, the yachts were sent away over the same course, the shortest of the club courses, twenty and one-quarter miles in length. Even this was a bit too long, for the best the big schooner Constellation could do over it was a little over five and a half hours. The breeze came from the N.E. at the start, and, between calms, it hauled as far as S.W. and backed again to N.E. At the finish a nice little breeze came in, just at a time when nobody cared whether it would blow or not.

Under the circumstances it was a most miserable day for a test of any of the classes. The feature of the race was the manner in which the 35ft. schooner Redskin hung to the 105-footer Constellation and the 75-footer Amorita. Her crew, composed almost entirely of amateurs, worked unceasingly to keep their boat in a leading position, and, as a matter of fact, she did lead the big fellows for almost two-thirds of the course. Redskin was first over the starting line, well clear of Amorita. Constellation was slow in getting to the line, and, on account of the light air and tide, came near fouling the flag mark. She was handicapped 1m. and 40s. Redskin led to the first leg in a drifting breeze. She tacked around the mark, while Amorita stood on and tacked to windward. Constellation tacked around the mark and followed Redskin. They got a little breeze until they were off Magnolia, when it left them, coming in again S.W. Constellation had pulled up on Redskin, but Amorita could not find the breeze and had lost all she gained by her tack. Redskin and Constellation were having it out, Constellation being unable to get by the little schooner, when the breeze again left them. It came in again N.E., when Constellation caught it first and turned the second mark in the lead. Redskin was a close second, while Amorita brought up in the rear. Constellation and Amorita set spinnakers on the run to the finish and both caught and passed Redskin. Redskin had no spinnaker, but her foresail was winged out and she held on well. If her fore and main sheets were trimmed a little more she would have done better. When near the finish her ballooner was unhooked about half-way up the luff and the foot poled out. This improvised spinnaker helped her. Although she finished last her time allowance gave her the race, and she deserved it.

In the seventh class sloops Golden Rod was first over the line and led throughout the race, but this was only what might have been expected. It is much to Mr. Morss' credit that he went out and raced Cossack when he knew that his chances of winning were very remote. The summary:

	Start.	Finish.	Elapsed.	Corrected.
Schooners.				
Redskin, Sturtevant Bros.	12 16 06	6 06 28	5 50 22	5 07 00
Amorita, T. M. McKee	12 18 46	6 04 26	5 45 40	5 32 05
Constellation, F. Skinner	12 20 00	5 59 47	5 39 47	5 39 47
Sloops.				
Goldenrod, G. M. Bruce	12 30 42	6 10 05	5 41 05	5 41 05
Cossack, H. A. Morss	12 30 54	6 23 32	5 53 32	5 49 20

The judges were Henry Howard, H. H. Buck, H. D. Bennett and H. P. Benson.

City of Boston Open.

OFF CITY POINT.

Saturday, July 19.

THE postponed races of the City of Boston for the classes which did not finish in the Fourth of July regatta were sailed off City Point on Saturday, July 19, in a very light N.E. breeze. Chloris, one of the Y. R. A. 21-footers, entered in the 25ft. class, and won easily. In the 18-footers there was a good race between Lobster and Wawenock. They were only a few seconds apart during the race, Lobster leading at the start, then Wawenock, and Lobster on the last leg to the finish. In the handicap class there were fourteen starters. Ida J. got the start, but the big cat Pilgrim soon went out into the lead and held it to the finish. The summary:

Class C.

	Elapsed.	Corrected.
Chloris, Cheney & Lanning	1 46 27	.. .. ..
Thordis, C. A. Heney	2 03 03	.. .. ..
Ideal, H. B. Wheeler	2 12 00	.. .. ..

Class T.

Lobster, C. J. Hendrie	1 44 44	.. .. ..
Wawenock, Coombs & Seymour	1 46 19	.. .. ..

Handicap Class.

Pilgrim, Joseph Turner	1 40 52	1 19 45

Annisquam Y. C.

ANNISQUAM, MASS.

Saturday, July 19.

THE second club race of the Annisquam Y. C. was sailed in Ipswich Bay on Saturday, July 19, in a light N.E. breeze. Three classes sailed and the dory class was the only one to fill. The summary:

First class.

	Elapsed.
Comforter, John Whitemore	2 27 00

Third Class.

Evelyn, D. H. Woodbury	2 20 48

Dory Class.

Ventus, I. Pevear	2 35 52
Pooh Bah, Finch	2 36 42
Clare	Withdrew.

Tarratine Y. C.

ISLESBORO, ME.

Saturday, July 19.

THE first race of the series of four to be held for a cup offered by Dr. Derby for the 21-footers, was held on Saturday, July 19, at 2:45 P. M. The first race of a like series for the 25-footers was started at 2:40 P. M., the prize being offered by William E. Scull, of Philadelphia.

The overcast sky and light airs of the morning gave little promise of a breeze in the afternoon and of any possibilities of a race. A large triangular course was laid out, to be sailed over once, the first leg bearing S.W. from the starting line, and being three miles distant, it being expected that whatever wind there was would come from the south'ard. Mr. Steele's steamer Laurita, which acted as judges' boat, took up her position on the line at 2:30 sharp, and found a brisk breeze blowing in from the S.W. that gave indications of holding for the afternoon. She fired the preliminary gun for the 25-footers at 2:35, and the final gun at 2:40. Chewink and Flirt were the only starters, and, after some pretty maneuvering crossed the line in the order named, Chewink having a good lead. They both went over on the port tack, and held along together for some time. Flirt seemed to like the conditions better, and began to slowly pick up on Chewink, weathering her and footing a slight bit faster. It was a pretty race, with little to choose, both boats appeared to be sailing on about even terms. When they flung over on the starboard tack Flirt established a lead and began to steadily increase it, until she rounded the windward mark at 3:11:00, Chewing following at 3:11:15. Both boats set their spinnakers to port and began one of the prettiest runs seen here for some time. Flirt held her lead until she unfortunately carried away some of her spinnaker gear and dropped part of the sail overboard. This brought her up into the wind and allowed Chewink to pass her. Flirt soon recovered her sail, got it set again and started off after Chewink. Again she had trouble with the sail, and it was this that cost her the race. Chewink had stolen a considerable lead and managed to get comfortably clear of Flirt's blanketing. She rounded the second mark ahead.

The next leg was a close reach home, a matter of only two miles, and was not long enough to allow Flirt to regain her lead. Chewink got her winning gun at 3:49:30 and Flirt crossed at 3:50:55.

Start, 2:40.	Finish.	Elapsed.
Chewink, W. E. Scull	3 49 30	1 09 30
Flirt, E. A. Bond	3 50 55	1 10 55

The raceabouts took their preliminary gun from the 25's start, and began scrapping for the choice of position on the windward end of the line. Opitsah made a beautiful start, crossing with the gun on the port tack, and was closely followed by Raider, who crossed her wake on the starboard tack, and headed in under the islands. Daydream, next over, followed Opitsah out into the bay in hopes of getting the benefit of the strong ebb tide. Persimmon kept close to Daydream, and Peterkin and Pirate, after holding on for a short time, flung about on to the starboard tack and followed Raider. Peterkin and Pirate had a short luffing match, which Peterkin got the best of and established a lead. Raider swung over to port tack and was forced by Peterkin, but after a few minutes' sailing had to ask for room on account of the rocks. Peterkin and Raider tacked almost together, and both crossed Pirate's bows.

The rest of the fleet was by this time standing in under the islands, having been greatly aided by the strong ebb tide out in the bay. All of them crossed the bows of Peterkin, Raider and Pirate and soon came about on the port tack. Persimmon had gotten a big lead and showed an immense liking for the conditions of light breeze and fairly choppy water. Daydream showed her usual windward abilities, but it was not blowing hard enough for her; she appeared a bit logy in comparison to her performances in a breeze of wind. Opitsah was doing very well, but could not prevent Peterkin from working out a lead on her. Raider was sailing wretchedly, not pointing within a point and a half of any of the other boats and moving in a perfectly lifeless sort of way. Pirate worked to windward of her and passed her with ease.

All the boats were near the windward mark, but there were no evidences of an exciting rounding. The fleet was pretty well strung out, Persimmon having a comfortable lead. She rounded at 3:20:00, followed by Daydream at 3:20:30, Peterkin at 3:21:08, Opitsah at 3:21:25, Pirate at 3:23:25 and Raider a poor last at 3:23:35.

All spinnakers were set to port, although they would have done better if set to starboard.

Opitsah luffed out to windward of Peterkin, blanketed her and passed her. She then began to gain a lot on Daydream, but not enough to pass her. Daydream blanketed Persimmon and shot ahead only to be again passed by Persimmon, who cleverly gybed and set the spinnaker to starboard. By doing this she blanketed Daydream and carried her sail on the side where it was doing by far the most work. Daydream attempted a gybe, but swung her boo mover on her spinnaker and carried its gear entirely away. This lost Daydream the race, for Persimmon shot ahead into a comfortable lead, which she maintained till the finish. The fleet rounded the second mark in the following order: Persimmon, Daydream, Opitsah, Peterkin, Pirate and Raider.

The reach home was pretty, all the boats except Raider and Pirate being well bunched. Opitsah gained considerably, but not enough to pass Daydream. Persimmon crossed the line in the pride of place at 3:57:15. The summary of times follows:

Start, 2:45.	Finish.	Elapsed.
Persimmon, E. Dodge	3 57 15	1 12 15
Daydream, J. W. Minturn	3 57 47	1 12 47
Opitsah, R. H. Daniels	3 58 28	1 13 28
Peterkin, Y. E. Kissell	4 00 40	1 15 40
Pirate, P. Metcalf	4 03 07	1 18 07
Raider, R. Derby	4 06 36	1 21 36

Persimmon won 11 points for the series; Daydream, 8; Opitsah, 5; Peterkin, 3; Pirate, 2, and Raider, 1.

Persimmon had a new set of Ratsey sails that worked beautifully and seemed to set better than any others in the fleet. Peterkin has her mast cut down and a wider headed mainsail put on. She did very well, considering it was the first time she had used her new sails.

Inter-Club Racing.

THE Seawanhaka Corinthian Y. C., which has been particularly active in years past in bringing about inter-club racing, has now succeeded in making an arrangement with the Beverly Y. C., of Monument Beach, Mass., by which a series of races will be held for the next three seasons. The boats representing the Seawanhaka Corinthian Y. C. will be towed to Newport by Com. A. Curtiss James' flagship, Aloha. The Aloha will leave Oyster Bay on Aug. 2 and the races will be held on Aug. 4, 5 and 6.

The date of the series for 1902 has been arranged so as to correspond as nearly as possible to the date of the arrival of the New York Y. C. at Newport, so that those who are taking part in the races may also participate in the cruise to Marblehead.

The terms of the agreement, signed by Johnston de Forest, chairman of the Seawanhaka Corinthian Race Committee, and R. W. Emmons, 2d, chairman of the Beverly Regatta Committee, is as follows:

Agreement covering the match races between the 21ft. raceabouts of the Beverly Y. C. of Massachusetts and the Seawanhaka Corinthian Y. C. of New York:

ARTICLE I.

The match shall be between yachts of the 21ft. raceabout class of the Seawanhaka Corinthian Y. C. and the 21ft. restricted class of the Beverly Y. C. Any yacht shall be eligible to compete which conforms to the rules of either club governing these classes now in force, or as such rules may hereafter be changed by the consent of the two clubs, and which is the bonafide property of a member or members in good standing in the club which it represents.

ARTICLE II.

The match shall consist of an annual series of races to be sailed each year for three successive years, or until one club has won two of the annual series. Each annual series shall consist of three races, and the match shall be awarded to the club whose representative yachts win two of the annual series.

ARTICLE III.

The system of scoring shall be that now in use by the Beverly Y. C. The scores by that system of the respective representative yachts of each club in any race shall be added together and the race awarded to the club making the highest total score in that race.

ARTICLE IV.

Each club shall be represented by three yachts in each race, except in the contingency provided for in this article. Should one or more yachts of either club be disabled before the starting of any race, a corresponding number of yachts shall be withdrawn by the other club; the yacht or yachts to be so withdrawn to be selected by the club withdrawing. At least ten days before the day set for the first race in each year, each club shall give in writing to the other the names of the yachts which it enters, the names of their owners, and a certificate by the official measurer of the club showing that the yachts conform to the rules as required by Article I. of this agreement.

ARTICLE V.

Should any ties result in any of the annual series, they shall be sailed off on a date to be settled by the committee.

ARTICLE VI.

The courses for the races shall be not less than eight and not over twelve miles in length, and for the first and third races in each year shall be to leeward or windward and return, and for the second race triangular. The start shall be "one gun," and shall be made between 1 and 4 o'clock P. M. each race day.

ARTICLE VII.

Each yacht shall be steered by a member of the club which it represents, and, except as herein modified, the racing rules of the Seawanhaka Corinthian Y. C. shall govern all races held pursuant to this agreement.

ARTICLE VIII.

Protests must be filed with the committee within twelve hours of the starting of the races.

ARTICLE IX.

The certificate required by paragraph 4 of Rule IX. of the Racing Rules may be filed with the committee at the close of the series if required, but the committee may dispense with all or any of the same in their discretion.

ARTICLE X.

No yacht shall be hauled out or laid on shore within the six days preceding the first race, or during the races of any series, except in case of accident for necessary repairs.

ARTICLE XI.

A committee to consist of one member from each club, and one other to be chosen by these two, shall have complete charge of the races, and their decision on the interpretation of this agreement and on all protests shall be final.

ARTICLE XII.

Each club shall subscribe $100 to be used for the purchase of a cup, to be held for a year by the club winning an annual series and to become the permanent property of the club winning the match.

ARTICLE XIII.

Each club shall bear one-half the expense of conducting the races in 1902, and in succeeding years the club in whose waters the annual series is sailed shall bear the whole expense.

ARTICLE XIV.

The series of 1902 shall be held at Newport, R. I., on Aug. 4, 5 and 6. In succeeding years the races shall be held in the home waters of the club which won the previous series, the dates to be mutually agreed upon.

South Boston Y. C.

OFF CITY POINT.

Saturday, July 19.

THE regular race for sailing tenders of the South Boston Y. C. was sailed off City Point on Saturday, July 19, in a very light air. The summary:

	Elapsed.	Corrected.
E. Merrill	4 52 50	4 52 09
P. Wineman	5 07 39	4 52 39
T. O. French	4 58 40	4 52 40
W. Colson	4 53 09	4 52 09

The day was scheduled for Ladies' Day, and it was intended to cruise down the bay in the larger yachts, but on account of the lack of wind this had to be abandoned. A hop was held in the club house in the evening.

Comments on Proposed Restrictions of the Y. R. U. of the Great Lakes.

Editor Forest and Stream:

Your interesting summary of the report of the Rule Committee to the Yacht Racing Union of the Great Lakes, on page 515 of your impression of June 28, shows that the main matter for discussion was the question whether a rating rule should be employed, or not—in the latter case the classes being subject to various restrictions.

Mr. Stephens, of New York, appears to have been the only expert who voted for a rating rule, all the others being in favor of restrictions, thinking that a better class of yacht would thereby be developed than under a rating rule.

The words "better class of yacht" no doubt means a better average yacht, and there can be little doubt that restrictions if settled with only a freer amount of common sense, are bound to produce a better average yacht than a rating rule. If, therefore, a good average and a strongly marked cousinship be the ideal, if all the yachts built for racing on the Great Lakes are to be very similar in speed and other capabilities, the restricted classes adopted will no doubt be the best means possible for producing same.

In my mind, however, the ideal of yacht racing is discovery, and this can only be attained by some very simple and untrammeled rating rule, such, for instance, as the Seawanhaka rule of 1882, and a multitude of yachts differing considerably.

The result of the racing then shows how speed can best be obtained under that rating rule, and important facts relative to speed soon become known. Racing under the length and sail area rules for about twenty years has certainly taught us a great deal in naval yacht architecture. Would we have made the same advance if in 1882 restrictions had been used instead of a rating rule? The answer is probably self-evident. If then we adopt restricted classes now the reason must be:

I. That we do not believe in the advantage of any further development—although the same be unknown to us, and may be of more startling importance than anything yet discovered; or

II. That we prefer one-design class racing to the worries and expense of the other.

THALASSA.

Beverly Y. C.

WING'S NECK, BUZZARD'S BAY.

Saturday, July 19.

THE club race of the Beverly Y. C. was sailed off Wing's Neck, Buzzard's Bay, on Saturday, July 19, in an extremely light easterly breeze. It was so light that it would be more properly termed a drifting match. Under the conditions it was no test of the boats. Arabian won in the 30-footers, Sylvia in the 21-footers, Vim in the fourth class cats and Krieker in the 15-footers. In the 21-footers only Sylvia and Barnacle rounded buoy 8, and so their times are given first in the summary. There was a misunderstanding in this class as to the course to be sailed, and this will be fixed up by the judges later. The summary:

Buzzard's Bay 30-footers.

	Elapsed.
Arabian, Robert Winsor	3 30 41
Praxilla, John Parkinson	3 35 52
Pontiac, J. A. Beebe	3 36 23
Young Miss, D. L. Whittemore	3 36 40
Zingara, E. M. Farnsworth	3 38 59
Gamecock, Louis Bacon	3 40 32
Mashnee, R. W. Emmons, Jr.	3 42 31
Notos, W. O. & C. H. Taylor, Jr.	3 44 38
Evelyn, John Hitchcock	3 47 13
Quakeress, W. F. Harrison	3 50 42

21-footers.

Sylvia, D. S. Warren	3 57 33
Barnacle, W. E. C. Eustis	4 19 25
Terrapin, L. S. Dabney	3 33 05
Wyona, Howard Miller	3 44 05
Edith, Clark King	4 09 20
Arethusa, C. M. Baker	Withdrew.

Fourth Class Cats.

Krieker, W. S. Jameson	3 09 19
Allison, Steward McLeod	3 12 15
Hod, H. B. Holmes	3 16 21

15-footers.

Vim, F. Sargent	2 15 38
Go Bye, H. Stockton	2 15 53
Spider, H. B. Stone	2 17 28
Eaglet, R. Bacon	2 18 09
Ranzo, M. Richardson	2 22 59

Eastern Y. C. Open Race.

THE Regatta Committee of the Eastern Y. C. has announced that the annual open race will be sailed off Marblehead on Monday, Aug. 11, and that it will be open to yachts of the Eastern and New York yacht clubs. The New York Y. C. fleet will be in Marblehead on that day. The start will be made at 11. The following classes will be provided:

SCHOONERS.

First Class—All over 75ft. waterline.
Second Class—53ft. and not over 75ft.
Third Class—30ft. and not over 53ft.

HANDICAP SCHOONERS.

Class A—All over 53ft. waterline.
Class B—30ft. and not over 53ft.

SLOOPS.

First Class—All over 71ft. waterline.
Second Class—61ft. and not over 71ft.
Third Class—53ft. and not over 61ft.
Fourth Class—46ft. and not over 53ft.
Fifth Class—40ft. and not over 46ft.
Sixth Class—35ft. and not over 40ft.
Seventh Class—29ft. and not over 35ft.

HANDICAP SLOOPS.

Class A—All over 40ft.
Class B—29ft. and not over 40ft.

In each class there will be a first prize. If four or more yachts start in a class there will be a second prize, and if seven or more start a third prize will be given. Special prizes will be given to the Buzzard's Bay 30-footer making the fastest time in the seventh class sloops. In the racing classes the prizes will be silver and in the cruising classes they will be pewter.

The Puritan cup for the year will be awarded to the Eastern Y. C. yacht making the fastest time over the courses sailed by the larger yachts.

Entries in the racing classes must be received by the Regatta Committee in writing by 8 on the morning of the race. For the handicap classes entries must be received by 8 of the evening before the race.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, July 19.

THE Seawanhaka knockabouts sailed the fourth series race for the Centre Island cup on Saturday, July 19. The wind was strong from the N.E., and the boats sailed over the inside course. The boats that finished first and second—Wyntje and Lucille—were protested for fouling one of the marks. The summary, start 3:20:

	Finish.	Elapsed.
Wyntje, Colgate Hoyt, Jr.	5 49 46	2 29 46
Lucille, H. H. Landon	5 50 43	2 30 43
Marcia, Johnston De Forest	5 51 21	2 31 21
Gowan, G. G. Stewart	5 53 21	2 33 21
Nakodo, J. G. Sherman	5 53 30	2 33 30
Heron, F. R. Coudert, Jr.	5 54 24	2 34 24
Bobs, W. A. W. Stewart	6 04 45	3 44 45

YACHTING NEWS NOTES.

On Tuesday afternoon, July 15, Mr. George M. Pynchon's new cutter, Neola, was dismasted in a vicious squall when off the Norwalk Islands on Long Island Sound. The yacht was returning from the New York Y. C. races at Newport to the owner's home at Belle Haven, Conn. The squall had been making for some time, and the canvas on the boat had been reduced to mainsail and jib. When the storm broke about 3 o'clock it was more severe than was expected, and after standing the strain for a short time, the mast finally gave way and the spars and gear fell off to leeward an don deck. Mr. Pynchon was accompanied by his wife and niece and Mr. Fred M. Hoyt, owner of the cutter Isolde. The ladies were below when the accident happened, and no one on deck was injured. After the wreckage was cleared away the yacht as towed into Greenwich, and was afterward taken to Shooter's Island, where a new mast was fitted. The squall was one of the worst ever experienced on the Sound, and for a time the wind reached a velocity of nearly sixty miles an hour.

The following sales have been made through Manning's Yacht Agency: The steam yacht Aria for Mr. John B. Rhoads, of New Bedford, Mass., to Mr. Edward H. Blake, of Bangor, Me.; the steam yacht Whisper for the estate of the late Thomas Manning to Mr. W. H. Burgess, of Oyster Bay, L. I. This agency has chartered the steam yacht Speranza to Mr. Charles H. Mellon, of Morristown, N. J., for Mr. Ogden D. Wilkinson, of Philadelphia, Pa.

Mr. T. Jenkins Hains has purchased through the agency of Mr. A. J. McIntosh the 30ft. L.W.L. Burgess cutter Saracen.

The Herreshoff Mfg. Co. has built for Mr. Harold Vanderbilt a cruising sloop to take the place of the 25ft. waterline knockabout Alyce that he had last season. The boat is 34ft. on the waterline and has a pole mast rig. She has liberal freeboard and under a cabin house has a large amount of accommodation. The Vanderbilt boat is quite like Azor, a sloop turned out this spring by the Herreshoffs for Mr. J. Malcolm Forbes. Azor is 34ft. on the waterline, and 40ft. over all. She is a combination keel and centerboard boat. These boats are arranged on deck and below very much the same as the Beverly Y. C. one-design 30-footers.

Mr. Percy Chubb's yawl Vigilant will not be seen in the racing this summer, as her owner is to make an extended cruise in the yacht as far as Labrador. This is rather unfortunate for Ailsa, as she is now without a competitor.

The English schooner Elmina, owned by Mr. W. Exshaw, of Portsmouth, England, now on an American cruise, anchored off Bay Ridge on Friday, July 18. Elmina was designed and built by Messrs. Camper & Nicholson, at Gosport, in 1874. She is 128ft. over all, 25ft. breadth and 13ft. deep.

Mr. Charles F. Herreshoff, who was for some time head draughtsman at the Herreshoff Mfg. Co., Bristol, R. I., and who has recently been associated with Prof. Byles, of Glasgow, Scotland, has gone into partnership with Mr. T. D. Wells, and has opened an office at 11 Broadway, New York city. In addition to their professional work as naval architects and engineers, they will also do a yacht brokerage business.

The American yacht Uncle Sam, designed by Crowninshield, and which won the Kaiser's prize in the Kiel regattas, has been bought by the Kaiser himself from Mr. F. R. Riggs, of New York city.

Mr. Francis W. J. Hurst, one of the most prominent and oldest members of the New York Y. C., died at Mount Kisco, N. Y., on July 22. He was 62 years old.

Trapshooting.

Fixtures.

July 23-25.—Bay Ridge A. A. Co., Md.—J. R. Malone's eighth annual midsummer tournament; $200 added money; two days targets, one day live birds.

July 24.—Pottstown, Pa.—Opening shoot of the Shuler Gun Club on its new grounds; open to all.

July 24-25.—Ann Arbor, Mich.—Third tournament of the Michigan State Trapshooters' League, under auspices of the Ann Arbor Gun Club. Wm. Corson, Sec'y.

July 25.—Salem, O.—Salem Gun Club's tournament.

July 25-26.—East Alton, Ill.—Wann Gun Club's amateur tournament.

July 28-30.—Atlanta, Ga.—Peters Cartridge Company's tournament, under auspices of the Atlanta Gun Club.

July 29-31.—Newton, Ia.—Southeastern Iowa Shooting Association's third annual amateur tournament.

July 28-Aug. 2.—Atlanta, Ga.—Peters Cartridge Company's tournament.

Aug. 1-2.—Excelsior Springs, Mo.—Target tournament of the Excelsior Springs Gun Club. W. E. Templeton, Pres.

Aug. 2.—East Orange, N. J.—E. C. Medal contest for championship of New Jersey, between Neaf Apgar, holder, and Dr. W. L. Gardiner, challenger.

Aug. 2.—East Orange, N. J.—Dr. W. L. Gardiner's target shoot and succotash party, given to the Wanderers.

Aug. 4-5.—Moberly, Mo.—Inanimate target tournament for amateurs.

Aug. 5-8.—Asheville, N. C.—Tournament given by Col. J. T. Anthony and Maj. E. P. McKissick.

Aug. 6-7.—Lafayette, Ind.—Lafayette Gun Club's annual tournament.

Aug. 6-7.—Litchfield, Ill.—Amateur tournament of the Litchfield Pioneer Gun Club.

Aug. 6-7.—Marietta, O.—The Interstate Association's tournament, under the auspices of the Columbian Gun Club. Chas. Bailey, Sec'y.

Aug. 7.—Leamington, Can.—Annual tournament of the Leamington Gun Club.

Aug. 12-13.—Olean, N. Y.—Two days' tournament of the Olean Gun Club; $30 added; open to all. B. D. Nobles, Sec'y.

Aug. 12-13.—Bowling Green, O.—Merchandise tournament of the Bowling Green Gun Club, for Wood county shooters.

Aug. 12-13.—Birmingham, Ala.—Third annual Alabama State target tournament, under the auspices of the Birmingham Gun Club. R. H. Baugh, Sec'y.

Aug. 13-14.—Brunswick, Me.—The Interstate Association's tournament, under the auspices of the Brunswick Gun Club. L. C. Whitmore, Sec'y.

Aug. 14-15.—Greenville, Pa.—Alexander's annual target tournament.

Aug. 14-16.—Hamilton, Can.—Dominion Trapshooting and Game Protective Association's tournament.

Aug. 14-15.—Vicksburg, Miss.—Mississippi and Louisiana Trapshooters' League target tournament. C. W. Walton, Sec'y, Natchez, Miss.

Aug. 20-21.—Kane, Pa.—Kane Sportsmen's Club's amateur target tournament.

Aug. 20-21.—Ossining, N. Y.—Two days' shoot of the Ossining Gun Club; first day handicap (100 targets, 14 to 21yds. rise, open to all) and R. I. clam bake; second day, regular programme.

Aug. 26-29.—Okoboji, Ia.—Amateur shooting tournament, under management of Messrs. C. W. Budd and E. C. Hinshaw.

Aug. 27-28.—Peru, Ind.—Peru Gun Club's sixth annual midsummer tournament, at Bass Lake. Frank Dunbar, Sec'y.

Aug. 27-28.—Haverhill, Mass.—The Interstate Association's tournament, under the auspices of the Haverhill Gun Club. S. G. Miller, Sec'y.

Aug. 27-28.—Ruffsdale, Pa.—Ruffsdale Rod and Gun Club's first annual two-day target tournament. Added money, $30. Rose system. Lloyd H. Ruff, Sec'y.

Aug. 29.—Pleasant Hill, Mo.—Sixth annual merchandise and sweepstake tourney. T. H. Cohron, Sec'y.

Sept. 1.—Battle Creek, Mich.—Amateur tournament of the Battle Creek Gun Club. M. E. Hensler, Sec'y.

Sept. 2-3.—Tiffin, O.—Second annual tournament of the Tiffin Gun Club; $75 added. L. D. Arndt, Sec'y.

Sept. 3-4.—Nappanee, Ind.—The Interstate Association's tournament, under the auspices of the Nappanee Gun Club. B. B. Maust, Sec'y.

Sept. 3-5.—Richmond, Ind.—Handicap tournament of the Richmond, Ind., and College Corner, New Paris and Oxford, O., gun clubs.

Sept. 3-5.—Erie, Pa.—Erie City Rod and Gun Club's handicap tournament at targets. Open to all; $200 added. A. N. Aitken, Sec'y.

Sept. 4-5.—Grand Rapids, Mich.—Open tournament of the Consolidated Sportsman's Association. Eber Rice, Sec'y.

Sept. 9-11.—Du Bois, Pa.—Three days' target tournament of the Du Bois Rod and Gun Club; added money, $200. L. S. Munch, Sec'y.

Sept. 9-12.—Battle Creek, Mich.—Tournament of the Indians; open to the world; $1,000 added. John Parker, Mgr.

Sept. 15-20.—Blue River Park, Kansas City, Mo.—Twenty-fifth tournament of the Missouri State Fish and Game Protective Association. Targets and live birds. Paul Franke, Sec'y.

Sept. 16-17.—Nebraska City, Neb.—Tournament at Nebraska City.

Sept. 16-18.—Williamsport, Pa.—Tournament of the West Branch Rod and Gun Club.

Sept. 16-19.—Detroit, Mich.—John Parker's annual tournament.

Sept. 23-25.—Cincinnati, O.—Second annual handicap target tournament of the Cincinnati Gun Club. Charles F. Dreihs, Sec'y.

Sept. 29-30.—Lewistown, Ill.—The Interstate Association's tournament, under the auspices of the Lewistown Gun Club. H. H. McComber, Sec'y.

Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.

Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.

Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Mr. Chris. Gottlieb, of Kansas City, Mo., writes us as follows: "The Excelsior Springs Gun Club will give a target tournament on Aug. 1 and 2. Traps will be open for practice on July 31. There will be ten 15-target events each day. Targets 1 cent each. Moneys to be divided Rose system. This is their first tournament venture, and they will endeavor to give everybody a good time. The waters of the famous Siloam, Sulpho Saline, and Regent Springs are world renown. The Wabash have seven trains daily from Kansas City to the springs; time, one hour and fifteen minutes; round trip, $1. The following well-known gentlemen will handicap you from 16 to 22yds.: Louis Erhardt, Atchison, Kans.; F. B. Cunningham, St. Joseph, Mo.; Frank Hodges, Olathe, Kans.; Harry Davis, Richmond, Mo.; Thos. Hearn, Kansas City, Mo. Ship your gun and shells to W. E. Templeton, president Excelsior Springs Gun Club. The Snapps tavern and Hotel Maple will be shooters' headquarters."

Dr. W. L. Gardiner made glad the hearts of the Wanderers, of which dignified body he is an illustrious member, by informing them at Freehold last week that he contemplated inviting them to a target and succotash carnival at his home in the Oranges, in the Republic of New Jersey, on Aug. 2. The Indian compote, the succotash, will be reinforced by other dishes and wholesome beverages, selected with an eye to quick fermentation and vivacious enjoyment.

The Interstate Association, through its able manager, Mr. Elmer E. Shaner, announces its programme for the trapshooting tournament given by it for the Brunswick (Me.) Gun Club, Aug. 13 and 14. Each day has a like programme, namely, ten events at 20 targets each, $2 entrance, alternately at known and unknown angles. Lunch and shells can be obtained on the grounds. Two sets of traps will be used. Targets, 2 cents. Rose system, ratios 5, 3, 2 and 1, will govern. Shooting will commence at 9 o'clock. Guns and ammunition forwarded to G. B. Webber, Brunswick, will be delivered on the shooting grounds free of charge. The Brunswick Gun Club will give $15, $10 and $5 to first, second and third high respectively, open to all who shoot the entire programme. The secretary, Mr. L. C. Whitmore will cheerfully furnish all pertinent information.

Mr. C. F. Lambert, of Haverhill, Mass., under date of July 19, writes us as follows: "Here is a quiet tip for those shooters who contemplate attending the Interstate Association tournament at Haverhill, Mass., Aug. 27-28: Don't limit your ammunition to the bare necessities of the programme, but bring an extra supply. The wingless bird may fly from other traps than the two sets from which the regular programme will be pulled off. Each of the committee has provided himself with a dark lantern, and is using it these nights looking for those two things most interesting to those who shoot, and are alive to the fact that the aforesaid 'things' consist of cash and merchandise. It is among the probabilities that an extra day's shooting may be added. If so, there will be an interstate, interclub and an individual handicap contest, with cash prizes for each."

Mr. Ed. Banks, the secretary of the organization mentioned, has sent out the following notice: "The Wanderers will meet on Saturday afternoon next, the 26th inst., on the grounds of the South Side Gun Club, Newark, N. J. The P. R. R. station at Emmett street, Newark, is five minutes' walk from the grounds; or Newark trolley (South Broad street line) two minutes' walk, getting off at terminus of the line. Please notify me by Thursday, the 24th, whether you will be in attendance or not. Dr. W. L. Gardiner, our treasurer, has kindly invited the Wanderers to a 'Succotash Party' at his home, East Orange, N. J., on Saturday afternoon, Aug. 2, on which date Dr. Gardiner will shoot a match with Mr. Neaf Apgar for the target championship of New Jersey."

At the Interstate tournament given for the Titusville, Pa., Gun Club, Mr. B. Leroy Woodard was high average for the first two days, by breaking 160 out of 170 on the first day and 163 out of 170 on the second day. On the third day Mr. J. S. Fanning was high with 163 out of 170, which tied Leroy for high average for the three days. Mr. Fanning was second on the first day with 157 out of 170, and tied for third on the second day with Mr. L. V. Byers. On the first day for third average, Messrs. A. H. Fox and H. D. Kirkover tied on 156 out of 170. On the second day for second average Messrs. J. F. Mallory and J. T. Atkinson tied on 146.

Mr. A. B. Richmond, of Grand Rapids, Mich., writes us as follows: "The Consolidated Sportsmen's Association of this city will hold a grand shooting tournament on Sept. 4 and 5, open to everybody. There will be between $300 and $500 added money. The club has one of the finest shooting grounds in the country, nicely located near the river, and no effort will be spared to make it most enjoyable for all. For full information and particulars address W. B. Jarvis, chairman executive committee, Grand Rapids, Mich."

After a two days' visit in New York, Mr. Frank Lawrence, on Monday of this week, returned to Pennsylvania, which territory he is caring for in the interest of the Winchester Repeating Arms Co., of which he is a representative. He had been absent on a six weeks' trip, and reported gratifying success. Mr. Lawrence has been engaged in the sporting goods business for many years, and knows all its details from beginning to end.

On Thursday of this week the Shuler Gun Club, Pottstown, Pa., holds its annual shoot. A team shoot, four men to a team, is on the programme for 1:30 o'clock. Moneys divided by the percentage system. There are twelve events on the programme, at 10, 15, and 20 targets, entrance 50 cents, 75 cents, $1 and $1.50. Competition is open to all. Shooting commences at 9:30.

We acknowledge with pleasure the receipt of the following invitation: "The committee in charge of the trapshooting tournament, by permission of the president and directors of the Winnipeg Industrial Exhibition Association, request the pleasure of your company to a supper at the grounds on Monday night, July 21, at 10 o'clock."

Interstate Park, L. I., the scene of some world-famous trapshooting contests, is now aswirl with horse racing activities. On Aug. 2 there is an opening meet of the members of the National Trotting Association, four races on the programme, namely, a free-for-all trot and pace, a 2:35 trot and pace, and a 3-minute trot and a running race for a silver cup. Later in the season target trapshooting will have special attention.

Mr. John S. Wright, manager of the Brooklyn Gun Club, announces an all-day shoot for July 30. He contemplates a programme of special interest to his select clientele. Competition commences at 10:30 sharp. As he always has something of practical value as an object of competition, his shoot is of the kind to keep in mind and attend.

In the 25-target handicap event of the Ossining, N. Y., Gun Club's shoot of July 19, Mr. J. Hitchcock, at 14yds., and Mr. H. W. Bissing, at 16yds., tied on 23 for the Terwilliger prize. In the shoot-off Mr. Hitchcock won by a score of 12 to 10 out of a possible 15.

The contest for the E. C. cup, emblematic of the championship of New Jersey, between Messrs. Neaf Apgar, holder, and Mr. W. S. Burtis, challenger, took place at Freehold, N. J., on Saturday of last week and was won by Mr. Apgar. The scores were 46 to 38.

Mr. T. M. Craig, of Sherbrooke, Can., defeated Mr. N. G. Bray in a contest for the individual championship Provincial trophy, July 12, by a score of 45 to 42. Each man shot at 50 targets, of which 20 were at known angles, 20 unknown angles, and 5 pairs.

The Wanderers and the Freehold Gun Club had a nine-man team race on the grounds of the latter on July 19, and the former won by a score of 187 to 184, each man shooting at 25 targets.

Mr. B. D. Nobles, secretary of the Olean, N. Y., Gun Club, writes us that his club will hold a two days' shoot Aug. 12 and 13. There will be $30 added money. Competition is open to all.

BERNARD WATERS.

Towson Gun Club.

TOWSON, Md., July 19.—The scores made at the first shoot of a series of three, between members of the Maryland Country Club and the Towson Gun Club, were in favor of the latter, 221 to 208. The conditions were 50 targets to each contestant. The scores:

Towson Club—C. Tracy 42, Geo. Marley 48, Brady 42, B. C. Marley 45, Geo. Tracy 44; total 221.

Maryland Country Club—J. Lassel 42, Richards 40, Hollander 44, Street 43, P. Lassel 39; total 208.

The next shoot will take place at the Maryland Country Club's grounds.

Dover Sportsmen's Association.

DOVER, N. H., July 19.—The scores made on the Dover Sportsmen's Association grounds to-day were as follows:

	Shot at.	Broke.		Shot at.	Broke.
F F Wentworth	84	65	Chesley	14	9
N C Wentworth	50	33	Meserve	30	14
St Evens	77	50	Tibbetts	10	2
Hallam	90	48			

The Duck Farm Shoot at Allentown.

THE John F. Weiler Gun Club, of Allentown, Pa., held its midsummer shoot at its grounds, near the Duck Farm, on Wednesday and Thursday of last week, July 16 and 17. On the first day there was quite a good attendance, but the heavy rain in the early morning of the 17th had its effect on the number of shooters gathered together on that day.

From out of town, representing the trade, were T. W. Morfey and F. E. Butler, of the U. M. C. Co.; T. H. Keller and Neaf Apgar, of the Peters Cartridge Co.; Edward Banks, of the American E. C. & Schultze Gunpowder Co.; Simon Glover, of New York; D. S. D., of South Bethlehem; C. E. Mink, Howard Ridge and Sanford, of Philadelphia; Fen. Cooper, of Mahanoy City, and W. N. Stroh, of Pittston, were among those who took part in the shooting.

The weather on the first day was all that could be desired, the air being cool and the sunshine quite enjoyable. On the second day things were different. It rained hard early in the day, and between 9 and 10 a thunderstorm of full growth took part in the proceedings. Before noon the sun came out, and the afternoon was close and muggy, myriads of black flies making things very unpleasant for shooters and onlookers. As, too, both traps worked exceedingly ill, the delays at the score, while the flies were busy were trying to even the most earnest disciple of Job in the bunch.

On the first day Glover was high, losing but 10 targets, while on the second day Apgar did the trick with the same number of losses, Glover losing 12. For the two days, Glover was high with 22 missed, C. F. Kramlich, the club's hard-working secretary, well earning second place by shooting consistently well under the most severe conditions. Mink took third place and Apgar fourth.

All the purses were divided under the Rose system, Mr. Gurnard looking after the cashier's office in a capable manner, assisted by Mr. Hausman. Scores of both days follow:

First Day, July 16.

Birch Brook Gun Club.

LYNN, Mass.—The Birch Brook Gun Club held its regular shoot on Saturday afternoon, July 19, and some good scores were made. Hilliard and his son Everett made 15, 10 and 7 each out of a total 35 in practice shooting. The rivalry is getting a little exciting, as several of the high men are not very far apart, but as the high ones maintain about the same average, the outcome may be pretty safely judged.

No. 1 was the medal; No. 2 the merchandise shoot. The handicap allowances in yards follow the names:

Events:	1	2	3	4	5	6	7	8	9

West Danbury Gun Club—R. Hall 18, Gardner 19, Ottman 8, Brown 16, Wilkins 10; total 71.

Pahquisque Club—Stevens 23, Gregory 16, Olmstead 11, Snell 11, Van Scoy 11; total 72.

C. W. STEVENS, Sec'y P. R. and G. C.

Baltimore Shooting Association.

BALTIMORE, Md., July 19.—The third trophy shoot of July was not strongly attended. The weather was hot. Capt. J. R. Malone made high score in the club race with 48 and 50, breaking his last 25 straight. Dr. H. E. Lupus was second with 47, W. R. Biddle third with 44.

Dr. Lupus now leads in Class A with 135 out of 150. In Class B J. W. Chew is first with 123. In Class C, C. E. Peters has the lead with 117. The handicap committee has decided to use the average system for the next handicap. This is the system which gave such general satisfaction on last Thursday at the Standard Club:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	15	10	15	H	50	Targets:	10	15	10	15	H	50

Biddle	5	9	6	12	14	44	Hart	8	13	9	10	16	43
Chew	6	13	9	15	16	43	Roberts	7	7	..	..	14	35

IN NEW JERSEY.

Emerald Gun Club.

The postponed May shoot of the Emerald Gun Club was held to-day, July 15, on Smith Brothers' grounds, Newark, N. J. Mr. W. Hassinger is a new member. The birds were a fair lot. The handicaps are distance and points:

W Corbet, 25, 5....0111*01022— 6
J Moore, 28, 6½...1011101021— 7
R Regan, 25, 6.....1111222022— 9
Dr O'Connell, 32, 7..1212222202— 9
F Kall, 28.....0111222001— 7
W Catton, 28, 7...0212111201— 8
J Henry, 28, 6.....1120110021— 7
R May, 28, 6.....110221200*— 6
A Hawes, 28.....1121022102— 8
H Koegle, 30, 7....2202122202— 8
J Fischer, 28, 6....1122121000— 7
Dr Hudson, 28, 7..1112111210— 9
T Short, 28, 7.....1220211222— 9
F Hansman, 25, 6..01111*1112— 8
W Hassinger, 30, 7.1122112121—10

Five birds: Koegle 4, Dr. O'Connell 5, Hansman 5, Dr. Hudson 4, R. May 3.

Freehold Gun Club.

Freehold, N. J., July 19.—The Freehold Gun Club held quite a successful shoot to-day, the event being marked by a strong attendance of "the Wanderers," some ten in number, most of whom shot through the entire programme. The weather was clear and warm and calm. The light in the midday hours was rather high, but in the late afternoon it was softer, and favorable for good scores. There were ten events on the programme, of which two were special contests, namely, the Championship of New Jersey, of which the E. C. cup is the emblem, between Messrs. Neaf Apgar and W. S. Burtis, and a nine-man team match between teams of the Wanderers and the Freehold Gun Club.

The grounds, situated at the edge of the town, are level, beautiful and, as to background, favorable for good work. The club contemplates building a new club house in the near future, on a plan in keeping with its greater scope and greater needs.

The visiting shooters were most courteously treated. The sweepstakes:

Events:	1	2	3	4	5	6	7	8
Targets:	15	15	10	10	20	30	15	15
Banks	12	13	10	8	20	29	13	10

Campbell, 2	..	..	..	..	..	14	..	..
Ferriday	..	..	..	..	..	..	9	..

No. 6 was the Freehold Gun Club handicap, the allowances following after the names of the contestants. The winners were: First, W. Walling; second, J. T. Laird; third, J. Matthews; fourth, Van Derveer.

The E. C. Cup Contest.

The New Jersey State championship contest, between Messrs. W. S. Burtis and Neaf Apgar, was the main event. It proved, however, to be an easy victory for the latter by a score of 46 to 38. The first 15 targets practically decided the contest, and at the end of the first 25, Mr. Apgar had scored 24, with 4 to the good, so that with such a lead there was no hope for his opponent.

Mr. Burtis' gun was pounding his cheek severely, which may account for the falling off in his form. The scores:

N Apgar.....111111111111111101111111111101111111111111111111111001—46
W S Burtis.....111111011010010111111111111101101111110111010011111011—38

The Wanderers—Freehold Team Race.

The nine-man team race proved to be quite close, the victors having but a narrow margin of superiority—that is, 3 targets, 187 to 184, out of a possible 225, or a little better than an average of 83 per cent. The scores:

The Wanderers' Team.

JAS. R. MERRILL, Sec'y.

Suffern Gun Club.

Paterson, N. J., July 20.—Ten members of the Jackson Park Gun Club, of Paterson, paid a visit to Suffern yesterday afternoon as the guests of the Suffern Gun Club. The latter had a delegation at the depot to meet us when we arrived. We were overdue in getting to Suffern, as our train was 45 minutes late on leaving Jersey City. We arrived at Suffern at about 3:15. We were escorted by the delegation to the grounds, about 300yds. from the depot, and down a steep embankment formed by the Erie railroad to the bottom of the Ramapo Valley, where are situated the grounds and club house. A large crowd was there to greet our coming. There was a squad shooting when we arrived, but they soon finished, and then followed a general introduction all around and a welcome hand extended to the Paterson boys. The visitors included Capt. Money, Count Lenone, Capt. John Powers, former game warden, Wm. Stalter, Garry Hopper, Ed. Morgan, Aaron Doty, G. W. Hopper, Wm. Dutcher, James McGuire and two other gentlemen.

While the boys were being made welcome the writer, Wm. Dutcher, made himself generally useful, and by the time the Paterson boys got ready, he had all their names down on a score pad and entrance money collected. Within ten minutes from the time we arrived at the grounds he had the first squad banging away to the wonderment of the crowd. He kept them at it at so fast a clip that after shooting at five events, all at 15 targets, the operator of the electric pull over the magautrap came to him and invited him to come and take some refreshments and something to eat. Then he told the writer that he was making it pretty hot work for the boys, as they were not used to such fast shooting. The crowd seemed to enjoy the lively work, and there was plenty of encouragement. All the while the writer was hustling things along he could hear the boys enjoying themselves on the inside of the club house.

They shot six events at 15 targets and one or two 10-target events, and then shells were nearly all gone. It was getting dark. At the request of the officers of the Suffern Gun Club, Capt. Money and Aaron Doty finished up the afternoon's sport with a 25-bird race, which was very interesting to spectators, ending with 21 for each man, a tie, and no more shells on hand.

The members of the Suffern Gun Club, whose names I failed to get, proposed three cheers and a tiger for the Paterson boys, and they were returned with interest by the Jackson Park Gun Club till the echo resounded between the hills where the grounds are situated. The Paterson boys extended an invitation to the Suffern boys to come to Paterson next Saturday, 26th, when they will hold a shoot, and enjoy an afternoon with us.

Capt. Money, and Doty after first event and Capt. Powers shot in pretty good form for a strange grounds. Reeves shot in fine form.

The writer was referee:

Events:	1	2	3	4	5	6
Count Lenone	13	8	9	9	8	10

WM. DUTCHER.

Jeanette Gun Club.

July 18.—The first shoot of the Jeannette Gun Club on its new grounds at Guttenburg was held to-day. Mr. Schortemeier (Job Lott) won Class A medal after a close race, which included a shoot-off on 13 birds. Steffens won the challenge medal. The scores:

F Ehlen, 28.....100*100222— 5
H Pape, 28.....12*1101022— 7
C Meyer, 28.....2111121221—10
C Steffens, 30.....1212112111—10

Thyssen, 25	0022122001— 6	Hainhorst, 30	1000212211— 7

WESTERN TRAPS.

Garfield Gun Club.

CHICAGO, Ill., July 19.—The appended scores were made on our grounds to-day on the occasion of the fifth trophy shoot of the second series. Notwithstanding the rain, which fell steadily until 2 o'clock, fifteen shooters put in an appearance for the trophy event. Dr. Meek carried off the honors of the day, breaking 24 in the main event, winning Class A trophy. P. McGowan did the trick for Class B, scoring 22, while J. Monighan captured the trinket in Class C on 14.

The day was a fairly good one for target shooting, except for being dark and gloomy. No wind, but abundance of water:

Twelfth trophy shoot, 25 targets:

J D Pollard.....0010101001001111010111110—14
C H Kehl.....0100000100101111100001100—10

DR. J. W. MEEK, Sec'y.

Tournament at Pleasant Hill.

Editor Forest and Stream:

The sixth annual merchandise and sweepstake (colored) tourney will take place at Pleasant Hill, Mo., Aug. 29. Our fifth shoot was to the negro race what the last G. A. H. was to the Anglo-Saxon one, as it brought together more colored shooters of the scatter gun than was ever known of before. This was due largely to the liberality of the manufacturers, aiding us in the encouragement of more trapshooting among our race.

We expect our coming shoot to surpass any previous one in every respect, as our programme will be more inviting than ever, and every colored lover of trapshooting should begin to prepare to make it a point to attend this shoot.

Owing to the death of the late E. R. Nuttall, of Ohiowa, Neb., holder of the colored championship cup, emblematic of the colored champion wing shot of the United States, it will be put up in open competition at this shoot.

Programmes will be out about the first of August, and can be obtained by addressing T. H. Cohron, Secretary, Box 345, Pleasant Hill, Mo.

Vicksburg Gun Club.

VICKSBURG, Miss.—The eighth annual shooting tournament of the Mississippi and Louisiana Trapshooters' League will be held under the auspices of the Vicksburg Gun Club at Vicksburg, Miss., Aug. 14 and 15 instead of former dates advertised. As will be remembered, the Vicksburg Gun Club gave a fine tournament last August, having in attendance over 100 trap shots. They expect to exceed that number this time. Their handsome catalague will be issued in the next ten days.

Reduced rail rates will be given to Vicksburg from all points. Shooters attending the Birmingham Gun Club tournament Aug. 12 and 13 can leave Birmingham the night of Aug. 13 over the Queen & Crescent route and arrive at Vicksburg by 7 A. M. Aug. 14. Any further information will be cheerfully furnished by J. J. Bradfield, secretary, Vicksburg, Miss.

Please note we have changed dates of our shoot to Aug. 14 and 15, instead of Aug. 19 and 20.

Algona Gun Club.

ALGONA, Ia., July 16.—The Algona Gun Club tournament was fairly well attended, twenty-eight taking part in the shooting. The weather was warm, with a strong south wind blowing directly in the faces of the shooters.

The programme called for twelve 15-target events, with $3 added to each event. The shooting was from one set of traps, Sergeant system. Gilbert was high man with 173; Budd and Konvalinka second with 168. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total.	Av.
Mortenson	14	13	15	13	12	13	15	15	14	14	14	15	167	.927

HAWKEYE.

Ossining Gun Club.

OSSINING, N. Y., July 19.—There was a good turnout of shooters at the regular Saturday afternoon shoot of the Ossining Gun Club to-day. The main event, No. 6, was at 25 birds, distance handicap for the Terwilliger prize, a set of game carvers. H. W. Bissing, at 16yds., and J. Hitchcock, at 14yds., tied with 23 out of 25. In the shoot-off at 15 birds, Hitchcock broke 12 to Bissing's 10. The win was remarkable for the reason that Mr. Hitchcock has been on the sick list for some time, and has not nearly recovered his accustomed strength.

C. G. B.

Provincial Championship Trophy.

SHERBROOKE, Que., July 19.—I inclose you a clipping from one of our city papers of July 12, and would like to publish that part of it referring to the Provincial championship trophy, as many of your subscribers know the contestants and are interested in the fate of the old cup:

"Considerable interest was manifested in the shooting at the grounds of the Sherbrooke Gun Club on July 12, as, in addition to the regular matches, there was a shoot between T. M. Craig and N. G. Bray for the individual championship Provincial trophy, held at present by the former. Last Saturday Craig again came out ahead with a score of 45 points. The conditions for this shoot are 50 birds, 20 at known angles, 20 at unknown angles, and 5 pairs. The scores were:

T M Craig.....16 20 9—45 N G Bray.....17 18 7—42

The scores in the other two matches were:

Robin Hood, 15 birds: C. H. Clark, 16yds., 14; J. B. Goodhue, 19yds., 14; Dr. Stockwell, 17yds., 13; N. G. Bray, 23yds., 13; T. M. Craig, 22yds., 13; C. G. Thompson, 22yds., 12. Clark and Goodhue tied, and in the shoot-off Clark won out with 11 to the latter's 10.

Club trophy, 15 birds: Dr. Stockwell, 16yds., 14; C. H. Clark, 16yds., 11; J. B. Goodhue, 19yds., 13; C. G. Thompson, 24yds., 11; T. M. Craig, 24yds., 10; N. G. Bray, 24yds., 9. C. H. Clark won second place in this match, as none of the scratch men are eligible for second place in this competition

Pawtuxet Gun Club.

PAWTUXET, R. I., July 12.—The first event was the tenth handicap for silver spoons. The second event was for the silver trophy representing the championship of Kent county:

Events:	1	2
Targets:	25	25
W Stainton, 16	20	17
Armstrong, 18	16	19
Sheldon, 20	18	..
Inman, 16	19	16
Willis, 16	15	13

Events:	1	2
Targets:	25	25
Sherman, 16	14	12
Monteith, 14	12	13
R Sheldon, 14	11	..
Jordan, 16	12	7
J Stainton, 16	6	..

July 19.—Event No. 1 was eleventh shoot in the handicap for sterling silver spoons. The next shoot will be the last of the series, and will be interesting. W. H. Sheldon, at 20yds., beat Dr. Inman by 2 targets only, who in turn led Armstrong by 1 target; then came Sherman, Willis and Stainton in a bunch with equal scores, followed by Ray Sheldon, the twelve-year-old, and Monteith in order. The last shoot may change positions somewhat.

Armstrong won the Kent county trophy again to-day; he seems to have a cinch on this.

The next shoot will be two weeks from to-day, as we postponed our regular shoot to allow the boys to see the Interstate team match at Providence next Saturday:

Events:	1	2
Targets:	25	25
Willis, 16	21	13
Inman, 16	21	19
Sherman, 16	20	20
Armstrong, 18	19	22
Sheldon, 20	19	19

Events:	1	2
Targets:	25	25
R Sheldon, 14	15	..
Monteith, 14	15	14
Perkins, 14	13	..
Stainton, 16	19	18

KENT.

Metropolitan Gun Club.

ST. JOSEPH, Mo., July 13.—Besides the regular monthly trophy shoot of the Metropolitan Gun Club, two teams were chosen from the members present, and shot a match at 25 targets per man, losing side to pay for supper. Scores as below:

No. 1 Team—Zim 24, Arnold 23, R. Conser 19, Stout 17, Brown 16, Moore 15, Loderhose 14, Toole 11, Downs 5; total 144.

No. 2 Team—Cunningham 24, Brinson 21, Libbe 20, Netherton 20, Chandlee 22, Kite 21, H. Conser 17, Walker 13, Padfield 3; total 161.

Trophy shoot: Cunningham (1) 22, Zim (1) 24, R. Conser (5) 25, Stout (5) 22, Libbe (5) 25, Brinson (4) 25, Chandlee (9) 25, Walker (9) 25, Loderhose (9) 23, Toole (6) 19, Brown (8) 24, Moore (10) 25.

Tie first shoot-off: Conser (5) 24, Moore (10) 24, Libbe (5) 25, Chandlee (9) 25, Walker (9) 25.

Tie second shoot-off: Libbe (5) 25, Chandlee (9) 25, Walker (9) 21.

Tie third shoot-off: Libbe (5) 24, Chandlee (9) 25.

Raleigh Gun Club.

RALEIGH, N. C., July 17.—The regular shoot held to-day was poorly attended, owing to absence from the city of several members who rarely ever fail to attend. Capt. Ben Eick was a visitor to-day. We enjoyed his visit, and trust to see him represent Dupont in this territory for years to come. His Winchester was out of repairs, so he used a double barrel. Not being accustomed to the gun, his percentage was not up to his usual score. The scores follow, each shooting at 50 targets: Johnson 44, Eick 42, Crowder 36, Ferrall 36.

R. T. GOWAN, Sec'y.

Boston Gun Club.

Boston, July 9.—The Boston Gun Club's ninth serial shoot was held on their grounds at Wellington to-day, and just an even dozen shooters were present to do justice to a delightful day. Straights were few and far between, Leroy being the only lucky one in the bunch, securing one from the 21yd. mark, and the other from the 16yd. mark. In the prize match Frank and Spencer were the real thing, and occupied first position with 19, both handicapped at 18yds. Leroy took care of second position with his lowest score of present series, but it did no harm to his standing, as he still has a clear lead of 8 birds over his next competitor.

Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	5p	10	15	5p	10	15	5p	15	25
Leroy, 21	7	10	7	8	8	7	10	..	..	..	..

Lund, 16	001110100100101	00 00 00 00 00— 8

July 16.—The final shoot of the Boston Gun Club was held on their grounds at Wellington to-day, and though the difficulties encountered were more than the usual, there was just as much good time connected with the affair as any one of the year.

Through a mistake, the haymakers had taken possession of the field in front of the traps, which necessitated our shifting our whole location, which was done in a short time, and things were moving with the usual hum, though not as convenient as is the usual case.

Much merriment was secured watching the ineffectual efforts of the contestants to break them all, and when scores were announced, the smallness of them was, to say the least, extremely laughable.

With all the faults, there never was any shoot enjoyed more than this one, and if it is a necessity we will see that conditions are similar on some future dates. In the prize match of to-day Frank easily led with 19, followed by Spencer with 17. In the serial match, five scores out of ten to count, Leroy captured first honors, having the excellent total of 108. Second postion was taken care of by Woodruff with 98; Frank, third, 95; Bullard, fourth, 95; Barry, fifth, 94; Spencer, sixth, 93; Hawkins, seventh, 87; Kirkwood brothers, eighth, 85.

Events:	1	2	3	4	5	6	7	8	9	10	11

University of Virginia Shoot.

Charlottesville, Va., July 18.—The scores made at our merchandise shoot here July 15-16 are appended. George shot a blue streak, making an average of 95 per cent. in regular events during first day, running 45 straight, capturing both the $5 gold pieces given for best average and longest runs open to amateurs only. His average for the two days, regular events was 88½ per cent. Regular events and the two special handicap events he made 86 2-3 per cent. His long run also captured the $5 gold piece offered for longest run, open to experts as well as to amateurs.

Bruffey made 92½ per cent. first day in regular events, 90½ in the two days' shoot, regular and handicap events counted, tieing with Eick for $5 gold piece for best average open to experts and amateurs.

G. L. Bruffey won the Winchester shotgun in the handicap event on the score of 24 out of 25 at 20yds., and E. W. Bruffey and Warren tied on 24 out of 25 same event, second day, and divided. Former was at 16yds., and latter at 17yds. Capt. Eick ran our shoot for us in the best manner without a hitch, for which our club is under obligation to his house, Dupont Powder Company.

G. L. Bruffey.

Interstate Tournament at Titusville.

Titusville, Pa., July 19.—The Interstate Association tournament given at Titusville, Pa., July 16, 17 and 18, under the auspices of the Titusville Gun Club, was a decided success in every particular.

The Titusville Gun Club is a comparatively new organization. It was organized in October, 1900, and has grown steadily in membership since that time. The shooting grounds are situated a mile west of the city limits, within easy access, being but fifteen minutes' ride by the electric cars. The location of the grounds is one of the most picturesque spots along beautiful Oil Creek, and a first glimpse of it never fails to elicit the admiration of visitors. A background of trees and shade, not too dark for good shooting, presents to the sportsman a picture that arouses his enthusiasm for the beauties of nature. Last year a cozy and convenient club house was erected on the grounds for the accommodation of the gun club and visiting sportsmen. It is neat, commodious and comfortable. The membership is composed of representative citizens of the town, among them many of the most successful business and professional men. They are noted for their hospitality and every visiting sportsman declares they are royal good fellows. The officers of the club are: Mr. C. F. Emerson, President; Dr. Hugh Jamison, Vice-President; Mr. T. L. Andrews, Secretary; Mr. Sol Mayer, Treasurer, and Mr. W. W. Kellog, Captain.

The opening day of the tournament was replete with interest. The weather could not have been better, with the possible exception of a breeze, which blew rather strong from the west at times. At the No. 2 set of traps, situated at the south side of the grounds, the targets were particularly erratic at times. When hard right-quarterers started over the gravel bank, the brisk wind coming down the creek would raise them several feel almost instantly, and he was a fortunate gunner who hit one of them.

In the day's shooting Leroy carried off first honors by breaking 160 out of a total of 170. J. S. Fanning was second with 157, and A. H. Fox and H. D. Kirkover, Jr., tied for third with 156.

One of the stellar attractions of the day was the Mallory brothers' squad. In the day's shooting they were inside the money in about every event, and always attracted an audience. In the evening they entertained the visiting sportsmen by taking them around the city in their automobiles, each of the brothers coming to the tournament with one of these machines.

The second day of the tournament was ushered in with a wind that started at about twenty-five miles an hour and increased to a gale before 10 o'clock. The shooting began at a few minutes before 10, and all the regular events were concluded by 2 o'clock. Several practice events were indulged in for the benefit of spectators who arrivd too late to see the work of the experts.

The attendance was not so large as on Wednesday, but there were as many shooters on the grounds, not all of whom were willing to risk their reputations and money in such windy weather. Considering the weather, the shooting was excellent. The shooting of Leroy, losing but 17 targets out of 170, may be considered remarkable. He was again high gun for the day. J. F. Mallory and J. T. Atkinson tied for second honors with 146. Third place was also a tie between J. S. Fanning and L. V. Byers, each having 143 to his credit.

The closing day of the tournament was an ideal one for making high scores, and Fanning succeeded in putting up the fine score of 163 out of 170, tieing Leroy for first general average for the three days of the tournament. The attendance was rather light, and the shooting was rushed through in order that the visitors could get away on early trains.

The scores of the three days follow:

July 16, First Day.

The Verbosity of Match Making.

Dunbarton, N. H., July 18.—Friend See E. See kindly relegates me to the class of kickers and squealers. I object to the squealing part. No one ever knew of my squealing out of any match I ever made, and I have been in a good many. Having shot, I think, in more open contests in various parts of the country from Canada to New Orleans, than any trapshooter in See E. See's State, I ought to know something of the rules of trapshooting.

See E. See quotes me (or rather misquotes) as saying that I did not want any part of the Maine shooters. What I said was, "I am not hunting for matches." As far saying that I was down in Maine once and paid my guide so much for one shot at a caribou that I swore I would never go there again, I certainly did not make such a statement. I said that I spent once six weeks in the late fall hunting with John Danforth, of Parmachenee Lake, and saw but one caribou, which I killed with the only cartridge I used on the trip. Why, friend See E. See, I have made seven trips to the backwoods of your State, spending from one week to two months at a time on the hunting or fishing grounds, and always had a good time.

As for my offer as published in Forest and Stream, it means precisely what it says, the object being to stir up some interest among the shooters of our local clubs. If See E. See wants something different, why does not he challenge New England or all creation in behalf of the Maine shooters. Just at present, I should think the Pine Tree men had a ten-man team race on their hands which will make them trot some to win. As for the wind being taken out of my sails by seeing Prof. Moody break targets, I did see a quiet gentleman of about my age do some shooting. According to the scores as published in Forest and Stream, the only man shooting under the name of Moody shot in about half of the events on the programme, and broke less than 80 per cent.

As for kicking: In my account of the Wellington tournament, I did criticise the manner of judging and keeping the scores, and I am not the only one who did. I entered every event on both days, including three extras on the first day, and paid in something over $47, and I think I was lucky in winning back some three-fourths of it. Late in the afternoon of the second day it was announced that all regular events were shot out. I was very sure that there were two of 25 targets each in which I had not shot, although I had paid my entrance to them. Dickey said that I had shot. The printed scores show that I was right. Therefore, I criticise that part of the tournament. (See E. See calls it kicking.) I would do the same again under similar conditions. Now, friend See E. See, we do not want to get into a personal controversy. Such things are not interesting to readers of Forest and Stream. If, as David Harum says, "I have done or said anything I am sorry for, I am willing to be forgiven."

C. M. Stark.

Ashland Gun Club.

Ashland, Va.—We inclose you newspaper clipping, showing account of shoot on the 12th inst. We arranged the distances 21yds. for 90 per cent. average, and decreased 1yd. for each 4 per cent. less, down to 14yds. This we thought the fairest that could be done, but from the small attendance—especially of the cracks—it looks as if they did not agree with us. What is the usual rule for distance handicapping, if any?

A. G. Club.

The cup is a handsome silver one, fashioned after the Carteret Gun Club style. It was donated by Mr. George B. Hutchings, of Ashland. It is about 8in. in diameter, 4in. deep, and beautifully engraved and embossed.

This is the first time a distance handicap was ever shot by any club in Virginia, and it is conceded by all shooters as being the fairest system of handicapping.

At the 21yd. line W. C. Saunders made the best score—71 out of a possible 100. At the 20yd. line M. D. Hart, with 70; at the 18yd. line George B. Hutchings, 72; at the 17yd. line Thos. H. Fox, 78; on the 16yd. line, W. D. Cushman, 70; on the 15yd. line S. J. Doswell, and on the 14yd. line line McLelland, 48.

The following are the scores: W. C. Saunders (21) 71, F. Stearns (21) 63, W. A. Hammond (21) 63, J. Harrison (21) 67, M. D. Hart (20) 70, G. B. Hutchings (18) 72, Dr. Bridgeforth (18) 65, J. E. Cox (18) 64, R. H. Johnson (18) 59, H. Brown (18) 68, T. H. Fox (17) 78, W. D. Cushman (16) 70, J. A. Anderson (16) 64, S. J. Doswell (15) 72, Wm. Sands (14) 47, McLelland (14) 48, H. W. Paine (14) 35.

PUBLISHERS' DEPARTMENT.

Mr. Fred Gilbert, the shotgun wizard, of Spirit Lake, Ia., has shot at 5,765 targets since Jan. 1, of which number he has broken 5,532, or .959 per cent. He used a Parker gun.—*Adv.*

All field shooters know that in cover most birds rise within a very few yards of the gun, and thus before a choke-bore are likely to be missed altogether or cut all to pieces. In these days, when all guns are choked, the shot spreader is a very useful part of the equipment of a cover shooter.—*Adv.*

At the Interstate Association's tournament given for the Titusville, Pa., Gun Club, July 16 to 18, there were trade representatives as follows: Chas. G. Grubb, Pittsburg, of the Peters Cartridge Co.; J. R. Hull, Meriden, of Parker Bros.; L. J. Squier, Cincinnati, Dupont Powder Co.; J. S. Fanning, New York, Laflin & Rand Powder Co.; A. H. Fox, Philadelphia, and Frank Lawrence, New York, Winchester Repeating Arms Co.; B. Leroy Woodard, Campello, Mass., Dupont Powder Co., and Parker Bros.

Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W. GREENER.

WINCHESTER

High Velocity Low Pressure Cartridges.

.45-70, .45-90 and .50-110 Calibers, Loaded with Smokeless Powder and Soft Point Metal Patched Bullets.

FOR BIG GAME SHOOTING AT DISTANCES UP TO 200 YARDS.

We are now able to furnish, through the regular trade channels, the above new Winchester High Velocity, large bore, cartridges for Winchester Model 1886, .45-70, .45-90 and .50-110 caliber rifles. These cartridges, although they give high velocity and great muzzle energy, develop only slightly increased initial pressure. By their use, owners of Winchester Model 1886 rifles of the calibers mentioned can greatly increase the power of their guns. For fine shooting, a slight alteration of sights may be necessary when these cartridges are used. When ordering new rifles in which it is intended to use these cartridges, it should be so stated in the order, so that the proper sights may be fitted.

The following table shows the muzzle velocity, penetration and trajectory of these High Velocity Low Pressure Cartridges:

Name of Cartridge.	Weight of Bullet, grains.	Velocity at Muzzle, Feet per second.	Penetration in 7/8 inch dry pine boards at 15ft. from muzzle. Soft point bullet.	Trajectory. 100 Yds. Height at 50 yds. Inches.	Trajectory. 200 yds. Height at 100 yds. Inches.
.45-70	300	1875	13	1.47	7.40
.45-90 Winchester	300	1980	14	1.41	6 63
.50-110 Express	300	2225	12	1.07	5.82

With the great increase in velocity which these cartridges have, their trajectory is proportionately flatter, and, at 200 yards, their remaining energies are practically the same as those of the small caliber high-power cartridges. It is a desirable feature of these cartridges that they can be used by persons who fear to use the high-power small caliber cartridges on account of their great range. These points considered, and the fact that the results are obtained with bullets of large cross section; make these cartridges unsurpassed for striking and killing power at the distances at which most big game is killed.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

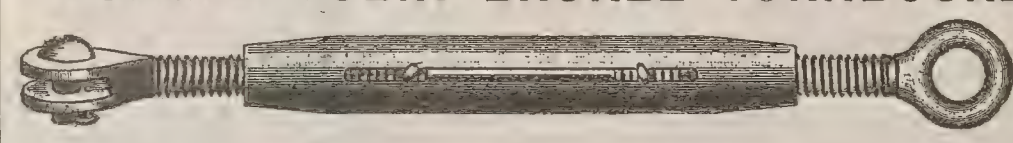
FORGED TOBIN BRONZE TURNBUCKLES.



With Cast Manganese Bronze Sleeve.

Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

YACHT ARCHITECTURE.

By Dixon Kemp, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

The Trapper's Guide.

A Manual of Instructions for Capturing All Kinds of Fur-bearing Animals, and Curing their Skins; with observations on the fur trade, hints on life in the woods, narratives of trapping and hunting excursions. By S. Newhouse and other trappers and sportsmen.

This is the best book on trapping ever written. It gives full descriptions of all the animals which the American trapper is likely to meet with, tells how they live, how to trap them and how to care for and cure their pelts. No man who is interested in trapping animals, whether it be muskrats or bears, should be without this complete manual of instruction.

Yacht and Boat Sailing.

By Dixon Kemp, Associate Institute of Naval Architects. Price $12.

This edition has been largely re-written, and contains a great number of new subjects, and the lines of many boats never before published, the total number of plates exceeding 100, besides more than 350 woodcuts in the text. Contents: "Selecting a Yacht," "Examination of the Yacht," "Building a Yacht," "Equipment of the Yacht," "Seamanship," "The Management of Open Boats," "The General Management of a Yacht," "The Rules of the Yacht Racing Association," "Yacht Racing; Handling a Yacht in a Match," "Centerboard Boats," "Centerboard Boats for Rowing and Sailing," "Sails for Centerboard Boats," "Small Centerboard Yachts," "Mersey Sailing Boats," "Clyde Sailing Boats," "Belfast Lough Boats," "Dublin Bay, Kingstown Boats," "Cork Harbor Boats," "Itchen Boats," "Falmouth Quay Punts," "Thames Bawley Boats," "Lake Windermere Yachts," "Yachts of the Norfolk Broads," "Small Yachts and Boats of Y. R. A. Rating," "Singlehanded Cruisers," "Types of Sailing Vessels," etc.

WARDENS IN CONVENTION.

THE meeting of game and fish wardens at Mammoth Hot Springs in the Yellowstone Park last week was the beginning of a system of co-operation which, it is hoped, may result in much benefit to the States of the Northwest. The convention was the outcome of activity on the part of State Game and Fish Warden W. F. Scott, of Helena, Montana, who has long been convinced of the practical results of associated action by the authorities of contiguous States in the work of protection. There were present representatives from eight States—Warden Scott and Dr. Jas. A. Henshall, of Montana; Executive Agent Sam. F. Fullerton and Commissioner H. G. Smith, of Minnesota; State Game Warden D. C. Nowlin, of Wyoming; State Game Warden C. W. Harris, of Colorado; State Game Warden L. P. W. Quimby, of Oregon, and Commissioner John Sharp, of Utah.

A permanent organization was effected under the name of the National Association of Game and Fish Wardens and Commissioners. W. F. Scott, of Montana, was elected President, and H. G. Smith, of Minnesota, Secretary and Treasurer.

Several well-considered papers were read and discussed. Commissioner Sharp made a strong argument for the abolition of spring shooting—an expedient which he reckoned absolutely necessary if the migratory species are to be saved. Mr. Fullerton discussed the benefits of co-operation between the States, and cited from his own experience instances where game illegally shipped from other States had been intercepted in Minnesota, whereupon the authorities of the State from which the game had been shipped had been supplied with the evidence thus obtained, and the culprits had been punished. Such co-operation if carried out systematically will go far to break up the business of a lawless border element which promotes the underground game traffic between the States. The system may well be extended to international co-operation between this country and Canada; among the possibilities of the immediate future is an alliance between the Dominion Marine and Fisheries authorities and those of the Great Lakes States for the efficient protection of the boundary waters. Mr. Fullerton urged as to legislation which should be adopted in such States as do not already have such features in their laws: (1) A declaration in the statute that the game is the property of the State and may be taken only as the statute itself expressly gives the privilege. (2) A non-export law. (3) A limit on the bag, "say twenty-five birds, two or three deer, and one moose." (4) Specific provisions respecting heads and hides; for the hide and head hunter does perhaps more damage than the meat hunter. (5) Above all else a prohibition of the sale of game birds, animals and fish at all times. On this point Mr. Fullerton said:

When FOREST AND STREAM first proposed this measure years ago, they were laughed at from one end of the country to the other. Strong editorials were written on the subject by the leading newspapers of the country, accusing FOREST AND STREAM of working in the interests of the "dude" sportsmen and trying to deprive a large majority of our citizens of the privilege of buying their game in the open market. But sentiment has changed since then, and I bring you a message from Minnesota vouching for the benefits we have received from that excellent section in our game laws stopping the sale of all game.

(6) A provision making contraband all implements of shooting and fishing illegally used. (7) Wardens' right of search. (8) Abolition of spring shooting. (9) A shooting license.

Warden Nowlin, who has made a study of the operation of the Wyoming non-resident hunting license system, read a paper strongly supporting the wisdom and utility of the tax, as an expedient for providing revenue, for keeping out the meat hunter, and for enabling the authorities to know what is done in the woods.

Years ago a New York city dweller having achieved an outing in the elk ranges of the Northwest, in reporting his experiences for FOREST AND STREAM, told how the allurement of the mountains had taken hold upon him, so that henceforth he could live no longer in the East, but amid the scenes which had attracted him in the West. He was one of an unnumbered host of men for whom the chance of a hunting trip has meant a permanent change of residence and of fortune. The place of fish and game as advertising mediums for a country was the subject of a paper read by Warden Scott, of Montana, who declared that millions of dollars had been invested in the Northwest by persons who had first been attracted to the country by the hunting and fishing. This with the other papers to which reference has been made will be printed in full in our next issue.

NATURE IN IRVING.

THE beauty, majesty and variety of the natural world, whether viewed in its entirety, or in its infinite commingling of variegated detail, have been ever a source of constant delight to the true sportsman. Merely catching the fish or bagging the swiftly flying bird is in itself but a fragmentary part of the sport. The witchery of nature's setting must be allied to it, else it is sadly marred or depreciated, or, indeed, entirely ceases to be sport. This is materially felt by sportsmen when they attempt to give realistic descriptions of their outings. The pleasurable emotions, excited by the beautiful, the sublime and the transformations in nature, so clear to the beholder's own consciousness, seem almost inarticulate in the attempt to depict them and their causes to others. And yet, insomuch as a writer falls short of giving a full, realistic description of his mind picture, insomuch is the description imperfect in itself and lessened in value to the readers of it. Word painting, like color painting, is an art which requires nice judgment, nice treatment and delicate blendings. There is quite as much difficulty in painting a mind picture in words so that it will be truly clear and pleasing to the minds of others as there is in painting in colors a picture which will be clear and pleasing to the eye and mind. Even among writers of established eminence, this art is rare. Washington Irving, whose works rank with the products of the world's best writers, possessed in an eminent degree the art of describing natural scenes, though, for that matter, he was a thorough master of any vein of literature which he engaged in. Much of his writings, however, are purely descriptive, and so fertile was his imagination, so airy and vivid his description, and so delicately and well chosen the matter, that continued reading of him is a continued delight. As a case in point, what could more delightfully portray a country home than the following, in "The Legend of Sleepy Hollow":

A great elm tree spread its branches over it; at the foot of which bubbled up a spring of the softest and sweetest water, in a little well formed of a barrel; and then stole away sparkling through the grass to a neighboring brook that bubbled along among alders and dwarf willows. Hard by the farmhouse was a vast barn that might have served for a church; every window and crevice of which seemed bursting forth with the treasures of the farm; the flail was busily resounding within it from morning to night; swallows and martins skimmed twittering about the eaves; and rows of pigeons, some with one eye turned up as if watching the weather, some with their heads under their wings or buried in their bosoms, and others, swelling and cooing and bowing about their dames were enjoying the sunshine on the roof. Sleek, unwieldy porkers were grunting in the repose and abundance of their pens, from whence sallied forth now and then troops of sucking pigs, as if to sniff the air. A stately squadron of snowy geese were riding in an adjoining pond, convoying whole fleets of ducks; regiments of turkeys were gobbling through the farm yard, and guinea fowls fretting about it like ill-tempered housewives with their peevish, discontented cry. Before the barn door strutted the gallant cock, that pattern of a husband, a warrior, and a fine gentleman, clapping his burnished wings and crowing in the pride and gladness of his heart—sometimes tearing up the earth with his feet and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered.

Can any one read the following without recalling to mind a brook just like it?:

Our first essay was along a mountain brook, among the highlands of the Hudson—a most unfortunate place for the execution of those piscatory tactics which had been invented along the velvet margins of quiet English rivulets. It was one of those wild streams that lavish among our romantic solitudes unheeded beauties, enough to fill the sketch book of a hunter of the picturesque. Sometimes it would leap down rocky shelves, making small cascades over which the trees threw their broad balancing sprays; and long, nameless weeds hung in fringes from the impending banks, dripping with diamond drops. Sometimes it would bawl and fret along a ravine in the matted shade of a forest, filling it with murmurs; and after this termagent career, would steal forth into open day with the most placid demure face imaginable; as I have seen some pestilent shrew of a housewife, after filling her home with uproar and ill humor, come dimpling out of doors, swimming and curtseying and smiling upon all the world.

The following conjures up thoughts of the ruffed grouse:

It is a rugged region; full of fastnesses. A line of rocky hills extends through it like a backbone, sending out ribs on either side; but these rude hills are for the most part richly wooded and inclose little fresh pastoral valleys watered by the Neperan, the Pocantico, and other beautiful streams along which the Indians built their wigwams in the olden time.

Could anything be more realistic in the way of describing where to dine, to fish or to shoot?

That question of the qualities of true sport has the perennial freshness of spring and the endurance of the everlasting hills. It has been discussed over and over again by correspondents of FOREST AND STREAM, and on each occasion has been settled for all time; yet but a spark is needed to kindle the flame anew. Just now the talk happens to have been prompted by Didymus, who made some invidious remarks about moose hunting and has brought out a vigorous defense from the big-game hunters. This is an admirable illustration of the bearing which the particular view-point may have on such a question. In his notes on tame birds last week, Didymus pictures himself as sitting on a shady porch, fanned by the Florida sea breeze, and for diversion winning the confidence of wild birds. How may one under such conditions be expected to view with any sympathy whatever the arduous enterprise of reducing to possession a set of moose antlers in the Canadian wilderness?

Whether advocates and followers of bird shooting or of big-game hunting, we are all agreed on this one thing, that the allurement of the sport is in the pursuing, be the pursuit indolent or arduous. In this the sportsman of to-day is the sportsman of two thousand years ago, as witness the Greek Callimachus, who lived and hunted and loved in the third century before the Christian era:

The huntsman o'er the hills pursues
The timid hare, and keenly views
The tracks of hind amid the snow,
Nor heeds the wint'ry winds that blow.
But should a stranger mildly say,
Accept the game I kill'd to-day—
The proffer'd gift he quickly scorns,
And to th' uncertain chase returns:
Such is my love; I never prize
An easy fair, but her who flies.

Rather severe on "The Future George V. of England" is a writer in Harper's Weekly, who recently gave six columns to a description of that Prince and his characteristics. The writer says: "Shooting and fishing are his chief recreations, and in both he is above the average." He also declared that the Prince is a "keen sportsman," and followed up this with the statement that he "has shot turkey buzzards in Buenos Ayres." One wonders—so different are men's ideas concerning sport in different countries—whether in all the wide world there is a place where turkey buzzards are regarded as game, or even where it is legitimate to shoot them. In many countries they are protected by law as scavengers. What is of course most probable is that Prince George never in all his life shot a turkey buzzard, but that the statement is merely the phrase of a writer who knows nothing about sport, but thought the combination of words sounded well. The amount of misinformation on sport and natural history that creeps in to the most carefully edited periodicals is astonishing. It is not long since, in a valued exchange, mention was made of shooting wild turkeys in the Altai Mountains in Siberia! Think of it!

Interesting evidence of the efficiency of the non-sale of game system comes from Florida, which was one of the last States to take up in earnest the protection of its deer and birds. The Legislature of 1899 enacted a stringent law, limiting the take of deer to five for any one person, and forbidding absolutely the sale of hides and venison. The law as to limit might be evaded, but with popular sentiment in support of the sale prohibition, excessive killing is a negligible factor. The market-hunter cannot sell his game; he is therefore to be counted out. The people other than market-hunters who would kill more than five deer in a season are not so numerous as to affect the situation. In counties like Kissimmee, where the non-sale law is rigorously enforced by the power of popular sentiment, the good results are convincingly manifested in a renewed deer supply.

The Sportsman Tourist.

Yellowstone Park from a Car Window.

In Two Parts—Part I.

THOUGH the title of this article is to a slight extent a misnomer, and we did not actually see the Park in that way, still our trip was so lacking in all the elements of romance and discomfort, that I deem it only proper to prepare the reader's mind for what is to follow.

Since FOREST AND STREAM is allowing Mr. Sears to "walk" all over the South on rafts, in farmers' wagons, canoes and various other prosaic methods of locomotion, I hope I shall be pardoned if my account of our vacation is lacking in elements of the picturesque, for we didn't camp, didn't tramp or pack our grub. On the contrary, we traveled in the most Philistine manner possible and had the best of everything we could get.

The first stage of our journey brought us to Ogden, a city which has for me a strong interest: first because it was named after Podgers; second, because it don't amount to anything, and third, because it ought to. The location in the prairie just at the foot of some grand mountains, is ideal, and the fact that it is a railroad junction should make it important; but the view from the top story of the hotel where we breakfasted showed that the inhabitants had hardly lived up to their opportunities. Having some few hours to wait, we wrote letters and took pictures after a good breakfast, and then put in a little time in the electric cars, some of which were very good and others so remarkably dilapidated as to suggest the thought that the line was either in liquidation, or else an instance of municipal ownership.

We had to get tickets at Ogden so long that the agent intimated that we had better do the town while he was getting them ready, and the train was twenty minutes late in its departure, but we were off at last in a car that was hot enough to fry eggs. There was the usual congregation of passengers, and the inevitable small boy. We had had one before, but a kind Providence had removed him from our midst at Reno. This small boy was pretty sick and very miserable, with a severe dose of whooping cough, and a very inexperienced mother who was hurrying him to the sea coast for a change of air, but meantime was filling him with alkali water and cake. As fast as he coughed himself empty, which he did at frequent intervals, she filled him up again. I think that if she had given him half a chance he would have been quite a cheerful little beggar, for he seemed that way inclined, but between the cough and the cake he had a pretty hard time.

At Pocotello, in the Fort Hall Indian Reservation, which has lately been the scene of some exciting land locations, we saw several specimens of the "noble red man," and likewise of "Mrs. Lo." He "favored" some startling effects in his costume, combining the most striking portions of the habiliments of the cowboy with some of his own. One young brave, to whose grace of carriage and eclecticism of dress we immediately succumbed, wore a cowboy hat and boots of the most aggravated type, a red calico shirt, a voluminous scarf of blue mosquito net around his neck, and no coat or vest. Another older brave had added a feather to his hat, moccasins and a gorgeous-hued blanket. The squaws were equally taking in their apparel (at a distance).

We passed over some miles of lava plains, relieved at intervals by what looked for all the world like ruined Ticonderogas, and though I knew that these were not the famous "lava beds" where the Modocs made it warm for Canby once, I couldn't help thinking that some first-class opportunities for an Indian fight had gone to waste hereabouts.

As it grew dark the engine livened up the landscape by setting fire to the grass alongside the track, until we seemed to be traveling in the midst of a torchlight procession got up especially in our honor.

Monida (the name is made up of the first syllables of Montana and Idaho, and it lies just on the boundary between those States) did not seem very imposing as we left the train; in fact, my first impressions of it were limited to a big lantern and a streak of board walk shining in its glare. There were no attentive gentlemen of color in red or any other caps, lying in wait for quarters, and I was under the disagreeable necessity of loading Mrs. *** with the cameras and smaller impedimenta, while I grasped the handles of two very heavy bags. Fortunately the distance was less than it appeared.

The hotel at Monida would hardly compare favorably with the "Walled-off Hysteria," but we managed to make out fairly well, and after breakfast next morning I went out and made the acquaintance of a big dog of the blue-ribbon-St.-Bernard kind, and found him "a perfect gentleman," with a pedigree and all the trimmings.

This metropolis lies in a plain surrounded by mountains, and is in fact located near the summit of the range which divides Idaho and Montana, at an elevation of 7,000 feet, which is about the average elevation of the Park, so there is little or no climbing to do in the stage ride.

The box seat of the "coach," as it is quite properly called, was pre-empted by a female who popped up suddenly from somewhere, and whose appearance was far from prepossessing. There were two other feminines in the party, both younger and infinitely better looking, but that didn't count on this occasion, and the lady, whom we came to know subsequently as Missouri, and not unfrequently as Misery, was not to be disturbed; her passive resistance being proof against all our efforts.

There is a great deal of country about here lying around out doors, and once in a great, very great, while the vastnesses were punctuated by a collection of low, squatty looking log cabin farm buildings, which are all one sees, except a few fine-looking cattle, of the famous stock ranges of Montana and Wyoming.

The stage road hardly came up to our ideas of what a stage road should be. In the first place, it was nearly level, and four horses dragged a rather heavy coach along without any difficulty; then there was very little dust, and no "chuck holes." Now a stage road without chuck holes, and no places just wide enough for the stage to squeeze up and through, while you gaze in fearsome admiration at the tops of big pines, more feet below you than you like to think, was to us a novel experience, and we found ourselves joining in the conversation of the others and with them perpetrating moss-grown conundrums and anecdotes of a hoary antiquity.

At various places in the dim distance we saw floating white specks which we were told were swans (wild, of course), and they possibly were, though they might have been pelicans; we were too far off to make sure even with the binoculars. Misery on the box seat borrowed Mrs. ***'s sunshade, admired the scenery and took copious notes of everybody's yarns, while she poked the driver's eye out with the parasol. He found her a most engaging companion, and traded off with an extra driver the first chance he got, "so he could get his eye put out for a while."

Somewhere between 5 and 6 we drew up at "Dwelle's," or, as it is more appropriately styled, the Grayling Inn, a log structure of considerable picturesque pretensions. Two large striped tents serve the purpose of annexes. The interior of the inn was quite prepossessing. A large central living room, with fireplace and comfortable chairs, and opening on to the dining room and various chambers, extended to the roof, while a gallery running round all four sides gave access to a second-story tier of sleeping rooms. The railing of this gallery, and the walls of the room, were ornamented with skins and heads and other trophies of the chase, and skin rugs were also plentifully bestowed about the floor.

The manager of the establishment was a lady of American nativity and administrative ability, and she rounded us up for dinner when we were trying to take photographs of the inn, with a polite but decided firmness that showed that she had a lively appreciation of what was due a good cook.

After dinner we crossed a stream on a narrow foot bridge to inspect a store kept by the proprietor of the hotel for the benefit of campers, and his own health. It was on the outside an unpretentious log structure, but inside it held the most heterogeneous collection I ever saw—shoes and candy, rifles, rubber boots and dishpans, baking and gun powder, beside all kinds of edibles in cans. In the rear was a room with a sawdusted floor about a foot below the level of the other room, and here were dispensed liquid refreshments, while on all sides, above and below, the space was encroached upon by big bags and barrels of staple supplies.

The proprietor, who was barkeeper as well, was extremely emphatic in his denunciations of some unknown party or parties who had effected an entrance into this sanctum the night before, by prying some fly-screen stuff from a window, and, as he supposed, helping him, or themselves, to what they wanted—the joke of the thing being that he had been unable to find out what they did want, since, after diligent search, he could not discover that anything had been taken. The money in his strong box (a cigar box without a cover in plain sight behind the bar) had not, apparently, been meddled with, and nothing else seemed to be missing. He hadn't taken the trouble to nail up the screen again, but with loud animadversions on the advance of "civilization," threatened to lie in wait with a rifle and a bear trap if there were any more "foolishness."

That portion of our stage load which hailed from Chicago had arranged for a "private conveyance," which left Mrs. ***, myself and one other passenger (Misery) to be disposed of; we were therefore stowed in a light wagon which just held four, and putting Misery on the seat with the driver, we set out in the morning on a rather hot and dusty ride. Misery, however, tortured the driver, and that made the time pass more pleasantly. To do her justice, though, she got off a conundrum yesterday none of us had heard, and gave me a chance to perpetrate one a man had told me thirty years ago. Hers was, "What are the three quickest ways of spreading the news? Telegraph, telephone, tell a woman."

The Grayling Inn is "just outside the Park," but whether that means a mile or a few yards, I don't know; there was no triumphal arch in our honor at the entrance, and after a ride of some hours over a country not particularly remarkable for anything, we arrived at the Fountain House, making a detour just before reaching it to look at the Paint Pots, Firehole Lake and Black Warrior Geyser. I could discover no resemblance to a black or any other colored warrior, and the fire hole was full of water, but the paint pots did look for all the world like boiling paint. There was also a certain "Mushroom Geyser," which Misery was very anxious to see, on the general principle of getting her money's worth, but for some reason we fell between two (toad) stools as it were and didn't get there. As the geysers were only pools of boiling water, they were not so interesting that we felt compelled to see every last one. The geyser country is not replete with picturesqueness, being composed principally of discolored deposits of silica and lime left by the overflow and cooling of the heated water. Everything, therefore, in the immediate vicinity of a geyser is as absolutely bare of vegetation as a cement cellar, and the air is full of the odor of wash day. The geysers, broadly speaking, are built on two plans: one a chamber deep down in the earth, where steam gradually accumulates until it grows powerful enough to force the water above it, through a more or less crooked and contracted channel, out into the air with a tremendous roar. The other on the champagne glass principle, a wide shallow basin like an open trumpet flower, and a deep center, through which the steam rises and breaks continuously as the bubbles of champagne do.

The "gushers" when quiescent, look like a mound of discolored plaster, with an irregular hole in the top, but the boiling kind have their bowls ornamented with all the colors of the rainbow, like a mussel shell, and rather darker and more intense than mother-of-pearl, as a rule, though some were very delicate in their coloring.

After getting located at the hotel, we strolled around a little and devoted considerable time very pleasantly to watching some of the smaller geysers (they were much larger than any we had ever seen before), which played at frequent intervals to heights varying from a few inches to ten feet. One, the Clepsydra (water clock) was particularly complaisant, and played in the most engaging manner for our sole benefit, and somewhere on our journey (it is impossible to retain any clear idea of the geography), we saw a pair which Mrs. *** christened "Mama and Baby," because whenever the larger one, which was some feet in diameter, gushed, the smaller one adjoining, which was only inches in diameter, gushed also a few seconds later, and in proportion to its size, as a little child imitates the motions of its mother.

Quite late in the afternoon Mrs. Chicago came to tell us that the Fountain Geyser, the largest in the Park, was scheduled to "gush" in a short time, and that a coach was waiting to take those who wished to gaze upon it at fifty cents per "gaze." That wasn't exactly the way she put it, but that was what it amounted to. The distance is about three-quarters of a mile, and on the way the coach stopped at the Surprise Geyser, a pool that remains placid until something is thrown into it, when it breaks into silvery bubbles in the track of the intruder. It is one of the prettiest surprises in the Park. This geyser deposits on the bottom of its shallow basin, concretions which look like white pebbles. From the circumstance of the driver plunging his bare arm into the water, I judge it to be much less heated than most of those I tested. Some of the highly colored literature published for the benefit of "geezers" shows this geyser in a magnificent state of eruption, but we saw no signs of any such action, nor did the driver say anything about its doing anything more than boil when pebbles were thrown in. It is given in the list of active geysers, but with an uncertain interval, and it may be that this is where the surprise really comes in.

By the way, there are no trees that any one would want to carry away, no glorious weeds, and almost no flowers. Trees are like telegraph poles, and there is no undergrowth. Millions and milions of feet of timber have fallen, with more millions of burnt skeletons than won't decay, but will stand, a blot on the landscape for years to come. What to do with the dead and fallen timber is a problem which I fear will never be solved. It is of no use to any one, and would cost a million dollars to remove, and the snows of winter and the fires of summer add to its mass faster by far than decay can diminish it.

The Fountain Geyser was reached after a time, and there were mild symptoms of disturbance on its surface which the driver said surely portended an eruption very soon. The water we were told would gush to the height of a hundred feet. There was considerable delay in the performance, but so much was evidently being done by the geyser in the way of preparation that we all waited with patience, and we were at length rewarded.

With a grandly increasing roar and volume the mass of water rose in the air, not quite as high as they said it did, I think, but about eighty feet, with a diameter at the base of a hundred, and played like a gigantic fountain for several minutes, while clouds of steam floated away over the "formation," then it gradually subsided, and the show was over. It was our first view of a real geyser, and though it had been a little spoiled by the exaggeration of the drivers, etc., it grows larger and more satisfying as we look back upon it.

We returned to the hotel in time for dinner, the driver of one of the coaches taking the precaution to collect the "fifty per" before we left the geyser, which seemed to show a lack of faith in the probity of the average tourist. He probably understood his business.

In settling my bill at the hotel next morning, I paid for board and lodging for the rest of the trip in the Park, getting in exchange for my good coin a couple of cards which nearly everybody seemed to desire to punch holes in, but the system is somewhat irregular, as at some places they declined to make any holes, and simply took the numbers.

It was at this—the Fountain—hotel that Mrs. *** displayed that reckless disregard of danger when in the pursuit of art which so distinguishes her. We were informed, probably by Misery, who was indefatigable, that a number of entirely untamed specimens of the genus "bar" of the species "black" were in the habit of breakfasting and supping on the tin cans and other relics of our feasts, which were deposited some distance in the rear of the hotel.

I had, up to the time of which I speak, lost no bears, and my natural timidity would have prompted me to remain where I was; but heartened by the dauntless bearing of Mrs. ***, who being a very small woman, naturally fears nothing, and Misery's childlike confidence in the good nature of bears, I accompanied these redoubtable females on their morning call.

There *were* bears, more than any of us had ever seen together at one time in our lives, and they were certainly not tame. They were of all sorts and conditions, from solitary and very stolid looking gentlemen, to the watchful mother with a pair of rollicking cubs. This lady seemed to regard all the world with a liberal measure of disapprobation. Upon sight of Misery the cubs scrambled up the nearest tree, with a rattle of claws that sounded like castanets, accompanied by snarls and growls, as large and emphatic as they could make them, while the old lady, stationing herself at the foot, greeted every bear that approached with a sight of her teeth and a taste of "the rough side of her tongue."

The human visitors had the wit to keep at a respectful distance from this touching picture of maternal solicitude, but the ardor of the camera fiend was not entirely to be overcome, and Mrs. *** and Misery approached so near to some bears feeding, as to get them on the plate large enough to be visible to the naked eye. A scientific friend with a differential rule, and a lot of abstruse calculations figured out that the camera and the bear were sixty feet apart, but I am sure the distance was less. According to my count there were eleven bears attending this matinée, but Mrs. *** detected two others more timid in the shades of the woods.

As we bent our steps toward the hotel again, we found that a patriarchal looking bear was between us and our destination, and was slowly and with dignity pacing along the path that led to it. At a respectful distance we followed him, carefully abstaining from anything likely to give him the idea that we considered his presence an intrusion. In fact, we endeavored to convince him that we regarded it as an honor to appear in his train. As far as distance went, there was nothing to prevent our taking a picture of the gentleman, but there was a lack of expression about the end presented to us, which made it doubtful that the picture would be recognized as a speaking likeness. We followed him for a hundred yards or so, when he obligingly turned off and disappeared among the nearby trees.

Our first stopping place to-day was the Prismatic Lake, a very large and strikingly beautiful pool, but the air was so full of steam, and the soap-sudsy odor was so strong, that combined with the altitude and the heat of the day, we found it impossible to stay long. We could not determine exactly where the prismatic part came in, but the bottom was covered with a formation resembling brain coral and displaying a great variety of coloring. The driver said it got its name from the changes in the hues of the stream as it rose from the surface, but we were unable to discover them.

Our way until lunch time lay through a country that was a good deal more than half hot water, most of it being just as near 212 degrees as an open vessel could be at that elevation; one has to be very careful about testing the temperature with the fingers even at the edges of the pools.

Speaking with only an approximation to scientific accuracy, an elevation of 6,970 feet corresponds to a barometrical height of 24 inches, and this to a boiling point of 201 degrees. An elevation of 8,130 feet corresponds to a barometric height of 21 inches, and this to a boiling point of 199 degrees, which would indicate a fall of one degree in the boiling point for about 570 feet increase in elevation.

As the Park lies somewhere between these elevations, I should judge that the heat of the boiling geysers where the water first rises, would be about 200 degrees, quite enough to scald any one seriously.

One geyser, about as large as an ordinary room, was an almost perfect shell shape, covered and colored with an iridescent coating that made it look like a pearl oyster.

Our driver showed himself ready to stop anywhere and to make little side trips to enable us to see everything possible, with the result that we saw so many pools and geysers that the names in my note book fail to identify them. There were the Emerald Pool, the Jewel, the Sapphire, the Morning Glory and the Excelsior.

The Emerald Pool I have utterly forgotten (one might as well be honest about it), while Mrs. *** says it was strikingly beautiful. The Jewel I remember more because I could see no reason in particular for the name. The Sapphire didn't seem any bluer than many of the others (it couldn't), but the Morning Glory was a wonder. It did certainly look like a gigantic flower, in all its variety of color, with the deep dark blue cup for the bees to poke their heads in after honey. It was nearly as large as a ball room, so it would hardly do for a boutonnier. The Excelsior on the other hand was a tremendous big pot of boiling water, with clouds of steam, too dense to allow one to see much of its surface.

In ample time for lunch we arrived at the hotel at "Old Faithful" Station. This hotel had been until recently only a lunch station, and its sleeping accommodations were far from satisfactory, consisting of several large tents, each divided by canvas partitions into sleeping apartments about six feet square. The Grayling was luxury in comparison; the table, though, was much better than these accommodations had led us to expect.

Having made things as comfortable as possible in our one-sixth of a tent, we set out to get a nearer view of old Faithful.

I don't think much of the name, it hardly seems fitting for so grand a subject, but it at least has the merit of indicating the regularity with which this, the greatest geyser in the world, and one of the greatest wonders, gushes. At almost exact intervals of seventy minutes this magnificent geyser throws a column of boiling water eight feet in diameter a hundred and fifty feet in the air, accompanied by clouds of steam and a stupendous roar. It plays for ten minutes or so, and then subsides, the water in the funnel receding to a depth of fifteen feet. The water rushes through an irregular opening in the top of a mound built up by precipitation of the materials held in solution, and this opening has evidently been at some time not very far distant, much larger than it is now.

This outlet will, I have no doubt, be entirely closed in course of time, and then there will be a grand explosion, the whole top will be blown off and it will in all probability become, like the Excelsior, only a big boiling pot, and will gush no more, but this will not happen for many years.

After the eruption most of the party went on a tramp over the "formation" to view some of the lesser wonders, but a small thunderstorm came up and sent them hurrying for shelter. I was rather in hopes that we should have a real good specimen of a thunder and lightning display among the mountains, but it soon passed away.

We had a good deal of a night. The gentleman in the next canvas cell seemed to have a good many troubles on his mind, and effectually prevented any one else from sleeping. While I lay awake I several times heard a big mule wagon belonging to the "post" drive past the hotel, and wondered what on earth it wanted around at that hour. In the course of time it dawned upon my benumbed faculties that it was the roar of Old Faithful, and no lunatic in a wagon. During the day the incessant turmoil of a hotel, even though so primitive as this one, drowns the roar of the geyser which is about a thousand yards away, but in the stillness of the night it sounds like distant thunder.

As a consequence of our neighbor's troubles, I did a little unwonted early rising, and joined a party of other disconsolates on the hotel porch, where I had my reward in seeing and hearing the Lion, which was gushing and roaring at a great rate. He throws a stream, which seems largely steam, nearly, if not quite, as high as Old Faithful, but it is not so large. All about, the valley was dotted with steam jets, and clouds of vapor hung over everything, the cold morning air condensing the steam and making it much more apparent than in the heat of noonday. I should have mentioned, too, the Castle Geyser, which we stopped to view as we came to the hotel yesterday, and which is partly described by its name. It is one of those that are active at uncertain intervals, and does not rank as one of the great ones, but it was spouting away this morning about fifty feet in the air.

Both the accommodations and the management at this hotel (?) leave considerable to be desired, but we were told that it was intended to change both and make this station the equal of the others.

We bade adieu to Old Faithful with many regrets, but we left the hotel without a tear, and set out for Yellowstone Lake. On this day's journey we crossed the Continental Divide twice, for the continent on this part of the world seems affected with curvature of the spine, and its rocky backbone is considerably out of line. We reached our greatest elevation at 8,390 feet, but as there was no walking to do, nobody suffered any inconvenience in consequence. If our stage had rolled off the road on one side, we should have been "Pacific Slopers," and on the other "Easterners," but it would have been a very gentle roll either way. ***

Two Glorious Fourths.—I.

July 4, 1901.—After a long night in which fleas and mosquitoes had taken turns in keeping me awake, I rolled out of my hammock, and out of the palm-thatched hut into the gray dawn. The Indians, oblivious to insects and temperature, were snoring on the ground. The four huts at Mecanche were all that was left of a large mahogany camp, and they were deserted except by vermin. Shaded by cocoanut palms they faced the blue waters of Lake San Andres, across which we had paddled on the preceding day. Far out on the water was a lazy cormorant, the only animate creature in sight. There were no alligators near, and everything was propitious for a bath. Over the low rolling, verdant hills of Yucatan, into a cloudless sky, rose the sun. There was none of long, roseate-tinted golden dawn of more northern latitudes. Not a breath of air was stirring. The lake was glass, and in the jungle not a leaf fluttered. Suddenly the forest broke into life. The doleful howl of the babboons and the roar of the jaguar had not been intermitted during the night. Now came the noisy chattering of monkeys, the derisive screams of parrots and yells and shrieks from countless beasts and birds that I could not identify in the pandemonium. Remembering the day, I labeled this part of the programme "The Sunrise Salute."

Coming from the water infinitely more comfortable than when I entered it, I aroused my two men and prepared breakfast. These natives can cook first-rate, but somehow I don't like their style. They have serious objections to washing either their hands or the dishes, or to properly cleaning game. Breakfast consisted of coffee, tortillas, chili and delicious whitefish, that had been caught in the lake the previous evening. The natives made the tortillas, I did the rest. I had not tasted bread, nor seen a person who could speak the English language since April 22. The Indians knew only a few words of Spanish and I had picked up still fewer words of the Maya dialect, so we were not very sociable. Naturally my thoughts were on better meals in the land of firecrackers and celebrations.

After breakfast the Indians rolled their cigars from the tobacco leaves which they always carried and packed up. Each took a gourd full of water. The guide had a light pack, a machete and a shotgun. I walked second. As I was just up from a hard tussle with fever, it was all that I could do to keep pace with the others and carry no weight, but notebooks and writing material that I was afraid to trust out of my hands. Indian No. 2 brought up the rear with a load of about eighty pounds. His sole weapon was a machete. There is a venomous little green snake in the jungle, one only of hundreds of species, but the meanest of them all, that delights in disputing the trail with travelers. On this account, if on no other, I was glad to have a native before me. Every few moments he would lop off a snake's head with his machete, and he took as much pride in the operation as a Western boy takes in stoning a rattler.

Near the huts we passed through several abandoned *milpas* (cornfields), that had been burned off in the days of the mahogany camp. Great squared logs of mahogany lay beside the trail, and there were the remains of an old saw pit. The timber will probably lie there until it rots, unless some piece strikes the fancy of an Indian who is about to make a new canoe. All the canoes on Lake San Andres are of mahogany. When we had traveled for half an hour, clearings and trail disappeared. The dense, apparently impenetrable jungle was on every side. The guide swung his machete with his right hand to clear a way through the thorns and vines that blocked our progress. In his left hand he carried his gun, and at the same time he kept up a good three-mile gait that it was difficult for me to follow. We were not the first that had penetrated the *montana* that juts out between the Gulf of Campeache and the Caribbean Sea. All about us were rubber and chicle trees, scarred from base to apex with the rude incisions of Indian sap gatherers. Most of these trees were more than half-dead, as the native thinks of only the present and bleeds a tree for all that it is worth, sometimes killing it outright.

But it was not all travel. Both the Indians were keen after game, and often when we came to a little spot where the undergrowth was not thick, and the sun shone down through the branches, drying the ground that had been soaked by yesterday's rain, I was forced to lie down and rest. The first game of the day would never have been discovered had it not been for the sharp eyes of the guide—a little brown creature shuffling through the brush and nosing the soft earth for insects and succulent roots. Pablo jumps after it. The thing waddles along clumsily for a few steps and then disappears. Where it had been there is now a dirty, brown football. Pablo gives it one or two hard raps with the heavy handle of his machete, when, lo! the thing relaxes and a dead armadillo lies on the ground. Of all the meat that the jungle produces, that of the armadillo is the most delicious. When boiled, sliced and eaten cold, it is even better than veal.

Pablo did most of the hunting, while Pedro and I rested and smoked. At first we tried to sleep, but soon gave it up as a bad job. Whenever we would get comfortably settled, the little monkeys would commence their chattering right over our heads, and would pelt us with twigs and rotten fruit until we were glad to leave them in undisputed possession of the territory. We were a month too late for the fruits of the jungle, but the sapote trees, covered with half-dried or decaying fruit, were visited by flocks of cojolitos—a bird as large as a sage hen and very wild. Pablo stalked one pair for an hour and then was unable to get a shot. He did, however, bring down a male *pisano* that dressed about 12 pounds. This bird had a large black crest, back black, abdomen and lower tail coverts white, cere brilliant gamboge yellow, immense. The prevailing color of the female is red and her cere is neither immense nor brilliant. When the *pisano* and the armadillo were put on Pedro's pack he became quite indignant, and, if I could understand him correctly, swore that he would not carry another ounce. I could not blame him under the circumstances. None the less we were blessed with plenty more game, more than we had any need of, the Indians' destructive instinct being the only excuse for slaughter. After the water supply in the gourds was exhausted we quenched our thirst by cutting bujuju vines and collecting the sap in cups, perhaps half a pint from each incision. This sap was much cooler than the water in the gourds, and was tasteless, but a trifle sweet.

About 2 o'clock we neared Xtinto, a seep hole in the jungle. From this point for thirty-six hours we would be dependent upon the bujuju vines for our water supply, unless we should be fortunate enough to catch some during the regular afternoon rain on the morrow. Pablo told us that he would blaze a trail that we could follow and darted on ahead. It took but an instant to lose sight of him. Half an hour later we heard a shot, and when we reached our man he was seated on a large, fat doe. This deer was as large as the Rocky Mountain blacktail, and much larger than the deer that I had shot in Mexico. It was only 200 yards to the laguna at Xtinta, and Pablo easily shouldered his game for that short distance.

Xtinto! Even amid the peace and plenty of the beautiful mountains, my stomach revolts and a kind of a seasick feeling comes over me at the thought of Xtinto. A pool, stagnant, slimy, covering less than an acre of ground. Beside the water, an alligator was sunning himself and loathsome snakes wriggled in and out through the scum. Coiled up by a stump was a boa constrictor. He had just made a hearty meal and was not at all irritable. Pablo dispatched him easily. He measured thirteen feet ten inches in length, and was the largest reptile that I saw in Yucatan. Then there were wild turkeys galore about the water. It was the genuine ocellated turkey, the most beautiful of its genus and the first of its species that I had ever seen. As it was within the political confines of Guatemala, the interrogation mark may as well come out of the last edition of Ridgway's Manual. Probably these turkeys had never before seen a human being. They were so tame that at first we could kill them with sticks.

About the pool the ground was marshy, suggestive of fever and noxious insects and venomous reptiles. The very smell of death was about the place. Before anything else could be done a *champa* must be built. The regular rain might come up at any moment. Literally these tropical showers often commence from a cloudless sky, the approaching sound through the forest being the only monitor. The *champa* is a hut of palm leaves that may be built in ten minutes. It sheds water, but is no protection against the creeping, flying or four-footed creatures of the tropics. Then came the skinning and dressing of the deer, and the cooking of the supper. Even the coffee was spoiled with the thoughts of the water from which it was made. I made my supper of *pisano;* the armadillo was boiled for the next day's lunch, and the Indians feasted on the deer's lungs, which they consider a great delicacy. After supper the Indians took the gun and went for a hunt. This seemed a useless undertaking, as we were so loaded already that we could not take any of the venison with us. But they were bound to go anyway. I heard several shots fired and just at sundown they returned, each carrying a wild hog, which they called *javile*. These were dressed and then the natives explained that they were going to smoke the meat and take it home with them on the return trip. I may as well remark that long before we got back to Xtinto the meat had gone the way of all flesh. First they made a framework of green wood, about two feet high, on which they placed the venison and pork, after cutting it into small pieces. Over this they built a *champa*, both to retain the smoke and to keep off the rain, which had not yet put in an appearance. The operation was completed by building a fire under the meat. In this green wood and dry were so mixed that there was great heat and dense smoke without much blaze. Meanwhile I was tired out and went to bed, but not to sleep. There were no large trees near by from which to swing a hammock, so I laid my blanket on the wet ground, put up my mosquito net pavilion and stretched out without undressing. The Indians smoked silently and kept up the fire. I shall have to confess that sickness and fatigue had made me very nervous. A dozen boils made it impossible for me to lie long in one position. The roar of the tiger, the howl of the baboon, the splash of the alligator, all seemed very near. Each rustle in the brush made me tremble at thoughts of the deadly lancehead snake. In fact, had I not been a total abstainer ever since entering the fever zone, I might have imagined that I had "snakes in my boots." Hours rolled on. Still the Indians smoked and fed the fire. I lay, bathed in a cold perspiration. By and by there was a sigh in the distant forest. It came nearer and grew louder—the moaning of surf on a rocky shore. Nearer yet nearer. All other sounds were drowned. Flashes of lightning flared through the jungle and thunder crashes made the earth tremble. Dead trees snapped with noise like rifle shot, and the verdant crown was twisted from more than one stately palm. Then the storm burst. The rain fell not in drops, but in sheets. Crash! Thunder! Lightning! Rain! Chaos!

Silence! The storm has passed far away. The beasts commence again their nightly prowling. Drip, drip, drip fall the drops from the plantain tree overhead. I dream of fireworks and salutes on Union Square. Another glorious Fourth has gone into history. Shoshone.

"Thanks to the human heart by which we live,
Thanks to its tenderness, its joys and fears,
To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears."
—Wordsworth.

Through the Parsonage Window.

IV.—Holding Down a Claim.

The winter on the buffalo range had been one of the pleasantest in my experience, just enough of exercise and adventure to keep one thoroughly alive. And, oh! the glorious rest and sleep. It was a brief glimpse of what might have been, but for the backslidings of Adam the First.

I expected life on a claim was to be much the same, for a time at least, but I was sadly mistaken. After a short time it grew to be the most hateful thing ever endured by man. I did most of my farming by proxy, which left me with much leisure on my hands. In summer when there was no outlet in the way of hunting, this burden of leisure became greater than I could bear, and I took on side lines in the way of herding Texas cattle on the range and making long drives to other parts of the country. In this I found relief, but in peace times even this became fearfully monotonous. In times of storm and flood, however, it was lively enough.

One of the bright spots of my herding experience was my association with a cowboy. Among the settlers and cattlemen, a person who knew anything of books was a rarity. There were plenty of well-educated men, but seldom one who knew anything of books and authors. A few quotations from Shakespeare, or rather from the almanac, and a brief rigmarole about the Bible being, after all, the greatest literary work, was the stock in trade of the educated who pretended to literary knowledge. I was always looking for people who could talk of literature in a common-sense way, and who took real interest in it. Through this yearning for companionship in books, I asked many leading questions, but whenever I saw any one getting out those musty old chestnuts about Shakespeare and the Bible, and brushing the dust off them, I fled to the hills.

There are several books that became enshrined in my memory in ineffacable tracery by coming unexpectedly upon me during this literary dearth. I used to make long journeys on horseback between my homestead and the ranches where I found employment. On one of these trips I stopped at a deserted sod shanty to try and get a drink of water. There was a well, tightly boarded up to keep out vermin, but no way to draw the water. In rumaging about for an empty tin can that I might attach to my lariat, I found an old book on the top of the sod wall under the eaves. The cover and some of the front part of the book were gone, but the body was intact, though nibbled at the edges by mice. I glanced at the first lines, became interested, and sat down in the shade of the wall to read more. It was high noon when I sat down, and when I got up from the feast the sun was just dipping behind the western hills. It was "Tempest and Sunshine," by Mary J. Holmes. To-day the same story has too much of sugar and melancholy in it, and I grow impatient.

Another was "Opening a Chestnut Burr," by E. P. Roe. That book transformed the vexing winds of the prairies into thrilling rhythms of song and story for several days. Later came "The Lady of the Aristook," the first I read of that author's works. Like the Kansas prairies, it was grand at first sight, but, unmixed with stirring events, it soon became a monotonous dead level of excellence.

Another book that came like a ray of light through inky blackness, was "Tow Sawyer." It was a copy of a pirated edition printed in Canada and smuggled into the United States, where it was sold cheap. A cowboy bought it on account of the cheapness, and brought it into camp at a time when I was convalescing from the effect of three broken ribs, and I verily believe it saved me from lunacy.

I want to apologize to the author for reading that pirated copy, but under the same circumstances would not you have done just as I did?

Among the cowboys was a literary crank like myself. Not that his knowledge of literature was extensive, any more than my own, but what he did know was never covered with the dust of conventionalism, and lying on the prairie beneath the stars and talking with him was a great treat. Sometimes the crimson dawn caught us still talking. We had grand times nearly all one summer, and then fate decided that we were getting too much enjoyment out of the situation and changed the deal. In my collection of gems, Cale Hodson is still in the same pigeon hole as Tom Sawyer, Burns, Milton, Walter Scott, Longfellow, Jim Bludso and the man he made famous, Artemus Ward, and many others.

Adventures, humorous and otherwise and more or less dangerous, were of almost daily occurrence. One that stands prominently among the many took place during a stormy period in May. Floods of rain had fallen and were falling at intervals of a few hours apart at most. Small ravines were turned into mighty rivers, and the levels into seas. Two of us were handling a bunch of 400 Texans, I taking the day and my partner the night shift. We had no camp, but rode back and forth from the main ranch.

One evening when the west was black and sullen, with occasional rumblings of discontent, the night man came out early, bringing a roll of blankets, a frying pan, some bacon, coffee and other provisions, and requested that I help drive the herd to a corral further back in the hills and stay the night with him. There was a sod shanty at the corral where we could stay during the night, and also prepare our meals. The weather was so threatening that he was afraid to risk the cattle on an open bed ground. The shanty consisted of a sod wall, with pole, hay and dirt roof.

With the cattle safely corralled, we went into the shanty to prepare our evening meal. To boil coffee and fry a little bacon was all the preparation we had to make, the bread being ready baked and well dried. As the bacon sat sizzling before the fireplace on a few coals raked out to give a steady heat without burning, we were surprised by a couple of snakes falling into it. The snakes were twisted together in a knot and fell squarely into the frying pan, and the way the hot grease flew when they began to thrash about sent us flying out of the shanty. When we ventured back a few minutes later we had "a pretty kettle of fish," and well cooked, too.

An examination of the roof showed it to be a literal den of snakes. The mice had come first to nest in the dry hay, which kept the dirt from falling through. Then the snakes had come to prey upon the mice. Snakes in dirt roofs of the sod shanties were a common thing in those days. We concluded that dry bread and coffee were all we needed for supper, and ate that in the open air. We also made up our minds without dissension to sleep outside, but alas for our hopes! We had no more than got snugly rolled up than the storm sprang upon us with demoniac howl and the rain came down in sheets, blankets and coverlids, and drove us inside again. I called a meeting and resolved that as the night man had been sleeping all day and was relieved from duty by reason of the corral, he should put in the night by herding the snakes off me while I slept. Rolling in a blanket on the pole bunk, I lay for an hour or so in restless wakefulness and finally dropped to sleep, there to be imprisoned in a den of snakes. Everything I grasped was snakes, everything I stepped on was snakes. At last the struggle became so fierce that I awoke. The night man had curled up at the foot of the bunk and was snoring lustily. The oil had all burned out of the lantern, which was left burning, and not the faintest trace of light showed anywhere.

Softly I stepped out of the bunk and thrust my foot into six inches of water which covered the floor. Gingerly I sat on the edge of the bunk and felt round till I got hold of my boots, and drawing them on, waded outside. The storm had broken and the moon was just beginning to top the black mass of clouds that was retreating to the eastward. Saddling my pony I mounted and rode down to the stream I must cross to reach the main ranch. The creek, which ordinarily was a mere thread, was a boiling race of mud and water. Plunging in, my pony swam for the opposite shore, but fell below the landing and came out against a perpendicular bank some six feet high. The water was nearly level with the top of it, but as the pony had no footing below, it was impossible for him to climb out, and we were carried down the stream. As we were swept along I grasped an overhanging bush and pulled myself out on the bank, then walking close along the bank, I pulled the pony up against the current to the landing by the bridle rein. Just below was a thick tangle of willows, where he must surely have been drowned. Riding hard, I reached the main ranch just in time to begin the duties of a new day.

Such is a brief chapter of life on a cattle ranch in early days. I have slept out under the stars for months without being bothered with a drop of rain, and I have seen more rain fall in a month in Kansas than in any other country. In the wilder country where the range was wide, I have known a cowboy to follow a herd for weeks at a time, and take care of it day and night alone. This of course was considered the work of two men, but under stress of circumstances, I have often known one to do it alone.

A Summer Evening.

RUTHERFORD, Cal., July 15.—I have just come in from watching one of the prettiest sights I have ever seen since I have been here—one that I never tire of.

C. and I sat on the steps of the porch reading, and looking up I happened to see a flock of quail standing out on the gravel path, looking at us. There were the father and mother and thirteen little ones. They trotted a few steps at a time and then, when they were near enough, all flew into the big live oak on the right hand side of the lawn. In a little while the lawn was covered with families of them, as well as a number of unfortunate pairs that did not seem to possess any offspring.

I noticed an occasional forlorn bachelor, and one of these clucked too sweetly to a demure hen near the fountain. I don't know whether he had received any encouragement from the lady or not, but her spouse pounced on him and soon chased him off. We counted seven flocks of young ones, and there must have been fully fifty pairs of grown ones.

They roosted in the palms in front of the house, and in the old madrona tree on the left. Before they flew into the trees they ate the mulberries lying under those trees, and a few took dust baths in the road just as a hen would do. They also drank the water that dribbled from the faucet, and picked around the lawn in the most fearless manner. I sat and watched them until it was time for C. to go to bed.

Last night after supper he took his gun and we went down the avenue on a hunt. Pretty soon we saw a jackrabbit sitting in the hay field. Of course, C. flew toward the rabbit, and the rabbit departed. It did not take long to get out of sight, and then right in front and near us we saw another. C. aimed carefully—or at least he says he did—and he took three and I one shot at that animal, and it just sat there and only raised its long ears when we fired. Then we crawled up closer, and all at once it too departed and we saw it no more.

Thus do I spend my evenings.

The magnolia trees are covered with their huge white flowers, and the cape jassamine on the porch smells nearly as strongly. The peaches, apricots, figs and mulberries are ripe, also blackberries, raspberries and melons.

L.

How He Stated It.

WHEN Representative Tompkins, of Ohio, was a young lawyer in the State, and was winning his spurs, he occasionally found it profitable to accept a case in a justice's court in the country. He tells the following story of the argument made by a rural barrister before such a magistrate. The case was one in which the plaintiff sought to recover damages from a railroad company for the killing of a cow. During the course of his argument the country lawyer used this expressive sentence: "If the train had been run as it should have been ran, or if the bell had been rung as it should have been rang, or if the whistle had been blown as it should have been blew, both of which they did neither, the cow would not have been injured when she was killed."—Richmond Dispatch.

Natural History.

Mr. Lenander's Buffalo.

BANCROFT, Ia., July 15.—*Editor Forest and Stream:* I was interested in the articles on the Pablo-Allard herd of buffalo by Mr. Monroe, in your issues of the 5th and 12th. Mr. C. J. Lenander, banker and land agent of this place, has a herd of eleven buffalo, eight of them being the sale of January last by Jos. Allard, listed in the article of Mr. Monroe's, but the buyer and sex not being given. Mr. Lenander is a lover of animals generally, and first took a liking for the buffaloes at Lincoln Park, Chicago, while visiting with Mr. DeVry, the head keeper of the zoo there. At that time he bargained for a pair of the bulls (they would not sell a cow), one and two years old, and though the park board nearly doubled the figures for which he had bargained with the keeper, he ordered them shipped, and they came by express, crated, early last

THE LENANDER HERD.

fall, arriving with bruised and skinned rumps, but otherwise all right. Under his generous care they have grown rapidly, and are a handsome pair. Getting into communication with the Allard boys through a mutual friend, Mr. Lenander went out to the reservation last January and brought back eight head; he had bargained for cows, but so much of the herd they had started with broke away from the drivers before they got to Sellish, where they were loaded, he was unable to secure that number, and so took a steer (that he expects to transform into buffalo steak and robe next winter) and a four-year-old bull to fill out the car. Until last month he kept them in his barn lot, but last month turned them into a thirty-acre

BUFFIN IS AMIABLE.

pasture on the edge of town, which he had bought and fenced for that purpose. One of the cows dropped a bull calf while they were in the small yard, but it was dead when found the next morning, doubtless resulting from an injury a short time previous when the mother got tangled up in a hay rick in the lot. Last Sunday a heifer calf was born, and the little one appears strong and hearty as can be. The animals do not appear to be very shy; the bulls and one of the cows have frequently eaten from our hands—in fact, the two bulls he got from Lincoln Park are almost rude in the manner they crowd about when there is corn in sight. I have sent you under separate cover three snap shots of the animals, the light-finished one being Mr. Lenander in the act of handing Buffin an ear of corn. Mr. Lenander and myself were out in the pasture this morning getting some snap shots at the new addition to the herd, and as soon as finished will send you one, as well as a snap taken by C. J. while I was handing an ear of corn to the bull brought from the Allard herd, just as an evidence that the wild buffalo is fairly domestic when treated right.

Mr. Lenander is negotiating with a party in this State for a pair of cows, now on exhibition at Arnold's Park, and will doubtless swell the number of his herd to thirteen soon. Beside the buffaloes, he has, at present, twenty wild geese and brant, a pair of sandhill cranes, twenty-five wild ducks—mallard, canvasback, widgeon and pintails—and a pair of Chinese pheasants, but as soon as he gets a place fixed for them he will get in three more pairs of the latter. An antelope will be added to his collection in

ne pasture next week, and he also contemplates closing a argain for a half-dozen elk. In his pasture are eight ead of Polled-Angus cows, with which he intends trying rossing the buffalo, and is promised several results of the xperiment next season. W. F. LAIDLEY.

The Parrot and the Crows.

STAUNTON, Va., July 25.—*Editor Forest and Stream:* have not fired a gun since forty years ago, when, as a onfederate soldier, I used to chase, and be chased by, y brother Americans over the Virginia fields. I have ot cast a fishing line since the days of "Tippacanoe and yler too," when the Richmond boys of that day used to equent Blakey's mill pond on the outskirts of that now storic city. And as for boating, I can't remember ever ing on anything smaller than a passenger steamer. hat on earth, then, does he subscribe to FOREST AND TREAM for? you will ask. Well, I get my natural history om its columns, where it is served up in the most un-fected, intelligible and informatory style of any source at I have yet found. Especially do I get a good idea the animal, man, from its correspondence, for of all urces where that animal is exhibited with unaffected turalness, the sporting camp is the best place to see m. It is there that he exhibits his true self—his good d bad traits.

What I write you now is in the natural history line, and is resurrected by seeing in FOREST AND STREAM some eresting speculations about crows talking. I live oppo-e to a large college for girls, on the grounds of which e many trees. Next door to where I live lives an aged rrot, with nothing very brilliant about him except his mage. He cannot talk English, and makes no effort that line that I can see. He can imitate no sound that recognizable, except the gleeful laughter of children at y, and their cries to each other. Over the house where parrot lives there sailed every morning during the early nths of the past spring a flock of crows, going from college trees, where they had spent the night, to a le mountain called Betsey Belle, a half-mile from town. night they sailed back by the same route. Their es on the passage were incessant. In less than a week. ch to my surprise, my dull parrot had caught, and ld and did, reproduce those cries so exactly that I ld not tell which was which. By the end of the first ek the crows plainly noticed it. At first one or two uld drop from the flock to a tree near the parrot, re-in a few seconds, rise, and rejoin the flock. Gradually number increased, until I have seen as many as from een to twenty crows in the tree, apparently chattering ut their imitator, who was on the porch only a few t off, and who replied in what seemed to me the very ne chatter. This went on as long as the crows roosted the college—say about six weeks. It was in the early wn only; for in the evening the cautious crows saw many people astir to venture down. So much for the rrot's ability as an imitator; he could fool the very ws themselves.

Now for the parrot as the imitated. At the house I live here is a very clever quadroon cook, Alexander Jones, o is also a clever imitator. He often opens a conversa-n with the parrot by imitating the bird's attempt at king. He can make the bird "talk" just as long as he nts to, and when the bird is silent can start him up ny time with his parrot jargon and keep him going. imitates the bird as exactly as the bird does the ws; and it is impossible to listen to the two day after without being convinced that Poll thinks he is talking nother bird.

Like all wise professors treading on new ground, I st either draw no conclusion at all, or draw so many as bewilder the student. I prefer the former and safer n; and will leave it to the class in natural history with simple assurance that the statements are fatcs.

Pike and Potholes.

HARLESTOWN, N. H., July 25.—*Editor Forest and ream:* I am very glad to see in this week's FOREST AND EAM your correction of the typesetter's blunders of week, in the cuts of the "pike family." If there is any ect on which I have preached persistently for more twenty years, it has been the continual perversion ames as applied to this race of fishes. Not only are names of the different species misplaced, but the thern and Western correspondents insist on writing atching "pike," when they mean "pike-perch," but the thern ones call them jack salmon, or Susquehanna ion.

they would remember that neither the pike nor sal-families have any spiny fins at all, and the pike, no er dorsal fin, what answers for that purpose being a small fin, set nearly back toward the tail, they would themselves from some erroneous descriptions of their t.

have been intending to write you for some days in rd to Mr. Stewart's very interesting letter describing holes" in North Carolina, and especially as to the ry that they are due to glacial action, which I do believe in.

have been familiar with both potholes and glacial vings, since my childhood, though it was not till many s later that Prof. Agassiz explained the true cause e groovings and scrapings with which the rocks of Connecticut River Valley are furrowed. There are very fine and large potholes in the granite rocks at ws Falls, eight miles below here, and another set moskeag Falls, on the Merrimac, about forty miles east of here; but the rotary action which produced could never have been given by the slow downward l of any glacier, such as has scored all the rocks of valley with furrows leading down stream, and left e collection of what he called *roches moutonnees*, on top of one of the ranges of hills between here and pee Lake, about 1,000 feet above sea level. I used te when a boy a fine show of these groovings by the of a hill road, leading to a neighboring town, and in oyish ignorance attributed them to wagon wheels and runners, getting out of the road; but when the rail-road was built up the valley some fifty years ago, wherever the old sod and soil was taken off the rock, a beautifully planed and polished surface was revealed, corresponding exactly with the old marks by the roadside, which I had seen twenty years before. Now it is easy to see how a slowly moving mass of ice loaded with stone and gravel could do this planing, but it could not stop to bore "auger holes" in the rock! That required an eddy below a waterfall to give the necessary motion.

One of the largest potholes at Bellows Falls has the lower edge split out, leaving a semicircular cavern, as if it had been thrown out by the freezing of the water which once filled it, and the same thing is shown in the largest and most remarkable pothole I have ever seen. This one, known as "The Devil's Pulpit," it located on Shirley Hill in Goffstown, N. H., about six miles west of Amoskeag Falls, in the valley of the little trout brook which comes down from the Uncanoonuc Mountains, and must be 700 or 800 feet above the level of the Merrimac River. It is many years since I saw it, but I should say from memory that it was ten or twelve feet in diameter, and as much in visible depth. The bottom was covered with forest débris, and a pine tree six or eight inches in diameter had fallen into it, top down, so that it was not convenient to get at the bottom. The brook fell into it, over the upper rim, and escaped through the wedge-shaped cleft, which had been split out of the lower side. It was, when I saw it, a very diminutive brook, with no such volume of water as would be supposed necessary to bore out such a hole, but all the visible rocks above it, for it was in a thick forest, were smooth and waterworn, and it seemed as if the whole Merrimac River might have flowed up at that level at some previous prehistoric time. I am almost inclined to think that these holes are pre-glacial, and that the downward thrust of the ice cap broke out the lower edges of the rim of both this one and the big one at Bellows Falls.

Beside, the geologists tell us that the "ice cap" only reached down into Pennsylvania, and Mr. Stewart's potholes must be far beyond its reach. However, I am more of an angler than a geologist, and do not set up for an authority on such questions. My angling has been naught this year, a severe attack of "the grippe" last spring leaving me too weak to tramp the trout brooks, and I have had to content myself with reading about other fishermen in FOREST AND STREAM.

I have enjoyed the discussions on the subject of calibers of rifles, and although I never had a chance to shoot "big game," and my experience has all been of the old-fashioned muzzleloading pea-shooters on squirrels and such "small deer," I am inclined to agree with Mr. Irland and Henry Braithwaite that the weight of the projectile should be proportional to the size of the game.

No doubt the small bullet in the right spot will kill, but we are not all Leatherstockings nor Robin Hoods, and cannot boast of such skill as Walter Scott describes, when he says:

"And when in turn he shot again,
The second cleft the first in twain."

Speaking of squirrels, I had a good laugh a few weeks since at a letter in FOREST AND STREAM, describing an imaginary conflict between a red and a gray squirrel, and I say imaginary, because in describing the red squirrel the writer drew a very good picture of a chipmunk, with his tawny back and the black stripes on his sides.

Now, a chipmunk never chased a gray squirrel up a tree, and the writer's imagination played a strong part somewhere!

VON W.

"We get queer men on our ships sometimes," said Rear Admiral Schley while he was telling stories of his experiences, "although they are all brave and loyal.

"There was a landsman on one of my ships once who was a bright fellow, apparently, and I took him as an orderly. One night I was in my cabin and a gale of wind came up. I called the orderly and said, 'Find out how the wind is blowing and report to me.'

"The man was gone a few minutes and then came in and reported, 'Captain, the wind is blowing right over the ship.'"—New York World.

Potassium For Snake Wounds.

Editor Forest and Stream:

In your paper of the 19th instant Horace Kephart, in the course of an article about rattlesnakes, asked for the experience of others in regard to the efficacy of potassium permanganate injected subcutaneously as an antidote to the poison of the rattlesnake.

The only occasion on which I ever met a rattler on his native heath was many years ago, when as a small boy I ventured into the brush on the banks of the Genesee River north of this city, for the purpose of cutting a "pole" wherewith to yank from the placid stream the perch, rock bass and sunfish which in those happy days did much abound in the river below the falls. This particular snake was comfortably coiled on a site where he could enjoy the sun rays and the balmy breezes of spring, and as I had no quarrel with him, and no weapon of attack or defense, I thought discretion the better part of valor, and did not disturb him, but cut a rod at another point and caught a good "string" of fish. This incident sheds no light on the value of permanganate in snake wounds, but it tells of one way to treat snakes when one has a choice. However, if I was never stung by rattler, one of my fellow citizens of Rochester was, and he has had experience enough with the reptiles to illuminate the subject.

Peter Gruber, better known as Rattlesnake Pete, has an extensive collection of snakes in his restaurant and museum on Mill street. I am not sure that his knowledge of snakes is deeply scientific, but there can be no doubt that it is practical. He has them in all forms and sizes, dead and alive. On special occasions he dresses in a suit made of the skins of rattlesnakes, and the visitor to his collection can see several large specimens of that snake any day with nothing but a plate of glass between himself and the venom sack. Pete handles his snakes freely, and has been struck by rattlers several times. A few months since a large rattler drove its fangs into his hand, and it was doubtful for a day or two if he would recover. The arm became alarmingly swollen in a short time, and the pain was excruciating. In anticipation of such accidents, he has constantly within reach a supply of permanganate of potassium, and on this occasion he attributes his recovery from the wound to the prompt application of the drug by subcutaneous injection. I believe that he also washes the wound with the antidote.

ROCHESTER, N. Y., July 22.

A MASSACHUSETTS NESTING WOODCOCK.
Photo by H. A. Mower, May 23, 1902. Photo copyright, 1902, by H. A. Mower.

A Nesting Woodcock.

BOSTON, Mass., July 26.—*Editor Forest and Stream:* Mr. Mower had the good fortune on May 23 to photograph a woodcock on her nest at the so-caled "Sawmill Privilege" of the Kettlehook system of Worcester Water Works. I inclose copy of an enlargement which will clearly show how nature contrives to have birds simulate their surroundings for protective purposes. You will see how difficult it is to distinguish the bird from the brush, grass, etc., among which it has made its nest. This photograph was considered so rare by Mr. Mower that he had it copyrighted, but has given me the privilege to use it, if FOREST AND STREAM cares to publish it. I hope it may be considered of sufficient importance for publication, not only because such pictures are rare, but also because this is tangible evidence of the fact that the woodcock is breeding in this State. Mr. Mower says that the mother bird bravely stayed on her nest despite the fact that one leg of the tripod which held his camera was only eight inches from her. But it was a critical time for the little creature, as was evidenced by the fact that when the nest was visited the next day there was proof that her brood had been hatched, and she had taken her young away.

J. W. COLLINS.

First Rabbit—That town boy has been around here nearly a week and never once tried to kill us.

Second Rabbit—Yes; he seems to be devoid of all human attributes.—Indianapolis Press.

Second Occurrence of the Black Brant (Bernicla nigricans) in Massachusetts.

CAMBRIDGE, Mass.—I have just had the pleasure of examining a black brant which was shot by Mr. William Avery Cary at Chatham, Mass., on April 15, 1902, and mounted by Mr. J. T. Clark, who ascertained, by dissection, that the bird was a male. It is a fine specimen in fully adult and perfectly typical plumage, having the characteristic belt or collar of conspicuous white marking almost completely encircling the neck, and the normal amount of sooty slate on the under parts. In company with six other brant it came within long gun range of a shooting stand or box on the Monomoy Island Flats. As its companions escaped capture, and hence close examination, it is uncertain whether or not they were of the same kind, but the presumption is, of course, that they belonged to our common Eastern species, for the black brant is an exceedingly rare straggler (from the Pacific coast of North America) to our Atlantic seaboard. It has been taken once before, however, in Massachusetts —"at or near Chatham," in the spring of 1883 (Cory, Auk. 1, 1884. 96). Mr. Cary, to whom I am indebted for most of the above details—as well as for permission to make them public—is, no doubt, personally known to many readers of FOREST AND STREAM, for he is Secretary of the Monomoy Branting Club, and one of our most prominent Boston sportsmen. He has, in his business office, a small but choice collection of mounted birds, chiefly waders and waterfowl, all of which have fallen to his own gun. The black brant will be added to this collection as soon as it leaves the hands of the taxidermist, Mr. Clark.

WILLIAM BREWSTER.

Weather Lore in Verse.

Dr. Jenner, of vaccination fame, found time, writes a contributor to American Medicine, to worship occasionally at the shrine of the muse. While he was not noted as a poet, yet some of his metrical compositions were quite clever. It is said that on receiving an invitation from a friend to make a country excursion, he sent his excuse in the form of a poem. As this poem shows very acute power of observation, I think it worth reciting. It is entitled, "Signs of Rain":

The hollow winds begin to blow,
The clouds look black, the glass is low,
The soot falls down, the spaniels sleep,
And spiders from their cobwebs creep.
Last night the sun went pale to bed,
The moon in halos hid her head.
The boding shepherd heaves a sigh,
For, see! a rainbow spans the sky
The walls are damp, the ditches smell,
Clos'd is the pink-ey'd pimpernel.
Hark! how the chairs and tables crack!
Old Betty's joints are on the rack.
Loud quack the ducks, the peacocks cry,
The distant hills are looking nigh.
How restless are the snorting swine—
The busy flies disturb the kine.
Low o'er the grass the swallow wings;
The cricket, too, how loud it sings,
Puss on the hearth, with velvet paws,
Sits smoothing o'er her whiskered jaws,
Thro' the clear stream the fishes rise,
And nimbly catch the incautious flies.
The sheep are seen with early light
Cropping the meads with eager bite.
Though June the air is cold and chill,
The mellow blackbird's voice is still.
The glow-worms, numerous and bright,
Illumed the dewy dell last night.
At dusk the squalid toad was seen
Hopping, crawling, o'er the green,
The frog has lost his yellow vest,
And in a dingy suit is dress'd.
The leech, disturb'd, is newly risen
Quite to the summit of his prison.
The whirling wind the dust obeys,
And in the rapid eddy plays.
My dog, so altered in his taste,
Quits mutton bones on grass to feast;
And see yon rooks, how odd their flight
They imitate the gliding kite,
Or seem precipitate to fall,
As if they felt the piercing ball,
'Twill surely rain—I see with sorrow
Our jaunt must be put off to-morrow.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Sport.

I AM not certain that I read Jacobstaff's article in FOREST AND STREAM for July 19 right, but if I did his idea of what constitutes sport is somewhat peculiar. If I understand him correctly, sport, in his judgment, is genuine just to the extent that it is free from exertion, and to insure this indispensable feature, the game must be small so the sportsman can carry it easily.

Now this is, to say the least, a novel view of the matter to me, and if all sport is to be measured by this new standard I cannot help wondering what will become of our rowing contests, our boxing contests, our baseball contests, our football contests—in short, all of our sports which demand supreme physical effort. Again, if size of game is to count for nothing, and the ease of the sportsman is to be the sole gauge of sport, we shall no doubt see salmon and tarpon anglers catching chubs and minnows from nearby ponds and brooks, while the disciples of the mighty Nimrod sit in easy chairs and shoot the ubiquitous English sparrow through the open window.

I have cherished the belief that the true sportsman delights, yes, glories, in the most arduous labor involved in his sport. I once saw a little dog kill a woodchuck almost as large as himself, and then lug it for a mile or more, finally laying down his prize near the spot where he killed it. I know of a hound that ran a trail steadily for three consecutive days. Now dogs cannot speak and give us, who profess to be sportsmen, definitions of sport, but a trite saying avers that "actions speak as loud as words," and we have in the action of these dogs an exemplification of sport which I think we may study with profit.

Jacobstaff speaks of moose hunting and other hunting as though he thinks that all the fun lies in the killing of game, and that all the rest of it is repulsive labor which should be shirked and avoided as one would avoid a plague.

I do not know how it is with others, but with me a moose hunt is a grand crescendo and diminuendo of sport, to which the killing of the noble game is but a fitting climax. The pleasure begins when I commence to outfit for the trip, and ends when I return and exhibit my trophies to my friends. No, it does not end then, for I have its memories to enjoy indefinitely. And what are those memories? I remember with pleasure and satisfaction the clean and sportsmanlike manner in which I killed the antlered monarchs, but far dearer and more pleasurable are my memories of the rushing rivers, the placid lakes, the primeval forests, the vast solitudes where I studied nature—nature unscarred by man.

And this is not all, for I remember with pleasure the storms and other discomforts which I endured, the wearying tramps, the contests with rushing waters as I pushed my canoe up stream through rapids for mile after mile, the sweating under havy packs—in short, the overcoming of each and every obstacle, obstacles which only served to give zest to the sport. I pity the sportsman who can see nothing but labor in all of this.

I have no desire to belittle the sport which Jacobstaff seems to regard as the only genuine sport, although it must necessarily appear somewhat tame when compared with moose hunting. I enjoy "following and watching the movements of an educated dog" through "the stubble or variegated field," and cutting down the whistling cock, whirring quail, or booming grouse, and I have had the good fortune to enjoy my full share of this sport in my day. I think I have reason to be thankful that I can enjoy this sport, as well as many other kinds, some of which require the expenditure of more energy and muscle and less powder and lead, and feel that they are all genuine. Jacobstaff, you have my sympathy.

JOS. W. SHURTER.

GANSEVOORT, July 19.

CHICAGO AND THE WEST.

A Sheep Hunt in Mexico.

Mr. E. E. Bliss, of Denver, Colo., has been feeling around for a good bighorn head, and I take pleasure in giving the story of his hunt in Old Mexico, where he was successful in getting his bighorn, under rather discouraging circumstances. Interest turns more and more to Old Mexico as a sporting country, and I am sure many readers of FOREST AND STREAM will take pleasure in reading Mr. Bliss' story of his hunt. It is especially interesting to myself, because of my familiarity with the Southwest during a residence there of some time.

E. HOUGH.

Shortly after hearing from you, says Mr. Bliss, I went to El Paso, intending to try for an Acapulco deer—if that is the name—and turkey in the Yaqui country. I had killed the small deer a few years before in the State of Durango, but saved no head.

The taxidermists, Townsend & Barber, and Messrs. Ramsay and Meade, of the Sierra Madre line, said the deer and turkeys are there all right. They also told of mountain sheep recently classified as a new species, only about eighty miles south.

You know the things they do to you for killing sheep in Colorado? Well, this looked like a good chance, although Mr. Meade confessed to tieing King Bruce's spider with seven unsuccessful attempts.

I lay my first failure to the poor quality of the Mexicans I had for guides. No. 1 didn't know the water holes at all. No. 2 did, but had other business after a couple of days.

The next outfit from Ahumada on the Mexican Central was good. Pedro knew the holes, but nothing about killing sheep. Burns & Daily, the all-right merchants of that place, had told me this, however, so the fact that I didn't get a shot, is to be charged to me.

Jack Boyd, born in the Southwest and raised on a cattle ranch, is the only man in that section who knows the sheep. At the time of my visit he was running the Plaza Hotel, but is now on his cattle ranch. With him as a companion, the third and last trip was begun.

Hough, if you wish to be real kind to some friend who thirsts for the gore of a mountain sheep, let him address this man at El Paso. He would, I think, act as guide the coming winter, and has all the qualities to be desired.

This should be a good place to say something of the Mexican officials, also. A writer in one of the sporting monthlies a short time ago was displeased with most everything at the customs office. I went there alone and discovered an inspector who speaks English. In fifteen minutes I had a thirty-day permit for my rifle and one hundred cartridges. This cost me twenty-five cents of their money. Of course there was a little red tape, but the trouble was theirs, not mine.

On each of the three trips the grub was packed in drill bags and each time was duty free. No tips or bribes and nothing but kindness was my experience.

At Ahumada we learned that a party of naturalists was camped at the spring west, where we intended to make our headquarters, so we decided to go east into a country unknown to all of us. This time we had trouble getting an outfit, but finally started with two small mules hitched to a small wagon with Francisco as driver, and two sorry-looking saddle horses, all for six dollars Mexican money per day.

The first day's journey was south of east to a water hole known to Boyd. Here we camped and filled our barrel and keg. The second day's course was the same. Toward noon Boyd got a nice antelope, and about 4 o'clock discovered a second bunch. This time I got a small but very pretty head, and as it was rather late we camped.

While we were caring for the heads and meat, Francisco got supper and watered the horses, giving them a bucket and a half each, a little more than was intended.

The third day in the same direction would take us to the Iron Mountains, and two miles out from the high part of these we had been told we would find Red Spring. Late that afternoon we had passed well down beyond the high part and no spring. Neither had we crossed a trail. The Mexican who had told us of the spring also said San Antonio ranch laid fifteen miles south of this same range. Should we go on and look for this, or should we strike back for the water hole, two days away? Approaching darkness made us prudent enough to decide in favor of the known water, but in the morning we were again brave, so we went on south to look for the ranch.

The forenoon was half gone when we came to an old, little-used road, running east and west. We followed this east into the hills at the south end of the mountains. Here Boyd took a climb and with his glass looked south, but could see no ranch. From his point he could see that our road turned north on emerging from the hills. Consulting, we decided to take the road west, hoping to strike the railroad by morning, as it runs southeasterly below Ahumada. The night would be cool and our poor old horses could travel better. Saddles and harness were taken off at noon as usual to give the animals a rest. Heretofore they would feed around camp with trailing ropes, but to-day they had to be tied to keep them away from the wagon. Three or four swallows for each of them had emptied the barrels the night before.

About 5 o'clock that evening we saw three horses off to our right feeding, and a little later as we reached the top of one more swell, a 'dobe appeared in the distance that an hour or so later proved to be San Antonio ranch, fifteen miles east of the mountains instead of south. A twenty-foot well is the only water, but it looked pretty good to us.

That night Boyd killed a coyote that came right into camp after our antelope meat.

The next morning we filled our barrels, took a few pictures of the Rurales, or country police, who are stationed here with their families, and also got them to set us right in regard to the water. Red Spring lies as the Mexican had told us, only east of the Iron Mountains, at the end of the road we had followed, instead of on the west side, where we had understood it to be.

Yes, there were sheep in these mountains, and wild hogs too. At noon we turned east on our back track, camping near the pass at night. With our horses we hunted around the south end the following forenoon, this time for sheep. Our water hunt was about ended.

At noon we met the wagon just through the hills. That night we camped at the water, having seen nothing favorable all day.

Leaving Francisco and the wagon at the spring, we spent the day hunting north along the mountains, seeing old sign of wild hogs, for which we hunted a little, but no sheep tracks. We had now seen these hills from most every point, scanning the sides with our glasses and occasionally looking for sign on a low ridge or knoll at the foot.

This is Boyd's method. The Mexican will take you to the very top, believing the sheep are always there. Boyd says they sometimes go there, after a run along the base, when alarmed.

A small group of mountains about twenty-five miles east of north from our camp looked good to Boyd, so in the morning, with our barrels filled, we made for them.

At about 5 o'clock that night we reached the base and camped. As it was early, we hunted a little near by, Boyd afoot over some of the ridges, and myself on horse around. On returning to camp Boyd said: "Well, we will get our sheep to-morrow. There is plenty of sign here, but it is a few days old. We will probably find they are in some other part of the mountains."

In the morning we rode around the east side, sending Francisco the other way with instructions to watch for signs of water and to camp out in the flat from the north end.

We reached the small hills at the north end before seeing anything except a few tracks. Here we crossed through and continued on north, stopping frequently to look. Coming to a long ridge about 150 feet high, we tied our horses and went to the top of it. Along the crest to the right Boyd found deer sign, and while we stood there we discovered four deer just at the base of the ridge in front of us. We admired them for some time till they scampered away to our left. Another ridge similar to and parallel with the one we were on laid in front of us a short distance. Boyd started for this, promising to give me the high sign if he should see anything. When half-way across the flat he glanced back at the deer which were still in sight at the end of my ridge. As he turned further to let me know there were now six of them, he sank to the earth and pulled off his old sombrero. The sign! With the little .30 carbine ready, I looked along the top of the ridge just as a nice old ram stepped up in sight, head on at about seventy-five yards.

In the three trips I had spent about thirty days looking for just this. Very, very carefully I touched the trigger. With a bleat the old fellow laid over dead.

Presently Boyd's gun cracked. A smaller ram had been behind. When his big brother fell he ran down across the flat in front of Boyd, making around the other ridge. Boyd can run some, too, but he couldn't head that sheep. One of his shots had drawn blood, however, so he followed the train. After a while I heard another shot, then in a few minutes he came in sight with red hands, as the glass revealed. Jack is a true prophet, you see. He had kept the trail to where the blood stopped, and here the small sheep had cut the trail of a large one which Boyd saw and shot as he turned to run, hitting him from behind in the center of one horn, yet the .25-35 was instantly fatal.

We luckily found the wagon and camped with the sheep. Sixteen inches for my horns and sixteen and a half for his, was the way Boyd made it.

Twelve o'clock found us ready for bed, Boyd having measured and skinned his sheep to be mounted whole. Hough, do you know where he could sell it? It's a fine specimen and in good shape.

We had found no water, but that was not so very important now. A half-bucket apiece was all the animals had.

Isn't it hard to believe that these sheep and the deer were at least twenty-five miles from water? Boyd says he never found a sheep track around any water hole, and he certainly has a keen eye. He claims they don't drink. I think so, too, now.

In skinning out my head the chin muscles were found to be just filled with small spines, evidently from the prickly pear cactus. Isn't this where they get the necessary moisture? We found the ears of these sheep entirely closed with scab. They say that all the sheep in that

section are similarly affected, but this does not harm the appearance of the heads at all.

Early in the morning we were off for the spring. During the noon rest the horses and mules preferred the scant shade of the palmillas to the grass, as it was very warm.

We wore very little clothing, but never suffered from cold. Duck shirt and pants, socks, shoes and leggins, with an Upthegrove coat tied to the saddle, was my rig. Boyd's was much the same, except socks. He sometimes followed the example of the natives and left them off, too. Rubber soles or something similar are quite necessary, but will soon wear out. The rocks are the worst I ever saw.

The rest of the way to the spring was made mostly on foot. Our horses were played. Boyd's had been without shoes behind for several days, and his heels were bleeding. For this reason he had been favored a little in dividing the water the previous night. About 3 o'clock my horse got so he didn't even feel like carrying his own weight. We emptied our canteens into the bucket. This small amount of water braced him up, and at 7 we reached the spring. Here we rested one day and just drank water. Francisco found two or three old horseshoes left by some prospector. We had no nails, but on arriving at San Antonio ranch we got a few ,and with Boyd's horse shod made Ahumada in due time.

Every one soon learns the Mexican expression for "very far." If there is one for "near by" I never heard it. There doesn't seem to be any occasion for it.

The Writings of Special.

Editor Forest and Stream:

Your regular correspondent under the name of Special writes well and entertainingly. I am sure the majority of the readers of FOREST AND STREAM are interested in what he says. Special is a personal stranger to me, yet I always read what he says. He has a way of stating cold facts which is interesting.

I object to New Hampshire being called a hole. Literally (as I understand) a hole (that is comparing Maine with New Hampshire) means a receptacle for the dollars which outsiders deposit. If New Hampshire is a hole in this sense, Maine is a cavern with no bottom. You Maine men, whether of the Fish and Game Commission or private citizens, read carefully what Special says as to this non-resident hunting license. Get out of your heads that your State is the only one where a man of moderate means can take his annual outing. You have a small class (comparatively) of transient visitors, who would be glad to have all expenses of such visitors trebled, and also to have a license of a large amount added, as Special says. Try it for a few years and note carefully the falling off of receipts.

Here in this smaller hole (as compared with Maine) we are glad to see transient visitors. We do not pretend to allure as does our neighboring State; we have deer, feathered game and some good fish. If you know how to kill or catch them, they are yours, and it will cost one considerably less than to try it in Maine, and sometimes the result will be fully as satisfactory. In this "hole of New Hampshire" we think we know the value of our transient visitors. They are the best crop we can cultivate. We do not want to choke them off by making them pay a special license for what they may not get. You Maine men read what Special says and ponder over it before you decide to kill the goose which lays the golden egg.

C. M. STARK.

DUNBARTON, N. H., July 28.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A Mouth-to-Mouth Talk.

IF the salmon is king, and the brook trout a prince of the blood, surely the black bass is entitled to have at least that much misused appendage, Esquire, hooked to his patronymic. But precisely here we are in deep water. If, in accordance with the threadbare jest, we "drop a line" to the large-mouthed gentleman from Oswego, bearing the alluring title of Esquire, should we not present to his nimbler and daintier-mouthed congener letters patent conferring the title of, say, Knight Commander of the Bath? We have no taste for raising family dorsals, therefore we shall leave this moot case in somewhat the same state of uncertainty as that in which the two petty rival Irish chieftains left the question of their superiority. One claimed the overlordship of the other, and the feudal service and emoluments appertaining to the tenure. The claimant dispatched a scowling kern, fortified with a primitive shillalah, who delivered his message, punctuated with thuds of his blackthorn on the gate (not the pate, in this instance) of the putative vassal:

"Pay me m'rint, O'Toole! An' if y'don't!!"

The addressed chieftain arose, muttering, "Sufferin' sods!" smote his shield with the handiest weapon at the moment, his fist, and thundered forth the ultimatum:

"I owe ye no rint, McFod! An' if I did!!"

Probably the "rint" is yet unpaid.

But though we do not desire to decide oracularly whether it shall be Micropterus Dolomieu, K. C. B., and Micropterus Salmoides, Esq., or vice versa, there is no reason why the interested parties themselves should not thresh out the subject. The opportunity to overhear such an interesting discussion was afforded us one day last summer at Greenwood Lake, where both species of the fresh-water bulldog occur. A more charming environment could not easily be found. Here nature emptied her horn of plenty long ago, and still sits smiling amid the beauties she has lavished. Doubtless there be lakes as blue and as placid as Greenwood, but with a more conscious, tricked-out insistence; there may be embosoming hills clad in more luxuriant summer verdure, but you shall find them in the infected air of the tropics; and the Greenwood hills in their autumn dress are unsurpassable. For the true sportsman, whose avocation is but a peg whereon to hang, in the gallery of his memory, pictures whose appeal is as varied to the mental as to the physical eye, this is an enchanted land. True, the mountain-fed waters do not now so teeem with their pristine life; the deer have been buffaloed, if we may be permitted the word, and the drum of the ruffed grouse and the fife of Bob White do not stir the blood so frequently as they did when Frank Forester trod the Warwick woodlands. But her majesty the lake is to-day as fair, and her surrounding knights, the hills, are still as majestic and obsequious in their bravery, throwing their gorgeous mantles at her feet, as was Sir Walter when, with the gesture of a king, he spread his cloak beneath the foosteps of his queen.

It was in these surroundings that my guide and I lay on a bank at the water's edge, one broiling summer afternoon. The chorus of the birds was hushed. The "drowsy hum" of insects filled the air. Here and there a dragon fly needled his gaudy length among the golden

globes of the pond lily that "lolls upon the wave," as it does forever in Poe's exquisite line. Leaves turned their pallid faces to the wilting sun as if beseeching him for mercy. Great fleece clouds mirrored their snow in the nether blue, or flung their giant shadows athwart the hills. A breeze, dropping from its wings the sappy odors of the woods, fluttered lightly on the surface of the lake.

"See!" cried John, suddenly, "there's a big bass under them lilypads."

A dark shadow glided through the anchoring stems. It was a large-mouth bass.

"That fellow will go five pounds good," he added. "An' by Christmas! there's another—a small-mouth—he's a two-pounder."

The second shadow seemed a little shy of the first. It was quicker in its movements, but kept a respectful distance. Just then we heard from the floor of the lake—it was shallow here—in snappy tones, the greeting:

"Hello, Stumpy!"

"Howdy, Redeye! What air yew a-doin' here?" came back the drawling answer, with an unmistakable implication of authority.

"Well," said the small-mouth, "the spring's been cold,

ROCKY POINT.

an' I thought I'd lazy a spell like yerself an' take a look at the sun."

"Hugh! Yew did, naow," grunted the Oswegoan.

"How d'y' stan' this hot weather, with all that fat on, Stumpy?"

"I hain't bin right smaart fer some days, young feller, ef y' want t' know bad. Th' lake's purgin' ongodly, an' I feel it alonger th' backbone—I hain't riz in a week, I hain't. I'm thirsty more than common, an' I drink like a fisherman! Y' look ez chipper ez a yaller perch yerself." He looked at the two-pounder enviously.

"Oh, yeh; I'm able to shake a fin, thanky—but you cer'nly look pale aroun' the gills, ole man."

Redeye was rubbing it in, but the loquacious old fellow had a failing common to the aged—he liked to talk about his ailments.

"Like's not I do look kind o' bad. Whiskers, thet catfish thet live in the hole at the maouth o' the crick, tol' me last night I'd oughter git a mess o' shiners t' brighten up on."

"Why, say, yer back fin ain't on straight, Shorty, an' y' got that greenery-yallery color on th' sides, from loafin' roun' weeds. You look fierce! What's the worst word?"

"Waal, I may look green an' I may look yaller, ez yew say, but I feel blue. Ef I must tell, my health hev bin pore sence I lose thet single o snelled hook thet stuck into m'jaw, an' three foot o' double gut a draggin' onto it, sence nigh onto a month. Yew seed it, hain't y'? Waal, I kind o' got use to it, I did. I drug it araoun' an' drug it araoun', an' when it rusted an' bruck off onto a stump a few days ago, I feel l-o-n-e-some like. 'Pears t' me ez ef I lose a fin." Here he rubbed his opercles gingerly against a lily stem.

"Don't worry about that, Shorty," said Dolomieu, moving slyly away. "You'll soon get another single o into that big gob o' yours."

Salmoides squared himself and set his spines, but did not follow. He knew he was no match for his sprightly half-brother in a swimming contest.

"Don't be so bristly, will y'? I didn't mean anythin'. I'm sorry y're under the weather." And Redeye ventured a little nearer.

"I don't take no stock in sich small fry ez yew, no haow," replied Stumpy. "Yew hain't wuth a tin frawg!"

"You seem t' be 'quainted with tin frogs. Did y' ever drop one down y'r fish car in a thunderstorm?"

"Say, mister fingerlin'," growled Stumpy, quivering with unavailing rage, his accent expanding in the heat of excitement, "my maouth bawthers yew awful, don't it? Eet's a handier maouth than yourn t' ketch reel live minnies into. Yew air stuck on yer shape big, hain't y'? But y' hain't no brook trout yerself, by a long fish line!"

"Now, see here, Stumpy, I don't want t' be too finical, but y' mustn't use such spressions as 'stuck on your shape' when addressin' me. I ain't used to it, an' I'll snub y' the next time I meet y'." Redeye picked up some diminutive substance from the sand, pebbled it out again with supercilious delicacy, and added: "You're as vulgar as a sucker, Shorty! Did y' ever go t' school?"

"School! Hugh! I bin jawstled araoun' into this here lake tew much t' go t' school. I never sot fin in no school, an' I hain't seed any."

"Then y' might 'a' hooked on to somethin' from the fishermen that come here, beside vulgarity an' tin frogs. That's the way I polished up m' grammar an' icktyology —ahem!"

"Wow! Say, yew must 'a' swallered what thet dominie thet use t' fish here on Sundays, with a wooden bait an' a bottle, calls a 'dictionairy.'"

"Well, y' see, Stumpy," replied Redeye, without moving a fin, "I'm a produc' o' fishculture." He turned in a flash, darted forward, and snapped out "Scat! Scat!" at a retreating object.

"What air yew a-scattin' about naow?" inquired Stumpy, irritated. "Yew're wusser'n one o' these here dawgfish."

"There's that ugly catfish just been here," said Redeye, returning.

"Caatfish! Say, hain't yew got sence enough into yer head t' know that no caatfish is a-comin' into this shaller water this time o' day? Thet's Spikey, the pick'rel, snootin' 'raoun' them weeds fer a minnie. Caatfish! Oh! Glob-glob! Glub-glub!" laughed the hulking fellow, rolling on his side, his gills rising and falling. "Yew bin t' school an' learn codology or somethin', yew hev! Oh, glob, glub! My sides! I'll bust somethin' a-lafin'."

"I ain't used t' these weeds," explained Redeye, weakly, "an' I didn't look sharp."

"Oh! Ho! Glub-glob! Glob!" came the fat, bubbling laughter again. "Yew hain't the only fresh fish thet's chock full o' book learnin', an' hain't got ez much nat'ral gumption ez a phantom minnie! I knowed slews o' fish, I did, what mout be ketchin' spinners to-day ef they leave these here fly-books alone. Oh, glob-glob!"

This outburst riled Dolomieu. The fire flashed viciously in his eye. His spines bristled "like quills upon the fretful porcupine." Round and round Salmoides he rushed, as a predatory street arab capers around an apple cart, not daring to approach within striking distance of the enraged Greek; or, to change to a more appropriate metaphor, like a swift cruiser about a sluggish battleship. The large-mouth merely turned within his own length, slowly, head to the enemy.

"Ain't you done chawin' of your mouth yet?" Redeye burst out. "When that gullet o' yours is open, y'r head's off an' the lake's afire! If I could throw a grain o' salt on y'r tail, you'd grow up t' be a jewfish! Y' look flabbier than a piece o' pork rind after a' evenin's fishin'." He was forgetting his boasted good manners under the barb of wounded vanity.

The five-pounder also began to lose his head at this Billingsgate, and started in to plow water. "Yew'll call me names oncet tew often, yew little blaack trash! I'll rip——" He stopped short, his prow toward the shore where we were lying.

"What y' starin' at, Stump?" asked Redeye, surprised. "Y' look as scary as Goggles, the wall-eyed pike!"

"Gosh all sinkers!" heaved out the huge one in great alarm. "They's Jawhn Smith, the guide, a-sittin' on to that bank, right there!"

"John Smith! Y' don't say!"

Both turned tail instantly and fled to the shelter of the further pads. We could still discern the two shadows, however, and hear the voices gurgling upward. Fear of their common enemy settled their squabbles temporarily. They drew closer together.

"Do you know John, too?" said Redeye.

"Do I know Jawhn! Yes, yes! Jawhn come mouty near givin' me the gapes, oncet upon a time, he did! It were the wuss turn I ever hev!"

"How'd it happen?"

"Waal, it were this-a-way: This June, one fine mornin', an' a ripple onto the lake, I sot eyes on Jawhn drappin' into his boat an' sneakin' aout t' fish, all by his lonesome. He were castin' a small frawg on a six-ounce fly-rawd. Yew seed him do it, hain't y'? Naow, thinks I, y' hain't a-gittin' no riz outen me t'-day, Jawhn! Waal, he kep a-wavin' an' a-wavin' thet little rush o' hisn, like a strip uv eel grass, an' I were tempted, I were, to foller him up an' see him ketch some fool fish on to it, livin' in hopes, I were, thet a loose frawg mout jump overboard outen his frawg car. 'Long about 'leven o'clawk, Vane come along, tew, an' I git kind o' kerflummixed with the tew boats, I reckon; an' I were feelin' terrible hongry by then, doin' nawthin' but follerin' all day. Ennyhaow, I were just behind a big stump, front o' Jawhn's raft, when I see a nice, bright frawg a-floppin' an' a-skitterin' an' a-shakin'

of his legs fer home, perpetual. Slosh—O! I sez, an' struck thet frawg like a musskylunge."

"Did y' get the frog?" asked Redeye, eagerly.

"Did I git th' frawg! Yes, yes! I git th' frawg, I did, an' a heap more t' boot! I struck thet frawg, head fust, an' run thirty foot t' swaller him, an' all t' wunst somethin' hit me a jab in the jaw an' sock me tew good foot offen bottom."

"Did y' spit him out?"

"I couldn't spit nawthin' out, I tell y'! Thet air frawg were tied tew a string, he were, an' Jawhn Smith were at t'other end on it."

"Snells alive! How'd y' pull out, Stumpy?"

"Waal, I med fer the stump an' got snarled 'raound it, kind o', an' busted the gut near the line—it were some frayed, I reckon—an' thet were the same snelled hook I drap t'other day!"

Before Stumpy finished relating his thrilling adventure a small sunfish had stolen to the edge of the lilypads. When Stumpy got his eye on the intruder, he swung his helm hard aport instanter, headed for him, and opened with his usual interrogative broadside:

"Say, Sunny, what air yew a-doin' here? This hain't no plaace fer the likes o' yew. I guess y' sort o' like the sun, but yew'll find this here summer resort a leetle tew hot! Me an' Redeye is a-havin' a quiet talkee, an' we don't want no disruption!" He waved his tail threateningly.

"You'd better take Stumpy's advice," admonished Redeye. "Paddle along now, Sunny—swimmin's good!"

The sunfish did not wait for a third invitation.

"Say," said Stumpy, weaving himself again into the pattern of the lily stems, with the important manner in which an obiter dictum is usually delivered, "say, them sunnies is cu'r'us little cusses."

"Yeh," assented Redeye, just tickling the old fellow's side with his tail tip, "they think themsel's some punkin seed."

"Waal," continued Stumpy, "ez I were a-sayin' when thet little tadpole disrupted me, Jawhn's ez slick ez a mother eel, an' y' don't ketch this here 'specimen o' the

CASTING FOR BLACK BASS.
Photo by Miss B.

finny tribe' ez yew say, a-follerin' of his boat no more. But, say, hain't yew had no hair-bread escapes, Redeye?"

"Only one, Stumpy, when I took a scarlet-ibis off a fly-fisherman last year; but I shook'm out on the second jump."

"I hain't much on th' jump m'self. Gimme a stump, or a lawg, or a bunch o' weeds, an' I'll tear loose tew outen three times, ev'ry sqush. But talkin' o' flies, yew wuz on to the beds when y' took thet air red-headed fly, I reckon?"

"I was that—early in June, in fly time, before the law was changed."

"Flies don't bawther me much, but on the beds I'll fight 'any ole thing,' ez them Noo York still-fishers sez. Our beds hev got-tew-be-purtected, Redeye—sot thet down oncet fer all. I tell y', I hain't skeered uv a wooden spinner an' thirteen hooks on to it, in spawnin' time."

"The law allows only three hooks on 'em now, an' they don't ketch to yer outsides so offen; but I don't want one of the flyin' devils stuck into my gullet, anyhow!" said Dolomieu, with a tremor. "I like mine soft, thank y'! What are you takin' now, Stumpy? What grub are y' livin' off?"

"Waal, a little of anythin' I kin git, but mostly minnies an' daubsons. I'm a great favoryte o' daubsons, I am—I like daubsons, special."

"Dobsons? I call 'em hellgrammites," corrected Redeye, unable to keep from showing off his "book learnin'."

Stumpy resented this display of pedantry. His caudal twitched angrily. "Yew do, naow?" he drawled. "Waal, say, I don't keer what the cuss word yew call 'em, I'll call 'em daubsons. They taste jest as good, an' they air good tew, I'll tell y'." He snapped his jaws together, half in warning, half in appreciation. "I wish I hed a nice bunch o' daubsons or nightwalkers, right naow!"

"How would a plump young frog go?"

"Naow, say, thet hits me tew a tender spawt! This here pouch o' mine's a-gittin' terrible slack. Ef I see a frawg naow, I'd show y' what a riz looks like—I kin make the water bile! I heerd a fisherman say oncet thet yew fellers fit like one o' these here salmon when y' wuz hooked, but y' don't rise tew a frawg good."

"Let's throw 'em a live frog," said John, "and see who gets it."

He took one from the frog box and threw it on the lilypads.

Immediately the water began to "bile" wickedly enough to cook the amphibian while they waited. Stumpy's curved bronze shot out of the lake, and he jumped clear over the frog, to take it head first, but missed it. Redeye came up beneath his rival, in the twinkling of an eye, sucked in deftly, rather than pounced on, the frightened victim, and made a run out to deeper water with his prey, while the old man sulked in the pads, poising his bulk between two roots. When Redeye had pouched the frog, he returned warily, feeling his way. He knew he had committed the unpardonable sin.

"Yum, yum, Stumpy!" said he, playing with fire, "that frog goes good, an' there ain't no string tied to him neither."

"I knowed I'd miss him," said Stumpy, keeping his eye on the victor. "I'm all upsot sence I lose thet snelled hook o' Jawhn's, I tell y'."

"Sour minners!" retorted Redeye. "You always was thick, ole greeny, but how did you miss him—with—that—big——"

Redeye had the last word, but it was lost in the mad race for life to the depths beyond, where, we are glad to say, "strikes" are sometimes arbitrated.

Split Bamboo.

Random Notes of an Angler.

The Tautog as a Sportsman's Fish.

Among my friends is a gentleman who devotes most of the time that can be spared from his business to hunting and fishing. He is an expert with rod and gun, and is an enthusiastic and thorough sportsman in every way, except that he prefers to catch tautog with a hand-line rather than with rod and reel.

This trait in his character—I call it crankiness—I have never been able to change. In vain have I quoted from angling books and sporting papers and given him my own experience and that of others who enjoy fishing for this species with rod and rather light tackle; he simply shrugs his shoulders, or laughs good naturedly at my arguments, declares that the way he fishes is the only fit way to catch tautog, and goes out in his boat early in the morning, anchors over his favorite ledges, and pulls up his two or three pounders hand over hand, like so many cod or haddock. Well, I suppose "a willfu man mun gang his ain gait," and if my friend will not be convinced, it is nobody's business but his own, but it is a great pity that he loses such a lot of capital sport as he does every season.

Now I do not claim that the tautog is pre-eminently a game fish when compared with the salmon, bass and squeteague, but that it is capable of affording most excellent sport with rod and reel there are hosts of anglers who will testify.

On a rather stiffish bait rod a four or five pound tautog will, if hooked in rough water, give an angler all he wants to attend to before it is landed. While the tautog is as a rule a bottom fish, it does not always restrict itself thus, for I have repeatedly taken them in breakers in which even the striped bass would have to "hustle" to keep in safe water.

Time and again have I fished from ledges and rocky shores for these fish when breakers six or eight feet high were dashing all around me, and the tautog found no difficulty in "stemming the tide" and in seizing my baited hook as it moved about in the foaming water. And then what a battle ensued! The tautog does not make such wild runs as does the striped bass, but it is an immensely muscular fish—examine one and note how broad and thick it is—and when it starts to go it generally goes, and the angler needs to handle his captive with good judgment or it will break away.

Frequently have I had my line taken out twenty or more yards at a run, and have had this repeated before my fish was landed.

The gait was not a fierce one, but there was a dogged determined pull, such as no ordinary line, if not running from a reel, could withstand.

The worst trick that this fish has is to carry the hook (the second one) beneath shelving rocks or in holes between jagged points of ledges, in which it becomes fastened and the fish escapes.

As to Tackle.

For tautog fishing my favorite rod is a split bamboo ten feet in length and weighing about eight ounces; the tip is stiff enough to be available for bait-casting and pliable enough to afford a proper degree of sportsmanlike play in handling a good fish.

For reel I have found that a substantial click reel, such as I have described in a previous article as a salmon reel, but smaller, is better than a multiplier. I know very well that there are anglers who will not agree with me in this, men who believe that a multiplier is the reel for surf fishing, for the reason that it permits one to take up line more quickly than an ordinary reel does, but I have seen so many accidents from the use of the former, have seen tangled lines, and clogged reels and lost fish, and "language" that I will "hae none o' them."

For a line I have settled down to using one of linen rather than one of braided silk, such as is used by many other anglers.

For hooks, the kind sold in the tackle stores under the name of blackfish or tautog hooks are undoubtedly the best; care should be taken to have them well tied on strong, doubly twisted gut, and when two hooks are used one should be set at least six inches above the other. It is well to have a variety of sizes along and a supply of Nos. 3 to 10 will suffice to meet any and all emergencies. A swivel sinker is preferable to any other in surf or breakers, but if bottom still-fishing is followed the tracing sinker through which the line moves freely is the better one. I am inclined to believe that the tracing sinker is not valued as it should be by most bait-fishermen. With the ordinary sinker which often rests on the bottom the fisherman does not feel the bite unless the sinker is dragged along; but with the tracing sinker the weakest bite is felt, for the reason that the line moves in response without any check whatever from the sinker.

While the tautog usually prefers a rocky bottom and loves to lurk among reefs and ledges and about sunken wrecks, it does not limit itself to such surroundings, for it is taken on great stretches of sandy bottom in Long Island Sound.

In former days it grew to a considerably larger size than is taken now, fish weighing ten or twelve pounds then being common, while in recent years a five-pounder is a rarity.

Scott in his "Fishing in American Waters" says that "The blackfish, or tautog, is not to be disdained by the disciple of rod and reel. Though he is eminently a commercial fish, yet a tide-runner of his family which weighs from eight to twelve pounds makes such dips and runs as try both the angler and his tackle. A somewhat celebrated Senator of Rhode Island (Burlingame) used annually to spend several summer weeks in fishing for tautog with an artistically rigged hand line. He sculled his boat to the edge of the tide, on the bank between a rapid current and nearly slack water, and near an islet or reef of rocks in the Seconnet River, where the water is about fifteen feet deep, anchored his punt firmly, standing up in the stern, and cast some seventy-five feet of line, armed with two hooks about two feet from the sinker, and baited with clam. In this way I have known him to take one hundred pounds of tautog in one hour."

The tautog has not only diminished in size, but it has decreased in numbers very considerably also. In Prof. Baird's report of the Rhode Island hearing which I alluded to in my last article, I find quite voluminous evidence from fishermen relating to the diminishing supply of these fish.

One witness stated that compared with the fishing twenty years ago, under the same conditions, the number of tautog caught now (1871) would not be more than one-eighth as many. He said that he used to go outside for his fishing principally, his car holding from 100 to 150 pounds. In the ordinary condition of weather he could fill it and be home by 9 o'clock in the morning, but now, twenty years later, fishing the same time, under the same conditions and on the same ground, if he got twenty-five pounds of fish, he considered he was doing well.

Another witness said that when he was a boy he used to see men who followed tautog fishing go off early in the morning, and come back with as many as they could sell by 7 or 8 o'clock in the forenoon; now one cannot get any to sell by going all day.

Among more recent data I find in the report of the Massachusetts Commissioners of Inland Fisheries and Game for 1900 that the total catch in that State of tautog in all pounds, weirs and seines in 1900, was only 12,473, while the average annual catch for the nineteen years 1882 to 1900, inclusive, was 63,802.

The catch for 1895 was entirely phenomenal, it being recorded as 436,090. If we omit this and strike an average for the other eighteen years, we find that it is 43,119, or considerably more than three times the entire catch for 1900.

The food of the tautog is varied and consequently the angler is not confined to only one or two kinds of bait; it is fond of small mussels, which it strips from the rocks, and sea clams, crustaceans, such as fiddler crabs, hermit and sand crabs, and small lobsters are greedily eaten by it. To small lobsters it is very destructive, as the following example will show:

"A fisherman put a tautog which weighed half a pound in a lobster car in which there were three hundred pounds of living lobsters. It was kept in the car from the first of May to the end of October, six months, when it had destroyed all the lobsters and weighed three-quarters of a pound."*

The bait which I use in preference to all others is a small crab such as is found hiding in the shale or beneath the rocks on the shore, and which may readily be obtained by turning over the rocks when the tide has gone out. I have found them so abundant at times that one hundred or more could be obtained on a stretch of shore not over ten rods in length. Little fellows they are, about an inch in diameter, but they make a most capital lure. The hook is passed through them from belly to back, care being taken not to crush them more than is absolutely necessary. If a number of these are captured, they may be kept in damp sea weed, in which they will live a long time.

The tautog is pretty abundant in most of the water which surrounds Long Island, and is taken in many localities in Long Island Sound and Fisher's Island Sound. It is a favorite market fish in New England, and is found along the New Jersey shore as far south as Delaware Bay, and although it is generally a near-shore fish, it is often captured on the ocean banks off Sandy Hook.

It is not a free-swimming, wide-ranging fish like the bluefish, bass and squeteague, but makes its summer home in a given locality, from which it moves only on the approach of very cold weather, when it goes out into deeper water, where, like the striped bass, it hibernates in the mud or beneath shelving rocks until spring returns.

One of the interesting peculiarities of the tautog is its inability to endure very cold weather, there being many instances on record of its having frozen to death under the water, the inside of the fish becoming a lump of ice.

Although in New England the tautog is most abundant south of Cape Cod, it is found in many localities along the shore from Provincetown to Cape Ann.

I have had good tautog fishing from the rocky shore at Eastern Point, Gloucester; have taken quite a number at Nahant, and have known of many being caught at Cohasset and from the bridge that crosses the river between Quincy Point and East Weymouth. At the first-named locality the fishing is done from the rocks, a strong, heavy rod being used, and the bait cast out into the surf and allowed to sink near the bottom. But at Weymouth bridge, unless one fishes from a boat, a hand line is necessary, it being almost impossible to save one of the heavy fish by lifting it with a rod. On one occasion, at Eastern Point, while fishing with two baits, I hooked a heavy fish, which darted at once beneath a rock and fastened the other hook securely. For several minutes it remained firmly fixed, and the prospect seemed good for losing both fish and tackle, when it suddenly became released, and the discovery was then made that another large fish had taken the disengaged bait and was hooked.

For a quarter of an hour they gave me all I could attend to, but the steady strain of the rod proved too much for them, and they were finally led into a quiet cove where the landing net soon secured them.

They were very dark-colored fish, almost a deep blue black; they weighed four and one-half and five pounds respectively, and were as handsome a pair as one will now find in a season's fishing.

Edward A. Samuels.

[TO BE CONTINUED.]

* Report of U. S. Com. of Fisheries, 1871-1872.

"A" New Whitefish.

Editor Forest and Stream:

In your last issue I notice that your able correspondent, Mr. E. T. D. Chambers, of Quebec, quotes the finding of a new whitefish in the waters of Lake Simcoe, and that it has been identified by Dr. Bensley as *Coregonus labradoricus,* or at least that its characteristics approach more closely to that form than to any other. As I had something to do with the identification of this little fish, I feel for the sake of science that we ought to place it where it belongs before the public, for already the best scientists in fishery matters have recorded its existence as *Coregonus richardsonii.*

These fish up to a year ago were classed as herrings by the local fishermen about Lake Simcoe, and nothing was thought of it until some Scotchman said that he knew they were Loch Fyne herrings such as he had so often seen in the old country. This opinion was given as an item of interest in the Toronto Globe, where it met my eye. Of course, I knew that such an opinion must be wrong, for probably Loch Fyne herrings would not live in fresh water, so I at once wrote to Mr. S. T. Bastedo to see if he could have a specimen sent to me. Apparently last season he could not get one for me, although he had Dr. Bensley to examine a specimen. This spring, however, he was good enough to have three of the little fish sent to me from Barrie. I saw at once that it belonged to the *Coregonus* family. However, I was not able to satisfy myself as to its particular identity, so I forwarded a specimen to Dr. H. M. Smith, of the U. S. Fish Commission at Washington, who has so ably written up some of the small whitefishes of Lake Erie. He very promptly acknowledged its receipt and stated that he and Dr. Evermann were surprised to find that it proved to be a specimen of *Coregonus richardsonii,* and said that as far as they knew it was the only recorded specimen beside the type fish, and that they were very anxious for more specimens.

I believe the type fish are dried specimens in the British Museum, and they were named after John Richardson, a noted author on subjects of natural history.

Gunther, Cat. VI., 185, 1866, says "its exact locality is unknown."

The fish is found associating with the common freshwater herrings in Lake Simcoe, and the fishermen say that it is not found at all in the adjacent waters. It seldom reaches more than a pound in weight, and is a most delicious fish for the table, being much finer and better flavored than its big relative, *Coregonus clupeiformis.* It is said that at certain seasons it will take the hook freely and many are caught in that way, but they are mostly taken in nets with the herring.

G. A. MacCallum.

London, July 28.

New England Fishing.

Boston, July 28.—Correspondents in Maine are in earnest about something being done to prevent too much fishing. The law permitting the sending out of ten pounds of fish is being assailed by the more thinking, and legislation will doubtless be asked to make a change. Box after box of fish goes out over the lines of railways tapping the fishing resorts. The express companies have not a word to say; it is money to them. If information is asked concerning the number of boxes they forward, they have none to give. The tone of the letters is that fishing in Maine is doomed; is slowly being reduced to the position of that of the Adirondacks. Severe restrictions of excessive fishing can only save the fish from being too soon exhausted.

Mr. E. C. Stevens, of Boston, fishing at Lake Dunmore, Salisbury, Vt., sends out one of his scores: Four pickerel, 6¼, 4, 3½ and 2 pounds; three bass, 3, 2 and 1 pound. The monster pickerel, for which that lake is famous, have not yet come to Mr. Stevens' net, but a more peculiar catch has. Mr. Austin L. Baker, of Boston, and Mr. Stevens' fishing companion, has caught a live mink in that net. Another big salmon was landed at Lake Auburn the other day. Mr. N. G. Manson, of Camp Leatherstocking, Richardson Lake, writes me of a day of experiences. On the carry between the two ponds, Big Richardson and Pepperpot, a bear that must have weighed four hundred pounds, was seen. At the pond Mr. Manson caught a trout weighing fully five pounds, the largest trout on record from that pond. Eight deer were sighted on the same afternoon. Mr. Manson writes that he is in a first-class fishing and shooting country; the only drawback is the fact of the great amount of poaching that is constantly carried on in that section, with no warden nearer than Rangeley village, nearly twenty miles away. Mill Brook, flowing from the Richardson ponds, was legally closed several years ago, but the Commissioners have neglected to post the brook, and nobody pays any attention to the law. The same conditions exist in regard to Metaluc Brook, flowing into the same lake, several miles below. Capt. Fred C. Barker looks out for Bemis Stream, flowing into Mooselucmaguntic Lake at Bemis. He employs out of his own pocket a man to watch "the spring" or natural hatchery up that stream, or the brook that joins it, every fall. In the bottom of the spring, about fifteen feet in diameter, hundreds of trout may be seen any day in the spawning season, the bottom full of spawn. It is easy to see that this care of that spring does more to keep up the supply of trout in that lake than any restocking that has ever been done by the Commission. The building of a fishway from Mooselucmaguntic Lake up into Rangeley Lake is being agitated, and late reports say that it is to be done. Nobody dares mention the building of a fishway at the Upper Dam, where the need is much greater. Two priests were apprehended by Game Warden Templeton at Jackman, Me., last week for fishing Parlin Stream, which is closed to all fishing. The Rev. Joseph Forest and the Rev. John Blair were caught fishing there by the warden. It cost the Rev. Forest $50, he paying all the bills.

Belgrade Lake, Me., has the reputation of being great for black bass. There is a story out that Monday over 2,500 bass were taken, and five trout, the largest weighing 4¼ pounds. While J. L. Ogden, of Newark, N. J., was playing a small bass there, it was seized and swallowed by a big pickerel. Mr. Ogden had considerable sharp work to land the pickerel on a six-ounce fly-rod. Charles Peeling, of New York, has two mounted trout hung in the office of the Belgrade, one weighing 8 pounds 14 ounces, the other 7 pounds 8 ounces. Continued cool and wet weather has caused the fly-fishing to hold out remarkably well at Moosehead; it is as good as it was three weeks ago, the height of the usual season. At Haines Landing Mr. Dexter C. Tiffany, of New York, has lately taken salmon of 4½, 4, 3¾ and 2½ pounds, and trout of 5½ and 2½ pounds. New Hampshire fishermen are having great sport with bass in Ashquam and other waters. W. H. Thompson, of Chelsea, and H. H. Howard, of Worcester, caught a string Tuesday weighing 17½ pounds. At Newfound Lake, a few catches of lake trout are still being made, the largest lately by Master Carl Bradden, weighing 10½ pounds. Congressman Frank D. Currier, of Canaan, recently took a string of thirty fine trout from the brooks near Dorchester. The Pemigewasset River is also yielding some good strings.

Boston, July 26.—Boston trout fishermen continue to make some good catches. C. A. Mentzer and W. J. Lamb recently made a trout fishing trip to Hancock, Vt., to a brook that Mr. Mentzer is acquainted with. They struck a good pitch of water for trout, and made a score of about ninety, some of good size for brook trout. As is almost ever the case nowadays, the camera went with them, and some pictures that they treasure were made. Another Boston trout fisherman—it is not best to give his full name for obvious reasons—went to a town in New Hampshire one day a couple of weeks ago, where he was to meet a fishing friend and try a trout brook that the friend knew about. Our Boston man did not know the country very well and had never been to the brook. He arrived at his friend's place at night. The friend could not go afishing the next day. Important business had come up and must be attended to. But the Boston fisherman could take his team and drive to the brook and fish that day, and both would go next day. The directions to find the brook were quite explicit: "Drive to the second turn in the road and turn to the left, then to the first turn and turn to the right, then to the forks of the road and go up a hill," etc. Our fisherman drove and drove, about as directed. Soon he came to a brook. He rigged his tackle and began to fish. The trout bit remarkably well and were of good size. Soon he caught a fish that did not look like a trout; one of a sort he had never seen. He caught another of the same sort, and then another. He filled his creel with handsome fish, and concluded that it was time to go back to his friend's house. He reached there much pleased with his luck. His friend looked the basket over, and began to look rather pale. "Keep those fish out of sight for heaven's sake. You've been on the wrong brook. Those are landlocked salmon. That brook is closed to all fishing, and if the wardens find out that you have caught them, they will cost you $10 apiece, beside the cost of prosecution!" The jaw of our fisherman dropped, and he felt like starting for Boston by next train. The brook was really posted, but he had waded right in the middle, and was so interested in fishing that he neither looked to the right or left, and did not see the signs.

Secretary L. Dana Chapman says that fishing continues good at the Megantic preserve. The cool, wet weather has prolonged the fishing remarkably. Restocking has also done much to help the sport there, beside the practice of fishing with the fly only, and that of returning all fish not needed to the water alive. L. O. Crane has made another record at Big Island Pond, a trout weighing 2 pounds 10 ounces.

Fishing has held out well at Lake Auburn, Me. Several good salmon were taken there on Tuesday last. One was caught by Frank Merrill, one by Mr. Thompson, and a third by Mrs. Curtis, of Boston, who has been a guest at Mr. Merrill's. I am not aware that these people used anything but the ordinary rigging, but I have it from good authority that local fishermen in that lake use a big spinner made at a tin shop, which the salmon take.

Special.

Capture of an Ocean Sunfish.

There was captured last Saturday near Seabright, N. J., a specimen of the ocean sunfish, an extremely curious but not very rare fish.

The sunfish is known to science as *Orthagoriscus mola;* it has a compressed disc-shaped body, no tail at all, but very long dorsal and anal fins. The sunfishes grow to be seven or eight feet long, and about the same breadth, and weigh from 600 to 800 pounds. They are found in the Mediterranean, on both sides of the Atlantic Ocean, and have been taken on the coasts of California and Japan. Their distribution is general throughout temperate and tropical seas.

The sunfish has no economic value. Its flesh is thin and tasteless, and when cooked separates into oil and bunches of tough fibers. However, the fishermen of Cape Cod sometimes make from the livers an oil which is highly prized as a remedy for sprains and bruises.

Nothing seems to be known of the time or place of the breeding of this species, but the young are occasionally taken.

The sunfish gains its name from its habit of floating on the surface of the water, with fins partly exposed. They are conspicuous objects when seen in this position, and are often captured and brought to cities, where they are exhibited as curiosities.

Fishing in the Delaware West Branch.

The fishing in the West Branch of the Delaware River near Deposit, N. Y., has been fair recently until July 17, when heavy rains roiled the water somewhat for a day. After that some fair catches were made just below this village. The river at this point has at different times been stocked with both black bass and wall-eyed pike fry, but I have heard of none of the latter fish being taken during my stay in this vicinity. Some fair-sized black bass were caught last week. Good catches have been made in Oquaga Lake, two and a half miles distant in the hills. Bass, wall-eyed pike and trout are found there. The river has been higher this month than usual at this season, and the fishing was spoiled for the time being by the heavy storms of July 18-20, when the stream rose several feet.

At Hale's Eddy the pool of that name is well known among anglers, and I am told good catches are made there every year. The village is five miles below Deposit. Boats can be hired, but I have seen few persons trolling on this part of the river. The local anglers stick to their barnyard hackle, and perhaps for this reason they catch more catfish than bass.

The best bass pool I have seen on the West Branch is less than two miles above Hancock. It is adjacent to the railway and may be approached from that side of the stream. One can fish from shore there by casting, as a series of ledges extend into the pool. Above these is a fall, in the tail of which, I am told, some famous catches of bass have been made. The water is deep and full of eddying currents. A nearer pool may be reached from Hancock by way of the road to Deposit, which passes nearby. This pool is also deep and dark, full of ledges where game fish can hide. It can be fished from the west bank by casting, and from a boat. Below it the river is swift, but deep for a long distance, even to Hancock.

One who wishes to fish the West Branch can find lodging at very reasonable rates in Hancock or Deposit, and the farmers along the river are accommodating and will no doubt find bed and board for the angler.

Perry D. Frazer.

Stockport, N. Y., July 21.

A Morehead City Shark.

Kinston, N. C., July 26.—*Editor Forest and Stream:* Herewith is a clipping from the Raleigh News and Observer of to-day. Take it for what it is worth:

"Morehead City, N. C., July 25.—The largest shark that was ever caught in these waters was to-day landed by Mr. Russell J. Coles, of Danville, Va., with a rod and reel after a most desperate fight, and before the shark was finally killed he was shot twenty times with a heavy revolver. Mr. Coles used 600 feet of No. 36 Cuttyhunk line on a heavy tarpon reel with short trolling rod, and his boatman had to hold him in the boat when he was trying to check the fierce rushes of the shark.

"After the shark was killed six men were unable to lift him from the water, and he was finally hauled up by block and tackle after several failures, as his great weight broke the first chain that was used.

"The shark is twelve and one-half feet long and his weight estimated to be over 1,200 pounds.

"Dr. Milligan, of the Government Fish Commission boat, Fish Hawk, says that he has fished all over the world, and that he does not believe that as heavy a fish as this was ever caught on rod and reel in the world before.

"Mr. Coles is justly proud of his great catch and has had him photographed and will preserve his skin."

This will be of interest to tarpon and tuna fishers who are prepared to believe it. To those whose credulity is not in good working order, it will doubtless prove interesting from an entirely different point of view.

Having lost several costly lines fishing for sheepshead down there, I am prepared to take it all in and hope that it is the fish of my acquaintance.

T. H. Faulkner.

Adirondack Notes.

Louis Watso, the Wabannake Indian, who years ago was a successful guide, died recently at his home at North River, aged about eighty-one years. Very few of the old-time guides are left. Mr. Watso belonged to a generation of men mostly of lasting remembrance. All who knew any of them will wish that each may find his "eternal camp" in the "happy hunting grounds."

Fred Bird and Frank Fuller, two young men raised at Blue Mountain Lake, this week visited a pond some miles away and returned with thirty-five pounds of brook trout. Bird handled the raft while Fuller cast the flies. The trout were nearly all taken in one day, and Fuller was lame and sore from the exercise. One trout was twelve inches long and the average weight was about one-quarter pound. It was a fine catch, and the boys were heartily congratulated. They also reported seeing twelve deer on the trip.

The weather continues wet.

Juvenal.

The New Jersey Coast.

Newark, N. J., July 28.—Since my last letter but little of interest to the surf angler has been presented. While a few bass of large size have been taken at Deal Beach and at Avon, the catches have been so far between that interest has been on the wane at all times. The prize so far is to the credit of Niart Rogers, weight 26½ pounds. Last Sunday a school of weakfish broke in shore in pusuit of a school of butterfish. Those on the shore who were properly equipped had a gala day, as many specimens weighing from 5 to 8 pounds each were presented. I have made a personal review of the entire ocean front between Atlantic Highlands and Barnegat City, and the results are as above reported—but few bass, no bluefish and weakfish only of small size in the bays and rivers.

Leonard Hulit.

"The Earth is Our Own."

The earth is ours? Nay, tenants are we all,
Tenants at will of unrelenting fate;
Even now, before life's opening outer gate
They stand, to whom the earth full soon will fall.

Theirs are the streams ye drain for fancied needs,
The trees ye fell, and leave a place of death
Instead of forests with their healing breath,
The falls that vanish to exploit your deeds.

What will ye answer, when of you they ask,
"Where is the beauty which you held in trust?
What use to us these heaps of golden dust,
With earth a prison where we do our task?"

—Ninette M. Lowater in N. Y. Sun.

Dec. 1.——, —. —.—Interstate Championship Field Trial Association's second annual trials. C. D. Cooke, Sec'y.

Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

Canine Elegies and Epitaphs.

Readers are invited to send for this column any epitaph or elegy of departed dogs of which they may have knowledge. We continue the series from last week:

XI.—On the Death of a Lap-Dog Named Echo.

In wood and wild, ye warbling throng,
Your heavy loss deplore;
Now half-extinct your power of song,
Sweet Echo is no more.

Ye jarring, screeching things around,
Scream your discordant joys;
Now half your din of tuneless sound
With Echo silent lies.

—Robert Burns.

XII.—Lion.

[This may be neither epitaph nor elegy, but more of the nature of an obituary; but it belongs with these rehearsals of the qualities of deceased canines.]

Death of an Imported Dog.

To the Editor of the World:

A large Newfoundland dog departed this life at half-past three this morning. Lion was the name of the terrific animal who was the terror of the neighborhood, but, alas, is no more, as he hath "gone where the woodbine twineth." His voice, resembling muffled thunder, will sound no more along the silvery Potomac. Weeping men and children ask themselves in vain, "Where art he?" All of his many virtues may be expressed in the following words: "He was a noble dog." He used to wander mid the sylvan forests, and his clarion notes that echoed from crag to crag and were listened to by an admiring neighborhood, are heard no more. "The good die young," and so let it be with this noble, courageous brute. Peace to his *manes*.

Mr. Editor, will you please insert this in your paper, as the dog was known far and wide, and whose death we would like to have proclaimed by the leading papers of America and Europe. We are much pleased with your paper. Pax Vobiscum.

Joseph Reinhart.

Moler's, Jeff. County, W. Va.

XIII.—On Fop.

A dog belonging to Lady Throckmorton. August, 1792.

Though once a puppy, and though Fop by name,
Here moulders one whose bones some honor claim.
No sycophant, although of spaniel race,
And though no hound, a martyr to the chase;
Ye squirrels, rabbits, levcrets, rejoice!
Your haunts no longer echo to his voice;
This record of his fate exulting view,
He died worn out with vain pursuit of you.
"Yes," the indignant shade of Fop replies,
"And worn with vain pursuit man also dies."

—William Cowper.

XIV.—On a Greyhound.

He who outbounded time and space,
The fleetest of the greyhound race,
Lies here! at length subdued by death,
His speed now stopped, and out of breath.

XV.—Old Charley.

A BRINDLE AND WHITE BULLDOG, BY HIS OWNER, THE REV. JAMES ADCOCK, SEPT. 1, 1859.

This lowly spot, inscribed with Charley's name,
Acquires fresh interest from his well-earned fame.
For while he lived no sturdy rogue or thief,
Approached the house to supplicate relief;
And many a time has laughter made me weep
To view his horror of an unwashed sweep.
Yet had he not the shadow of a fear,
Nor heeded odds when other dogs were near;
Venus and Mars held o'er him equal sway,
And either call he scorned to disobey.
His knotted shoulder and his vise-like jaw
Serv'd well to keep the mongrel curs in awe;
But when some worthier rival grac'd the stage,
Full of high mettle, void of needless rage,
He'd dare the onset, nor would seek retreat,
Till prostrate lay that rival at his feet.
His pluck and bottom were above all praise,
And scars the prowess told of bygone days;
Yet was he ever faithful, ever true—
Gentle and playful as a kitten, too.
Curious in food, how fond was he of cake!
And every sort of biscuit one could bake!
While with a nut to see him was a treat—
He'd crack the shell and then the kernel eat.
But now at length invidious disease,
In league with time, has wrought his health's decease,
And chemistry, in shape of prussic acid,
Hath stopped his breath, and rendered him quite placid.
Charley, farewell! and as thy looks no more
Shall scare the beggar from thy master's door,
So all who knew thee best shall fondly tell
How kind a heart did in thy bosom dwell.
Peace, then, to his remains! Here Charley lies,
And if his race can claim a Paradise,
May he the best of kennels there obtain
And live to bark and play and fight again.

Wolf Dog Hybrids in Canada.

From my friend Mr. Septimus Field, who is living at Asessippi, near the foot of the Riding Mountains, in a sportsman's paradise abounding with moose, wapiti, black-tail deer and jumpers, I have received a very interesting account of the habitual breeding of the cross-bred wolf dogs in that locality. The writer informs me that the cross between wolf and domestic dog is very common in his locality, as both are so plentiful. The Indians in the reserves have many of various colors. They tie up a bitch in the bush, and the pairing takes place the first night. An Indian named See Moose has one a cross between a dog wolf and collie bitch. It is a little darker on the back, but in all other points so much like a wolf that at a short distance no one could distinguish it from one. The Indians use them for their flat sleighs in winter, as they make good train dogs; and, what is of more importance, can get their own living when meat is scarce with their owners. The agent of the Pelly Reserve had them all shot, as they worried his sheep so that he could scarcely keep any. A settler near Asessippi has a light-colored one that he would not hesitate shooting anywhere if he were seen without his owner. Mr. Field does not like them. They are a lurcher-looking kind of dog. The production of these cross-bred animals from parents of both sexes of either breed is a sufficient proof, if, indeed, any were wanting, of the well-known close affinity between the dog and the wolf, which is now recognized by naturalists as one of the ancestors of the domestic dog. —W. B. Tegetmeier in London Field.

Ohio Field Trial Association.

Columbus, O., July 26.—*Editor Forest and Stream:* At a meeting of the Board of Governors of the Ohio Field Trial Association, held at Columbus, O., July 26, it was decided, owing to circumstances beyond control of the club, to hold the trials of the Association on the old dates, Nov. 4, beginning with the Members' Stake, to be followed with an open Derby and an open All-Aged Stake, with purse of $400 in each of the stakes.

At an inspection of the club grounds at Washington Court House, this week, the same were found in prosperous condition, abundance of stubble which contained more old birds with fine broods than was ever before known there.

Names of judges will be announced soon. Entry blanks and any other information will be forwarded by C. E. Baughn, secretary, Washington Court House, O.

C. E. Baughn, Secretary.

A Statue to a Monkey.

The municipal council of the French town of Grenoble has recently voted a large sum of money for a bronze statue of the famous chimpanzee named Charlemagne, who not long since died there. For nine years the chimpanzee, which was brought to Grenoble by an African explorer, had enjoyed the freedom of the town, being privileged to enter practically every house and to help himself to anything he fancied in fruit and vegetable shops. The chief reason of the town's great regard for the chimpanzee was that about five years ago he rescued a child from drowning in a well. Charlemagne had seen everything, and for him to swing himself over the top of the well was the work of a moment. Descending by the rope used for the buckets, he grasped the child and quickly carried her back to her friends, climbing up by the rope. Charlemagne increased his popularity by spending hours in the children's hospital of the town, playing in different wards and amusing the children, who were all very fond of him. In such respect was this chimpanzee held that when he died the inhabitants of the town followed his remains to the grave.—The Beacon.

Paris has an official pack of dogs trained to rescue people from drowning. The other day an unfortunate man threw himself into the Seine for the purpose of committing suicide. Diane, for such is the name of the quadruped heroine, happened to be close at hand, led by a police officer, who, pointing to the struggling man, bade the animal to enter the river. Diane swam vigorously, caught him and dragged him, *nolens volens*, to the shore, while the bystanders showed their delight by loud applause.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

AUGUST.

1. Manhasset Bay, race for 18ft. one-design classes; Port Washington, Long Island Sound.
1. Corinthian, Midsummer Invitation series, Marblehead, Massachusetts Bay.
2. New Bedford, club, South Dartmouth.
2. Indian Harbor, club, Greenwich, L. I. Sound.
2. Royal Canadian, dinghy, 16ft. to 25ft. classes, Toronto.
2. Penataquit Corinthian, open regatta, Bay Shore.
2. Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Duxbury, club, Duxbury, Massachusetts Bay.
2. Winthrop, club, Winthrop, Boston Harbor.
2. Corinthian, annual, open, Marblehead, Massachusetts Bay.
2. Columbia, race to Macatawa Bay, Lake Michigan.
2. Manhassett, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
2. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
2 Brooklyn, Y. R. A. of Gravesend Bay, Sea Gate, N. Y. Bay.
4-5. Manchester, M. Y. R. A., open, West Manchester, Mass. Bay.
5. New York, cruise, rendezvous at New London.
6. New York, cruise, run to Newport.
5-6. Misery Island, open, Salem Bay, Massachusetts Bay.
7. New York, cruise, Astor cup races.
7. East Gloucester, M. Y. R. A., open, Gloucester, Mass. Bay.
7-9. Seawanhaka cup races, Dorval, Lake St. Louis, Canada, between representatives of Royal St. Lawrence Y. C. and Bridgeport Y. C.
7-9. Macatawa Bay, Lake Michigan, Y. A. open races.
8-9. Annisquam, M. Y. R. A., open, Annisquam, Mass. Bay.
9. Hempstead, Y. R. A. of L. I. S., open, Glen Cove, L. I. Sound.
9. Northport, Y. R. A. of L. I. S., open, Northport, L. I. Sound.
9. Seawanhaka Corinthian, club race for Centre Island cup, Oyster Bay, Long Island Sound.
9. Knickerbocker, annual cruise, rendezvous College Point, L. I. Sound.
9. Kennebec, open, Bath, Maine.
9. New Bedford, club, South Dartmouth.
9. Quincy, club, Quincy Bay, Boston Harbor.
9. Royal Canadian, first class, Toronto.
9. South Boston, sailing tender race, City Point, Boston Harbor.
9. Duxbury, club, Duxbury, Massachusetts Bay.
9. Beverly-Van Rensselaer cup race, Marion, Buzzard's Bay.
9. Winthrop, club, Winthrop, Boston Harbor.
9. Wollaston, club, Quincy Bay, Boston Harbor.
11. American, M. Y. R. A., open, Newburyport, Massachusetts Bay.
15. Penataquit-Corinthian, annual cruise, Bay Shore.
16. Royal Canadian, 30ft. class, Toronto.
16. Shelter Island, open regatta, Shelter Island Heights.
16. Horseshoe Harbor, Y. R. A. of L. I. S., open, Larchmont, Long Island Sound.
16. Huntington, Y.R.A. of L. I. S., open, Huntington, L. I. Sound.
16. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
16. Hull-Massachusetts, club, Hull, Boston Harbor.
16. Seawanhaka Corinthian, club, race for Centre Island cup, Oyster Bay, Long Island Sound.
16. Duxbury, club, Duxbury, Massachusetts Bay.
16. Winthrop, club, Winthrop, Boston Harbor.
16. Beverly, fourth Corinthian, Monument Beach, Buzzard's Bay.
16. Corinthian, club championship, Marblehead, Mass. Bay.
21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor.
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

SEPTEMBER.

1. Indian Harbor, club, Greenwich, L. I. Sound.
1. Quincy, club, Quincy Bay, Boston Harbor.
1. Corinthian, club, Essington, Delaware River.
1. Corinthian, annual cruise, Marblehead, Massachusetts Bay.
1. Larchmont, fall regatta, Larchmont, Long Island Sound.
1. Sachem's Head, Y. R. A. of L. I. S., open, Guilford, L. I. Sound.
1. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
1. Lynn, M. Y. R. A., open, Nahant, Massachusetts Bay.
1. Beverly, open, Monument Beach, Buzzard's Bay.
1. Royal Canadian, first class, Lorne cup cruising race, Toronto.
1 Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Penataquit-Corinthian, fall regatta, Bay Shore.
4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.
6. Beverly, open, Mattapoisett, Buzzard's Bay.
6. Wollaston, club, Quincy Bay, Boston Harbor.
6. Quincy, M. Y. R. A., open, Quincy, Boston Harbor.
6. South Boston, sailing tender race, City Point, Boston Harbor.
6. New York C. C., Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
6. Penataquit-Corinthian, Lighthouse cup, Bay shore.
8. Eastern, open, Marblehead, Massachusetts Bay.
11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
27. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

With the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of Forest and Stream offer prizes for the best stories of cruises submitted to be published in Forest and Stream. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Larchmont Y. C. Race Week.

LARCHMONT, LONG ISLAND SOUND.

Monday, July 21.

The time of starting Monday's race was postponed from 11:30 to 12:30 o'clock, owing to the weather conditions that prevailed in the morning. There was very little wind and a heavy fog hung over the Sound. The Regatta Committee decided to start the boats at 12:30, as at that hour the fog had lifted and there was some air stirring from the E.N.E. All the boats were to sail over triangular courses, the first leg of all being nearly due E. The schooners and 70-footers sailed twice around a thirty-mile triangle, the sloops of classes L, M and N twice around an eleven-mile triangle, and the small boats twice around a five-and-a-half-mile triangle.

It was an unsatisfactory day for racing, owing to the fluky conditions. At the start the wind was from the E.N.E., blowing about five miles. During the afternoon it increased in strength to about twelve miles, finally petering out until it was almost a flat calm. Late in the afternoon the wind veered to the N.W. and blew hard.

At 12:35 the 70-footers started. Mineola was sailed by Charles Barr, while Yankee was handled by Mr. Harry Maxwell and Mr. Herbert Jennings. Mineola was first over the line, Yankee being a little behind and to leeward. They crossed on the starboard tack, but went about soon after going over and stood out into the Sound on the port tack. Yankee worked out on Mineola's weather and at the first mark was almost two minutes in the lead. After rounding, spinnakers were set to port and balloon jibs were broken out. Yankee increased her lead on this leg, but on the three-mile reach across the Sound Mineola again drew up on Yankee. On the first leg of the second round Yankee gained and rounded the mark over two minutes in the lead of Mineola. The wind was dropping when they ran to the mark off Hempstead Harbor, and for a time the boats were almost becalmed. On the second leg Mineola picked up some, but on the reach to the finish line Yankee got the best of the fluky breezes and drew well into the lead and finished with minutes to spare.

Elmina, Muriel and Quisetta started at 12:40 in the order named. On the beat to the first mark Elmina beat Muriel about one minute, and Quisetta over two minutes. On the run to the next mark, Elmina had to gybe her spinnaker over, having set it on the wrong side in the first place. At the end of the first round Elmina led Muriel by 2m. 35s. Out on the second round Muriel did much better and was only beaten 1m. 20s.

In Saturday's race Dorwina broke down just before the start, but she had been fixed up for the day's race, and sailed against Effort. Effort won by 1m. 21s.

Spasm raced Possum and won by 46s. Leda did not start.

Mimosa had no competitor and did not finish.

In the raceabout class Mavis got the best of the start and led all through the race, beating Sis, the second boat, 2m. 8s.

Some good racing was seen in the one-design classes. Lambkin beat Firefly, of the Manhasset raceabouts 49s. In the New Rochelle class the finishes were close, Ace winning from Caper by 10s. Three boats started in the American Y. C. one-design class; Jolly Tar won, beating Howdy 5s. In the Ardsley one-design class Mary Baker No. 2 beat Ping Pong 2m. 43s.

A special race was made up between Chingachgook, Adelaide and Cricket. Adelaide won by 7m. 56s. The summary follows:

Sloops—Class H, 70 to 80ft. Racing Length—Start, 12.35.

	Finish.	Elapsed.
Mineola, August Belmont	5 22 34	4 47 34
Yankee, J. R. Maxwell	5 11 50	4 36 50

Schooners—Class D, 65 to 75ft. Racing Length—Start, 12:40.

Elmina, F. F. Brewster	5 51 05	5 11 05
Muriel, Charles Smithers	5 52 25	5 12 25
Quissetta, Samuel C. Davis	6 17 13	5 37 13

Sloops—Class L, 36 to 43ft. Racing Length—Start, 12:50.

Dorwina, Clifford Brokaw	5 07 04	4 17 04
Effort, F. M. Smith	5 05 43	4 15 43

Sloops—Class M, 30 to 36ft. Racing Length—Start, 12:50.

Spasm, E. D. King	5 08 05	4 18 05
Possum, E. S. Ballou	5 08 51	4 18 51

Sloops—Class N, 25 to 30ft. Racing Length—Start, 12:50.

Mimosa, Trenor E. Park	Did not finish.

Sloops—Raceabout Class, 21ft. Racing Length—Start, 12:55.

Mavis, G. L. Pirie	3 21 10	2 26 10
Rogue, A. B. Alley	3 27 52	2 32 52
Sis, F. T. Bedford, Jr.	3 23 18	2 28 18
Whistlewing, H. M. Crane	3 27 32	2 32 32

QUISSETTA.

Scamp, A. Pirie	3 26 56	2 31 56
Hobo, Trenor L. Park	3 29 06	2 34 06

Manhasset Y. C. Raceabouts—start, 1:00.

Firefly, Guy Standing	4 03 25	3 03 25
Arizona, G. A. Corry	Withdrew.	
Lambkin, S. W. Roach	4 02 36	3 02 36

New Rochelle One-Design Class—Start, 1:00.

Knave, R. N. Bavier	3 55 45	2 55 45
Deuce, L. D. Huntington, Jr.	3 56 00	2 56 00
Ace, W. N. Bavier	3 55 15	2 55 15
Caper, P. L. Howard	3 55 25	2 55 25

American Y. C. Raceabouts—Start, 1:00.

Jolly Tar, S. Howland	3 25 15	2 30 15
Rascal, J. C. Hopkins	3 22 01	2 27 01

Ardsley One-Design Class—Start, 1:00.

Ping Pong, Deming & Campbell	4 03 13	3 03 13
Midget, Edwin Gould	4 07 07	3 07 07
Mary Baker No. 1	4 04 55	3 04 55
Mary Baker No. 2	4 00 30	3 00 50

Special Race—Start, 12:55.

Adelaide, J. J. Dwyer	3 28 20	2 33 20
Chingachgook, E. A. Stevens	3 36 16	2 41 16
Cricket, H. C. Pryer	3 53 50	2 58 50

The winners were Yankee, Elmina, Effort, Spasm, Mavis, Lambkin, Ace, Jolly Tar, Mary Baker No. 2 and Adelaide.

Wednesday, July 23.

Tuesday was Ladies' Day, and during the afternoon the launch, gig and dinghy races were held.

Wednesday proved to be the most unsatisfactory day of the week, as the wind, which blew from the N. at the start, died away and for two hours some of the boats were becalmed, while others got a little air from the S.W. that seemed to hold in the middle of the Sound, and this enabled them to draw up on the leading boats. In several cases boats were not able to finish within the time limit, one-half hour after sundown.

The first leg of the course for the larger boats was E.N.E., three miles; the second, S. three and seven-eighths miles, and the last, N.W. There was really no windward work.

The first leg was a close reach on the port tack, the second a run with spinnakers to port and the third a close reach on the starboard tack.

The three 70-footers started at 11:35, and all got away on the port tack, with Mineola ahead. On the reach to the first mark in the puffy wind, first one boat would be favored, then another. Mineola rounded the mark first with Yankee next and Rainbow last. On the run to the next mark, off Red Springs, spinnakers were carried to port. Yankee got slightly in the lead and at the second mark was one second ahead of Mineola. It was a close reach across the Sound, and Mineola carried a reaching jib topsail while the other two boats carried baby jib topsails. In the light air Mineola did much better with this sail, and at the end of the first round was ahead by over half a minute. At the first mark on the second round the boats were all bunched, there being only ten seconds between the three. Spinnakers were set for the run to the next mark; ballooners were set on Mineola and Rainbow, and these seemed to do more harm than good, as Yankee passed both of them.

After being becalmed for some time, the boats got a little air that enabled them to round the mark. Spinnakers were set to port and Mineola finished first, with Yankee second, while Rainbow was far astern. These boats were to have sailed three times over the course, but were stopped at the end of the second round.

Elmina and Muriel started at 11:40 in the order named. Several times Muriel drew up on her competitor, but the fickle breeze favored Elmina, and she finally finished a winner by over three minutes.

Neola and Weetamoe again met. Neola had the best of the start. Neola got away from Weetamoe rapidly, and at the end of the first round was ahead by nearly fourteen minutes. On the second round Neola got becalmed when near the Red Springs buoy, and lay there for a long time. Weetamoe still carrying along a little breeze with her and nearly caught up with Neola. However, this boat finally got a slight breeze that enabled her to round the mark and work slowly over to the finish line, which she crossed a little while before the time limit expired. Weetamoe did not finish.

In the 65ft. schooner class Miladi beat Gevalia on every point of sailing. The latter was not able to finish within the time limit.

Mira lost the race in the 43ft. class through the fickleness of the wind. She got a beautiful start, being right on the line at gunfire with lots of headway on. At times Challenge was reasonably close to Mira, but never dangerously so. At the beginning of the second round Dorwina and Effort were nearly a leg behind Mira and Challenge was also well astern of her. On the second leg of the course Mira ran out of the breeze and lay becalmed, while Effort and Challenge still held some wind and passed her. Dorwina did not finish within the time limit. Challenge won handily.

None of the boats in the 36ft. class finished within the time limit. The same was true of the 30ft. class.

The yawls Term and Spindrift were in collision before the start, and Tern's bowsprit was carried away.

There was a close race in the raceabout class, Indian winning, beating Hobo 36s. Scamp finished third.

Snapper won in the 25ft. class by over fifteen minutes. Pixie was second.

Microbe and Marguerite were disqualified for fouling the mark boat at the start. Firefly also was disqualified for booming her jib out on the run home to the finish line. The summary follows:

Schooners—Class D.—65 to 75ft. Racing Length—Start, 11.40.

	Finish.	Elapsed.
Elmina, F. F. Brewster	6 13 43	6 33 43
Muriel, Charles Smithers	6 16 58	6 46 58
Quisetta, Samuel C. Davis	Withdrew.	

Sloops—Class H.—70 to 80ft. Racing Length—Start, 11:35.

Mineola, August Belmont	3 48 30	4 13 30

Yankee, J. R. Maxwell	3 52 58		4 17 58
Rainbow, C. Vanderbilt	4 04 48		4 29 48
Schooners—Class F.—Under 65ft. Racing Length—Start, 11:40.			
Gevalia, T. O'Connor Sloane	Withdrew.		
Miladi, S. H. Mason	7 50 00		8 10 00
Sloops—Class I.—60 to 70ft. Racing Length—Start, 11:45.			
Neola, George M. Pynchon	7 30 00		7 45 00
Weetamoe, Henry F. Lippitt	Withdrew.		
Sloops—Class L—36 to 43ft. Racing Length—Start, 11:50.			
Dorwina, Clifford V. Brokaw	Withdrew.		
Effort, F. M. Smith	7 35 36		7 45 36
Mira, C. L. Poor	7 42 52		7 52 52
Challenger, W. T. Foote, Jr	7 36 26		7 31 26
Sloops—Class M—30 to 36ft. Racing Length—Start, 11:55.			
Leda, Harry L. Maxwell	Withdrew.		
Possum, E. L. Ballon	Withdrew.		
Spasm, E. D. King	Withdrew.		
Sloops—Class N—25 to 30ft. Racing Length—Start, 12:00.			
Alerion, A. H. Alker	Withdrew.		
Mimosa, Trenor L. Park	Withdrew.		
Gossip, D. B. Pratt	Withdrew.		
Sloops—Class P—21 to 25ft. Racing Length—Start, 12:05.			
Rochelle, F. J. Gould	6 22 55		6 17 55
Chingachgook, E. A. Stevens	5 48 24		5 43 24
Pixie, E. L. Hopkin	5 14 09		5 09 09
Snapper, A. B. Alley	4 58 55		4 53 55
Ojibway, ——	5 15 06		5 10 05
Raceabouts—25ft. Racing Length—Start, 12:05.			
Rogue, A. B. Alley	3 57 11		3 52 11
Mavis, G. L. Pirie	4 29 10		4 24 10
Scamp, A. Pirie	3 56 52		3 51 52
Indian, J. R. Maxwell, Jr	3 52 34		3 47 34
Whistlewing, H. M. Crane	3 58 48		3 53 48
Hobo, Trenor L. Park	3 53 10		3 48 10
American Yacht Club—One-Design Class—21ft, Racing Length. Start, 12:05.			
Jolly Tar, S. Howland	4 22 26		4 17 26
Rascal, S. C. Hopkins	4 20 49		4 15 49
Howdy, S. Wainwright	4 11 00		4 06 00
Cricket, Howard Willetts	5 42 19		5 32 19
Kid, O. Harriman, Jr	4 21 15		4 16 15
The Ping-Pong, W. H. Browning	Withdrew.		
Larchmont 21ft. Class—Start, 12:05.			
Adelaide, J. J. Dwyer	5 07 09		5 02 09
Houri, J. H. Esser	5 10 58		5 05 58
Sloops—Class Q—18 to 21ft. Racing Length—Start, 12:10.			
Quoc, A. D. Tappan	5 24 50		5 14 50
Gazabo, N. P. Vulte	5 24 44		5 14 34
Eos, ——	5 08 40		4 58 40
Montauk, J. S. Appleby	4 43 44		4 24 44
Sloops—Class R—Under 18ft. Racing Length—Start, 12:10.			
Cricket, H. C. Pryer	5 42 19		5 32 19
Flim Flam, A. D. Prince	..		....
Nike, Guy Forbes	5 43 55		5 33 55
Microbe, J. Mitchell	Disqualified.		
Manhasset Yacht Club Raceabouts—Start, 12:10.			
Lambkin, S. W. Roach	5 35 54		5 25 54
Firefly, Guy Standing	5 50 11		5 40 11
Mist, J. Alker	6 23 32		6 13 32
Arizona, G. A. Corry	5 50 07		5 40 07
New Rochelle One-Design Class—Start, 12:10.			
Caper, P. L. Howard	5 18 40		5 08 40
Knave, W. N. Bavier	5 00 10		4 59 10
Deuce, L. D. Huntington, Jr	5 28 45		5 18 45
Ace, W. A. Bavier, Jr	Withdrew.		
Ardsley Club One-Design Class—Start, 12:10.			
Scoot, Morgan Cowperthwait	5 47 01		5 47 01
Ping-Pong, Denning & Campbell	5 48 23		5 48 23
Midget, Edwin L. Gould	6 00 00		5 50 00
Catboats—Class W.—Under 18ft. Racing Length—Start, 12:15.			
Wif Waf, Howell Sayre	4 00 30		3 45 30
Scud, Donald Abbott	Withdrew.		

The winners were Elmina, Mineola, Neola, Challenge, Snapper, Indian, Howdy, Adelaide, Gazaboo, Cricket, Lambkin, Knave, Scoot and Wif Waf.

Thursday, July 24.

The unsatisfactory racing of Wednesday was fully compensated for by some wonderfully exciting racing on Thursday.

There was a fresh breeze at the start from the S. Later it went to the S.E. and dropped a little.

The large boats sailed twice over a fifteen-mile triangle, the course being six miles east three-quarters north to the middle of the Sound; six miles southwest five-eighths west to a buoy off Prospect Point, Hempstead Bay, and three miles north-northwest to the stakeboat off Larchmont, twice sailed over, making the total distance thirty miles. That for the 43, 36 and 30ft. sloops was four miles east to the middle of the Sound, four miles southwest to the White Spar buoy in Hempstead Harbor, and three miles north-northwest to the home stakeboat, twice sailed over, making the distance twenty-one and a half miles. For the raceabouts and other small boats the distance was eleven miles, twice over a couse, two miles east to the middle of the Sound, two miles southwest, and one and a half miles north-northwest to the home mark. This made the first two legs reaches, and the third leg a run for all boats.

When the seventies started at 11:35 they crossed in the following order: Mineola,, Rainbow and Yankee. On the reach to the first mark all three boats got in a luffing match, but their position remained unchanged. They rounded the second mark very much in the same order as when they started. On the second leg Rainbow did better, and worked up on Mineola's weather. Running home on the first round, Rainbow and Yankee both closed up on Mineola a little. On the second round Mineola did much better than the other two boats. On the second leg of the course a baby jib topsail was set in place of a reaching one on Yankee, and she did much better, passing Rainbow and closing up on Mineola. However, Mineola managed to keep far enough in the lead to win by 1m. 23s.

Muriel and Elmina started at 11:40, the former crossing almost on gunfire. Elmina was forced across on the wrong side of the mark boat, and had to recross, so that when she finally went over she was handicapped nearly two minutes. On the reach to the first mark jib topsails and small main top staysails were carried, and Muriel slowly drew away from her competitor. Some minutes after rounding the first mark Muriel's fore topmast broke just below the topsail halliard block and the jib topsail and fore topsail dropped away to leeward. The wreckage was cleaned up smartly and a small main top staysail was set. The accident allowed Elmina to come up on Muriel a little, but at the second mark the latter was about one minute ahead of Elmina.

After rounding, sheets were eased off and spinnakers were set to port. Remarkably clever work was shown on Muriel for her fore topmast had been carried away and no spinnaker could be set forward. No time was lost before rounding in sending all blocks and spinnaker gear aloft on the main mast, so that sail could be set on the after spar. Elmina finally gybed over and set her ballooner. Both boats had been holding well to the westward, and Muriel held on for a time, when she, also, gybed over and reached down to the mark. Elmina had cut down some of her rival's lead on this leg.

On the first leg the second time around Muriel again set her small main topmast staysail and improved her lead. After tacking at the mark they had a close reach on the port tack to the second mark and on this leg Elmina came up on Muriel fast. At the second mark Muriel was only thirty seconds ahead. The run home to the finish line was a fitting wind up of a sensational race. Both boats gybed to port after rounding. A luffing match followed, but nothing was gained by this move by either boat. Elmina's spinnaker was broken out and then Muriel began luffing again. Then Elmina's spinnaker was doused and both boats gybed over. Muriel was in the weather position, and was gybed over, all standing, and by that move her spinnaker was torn and the pole broken. Muriel's foresail was swung out and she came down before it "wing and wing." Elmina was overhauling Muriel fast, but her spinnaker split and had to be taken in. Muriel crossed the finish line five second ahead of Elmina, but lost the race on time allowance. She gives Elmina seventeen seconds.

What bade fair to be a very close race between Weetamoe and Neola was spoiled by an accident. On the third leg of the first round, when setting up the throat halliards, a white bronze pin in the throat halliard block parted, letting the sail down on the run. There was a man standing on the gaff at the time, and he fell over backward to the deck. It was a long tumble, but the man was not very badly hurt. Neola withdrew and ran into Larchmont Harbor at once to get medical assistance for the injured sailor. Neola had just worked ahead of Weetamoe and was leaving her rapidly when the accident happened.

After an interesting race in the 43ft. class Mira won on time allowance. The summary:

	Finish.	Elapsed.
Sloops—Class H—70 to 80ft. Racing Length—Start, 11:35.		
Mineola, August Belmont	2 29 23	2 54 23
Yankee, J. R. Maxwell	2 30 46	2 55 46
Rainbow, Cornelius Vanderbilt	2 32 18	2 57 18
Schooners—Class D—65 to 75ft. Racing Length—Start, 11:40.		
Muriel, Charles Smithers	2 45 45	3 05 45
Elmina, F. F. Brewster	2 45 50	3 05 50
Sloops—Class I—60 to 70ft. Racing Length—Start, 11:45.		
Neola, George M. Pynchon	Withdrew.	
Weetamoe, H. F. Lippitt	2 49 45	3 04 45
Sloops—Class L—36 to 43ft. Racing Length—Start, 11:50.		
Dorwina, Clifford V. Brokaw	2 34 51	2 44 51
Effort, F. M. Smith	2 35 40	2 45 40
Challenge, Wallace Foote, Jr	2 40 30	2 50 30
Mira, C. L. Poor	2 38 20	2 48 20
Sloops—Class M—30 to 36ft. Racing Length—Start, 11:55.		
Possum, E. S. Ballou	2 59 54	3 04 54
Spasm, E. D. King	2 50 29	2 55 29
Sloops—Class N—25 to 30ft. Racing Length—Start, 11:55.		
Marguerite, O. H. Jennings	3 08 00	3 13 00
Mimosa, Trenor L. Park	3 09 11	3 14 11
Sloops—Class P—21 to 25ft. Racing Length—Start, 12:00.		
Chingachcook, E. A. Stevens	2 10 11	2 10 11
Pixie, E. L. Hopkins	2 03 40	2 03 40
Raceabouts—21ft. Class—Start, 12:00.		
Rogue, A. Bryan Alley	2 04 50	2 04 50

Ace, W. N. Bavier, Jr	2 21 35	2 16 35
Ardsley Yacht Club One-Design Class—Start, 12:05.		
Scoot, Morgan Cowperthwait	2 31 16	2 26 16
Ping-Pong, Denning & Campbell	2 31 04	2 26 04
Sloops—Class Q—18 to 21ft Racing Length—Start, 12:05.		
Gazabo, N. P. Vulte	2 12 00	2 07 00
Neola, J. R. Johnson, Jr	2 06 38	2 01 38

The winners were Mineola, Elmina, Weetamoe, Mira, Spasm, Marguerite, Pixie, Hobo, Adelaide, The Kid, No. 52, Lambkin, Knave, Ping Pong and Neola.

Friday, July 25.

A fair sailing breeze from the S.E. enabled the Regatta Committee to send the boats off on scheduled time. In the early morning it rained and all during the day the sky was overcast and it was rather chilly and unpleasant. The course chosen was a triangle of ten and three-quarter miles, to be sailed twice over by the small sloops, and three times by the schooners and big sloops. It was a beat to the first mark, a reach to the second and a close reach to the home mark off Larchmont.

The three 70-footers were just on the line when the starting signal for that class was given at 11:35. Rainbow was in the weather berth with Mineola next and Yankee to leeward. On the beat to Red Springs buoy Mineola worked into the lead and rounded the mark first. On the reach to the second mark off Parsonage's Point Yankee passed Mineola and Rainbow took second place. They rounded the mark in the order named, where they gybed over, then eased sheets for the reach to the mark off Larchmont. Rainbow and Mineola both closed up on Yankee on this leg. On the first leg of the second round Mineola worked up on Yankee, while Rainbow dropped astern. At the second mark Mineola was only a short distance away from Yankee, but Rainbow was several minutes behind. Yankee and Mineola had a luffing match on the third leg and got some distance off their course, which enabled Rainbow to pull up on them perceptibly. Mineola was first around the second time, and on the windward leg of the third round increased her lead. On the second leg Yankee again pulled up on her a little, but on the last leg Mineola got away from her competitors fast and won by three minutes and a half.

Muriel was on hand with her new fore topmast in place. Elmina led over the line at the start, which she held all over the course, finishing a winner by two minutes and thirty-three seconds. Muriel pushed Elmina hard for first honors, however, and the boats fought it out all over the course.

A special race had been arranged between the schooner Katrina and the cutter Isolde. Just before the latter boat

ELMINA.
Owned by F. F. Brewster. Photo by James Burton, New York.

left her mooring to go to the starting line it was found that the steward who had been ill for some time needed medical assistance, so there was considerable delay in getting him ashore. Isolde was handicapped over seven minutes, and even then cut down Katrina's lead on the windward work, but on the two reaching legs on each round the schooner with her big main topmast staysail would get away from the cutter in the light breeze.

Neola and Weetamoe had another good race. Weetamoe led over the starting line by a few seconds, but Neola with good headway on drove through Weetamoe's lee. She did not hold her lead very long, and at the first mark Weetamoe was some little distance ahead. This lead she improved on the two reaching legs, and at the end of the first round was over one minute ahead. Weetamoe continued to leave her competitor and won by 7m. 49s.

The 43-footers sailed twice over the same triangle that the big boats covered three times. Mira did not race, as her owner was away. This left Dorwina, Effort and Challenge to fight the race out. Dorwina was first to start, and after a close race won by the narrow margin of 12s.

In the 25ft. class Mimosa turned tables on Marguerite, beating her with the greatest ease.

Mavis won in the raceabout class, beating Hobo 2m. 32s. Four boats started.

Lambkin again won in the Manhasset raceabout class. She beat Mist 2m. 46s. In the New Rochelle raceabout class Knave beat Ace 1m. 42s.

Four boats started in the American Y. C. one-design class, and after a close race Rascal beat Jolly Tar 36s.

The summary:

Sloops—Class H—70 to 80ft. Racing Length—Start, 11:35.

	Finish.	Elapsed.
Mineola, August Belmont	3 50 09	4 15 09
Yankee, J. R. Maxwell	3 53 40	4 18 40
Rainbow, Cornelius Vanderbilt	4 00 46	4 25 46
Schooners—Class D—65 to 75ft. Racing Length—Start, 11:40.		
Elmina, F. F. Brewster	4 52 37	4 32 37
Muriel, Charles Smithers	4 15 10	4 35 10
Mixed Class—Start, 11:40.		
Katrina (schooner), James B. Ford	4 35 15	4 55 15
Isolde (cutter), F. M. Hoyt	4 52 29	5 12 29
Sloops—Class I—60 to 70ft. Racing Length—Start, 11:45.		
Weetamoe, H. F. Lippitt	4 20 24	4 35 24
Neola, George M. Pynchon	4 28 13	4 43 13
Sloops—Class L—36 to 40ft. Racing Length—Start, 11:50.		
Dorwina, Clifford V. Brokaw	3 09 45	3 19 45
Effort, F. M. Smith	3 10 00	3 20 00
Challenge, Wallace T. Foote, Jr.	3 10 47	3 20 47
Sloops—Class N—25 to 30ft. Racing Length—Start, 11:55.		
Mimosa, Trenor L. Park	3 39 52	3 44 52
Marguerite, O. H. Jennings	3 50 53	3 55 53

Ace, W. N. Bavier, Jr.	2 49 28	2 44 28
American Yacht Club One-Design Class—Start, 12:00.		
Jolly Tar, S. Howland	2 18 50	2 18 50
Rascal, S. C. Hopkins	2 18 14	2 18 14
Howdy, S. Wainwright	2 18 55	2 18 55
Cricket, Howard Willetts	2 25 25	2 25 25
Sloops—Class Q—18 to 21ft. Racing Length—Start, 12:05.		
Gazabo, N. P. Vulte	2 42 59	2 37 59
Neola, J. R. Johnson, Jr.	2 46 40	2 41 40
Cricket, H. C. Pryer	2 45 30	2 40 30

The winners were Mineola, Elmina, Katrina, Weetamoe, Dorwina, Mimosa, Adelaide, Mavis, Lambkin, Knave, Rascal and Gazabo.

Saturday, July 26.

Saturday, the last day of race week, proved to be one filled with surprises and popular victories. The most prominent of these was Muriel's success. Mr. Charles Smithers, owner of Muriel, has for two seasons sailed his own boat against Elmina, while the latter has been handled by one of the cleverest professionals in America, Capt. Dennis. Heretofore Muriel has not been successful, but on Saturday it seemed as if Mr. Smithers had solved the problem and knew just what to do, for he won the race handily. When Muriel finished a winner, all the steam yachts in the vicinity blew prolonged blasts from their whistles, and cheers were given from the boats in the fleet. So enthusiastic was the greeting it reminded one of the finish of an America's Cup race.

When the preparatory signal was given at 11:30 the wind was E.N.E., and blowing a good sailing breeze, and it held true throughout the race. The course for all boats over 30ft. racing length, was E.N.E. 3 miles, then S. 3⅞ miles, then N.W. 3⅞ miles. The schooners and 60 and 70 footers sailed three times around this triangle, making 32¼ miles, while the others went around twice, making 21½ miles.

When the 70-footers were sent away at 11:35 they all came down to the line on the starboard tack. Rainbow worked around the mark boat, with Mineola under her lee, and as they crossed Yankee was swung on Rainbow's weather. All three boats stood in along the shore as long as possible, and then Mineola and Yankee made a long tack out into the Sound, while Rainbow made short hitches along the beach. At the first mark Rainbow was nearly a minute ahead of Mineola. On the reach to the next mark Rainbow increased her lead. All gybed at this mark, and on the next leg Mineola picked up on Rainbow a little. On the first leg of the second round Yankee worked the shore and caught Mineola. Rainbow was still ahead at the mark. At the end of the second round Rainbow was nearly two minutes ahead of Yankee. Mineola did not do well on windward work on the third round, but on the two reaching legs she picked Yankee up considerably and they had a hot fight up to the finish for second place.

When the schooners started at 11:40 Elmina was a shade in the lead. Both were on the starboard tack, but Muriel took a port tack immediately after crossing, in order to get clear of Elmina. When Muriel took the starboard tack again she crossed Elmina's bows, and from that time on Elmina never troubled her. At the weather mark Muriel was nearly two minutes in the lead. On the reaching legs Elmina came up a little, but was never dangerous. Muriel continued to make slight gains up to the time of the finish, when she was 2m. 36s. ahead. Taking off the 17s. that she allows Elmina, she won by 2m. 19s. corrected time.

The cutter Isolde and the schooner Katrina again went in a special class. Isolde beat her on every point of sailing, and after the first round the race was devoid of interest. The showing made by Isolde with the new bronze sixties was really remarkable. Isolde, with her very small rig, nearly held the new boats with their large rigs on almost every point of sailing.

The sixties, Weetamoe and Neola, again sailed another close race. Weetamoe had rather the better of the start, and after numerous short tacks under the shore, rounded the weather mark a minute ahead. Weetamoe increased her lead slightly as the race progressed, and won by a good margin.

The race in the 43ft. class could not have been closer without having it a tie, as Mira won by 1s. corrected time. Effort was sailed by Mr. Addison Hanan and Mira by Mr. A. H. W. Johnson. Effort finished first, but had to allow Mira 4m. 33s. Challenge finished third and Dorwina last.

In the 30ft. class Alerion finished ahead. Both Alerion and Mimosa protested each other for a foul that occurred on one of the marks on the second round.

In the raceabout class Sis won; Hobo finished in second place, and Mr. Bucham, who sailed the boat, protested Whistlewing and Pompillia for trying to force him when close hauled on the starboard tack. If the protest is upheld the race may be resailed.

The summary follows:

Sloops—Class H—70 to 80ft. Racing Length—Start, 11:35.

	Finish.	Elapsed.
Rainbow, Cornelius Vanderbilt	3 32 08	3 57 08
Mineola, August Belmont	3 34 12	3 59 12
Yankee, J. Rogers Maxwell	3 33 50	3 58 50
Schooners—Class D—65 to 75ft. Racing Length—Start, 11:40.		
Elmina, F. F. Brewster	3 47 35	4 07 35
Muriel, Charles Smithers	3 44 59	4 04 59
Special Race—Mixed Class—Start, 11:43.		
Katrina (schooner), J. B. Ford	4 38 25	4 55 25
Isolde (cutter), F. M. Hoyt	4 12 44	4 29 44
Sloops—Class I—60 to 70ft. racing length—Start, 11:45.		
Neola, George M. Pynchon	4 08 31	4 23 31
Weetamoe, Henry F. Lippitt	4 06 21	4 21 21
Sloops—Class L—36 to 43ft. Racing Length—Start, 11:50.		
Dorwina, Clifford V. Brokaw	3 16 45	3 26 45
Effort, F. M. Smith	3 11 25	3 21 25
Mira, C. L. Poor	3 15 45	3 25 45
Challenge, W. T. Foote, Jr	3 16 01	3 26 01

Mist, J. H. Alker	2 58 28	2 48 28
Arizona, G. A. Corry	2 54 39	2 44 39

The winners were Muriel, Rainbow, Isolde, Weetamoe, Mira, Leda, Tern, Chingachgook, Sis, Neola, Adelaide, Cricket, Caper and Lambkin.

Newport Special Thirties.

NEWPORT, R. I.

Monday, July 21.

THE 30-footers sailed a race in a very light southerly breeze on Monday. The contest was most unsatisfactory, for it was hardly more than a drift all over the course. The course chosen was from Brenton's Cove to Coddington's Cove, five miles to leeward and return. Carolina won by 9m. The summary, start 3:40:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 53 37	2 13 37
Barbara, Winthrop Rutherford	6 02 26	2 22 26
Wa Wa, Reginald Brooks	6 06 03	2 26 03
Esperanza, H. O. Havemeyer, Jr.	6 12 04	2 32 04
Asahi, Lloyd Warren and W. Starr Miller	Withdrew.	

Tuesday, July 22.

Carolina won the sweepstake race sailed on Tuesday over a triangular course. The breeze was light from the south. Barbara led to the second mark, at which time Carolina worked ahead and finished a winner. The summary, start 3:27:

	Finish.	Elapsed.
Carolina, Pembroke Jones	4 43 02	1 16 02
Wa Wa, Reginald Brooks	4 44 03	1 17 03
Asahi, Lloyd Warren and W. Starr Miller	4 44 21	1 17 21
Esperanza, Harry O. Havemeyer	4 45 00	1 18 00
Barbara, Winthrop Rutherford	4 45 58	1 18 58
Breeze, William G. Roelker, Jr.	4 46 16	1 19 16

Wednesday, July 23.

In a fresh southwest wind Carolina took another race on Wednesday. The boats sailed over a triangular course.

Carolina got he best of the start, and was never headed. The summary, start 4:06:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 26 09	1 20 09
Esperanza, H. O. Havemeyer, Jr.	5 28 03	1 22 03
Asahi, Lloyd Warren and W. Starr Miller	5 28 49	1 22 49
Barbara, Winthrop Rutherfurd	5 31 11	1 24 11
Wa Wa, Reginald Brooks	5 33 09	1 27 09
Breeze, G. Roelker, Jr.	5 40 27	1 34 27

Friday, July 25.

Carolina seems to be the best light-weather boat among the 30-footers. The race sailed on Friday was the fourth she has won this week in light airs. The course chosen was from Brenton's Cove to Beaver Tail and Seal Rock and return. Asahi got the best of the start, but was passed early in the race by Carolina, which boat won by 11m. The summary, start 3:52:

	Finish.	Elapsed.
Carolina, Pembroke Jones	6 03 39	2 11 39
Esperanza, H. O. Havemeyer, Jr.	6 14 37	2 22 37
Barbara, Winthrop Rutherfurd	6 18 48	2 26 48
Asahi, Lloyd Warren and W. Starr Miller	6 21 09	2 29 09
Veda, Lanier Winslow	6 22 21	2 30 21

Hull-Massachusetts Y. C.

Midsummer Series.

HULL, MASS.

Never in the history of yacht racing in Massachusetts Bay has a more successful series of races been held than the midsummer series of Y. R. A. open races given by the Hull-Massachusetts Y. C. on Thursday, Friday and Saturday, July 24, 25 and 26. Although the cash prizes were liberal, the most inviting feature to the racing men was the set of cups offered by Mr. Thomas W. Lawson for the Y. R. A. restricted 25-footers, 21-footers and 18ft. knockabouts. These were beautiful trophies, two in each class, and the boys all worked hard to get them. It may have been that the natural desire on the part of the yachtsmen to "get together" would have brought about a good attendance anyway, but it is safe to say that the prospect of winning these cups kept some of them at it stronger than they otherwise might have.

Throughout the series the most perfect conditions of weather were obtained. The breeze that prevailed throughout was from E. by S. to E.S.E. On the first day it was moderate. It was a little stronger on the second day, a good whole-sail breeze for all classes, and on the last day it was for light-weather racing. Under these conditions it was inevitable that no one boat would capture all the honors, and in the dividing up of leading positions throughout the series, a greater interest was maintained at all times. When first and second places go shifting around among the boats it stimulates an interest among the individuals and helps to make the classes more strong.

A peculiar combination of figures was found in the number of entries. On each day the total number of entries was forty-four. On two days the number of restricted boats of the Y. R. A. classes was thirty-four, and, on one day, thirty-three. On each day there were eleven boats in the restricted 21ft. class and on two of the days there were four boats in the knockabout class. There may or may not be luck in the 4-11-44 combination, but there was certainly luck throughout the series. At the close all hands voted that it was a most successful meet.

The Lawson cups were awarded for the best averages on the three days' races, figured by the percentage table of the Y. R. A. Only one award was made. That was in the 25ft. class, where Calypso, last year's champion, beat out the newer keel boats. In the 21ft. class and in the 18ft. knockabouts it was impossible to award the cups, as there were several protests to be acted upon, which will have to be decided later. With eleven boats starting in the 21-footers and seventeen in the 18-footers, it was inevitable that they would get together and rub sides at the start, and as they are all very closely matched, they continued this performance at different points on the courses.

Thursday, July 24.

On the first day of the series a moderate breeze prevailed, E.S.E. The boats sailed a triangular course, giving a beat, a run and a reach. The 25-footers made a good start, going over the line in two divisions, one on the port tack and the other on the starboard. On the first leg Seboomook pulled out a lead, but on the run Sally VI. caught and passed her. On the reach, on the first time around the triangle, Calypso came up and took second place, but on the beat, Seboomook gained it again, Sally VI. holding the lead all the time. Seboomook took the lead again on the run, and then came a hot scrap to the finish. Sally VI. was given a rap full and she pulled through Seboomook's lee. Then both were driven. Sally managed to keep just ahead of Seboomook, and when the flag mark at the line was reached, she shot into the wind and across. Seboomook shot with her, just one second behind. There was a hot start in the 21ft. class, all coming to the line in a bunch. Opitsah IV. caused consternation by coming along on the starboard tack and sweeping the line. Chloris pulled out a lead to the first mark and held it until she was to have come to the finish line. There was a misunderstanding, in which the leading boats turned the wrong buoy, and Micmac came up and finished first. Up to that time it had all been Chloris' race. Spinster won in the knockabouts and Lurline II. in the dory class, after a hot race. The summary:

Class D—25-Footers.

	Ac. time.
Sally VI, L. F. Percival	1 38 50
Seboomook, B. A. Smith	1 38 51
Chewink II, F. G. Macomber, Jr.	1 39 10
Calypso, A. W. Chesterton	1 42 20
Early Dawn, J. F. Doherty	1 44 06
L'Aiglon, E. W. Hodgson	1 44 35
Little Peter, G. B. Doane	Withdrew

Class S—21-Footers.

Micmac, Richard Hutchinson	1 53 40
Mildred II, S. P. Moses	1 54 05
Rooster II, Adams Bros.	1 55 00
Little Haste, T. K. Lothrop, Jr.	1 55 01
Perhaps II, J. E. Robinson	1 55 30
Pilot, Reginald Boardman	1 58 05
Opitsah IV, S. H. Foster	1 58 20
Thecla, G. W. Chapin	1 58 45
Tabasco III, H. H. Wiggin	2 00 03

Knockabouts.

Dabster, George Keith	1 17 35
Chloris, Cheney and Lanning	2 00 40
Porcupine, C. H. W. Foster	2 01 56
Tunipoo, C. A. Cooley	2 07 45

Class K—Raceabouts

Spinster III, L. M. Clark	1 16 10
Bonito, John Fallon	1 19 45
Jacobin, T. W. King	1 18 30

Class I—18-Foot Knockabouts.

Biza, Alfred Douglas	1 13 02
Kittiwake, H. M. Jones	1 15 52
Malillian, B. S. Permar	1 16 10
Dominio, C. C. Clapp	1 16 20
Question, J. H. Hunt	1 16 30
Miladi II, F. R. Adams	1 16 45
Savage, J. A. Lawrence	1 17 59
Snapper, Loring Bros.	1 18 50
Gertrude, ———	1 19 22
Ayaya, W. P. Keyes	1 20 20
Aspinquid, C. M. Foster	1 20 20
Nethla, C. W. Cole	1 20 45
Tokalon, R. J. Randolph, Jr.	1 21 22
Stroller, Goodspeed Bros.	1 26 58
Patrice, W. F. Scott	1 27 58
Alcedo, J. Linder	Withdrew

Dorchester Y. C. Dories.

Lurline II, J. P. Meade	1 34 42
Boomerang, H. Cleary	1 34 49
Hobo, T. K. King	1 38 10
San Toy, J. A. Hendrie	1 39 05
Amorita, H. Cutter	1 49 50

The judges were Foster Hooper, C. E. Lauriat, Jr., and S. N. Small. There were many protests in the 21-footers, mostly on account of the misunderstanding of the course. The protests were as follows: Micmac against Chloris, Pilot, Opitsah IV., Little Haste and Porcupine; Perhaps II. against Mildred II. and Little Haste; Opitsah IV. against Micmac and Perhaps II.

Friday, July 25.

In the second race the wind came from the same direction, but was a trifle stronger. In the 25-footers Chewink II. was over the line first at the start, but in a strengthening breeze Calypso went out to the front and remained there all through the race. In the 21-footers, Mildred II. led to the first mark, but Chloris pulled out a lead on the run which she held until they were on the same leg the second time around. Then Chloris forgot to set a spinnaker and ballooner until after Little Haste had got by her, and this cost her the race. In the 18ft. knockabouts Savage went into first place soon after the start, and she remained there to the finish. Darthea won in the raceabouts; Dabster took an easy win in the knockabouts, and there was the usual hot finish in the dory class, the race going to Lurline II. he summary:

Class D—25-Footers.

	Ac time.
Calypso, A. W. Chesterton	1 57 45
Seeboomook, B. A. Smith	1 58 56
Sally VI, L. F. Percival	2 00 16
L'Aiglon, E. W. Hodgson	2 04 53
Chewink II, F. G. Macomber, Jr.	2 05 25
Early Dawn, J. E. Doherty	2 10 10

Class S—21-Footers.

Little Haste, T. K. Lothrop, Jr.	2 04 09
Chloris, Cheney and Lanning	2 04 45
Mildred II, S. P. Moses	2 05 40
Opitsah IV, S. H. Foster	2 07 50
Pilot, Reginald Boardman	2 10 51
Micmac, Richard Hutchinson	2 11 55
Tabasco III, H. H. Wiggin	2 13 40
Perhaps II, J. E. Robinson	2 16 46
Katherine, H. B. Sears	2 19 09
Thecla, C. W. Chapin	2 22 10
Porcupine, C. H. W. Foster	Withdrew

Class K—Raceabouts.

Amorita, H. Cutter	1 25 25
Hobo, T. W. King	1 25 31

The judges were Foster Hooper and C. E. Lauriat, Jr. Micmac protested Opitsah IV.

Saturday, July 26.

For the last day of the series the breeze was lightest of all, E. by S. All classes were given the short course, the points of sailing being the same as on the previous days. In the 25-footers it was all Chewink II. Sally VI. was pushed over the line too soon at the start, a feature which did her no good. Chewink II., however, sailed her race of the year, in comparison with the other boats, and came home an easy winner, after leading all over the course. In the 21-footers, Rooster II. took the windward position at the start and pulled out a lead to the first mark. After this Little Haste went into the lead and she sailed a great race, making faster than any of the 25-footers, with the exception of the leader. In the 18-footers there was a general mix up at the start. Caprice came down the line on the starboard tack and mowed Malillian. Malillian went into the lead after the start and held it until the short beat from the last mark to the finish, when Savage came up and won out by seven seconds. Tunipoo won a good race in the raceabouts; Jacobin took an easy win in the knockabouts, and Hobo and Vera sailed a dead heat in the dory class. The summary:

Class D—25-Footers.

	Ac. time.
Chewink II, F. G. Macomber, Jr.	1 51 25
Calypso, A. W. Chesterton	1 56 30
Sally VI, L. F. Percival	1 57 14
Seboomook, B. A. Smith	1 57 16

L'Aiglon, E. W. Hodgson	1 58 30
Early Dawn, J. E. Doherty	2 01 51
Little Peter, G. B. Doane	2 07 02

Class S—21-Footers.

Little Haste, T. K. Lothrop	1 55 00
Rooster II, Adams Bros.	1 57 50
Chloris, Cheney and Lanning	2 02 20
Opitsah IV, S. H. Foster	2 03 25
Tabasco III, H. H. Wiggin	2 03 47
Pilot, Reginald Boardman	2 04 39
Mildred II, S. P. Moses	2 06 20
Micmac, Richard Hutchinson	2 07 01
Thecla, C. W. Chapin	2 10 45
Perhaps II, J. E. Robinson	2 13 30
Katherine, H. C. Sears	2 15 28

Class K—Raceabouts.

The judges were Foster Hooper, Charles E. Lauriat, Jr., and John T. Humphrey. Caprice protested Malillian and Savage and Malillian entered a counter protest against Caprice.

John B. Killeen.

New York Y. C. Annual Cruise.

Rendezvous, New London.

The Cruise.—Aug. 4, meeting of captains on the flagship at 5 P. M.; Aug. 5, to Newport; Aug. 6, the Astor cups, off Newport; Aug. 7, to Vineyard Haven; Aug. 8, to Provincetown; Aug. 9, to Marblehead. (From the Commodore's General Orders, No. 2.)

Squadron Runs.—There will be the customary runs from port to port in cruising trim. A yacht alone in her class will sail in the class next above (R. R. IX., Sec. 5). Yachts alone in their respective classes, and with the classes next above not filled, will be bunched in a mixed class, difference in rig being allowed for as in R. R. IV. On application to the committee, special classes will be arranged for yachts in either racing or cruising trim, and for "auxiliaries." Final classification lists will be issued at the rendezvous.

Cruising Trim.—"Anchors at the bow and at least one cable bent; cruising complement of boats carried (launches optional); cruising deck, cabin and galley fittings and fixtures in place; topsails extending above the truck or beyond the end of the gaff barred. Water can be taken into the tanks up to 8 A. M."

Club Prizes.—In each class there will be a prize for first, if two or more start, and a prize for second, if four or more start.

Special Cups.—The Commodore's cups will be sailed for on Run No. 3. The Navy Challenge cups will be awarded, respectively, to the schooner and the single-masted vessel or yawl winning the greatest number of runs, schooners sailing in one class and the other rigs in another. Terms for the cups offered by the flag officers and captains, Royal Phelps Carroll and Cornelius Vanderbilt, and for those which may be offered by others, will be announced at New London.

Owl and Gamecock Colors will be rowed for at such port as the Commodore shall decide. Entries.—"Gamecock," $10; "Owl," $5. Dinghies, $2; launches, $10. The club will add $2 an oar and $5 for launches.

The Astor Cups.—Newport, Aug. 6. A $1,000 cup for schooners and a $500 cup for sloops, cutters and yawls. The start will be off Brenton Reef Light Vessel, at 10:30 A. M.

Club Steamboat.—For the Astor cups the Gay Head (New Bedford and Vineyard Haven Line) has been chartered for members and their guests. She will leave the foot of Old Colony Dock, Newport, at 10 A. M., and will touch there on her return. Tickets, at $2 each, including lunch, can be obtained from the committee. Members of the Eastern Y. C. can obtain tickets for themselves, and also extra tickets, on the same terms.

Sailing Directions.

Courses.—The start and finish lines will be between a white flag on the committee boat and the points mentioned below:

No. 1. New London to Newport. From a stake boat one-quarter mile east of Sarah's Ledge Buoy to Brenton Reef Light Vessel, the committee boat being to the westward of the light vessel. Forty miles.

No. 2. Newport to Vineyard Haven. From Brenton Reef Light Vessel to West Chop Buoy (Red Nun, No. 2), leaving Vineyard Sound Light Vessel to port and the Lucas Shoal and Middle Ground Buoys to starboard. Thirty-seven miles.

No. 3. Vineyard Haven to Provincetown. From a stake boat one-quarter mile north of East Chop Buoy to a stake boat one mile west by south three-quarters south of Wood End Light, Wood End and Long Point Lights being in range, and with the committee boat to the westward of the stake boat.

Course No. 1. Classes A, B, C, G, H and I, will leave Great Round Shoal Light Vessel and the Whistle Buoy nine and a half miles east of it, to port. Ninety-five miles.

Course No. 2. Classes D, F, J, K, L and M, will leave Handkerchief Light Vessel to port, Shovelfull Light Ves-

sel to starboard and Pollock Rip Light Vessel to port. Seventy-nine miles.

No. 4. Provincetown to Marblehead. From a stake boat placed as at the finish of No. 3, to a stake boat one cable's length west of Half Way Rock. Thirty-eight and one-half miles.

The marking point on light vessels will be the foremast, and on stake boats the mast. The stake boats will display the club signal by day, and after dark they will carry two red lights hung vertically.

When at the finish, the committee boat will hoist a red ball by day, and at night will show a white light, and also three red lights hung vertically, and will burn the club signal at ten-minute intervals. In fog—except at finish of Run No. 1—the committee boat will "at intervals of not more than one minute, ring the bell rapidly, for about five seconds," and at intervals of two minutes will sound three short whistle blasts.

Starting Signals.—Preparatory: A gun will be fired, the club signal lowered, and the blue peter set.

Ten minutes later a gun will be fired, the blue peter lowered, and a red ball hoisted for the start of classes J, K, L and M.

Five minutes later a gun will be fired and a second red ball hoisted for the start of classes G, H and I.

Five minutes later a gun will be fired and a third red ball hoisted for the start of classes D and F.

Five minutes later a gun will be fired and a fourth red ball hoisted for the start of classes A, B and C.

Five minutes later the balls will drop.

Handicap Time.—Each division will be allowed two minutes for crossing the line.

Five minutes after the balls have dropped a gun will be fired and a red ball hoisted for the start of "auxiliaries."

Ten minutes later a gun and the dropping of the ball will give their handicap time.

Should a signal gun miss fire, a prolonged blast of the whistle will be given.

Entries.—Crossing the line with private signal and racing number displayed, as directed in R. R. IX., Sec. 3, will be regarded as an entry.

S. Nicholson Kane,
Newbury D. Lawton,
Edward H. Wales,
Regatta Committee.

Tarratine Y. C.

ISLESBORO, ME.

The ladies' race for the 21-footers which had been postponed since Monday was sailed Thursday afternoon at 2:55 P. M. The prize was a cup offered by Mrs. Steele. The second race of the 25-footers' series was also sailed on the same afternoon, the start being made at 2:50. Flirt and Chewink were the only two entries in the 25ft. class, whereas Pirate, Opitsah, Loafer and Peterkin were entered in the 21ft. class.

The wind was light from the S.E. and gave little indication of holding for the afternoon. Signals for the large triangle reversed were sent up on the Vancluse, it being hoped that the second leg would be to windward; the wind shifted to the east during the race, however, and made the second leg a long fetch and a short one. The first mark had drifted considerably to the south'ard, so that the 25's had some difficulty in finding it. This caused Chewink a good deal of inconvenience, as she had her spinnaker set to starboard, whereas Flirt held hers to port and was not forced to gybe as was Chewink. Flirt crossed the line before the gun and had to swing back and recross it. Chewink was far behind, and Flirt got off with a big lead. Chewink headed too much to the north'ard and upon seeing the mark was forced to gybe and set her spinnaker to port. Flirt gained greatly by this and rounded the first mark at 3:06:15, followed by Chewink at 3:07:15, a minute behind. Both hauled close on the port tack and headed very nearly for the mark, Flirt, if anything, making the best of the conditions and running into a slightly heavier spot of wind. Chewink looked out of the race, as Flirt was weathering her and footing faster. Both had to make short hitches before rounding the mark, but Flirt rather overstood it, and lost a little time. The wind began to lighten considerably on the reach home and Chewink gained a lot on Flirt. She got her reaching jib set quicker and came along with the tail end of the breeze. It looked as if she might even pass Flirt before they reached the line, but Flirt managed to skin in at 3:47:30, 30s. ahead of Chewink. The summary:

	Start.	Finish.	Elapsed.
Flirt, F. L. Bond	2 50	3 47 30	0 57 30
Chewink, W. E. Scull	2 50	3 48 00	0 58 00

The starting gun for the raceabouts was fired at 2:55, Opitsah crossing the line with it and well in the lead. Loafer and Pirate went over next without clear water between them, Loafer being in the lead. Peterkin followed three or four lengths astern. Opitsah increased her lead astonishingly on the run and left the other three boats far behind. Pirate, Loafer and Peterkin had an exciting time of it, all three being lapped. Pirate managed to pass Loafer, but Peterkin was unable to. Opitsah rounded the first mark at 3:08:25, followed by Pirate at 2:10:40, Loafer at 3:11:00 and Peterkin at 3:11:03.

All hauled close on the port tack, and Pirate began to gain on Opitsah. Peterkin lost, if anything, on Loafer. It was not an exciting beat, as the boats did not change their positions, and there was no tacking. All four had to hitch for the mark, as the 25's had done, Opitsah rounding at 3:30:30.

The wind dropped on the reach in and all the boats gained on Opitsah. Peterkin and Loafer had it close, but Peterkin was unable to get the lead. Pirate sailed second in little danger of winning or being overtaken. Opitsah crossed at 3:57:40, winning easily. Peterkin and Loafer had an exciting luffing match, and it looked as if Peterkin would establish a lead. She was unable to do it, however, and finished with her bow well lapping Loafer. The summary:

	Start.	Finish.
Opitsah, Miss Howe	2 55	3 57 40
Pirate, Miss Metcalf		4 01 00
Loafer, Miss Shattuck		4 03 15
Peterkin, Miss Kissel		4 03.17

Saturday, July 26.

The second race of the series for Dr. Derby's cup was sailed on Saturday, July 26, at 2:45 P. M. The wind started blowing from the south'ard early in the morning, but did not carry much strength until late in the afternoon, when it came in briskly. The course was three nautical miles to windward and return, to be sailed over twice, making an entire stretch of twelve knots.

The club steamer Vancluse took up her position on the line at 2:30 P. M. and fired the preliminary gun at 2:40. Idol and Daydream had left their moorings late and were so far away from the line that they had no chance of getting there in time, thus reducing the starters to Persimmon, Opitsah, Raider, Peterkin and Pirate. Opitsah crossed the line in the middle with the gun and got clear of the fleet; Raider went over on the windward end on top of Persimmon, Peterkin and Pirate putting all these boats in a bad pocket. Persimmon took to the condition better than any of the other boats and gradually drew from under Raider's lee, until she was in a position to tack and cross her bows. Opitsah was to windward of Raider on the starboard tack when Persimmon crossed under her stern so she flung about and put Persimmon in a pocket. Persimmon forereached her and soon tacked about to starboard in a commanding lead.

Pirate flung over to the port tack soon after the start and headed way out into the bay in hopes of getting the benefit of the strong ebb tide. She appeared to be considerably slowed up by the heavy chop. Peterkin could not get out of Raider's pocket, so finally had to split tacks and stand out into the bay also. Raider tacked after her and met Opitsah coming in under the islands.

She swung about on Opitsah's weather quarter and followed her well in under the land. She was unable to gain, however, and soon split tacks and went off after Peterkin. Opitsah kept further in under the land until she could fetch the mark, when she flung about on the port tack, following Peterkin. Raider hitched under their lee and headed after them. Pirate came in from the bay where she had been doing splendid work, and tacked around the mark close behind Persimmon, who rounded at 3:26:00. Pirate followed at 3:27:51, Peterkin at 3:28:11, Opitsah at 3:28:40 and Raider at 3:29:05.

Peterkin soon passed Pirate on the run in and Raider gained a great deal on Opitsah, who was the only boat that set her spinnaker to port. Pirate also lost to Raider, who, just before the mark, passed both Pirate and Opitsah. Persimmon rounded in a comfortable lead at 3:56:50. Peterkin came next at 3:59:00, followed by Raider at 4:00:15, Opitsah at 4:00:18 and Pirate at 4:00:21, in a close bunch.

Raider stood in under the islands, closely followed by Pirate, whereas Persimmon, Peterkin and Opitsah stood well out into the bay. Raider easily beat Pirate, who in turn crossed Opitsah's bows. Persimmon increased her lead in a commanding weather berth and Peterkin lost to all the last three boats. The wind freshened considerably and the boats all began to pick along faster. Next to Persimmon, Raider did the best work. Persimmon rounded the windward mark at 4:32:10, followed by Peterkin at 4:36:40. Raider came next at 4:38:30, Pirate at 4:39:10 and Opitsah at 4:39:50.

For the last three boats the run home was most exciting. Both Pirate and Opitsah began to gain rapidly on Raider, who luffed out to windward of both of them. Pirate bore down under Raider's lee and was promptly blanketed by Opitsah. As Opitsah passed Pirate she shot under Raider's mainsail and was in turn blanketed herself. These three boats raced along together for a mile and a half, now one ahead now another, all on practically even terms. Just before the finish line was reached Pirate bore off with Opitsah on top of her, whereas Raider headed for the Vancluse, the windward end of the line. Opitsah shot ahead with Pirate, but bore off too much and fouled her. She crossed the line at 5:07:34, beating Pirate by 1s. and Raider by 5s. Persimmon won at 4:50:30, beating Peterkin, second boat, by 5m. and 40s. The summary:

	Start.	Finish.	Elapsed.
Persimmon, E. Dodge	2 45	4 59 30	2 14 30
Peterkin, Y. E. Kissel		5 05 10	2 20 10
Opitsah, E. A. Daniels		5 07 34	2 22 34
Pirate, P. Metcalf		5 07 35	2 22 35
Raider, R. Derby		5 07 40	2 22 40

Pirate protested Opitsah after the race, but no decision has been yet given. The score for the cup now stands:

	1st Race.	2d Race.
Persimmon	11	10
Peterkin	3	7
Opitsah	5	4
Daydream	8	0
Pirate	2	2
Raider	1	1

Richard Derby.

English Letter.

During the past three weeks the most notable feature in our racing has been the slight but marked improvement in the form shown by the 52-footer Camellia. When she left the Thames she went to her builder's yard and some alterations, the nature of which is not known, were made. Her next appearance was on the Clyde, where she has proved quite a match for Lucida. The Fife boat is still a wee bit better on the wind—particularly in working short tacks—but it is very little, and Camellia is the faster with sheets checked. The racing between the two is now perfect, and Mr. Fife's triumphal march has at last been checked. In the 36ft. class on the Clyde, too, Barrabel is apparently a faster craft than either of the two Fife boats, except in very moderate and light weather. She was designed by Mylne. The measurements of the three boats is very much the same, and the success of Barrabel ought to bring a considerable amount of business to Mr. Mylne. This will mean better racing, for the sport cannot flourish for long when one designer has it all so much his own way as Mr. Fife has for the last year or so. I am very much mistaken, too, if it does not lead to the speedy development of our rule, which so far has not been rapid.

Mr. Fife's greatest achievement this year—perhaps his very greatest—is undoubtedly Mr. Cecil Quentin's schooner Cicely, which, as you know by now, has turned out a great success, and is more than a match for the Emperor's new vessel. It is stated in our papers that the German yachtsmen are rather disgusted at the ill success of Mr. Cary Smith's creation, but it is not very easy to see why. These huge vessels are not suitable for ordinary regatta racing, and the draft of Meteor III., while eminently suitable for an ocean-going cruiser, is all too light for a racing craft. Anyhow, it is pretty safe to think that Meteor is quite as good as any schooner that has made Cary Smith famous.

The King's illness, of course, necessitated the postponement of all the Coronation festivities, including the naval review at Spithead. An enormous number of yachts had arrived in the Solent and Southampton to witness it, but as the fleet remained for a week, the loss of the actual review was of less importance. Next week, it is stated, the King will join his new yacht, Victoria and Albert. Her moorings are to be shifted out of Cowes Roads into Osborne Bay. No doubt a certain number of private yachts will also find it convenient to take up moorings there too.

An unfortunate accident occured the week before the proposed review, in which the owner of a little ten-ton yacht was drowned. She belonged to Commander Griffen, R. N., and he was coming round from Dartmouth to see the review. At Portland there was not enough wind to help the yacht clear of the Race, and a motor dinghy was sent ahead to tow, with Commander Griffen and a boy on board. She could not keep the yacht clear of the Race, and both were drawn into it. The dinghy capsized and both the boy and the owner were swept away from it. However, they got hold of her again, but Commander Griffen was swept away a second time and drowned. There is always a race at Portland, and the only way to avoid it is to keep well out to sea, or hug the rocks. The flood tide sets out of West Bay and will soon sweep a vessel into the Race, unless her bowsprit is kept pointing close up to the rocks.

Kariad has been unfortunate on the Clyde, for up to the time of writing, Tutty (the ex-65-footer) and Bona have been too much for her with their time allowance. Tutty is sailing in exceptionally good form this year.

No doubt you have heard of the sinking of the German torpedo boat by the British tramp steamer, Firsby. The torpedo boat was bringing a party of Englishmen from Heligoland to Kiel, and Professor Busley was also on board. When the collision took place the German commander ordered that the Englishmen should be saved first. He himself and seven of the crew were drowned. Professor Busley is one of the most popular figures in German yachting, and has done enormous good in promoting good fellowship between the yachtsmen of the two countries.

The entries for the Heligoland-Dover match, for the handsome prize presented by Mr. Carl von Busch are Meteor, Navahoe, Lasca, Clara, Comet (the old Cup challenger Thistle), Wanderer and Lussane. If all these start, it will be returning good for evil, for the starters in the Emperor's race were shockingly few. By the way, Cicely was a very long way ahead of Vol-au-Vent in that match, but got becalmed. They had the wind aft all the way.

Of the many boats built for the Emperor's new 32ft. class, particulars of which I gave, Uncle Sam, a Crowninshield craft, appears to be the best.

Many yachtsmen on your side will be sorry to hear of the death of Mr. Richard T. A. Grant, formerly Secretary to the Royal Yacht Squadron. He died on June 30 very suddenly.

Although not officially announced, it is pretty well known that Mr. Fife has been commissioned by Sir Thomas Lipton to design a new Cup challenger. The vessel will be built by Denny Bros. at Dumbarton. Sir Thomas has received the honor of a Baronetcy from the King. I think you will lose the Cup this time if the vessel is as well sailed as Shamrock II. was. Certainly you will have to turn out a faster craft than Columbia. It would be rather amusing if that craft should prove to be Constitution—and it is quite on the cards, too!

E. H. Hamilton.

Beverly Y. C.

WING'S NECK, BUZZARD'S BAY, MASS.

Saturday, July 26.

A champion Corinthian race of the Beverly Y. C. was sailed off the club house, Wing's Neck, on Saturday, July 26, in a light easterly breeze. The 30-footers went over the starting line in a bunch, and off the wind Quakeress II. led the fleet. On the beat home Pontiac worked out into first place and won easily. In the 25-footers Thorana took an easy win from Kalama. In the 21-footers Edith led to leeward, but Terrapin won out on the windward work. Krieker won in the fourth class cats and Go Bye in the 15-footers. The summary:

30-Footers.

	Time.
Pontiac, J. H. Beebe	3 17 50
Praxilla, J. Parkinson	3 21 40
Quakeress II., W. F. Harrison	3 25 23
Mashnee, R. W. Emmons	3 26 37
Young Miss, D. L. Whittemore	3 27 36
Gamecock, Louis Bacon	3 27 38
Arabian, Robert Winsor	3 28 30
Zingara, E. N. Farnsworth	3 29 32
Evelyn, John Hitchcock	3 31 22
Notos, W. O. & C. H. Taylor, Jr.	Withdrew

25-Footers.

Thorana, T. B. Wales	2 30 40
Kalama, David Rice	2 37 10

21-Footers.

Terrapin, L. S. Dabney	2 36 25
Sylvia, S. D. Warren	2 38 25
Arethusa, C. M. Baker	2 41 27
Wynona, Howard Miller	2 42 00
Barnacle, W. E. C. Eustis	2 43 40
Edith, Clark King	2 44 32
Radiant, C. M. Baker	2 48 35

Fourth Class—Cats.

Krieker, W. S. Jameson	1 56 50
Allison, Stewart McLeod	1 59 05
Hod, H. B. Holmes	2 15 25

15-Footers.

Go Bye, H. Stockton	1 54 20
Teazer, R. W. Emmons	1 56 15
Vim, F. Sargent	1 56 30
Spider, H. B. Stone	1 57 07
Ranzo, Maurice Richardson	1 57 50
Varda, Jack Perkinson	2 08 10
Peacock, Robert Winsor	2 12 20

Yacht Racing Association of Gravesend Bay.

Saturday, July 26.

THE fifth regatta of the Yacht Racing Association of Gravesend Bay was held on the afternoon of Saturday, July 26, under the auspices of the Atlantic Y. C. Twenty-eight craft started in the contest, three were disqualified for various reasons, and one did not finish.

It was one of the best races sailed thus far. The winners in the different classes were Bonito, Vivian, Caribou, Song and Dance, Opossum, Pickaninny, Kelpie and Martha M.

In general the struggles in the different classes were won by good margins. The race between the old rivals Song and Dance and Cockatoo was an exception, however, and the former won the contest only after the hardest kind of a fight, and by the small margin of 24s.

At no time were the two far apart. Song and Dance, being of centerboard construction, would gain a bit when sailing with a free wind, while the fin-keel Cockatoo picked up on windward work. They are now tied on the standing of the Association series with 42 points each.

In the race for class M boats in cruising trim, Bonito led Sunol at the finish by 1m. 40s. Kangaroo started in this class. She was minutes astern in getting away and was never able to overcome the handicap.

The neat little class N flyer, Vivian, and Gwendolen, another clean-cut boat of beautiful model, were opponents. The first named, from a poor start, won by 3m. 43s. It was the second meeting of the two craft in the Association races. At the end of the first they were separated by only a few seconds.

In special class N Caribou got a victory from Squaw. The latter did not finish the race. The Association boats were given warning before the contest to carry their racing numbers in the correct position—that is, above the last row of reef points and midway between the luff and leach. Squaw had not fulfilled these requirements and was disqualified. This gave Caribou a sailover.

In class P Song and Dance led Cockatoo by 24s. Opossum, now sailing in regular class Q, beat Trouble, her nearest adversary, by 1m. 11s. The light southeasterly breeze blowing was just suited to the lighter craft in which Herreshoff has succeeded in turning out a very speedy creation.

In class R, Pebble led Pickaninny, starting for the first time this year, by a good margin. Pebble, however, fouled one of the marking buoys and was disqualified. Pickaninny also got into trouble during the race. There were no protests lodged against her, but eventual disqualification will undoubtedly be the outcome. She was credited with a win until the case is decided.

In the Marine and Field special class, Kelpie, champion of last year, led Jig-a-Jig, the second boat, by 1m. 42s. The latter was unfortunate enough to be disqualified for not having her number in the proper position, and second place in the Association race went to Flying Fox, whom Kelpie defeated by 3m. 34s.

The disqualification of Jig-a-Jig is inoperative in the fourth struggle for points on the Snedeker trophy, in which the one-design boats were engaged. So Jig-a-Jig is credited with second place in the race on this series.

In the catboat class Martha M. led Rascal by 3m. 43s. Boozie, the Long Island creation, which carried off honors in the heavy wind of the race before, made a poor showing.

The protest by Rascal against Martha M. in the Marine and Field Club race of July 12, has been allowed. This disqualifies Martha M. and takes away the eight points put down to her credit for that race. Rascal gets second place and an additional two points.

The protest by the owner of Karma against Song and Dance for fouling Wraith in the same contest, was not allowed.

The usual Association courses were sailed. The smalle craft had a reach, a run, another reach, and long and short windward boards to the home mark. The larger craft going out to West Bank Light had a close fetch and a run home.

The sixth regatta of the Yacht Racing Association of Gravesend Bay takes place on Saturday, Aug. 2, under the auspices of the Brooklyn Y. C. The summaries follow:

Class M—Special—Start 3:03.

	Actual.	Corrected.
Bonito, Haviland Bros.	3 20 49	2 17 49
Sunol, John Abbey	5 22 29	2 19 29
Kangaroo, C. H. Humphreys	5 33 41	2 30 41
Sloops—Class N—Start 3:06.		
Vivian, S. E. Vernon	5 14 48	2 08 48
Gwendolen, H. G. S. Nobles	5 18 31	2 12 31
Class N—Special—Start 3:06.		
Caribou, J. E. Nicholson	5 19 48	2 13 18
Squaw, H. J. Heath		Disqualified
Sloops—Class P—Start 3:09.		
Song and Dance, E. F. Luckenbach	4 36 14	1 27 14
Cockatoo, Hendon Chubb	4 36 38	1 27 38
Carona, J. E. Beggs	4 38 14	1 29 14
Streak, Speidel Bros.	4 38 56	1 29 56
Sloops—Class Q—Start 3:12.		
Opossum, R. P. Doremus	4 40 08	1 28 08
Trouble, W. H. Childs	4 41 19	1 29 19
Wraith, Calvin Tomkins	4 43 05	1 31 05
Bronco, F. C. Moore	4 43 49	1 31 49
Flying Fish, L. M. Dean	4 49 22	1 37 22
Wink, W. A. Barstow	4 50 53	1 38 53
Sloops—Class R—Start 3:15.		
Pickaninny, L. R. Connett	5 02 11	1 47 11
Pebble, R. W. Speir		Disqualified
Marine and Field Class—Start 3:18.		
Kelpie, W. K. Brown	4 53 42	1 35 42
Flying Fox, Cone and Buckman	4 57 16	1 39 16
Stinger, A. P. Clapp	4 57 29	1 39 29
Quinque, L. H. Smith	5 03 23	1 45 23
Jig-a-Jig, W. A. Hutcheson		Disqualified
Catboats—Class V—Start 3:24.		
Martha M., Richard Moore	4 51 44	1 27 44
Rascal, D. G. Whitlock	4 55 34	1 31 34
Boozie, C. D. Durkee	4 58 58	1 34 58
Jean, F. Nickerson	Did not finish.	

Points to date in Y. R. A. G. B. series: Mariquita, 5; Sunol, 36; Bonito, 28; Kangaroo, 12; Vivian, 30; Gwendolen, 16; Caribou, 40; Squaw, 24; Indian, 6; Cockatoo, 42; Song and Dance, 42; Karma, 20; Streak, 16; Corona, 6; Trouble, 32; Opossum, 24; Bronco, 24; Wraith, 22; Wink, 11; Flying Fish, 4; Spots, 2; Pickaninny, 5; Kelpie, 48; Stinger, 40; Quinque, 14; Flying Fox, 10; Jig-a-Jig, 6; Vixen, 4; Rascal, 32; Martha M., 30; Boozie, 16.

Points to date on Snedeker trophy, Marine and Field class: Kelpie, 15; Stinger, 9; Vixen, 4; Jig-a-Jig, 3; Quinque, 3; Flying Fox, 1.

Western Yachts.

Lake Michigan Yachting Association.

CHICAGO, Ill., July 24.—The seventh annual regatta of the Lake Michigan Yachting Association will be held under the auspices of the Macatawa Bay Y. C., Aug. 7-9 This will be quite a sporty little event, with plenty of silver cups as class prizes. Measurements under the rules of the Association; the course a six-mile triangle, two miles to the leg, twice around.

The second annual Venetian night of the entertaining club will be held Thursday, Aug. 7, a general illumination, followed by dances, etc. On Saturday night there will be a yachtsmen's ball. The local club will hold a daily regatta on the inside course, open to boats of inland water types, with proper silver cups as prizes. Measurements under Inland Lake Y. A. rules.

The second annual cruising race of the Macatawa Bay Y. C. from Chicago to Macatawa will strrt from the Van Buren street gap Saturday, Aug. 2, at 5 o'clock P. M. There will be three prizes awarded, for classes A, B and C. Ample hotel accommodations and good steamer facilities across the lake add to the interest of this event, which will be patronized.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Riverton Y. C.

RIVERTON, DELAWARE RIVER.

Saturday, July 19.

A NUMBER of boats belonging to members of the Beverly Y. C., the newest organization on the Delaware, participated in the regatta given by the Riverton Y. C. on Saturday, July 19.

There was no wind in the morning, but in the afternoon sufficient breeze came up to allow the Regatta Committee to start the fleet.

On the run home Sea Gull drew away from the boats in her class and won by 26s.

Isit demonstrated her light-weather qualities by beating the boats in her class handily. The summary:

Catboats—Start, 3:05.

	Fin.	E. T.	C. T.
Carolyn, Ch. C. Rinahard	5 26 02	2 21 02	2 18 56

Quincy Y. C.

QUINCY, MASS.

Saturday, July 26.

A REGULAR club race of the Quincy Y. C. was sailed off the club house at Hough's Neck on Saturday, July 26, in a light easterly breeze. In the first class Eclipse won easily. In the second class Mable won in a close race. Cleopatra won in the special class, and Marjorie in the Lark class. In the race for launches, Mildred won by 3m. and 36s. on corrected time. The summary:

First Class.

	Act time.	Cor. time.
Eclipse, Dr. Jones	1 39 15	1 14 59
Hustler, Whittemore and Robbins	1 45 01	1 17 11
Goblin, Elmer Rickey	1 49 55	1 20 47
Marvel, Reid and Lincoln	1 48 21	1 21 15
Ida J, C. C. Collins	1 46 21	1 21 41
Moondyne, Shaw Bros.	1 52 40	1 26 48
Stay King, Mr. Laird	1 51 04	not m'd
Second Class.		
Mabel G, George Gardner	2 07 18	not m'd.
Kitty, John Evans	2 07 29	not m'd.
Special Class.		
Cleopatra, F. F. Crane	1 46 27	0 00 00
Omeme, W. P. Parker	1 48 38	0 00 00
Larks.		
Marjorie, Mr. Bennett	1 00 20	0 00 00
Ethel S, George Swift	1 02 31	0 00 00
Ella H, Herbert Holmes	1 09 51	0 00 00

Mosquito Fleet Y. C.

SOUTH BOSTON, MASS.

Saturday, July 26.

A CLUB race of the Mosquito Fleet Y. C. for handicap class and sailing tenders, was held off Marine Park on Saturday, July 26, in a light easterly breeze. Sentinel finished first in the handicap class, but lost to Venture on corrected time. F. O. French won a good first from E. Merrill in the tender class by 3s. The summary:

Handicap Class.

	Act time.	Cor time.
Venture, W. C. Cherrington	2 18 52	2 25 52
Sentinel, N. C. Robinson	2 13 47	2 26 47
Halen, W. Tracy	2 27 42	2 32 42
Egeria, R. S. Lauders	2 35 33	2 40 33
Myth, J. T. Powers	2 36 06	2 44 06
Alcyone, F. W. Coombs	2 42 00	2 42 00
Alder, C. P. Mooney	Withdrew.	
Ustane, C. J. Moriarty	Withdrew.	
Vand I, E. Leach	Withdrew.	

Open Tender Class.

	Time.
F. O. French	1 12 34
E. Merrill	1 12 37
W. L. Colson	1 12 50
H. Stickney	1 12 55
E. T. Landers	1 12 58

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, July 26.

THE fifth series race sailed by the Seawanhaka knockabouts for the Centre Island cup was sailed over knockabout course No. 2 on the afternoon of Saturday, July 26. Seven boats started, and Vagrant won. The breeze was fresh from the E. The summary, start 3:40:

	Finish.	Elapsed.
Vagrant, Brown & Low	5 11 09	1 31 09
Marcia, Johnston de Forest	5 12 20	1 32 20
Bobs, W. A. W. Stewart	5 13 16	Disq.
Gowan, F. G. Stewart	5 14 56	1 34 56
Wyntje, Colgate Hoyt, Jr.	5 20 49	1 40 49
Lucille, H. H. Lander	5 21 01	1 41 01
Heron, F. R. Coudert, Jr.	5 25 37	1 45 37

In the race sailed on Saturday a week ago Lucille and Wyntje, which finished first and second, were protested and the Race Committee has disqualified these two boats, and Marcia, which finished third, wins.

On Saturday morning Gowan and Wyntje sailed a race for the Leland Corinthian Challenge cup, and Gowan won. The summary, start 10:45:

	Finish.	Elapsed.
Gowan, F. G. Stewart	1 05 30	2 20 30
Wyntje, Colgate Hoyt, Jr.	Did not finish.	

Portland Y. C.

PORTLAND, ME.

Saturday, July 12.

THE Portland Y. C. held its first race on Saturday, July 12, in a strong S.W. breeze. Eight boats started in the three classes. Class C was made up of one-design boats from the board of Mr. W. Starling Burgess. Lobadoba won by one minute. The summary:

Class A.

	Start.	Finish.
Banshee	2 04 25	4 20 43
Clique	2 04 45	4 26 51
Class B.		
Burgomaster	2 10 43	4 02 03
White Wings	2 11 50	4 24 15
Whist	2 10 40	4 37 37
Class C.		
Lobadoba	2 20 15	4 00 09
Skid	2 20 20	4 01 09
Krisheim	2 20 03	4 04 37

The winners were Banshee, Burgomaster and Lobadoba.

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, July 26.

THE 18 and 21ft. one-design boats of the American Y. C. raced over a ten-mile triangular course off Milton Point on Saturday, July 26. Zeleika II. lost her rudder and did not finish. The wind was fresh from the E. The Kid won in her class; Jolly Tar was second, but was protested for fouling one of the marks. Mr. Simon Ford's boat won in the 18ft. class. The summary:

21-Foot Raceabouts—Start, 2:30.

	Finish.	Elapsed.
The Kid, D. Harriman, Jr.	4 43 17	2 13 17
Jolly Tar, S. Howland	4 43 58	2 13 58
Cricket, Howard Willetts	4 44 14	2 14 14
Howdy, S. Wainwright	4 46 18	2 16 18
Rascal, S. C. Hopkins	4 48 18	2 18 28
Ping-Pong, W. H. Browning	5 13 08	2 43 08
18-Foot Raceabouts—Start, 2:30.		
—— S. Ford	5 08 13	2 38 13
Hustler, J. T. Downing	5 18 42	2 48 42
Rattler, J. E. Bowles	5 17 37	2 47 37
Zeleika II, H. A. Sherman	Disabled.	

Winthrop Y. C.

WINTHROP, MASS.

Saturday, July 26.

THE regular handicap race of the Winthrop Y. C. was sailed on Saturday, July 26. The breeze was light and fluky from the eastward, making the race decidedly uninteresting. The summary:

25-Foot Class.

	Ac time.	Cor time.
Ariel, James R. Hodder	1 41 47	1 38 47
Thordis, C. A. Heney	1 49 02	1 46 00
21-Foot Class.		
Greyling, Mr. Langland	2 12 38	2 12 38
Mineola, ——	2 45 40	2 36 40
18-Foot Class.		
Zetes, J. A. McKie	1 52 16	1 52 16
Hector, A. W. Hubbard	1 53 59	1 51 59
Favorite, Fred Bird	2 06 59	2 02 59
Martha, Mr. Jenkins	2 16 59	2 07 59
15-Foot Class.		
Elf, J. W. Kelly	1 05 30	1 05 30
Coper, J. W. Colson	Withdrew.	
15-Foot Juniors.		
Flash, W. H. Myrick	1 14 37	1 14 37
Virginia, W. H. Traiser	1 17 45	1 15 45
Knox, ——	Withdrew.	

Columbia Y. C.

SOUTH BOSTON, MASS.

Saturday, July 26.

A CLUB race of the Columbia Y. C. was held off City Point on Saturday, July 26, in a light easterly breeze. The summary:

First Class.

	Act time.	Cor time.
Julia, M. Roach	2 12 30	2 12 30
Grandee, Albert Baker	2 30 53	2 30 53
Nelka, G. Coy	2 34 30	2 26 30
Wapita, E. Powers	2 42 25	2 32 25
Second Class.		
Strideaway, C. Snow	2 10 30	2 05 20
Cathryn, J. R. Young	2 18 25	2 09 25
Acme, H. Patterson	2 14 40	2 09 40
Walrus, F. R. Granger	2 12 50	2 12 05

Rifle Range and Gallery.

Rifle at Shell Mound.

SAN FRANCISCO, July 14.—Yesterday was red-letter day at Shell Mound range. T. E. Gorman, our local revolver expert, badly smashed the 100-shot record at 50yds., Standard target. C. S. Richmond, of Savannah Ga., is now deposed from the pedestal. Gorman's score is 924, Richmond's being 918. Scores of the day:

Golden Gate Rifle and Pistol Club.—Pistol, handicap: M. T. White 86, 86, 87, 87; F. S. Washburn 91, 90; W. F. Blasse 89, 80; M. F. Blasse 80; B. A. Galloway 54, 40.

Revolver, gold medal: J. R. Trago 86, 82. Handicap, J. R. Trago 86; J. W. Tompkins 77, 72, 71, 68, 61; L. C. Hinkel 96, 94, 92, 90, 90; P. A. Becker 91, 89; J. E. Gorman 100, 96, 95, 93, 92, 92, 91, 91, 88, 86.

Golden Gate Rifle and Pistol Club, monthly medal shoot, rifle, handicap: W. F. Blasse 210, 209; Glindermann trophy, W. F. Blasse, 215; gold medal, G. Tammeyer, 321; W. Ehrenpfort, 199, 164; silver medal, O. H. Bremer, 223, 209; gold and silver bars, M. F. Blasse, 221, 213, 210, 207; H. Hinkel, 212, 211, 205, 200.

The Shell Mound Rifle Club bullseye shoot of July 6 resulted as follows: W. Siebe 33, R. Wixson 45, J. Ringen 45½, P. Ramm 46, Capt. Siebe 60½, A. Niehaus 78½, C. Heissenberg 85, G. Mitchell 90, L. Siebe 98, H. Huber 98½, C. Parson 99, A. Thompson 113½.

San Francisco Schuetzen Verein, monthly medal shoot.—Champion class: Best string, D. B. Faktor 434; champion class medal, Herman Huber, 436; first class, not won; second class, S. Heino, 383; third class, F. Hensel 362; fourth class, D. Dunker, 351; best first shot, F. P. Schuster, 24; best last shot, F. P. Schuster, 24.

Germania Schuetzen Club, monthly medal shoot: First champion class, F. E. Mason, 228, 223; second champion class, O. Bremer, 208, 202; first class, J. Gefken, 208, 202; second class, D. Salfield, 211, 208; third class, J. Beuttler, 172; best first shot, G. H. Bahrs, 23; best last shot, S. Heino, 25; competition for trophies: D. D. Faktor 226, F. E. Mason 225, O. Bremer 218, L. Bendel 217, J. Gefken 211, N. Ahrens, 211; competition for cash prizes: F. E. Mason 73, D. B. Faktor 73, H. Huber 71, N. Ahrens 71, L. Bendel 69, O. Bremer 69.

ROEEL.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, July 6.—At the Columbia Pistol and Rifle Club's regular shoot there were fine weather and fine scores. Many visitors were present, among them Henry Kroeckel, secretary of Stockton Pistol and Rifle Club. He said they would extend a formal invitation for us to visit and have a friendly shoot with them at Stockton in August. Dr. Twist tied the .22 rifle club record, 16, to-day. Cady and Daiss pressed him closely, but were not quite equal to the occasion. Capt. Fred Kuhnle, our veteran rifle shot, put up an 8 on his first three-shot score and did wonderful work for a man over sixty-six years of age. We know of no man of his age who can beat him. Hinkel was high again with revolver. He was presented with a gold Columbia button for the Columbia target record, 30, of last shoot.

At our last regular meeting we voted to give E. E. Patridge, of Walnut Hill, Mass., a Columbia button for his 50-shot record on Columbia target, 165, it being found to be 2 points better than Anderton's 476, on Standard. We recognize it as the world's 50-shot pistol record.

Scores to-day, Columbia target:

Rifle, 200yds., 3-shot match: Capt. Fred Kuhnle 8, 11, 14, 14, 15, 16, 16, 16, 16, 20, 20, 22; F. O. Young, 16.

Ten-shot rifle match: F. O. Young 55, 58, 67, 72, 73, Dr. Twist (.22 rifle) 143.

Military match, Creedmoor count: H. Hinkel 46, 44, 44.

Pistol: Ed Hovey 37, 42, 47, 47; Young 57.

Revolver: L. C. Hinkel 41, 46, 54, 54, 56, 56, 58, 62; A. H. Pape 48, 50, 58, 61, 63, 63, 64; F. O. Young 48, 55, 57, 59, 60, 60 62; Dr. Hunsaker 70, 74, 78, 81; J. R. Trego 84, 85, 94.

.22 and .25 rifle match: Dr. J. F. Twist 16, 22, 24, 26, 28; A. H. Cady 17, 18, 26, 26, 26, 28; C. M. Daiss 18, 19, 20, 22, 24, 27; F. O. Young 20, 20, 26; E. A. Allen 30, 32, 34, 37; Mrs. Waltham 42, 43; Dr. Harvey 42, 63.

Mr. E. E. Patridge's target, certified to by the secretary of Walnut Hill, was received by us.

FRED. O. YOUNG, Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road, July 20. Conditions, 200yds., offhand, at the German ring target. Payne was declared champion for the day with the good score of 224. Weather cloudy in the morning, clearing in the afternoon. Thermometer, 86; wind, unsteady, from 4 to 6 o'clock:

Payne	224 217 215 212 210	22 17 21—60
Gindele	221 220 217 216 213	18 24 22—64
Hasenzahl	219 211 210 215 209	22 18 22—62
Nestler	219 214 213 210 195	21 19 22—62
Odell	219 209 207 200 199	20 20 22—62

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

Mr. B. B. Hull, Schenectady, N. Y., writes us as follows, under date of July 26: "At the semi-annual meeting of the Schenectady Gun Club, held July 8, careful consideration was given to the subject of ways and means for successfully conducting the New York State Shoot, which is to be held at Schenectady next year. The matter was taken up energetically and discussed quite fully. A general committee was organized, from which subcommittees were appointed to handle the various lines of preliminary work which this tournament will demand. Already we are assured of grounds which approach perfection in the eyes of the trapshooter, and that within from five to ten minutes of the hotels, depot and business district of the city. The State Shoot is nearly a year away, but the Schenectady Gun Club realizes that it means a great deal of hard work, and it is the object of the club members to do as much of the work now as is possible, and spare no effort to make this tournament an unqualified success. At this meeting Captain Valentine Wallburg was presented with a solid silver loving cup as a token of esteem for the founder and president of the club."

Mr. C. F. Lambert, of Lynn, Mass., writes us interestingly as follows: "The Watertown (Mass.) Gun Club are arranging to entertain their friends by means of an all-day tournament on Aug. 30 next. Those who in the past have attended their shoots unanimously report the Watertown boys as royal entertainers, and they, without question, have the finest grounds and equipment to be found anywhere. Details of this shoot will be furnished later, or, in ample season to allow those who will be shooting in the State that particular week to make their arrangements for attending. Enough money will be added to the programme events to excite competition, at least."

The second of a series of three contests, between 5-man teams of the Towson Gun Club and the Maryland County Club, was shot last Saturday on the grounds of the latter club. The Towson Club won by a score of 201 to 199. Each man shot at 50 targets. This concludes the series. The Towson Gun Club won both shoots. Its team defeated the Maryland Country Club at Towson last Saturday by a score of 221 to 208, out of a possible 300.

The Virginia Trapshooters' Association anounces that its third annual shoot will take place on Sept. 1, 2 and 3, on the grounds of the Lynchburg (Va.) Gun Club in Riverton. Sweepstakes open to all amateurs. Targets, 2 cents. The Association team and Individual championship are the only events closed to the public. Programmes and badges will be ready by Aug. 20. J. A. Anderson, of Lynchburg, Va., is the secretary.

Mr. C. F. Lambert, of Lynn, Mass., announces an additional day's shooting the day following the Interstate tournament at Haverhill, Mass., Aug. 27 and 28. Elsewhere in our columns will be found his communication on this subject. It is an attractive additional programme, and contains much of interest to all trapshooters who wish to compete for fun or seriously.

To the peripatetic shooters known as the Wanderers, Dr. W. L. Gardiner, the distinguished treasurer of that organization, has issued invitations to a succotash party at his home, Elliott Place, East Orange, N. J., on Aug. 2. The afternoon will be devoted to food and targets. No handicaps. Take 12:10 train for Brick Church. Conveyance will be at the depot.

Mr. J. H. McKibben, secretary of the Peters Cartridge Company, Cincinnati, writes us as follows: "Aug. 5, 6 and 7, the Peters Cartridge Company tournament, under the auspices of the Troy Gun Club, Troy, Ala. Aug. 12, 13 and 14, the Peters Cartridge Company tournament, under the auspices of the Americus Gun Club, Americus, Ga."

Mr. Bert B. Adams, secretary of the Limited Gun Club, Indianapolis, Ind., writes us as follows: "The Limited Gun Club, of Indianapolis, Ind., will hold a two days' tournament on Aug. 20 and 21. The first day at targets, and the second at sparrows. This will be a handicap shoot. Programmes will follow in a few days."

The Parker Gun Club, of Meriden, Conn., announces a two-days' tournament, Sept. 1 and 2, which is known to fame as the Parker Gun Club's Annual Labor Day Shoot and Sheep Bake. Programmes will be forwarded to applicants on application to the secretary, Mr. C. S. Howard.

At the Providence Gun Club's tournament last week, in the Interstate team race of New England trapshooting clubs, the Massachusetts team won by a score of 441. There were four teams, the others being of Maine, New Hampshire and Rhode Island. The race was 5-man teams, 100 targets per man.

Mr. John J. Levy, of Annapolis, Md., won the Bay Ridge Handicap, a 20-bird event, at Mr. J. R. Malone's midsummer tournament last week. Three, Messrs. Levy, Eick and Bond, tied with straight scores. The tie was shot miss and out, and Levy won in the sixth round.

The Wanderers last Saturday met defeat at the hands of a team of the South Side Gun Club, of Newark. There were nine men on a side, 25 targets per man. The scores were: South Sides, 196; Wanderers, 189. The victors made an average of over 87 per cent.

Secretary Ed. J. Bowers, of Nappanee, Ind., informs us that the Nappanee Gun Club will add $100 to its Interstate shoot Sept. 3 and 4, of which $50 will be added to the events and $50 will be given in average moneys to professionals and amateurs.

Mr. C. M. Stark, of Dunbarton, N. H., has issued a challenge, published elsewhere in our trap columns this week, which is of special interest to Maine trapshooters. It is a straightforward challenge, meriting frank and straightforward consideration.

In a 7-man team match, 25 targets per man, the Rockland Military Academy team, of Nyack-on-the-Hudson, defeated the Spring Valley Gun Club by a score of 111 to 107. This was the third contest of a series.

At Mr. J. R. Malone's eighth annual midsummer tournament, held at Bay Ridge, Md., last week, Dr. H. E. Lupus, of Baltimore, won high average. He broke 359 out of 380 for the two days.

At Westchester, Pa., July 26, a team race, between the Clearview Gun Club, of Philadelphia, and the Westchester Gun Club, 15 men on a side, 25 targets per man, resulted in a tie on 287.

Secretary Frank Dunbar, of Peru, Ind., writes us as follows: "Please announce in your columns change of date of Bass Lake, Ind., tournament, from Aug. 27-28 to Aug. 26-27, 1902."

Secretary J. L. Barlow, of Ossining, N. Y., informs us that at Pleasantville, N. Y., the Westchester Trapshooting Association will hold a tournament on Labor Day.

The next meeting of the Arkansas State Sportsmen's Association, 1903, will be held at Jonesborough, Ark.

The Holyoke (Mass.) Shooting Club will hold its annual tournament on Aug. 19.

BERNARD WATERS.

IN NEW JERSEY.

South Side Gun Club.

Newark, N. J., July 26.—The shoot of the South Side Gun Club to-day was added to by the attendance of a delegation from the Wanderers. A two-man team race, Piercy and Welles against Gardiner and Skelly, resulted in a win by the latter. The scores follow:

Events:	1	2	3	4	5	6	7

JAS. R. MERRILL, Sec'y.

Trap at Mansfield, La.

One of the most successful tournaments and one of the largest in point of numbers ever held in this section was the one at Mansfield, La., July 15 and 16, 1902.

Representative shooters from all parts of the State and adjoining regions were present, and all enjoyed one of the most pleasant outings possible.

The programme consisted of eight 15-target events each day, with $1.50 entries and 2-cent targets. Division by Roe system factors, 7, 5, 3, 2.

All told, thirty-seven shooters took part, most shooting through. The ladies of the interesting historic little city prepared and served a most excellent dinner. All this was done in the very best manner possible. In fact, this part of it was more nicely arranged than at any tournament I have lately attended. The people of the town all treated us with the greatest possible kindness.

The shooting was done according to the Sergeant system. The traps were set in a valley and targets thrown toward a hill on the front and a wood on the right. The background was very bad. Birds were thrown wide, acute, low and very fast. When not striking the hill, they dropped seventy-five yards away. Numbers of the shooters, who at home make high records, were constantly wondering at their poor shooting. The extra speed alone would explain it, leaving out entirely background and the very acute angles.

There was an interesting race for first during the opening day. Only one target separated the leaders when the last event was reached, then Picket dropped four, leaving Welch winner by four birds on the day. H. Marsten missed with 14, Mr. Elam a close fourth with 93, Woodrow was fifth with 91.

Again on the second day the race for first was between Picket and Welch, the former losing by 5 targets on the day and 9 on the entire shoot.

Bosley was third on the second day with 90, H. Marsten fourth with 87, Elam fifth with 86. Mr. Elam shot a strong regular gait. He will develop into a good one, as will Woodrow and the rest of his squad.

Hon. J. H. Caldwell, of Robeline, shot through the first day, but left for home at evening, feeling ill. The major is a good 90 per cent. shooter, but was out of practice. His geniality was sadly missed.

There were certainly some nervy shooters in attendance. Those worthy of mention in this respect being Avington, Darnell, Fleming, Wemple, Warren, Simmons and Booth. To this should be added Guy Winfree, Lyons and Sims, who entered the second day. Some of these men went the entire route without getting a prize, and yet hung on like grim death. Such perseverance must eventually conquer.

We had more "Nabors" in this shoot than ordinary, and they shot some, too. Mr. J. M. Nabors is never excited, shoots easily and gracefully; the writer is indebted to him for a number of courtesies, one being a kind invitation to his home, which unfortunate circumstances prevented me from accepting.

A number of rising young shots were present, who will be heard from in the future, among them are the Marstens, Picket, Bosley, Douglass, Jenkins and Judge Lee, the latter furnished much good humor for the crowd. He, like his boon companion, Major Caldwell, was not shooting up to his record. They will arrive later, however. Mr. Lindsey had lost the fine form in which he so conspicuously shone two years or so ago. If grit will win he will be again on top.

A. J. Manhein was also, as the writer well knows, shooting below the standard he usually sets. In fact, this shoot was a "record breaker." Atkins shot well; he is a comer. Dr. Nabors also is in the same class; Simmons, Wadley and Fraser steadily improved.

A. J. Manhein, of Florein, was also, as the writer well knows, shooting below his usual average.

In fact, this was a record breaker in this respect, at least. Mr. Atkins was in good form. His 14 was a nice exhibition of shooting, as was the same by Woodard.

Drs. Nabors and Parsons did some very good work for amateurs. The Booths, Simmons, Wadley and Fraser steadily improved. Simmons took sick the last day.

The shoot was remarkable for several things. One was the fact that only one straight was made and this right after a bet was taken that one could not be made. Welch made it in the second event of the second day and tried to duplicate it in the last, but fell on the final.

On the right of the traps, 96 yards distant, is a tall dead pine. A shooter at No. 4 trap at one shot broke a target and killed a woodpecker from this tree. I took the distance to the tree, guessed at its height, calculated the hypothenuse of the resultant triangle, and found it approximately 98 yards. Mr. Woodard testifies to the above.

Rain prevented a number of extras being shot the second day, so quite a number staid over. While the scores reached me too late for publication, I see there was some good shooting.

At the close of the second day a 25-bird extra was shot, Welch winning on a score of 21, Cowley second on 20.

This tournament will result in much good to trapshooting in this region, as all went away delighted.

A case of shells was offered to the squad making best score for the two days; this excited much interesting rivalry. It soon became evident that the prize lay between East Point and Mansfield. The former won on a small margin.

It would probably excite greater interest if individual prizes were offered to the four or five highest scores for the entire shoot. This, no doubt, in most cases, would have a tendency to induce a greater number to shoot through and more to remain in longer. Another mistake clubs make is in having squads composed entirely of home or nearby shooters. This always starts the cry of easier targets for some than for others. I have never known shooters to encourage or even tolerate such partiality, but no doubt the trap boys are frequently guilty. By the above plan it is very easily avoided.

This was certainly a meet of typical sportsmen—men all of whom shoot merely for the recreation without thought of gain. No manufacturer's agent was here, nor expert, nor professional shot of any kind. All were Simon pure amateur.

There is a bond of union between all true sportsmen that is hard to define or understand to the true lover of wood and field. Nature has a richer blending of her wondrous colors, as she strikes the myriad notes that thrill all who have a sense of finer harmony; to him there is a low subdued melody that others never hear. It is strangely sad, yet he loves to hear its soft vibrations as it pervades his whole being with a sweet gentle melancholy, to him the breaking of a twig or rustle of a leaf beneath the forest's canopy is music. The cry of our edcuators is now "On to Nature Study," and the mechanic grind has begun. No matter how low the brow or dull the eye or weak the brain, if this curtain that shrines the Holy of Holies cannot be lifted, it must be rent and the manufactured product thrust within. The multitude have mouthed the "Sighing of the breezes," "The whispering of the pines," "the merry music of rippling waters," until they have become meaningless phrases; those who utter them understand them not; those who understand them do not utter; the full essence may be treasured within the heart but cannot be encompassed with words.2 Standing in a primitive wood, deeply awed by the holy silence, there is a feeling more deeply religious than pervades a gigantic cathedral, thrilled by the organ's deep diapason or echoing with prayers voiced in song. His lips are silent. He utters no invocations. He bends not the knee in supplication, and yet, in one entrancing moment of holy joy and peaceful calm a happiness that seraphs might envy steals into his enraptured being and he truly "sees God in the storm and hears Him in the wind." "His mind to him a kingdom is," and his heart a throne upon which sits gloomy melancholy in solemn state, yet supremely happy, though in awful solitude. Only he who has breathed or drank this heavenly nectar in forest, dale or dell, or woodland bower; only he whose heart has been touched by the finger of God can feel what he cannot utter. Binding the hearts that swell with these emotions are cords to the mind tangible yet to the senses invisible, vibrant, mystic that makes us one and undivided, and shall never be sundered.

First Day, July 15.

J. F. WELCH.

J. R. Malone's Mid-Summer Tournament.

THE eighth annual midsummer tournament of Mr. J. R. Malone was held at Bay Ridge, A. A. Co., Md., July 23 to 25. The first two-days were devoted to target competition, the third to live-bird competition. Targets were thrown Sergeant system.

First Day, July 23.

The programme had eleven events, open to all, alternating at 15 and 20 targets, $1.30 and $1.75 entrance, $50 added money; and eight events open to amateurs only. Of these, four were at 15 targets, $1.00 entrance, three at 20 targets, $1.40 entrance, and one at 50 targets for a handsome silver cup, which was won by Millard Cantler, of Annapolis. In the county events the moneys were divided into four parts—40, 30, 20 and 10 per cent., and there was a gold medal for the highest average of the day in the county events. This was won by Ridgley B. Bond, of Jessups, scoring 152 out of a possible 170. Edgar Basil, of Annapolis, was a close second with 151.

Master Jesse H. Poplar, Jr., of Havre de Grace, the boy wonder, killed 18 live pigeons out of 21. He is only seven years. He uses a gun constructed especially for him. It is a 28 bore and weighs only 5¼lbs. The shells used contain 1¾drs. of powder and ½oz. shot, and the trigger requires a pull of 9lbs. The youngster was the most cool and collected shooter on the grounds.

In the experts' open event, German and Storr tied with an average of 178 out of a possible 190 targets. Elliott, while not the highest average, did the cleanest shooting, breaking three perfect events of 20 targets. About the seventh event ne and Ben Eick were changed from a handicap of 18yds. to 20yds., which no doubt lost them to a great extent their chances for first prize. They were money events, and given as average money to the ten highest scores on the reverse system: First high average, $3; second, $3; third, $4; fourth, $4; fifth, $5; sixth, $5; seventh, $6; eighth, $6; ninth, $7; tenth, $7. The handicaps were from 14 to 20yds.

This division was made to help the weak shots. As those finishing high in average will of course win more money than those finishing lower, this division of the purse gave the weaker shot a better chance.

Scores, experts' open events, 190 targets:

Events:	1	2	3	4	5	6	7	8	9	10	11	Total

Cup race: Bond 44, Knackstedt 42, Chance 33, Smith 42, Gefford 47, Barnes 42, Kirk 44, Stubner 44, Basil 47, Levy 42, Cantler 48, Tydings 34, Wilmer 40, Coleman 45, Jackson 40.

Second Day, July 24.

The programme in the open events was of the same number and kind as on the first day. There were five events for county shooters—two at 15, $1, and two at 20, targets $1.40 entrance. The fifth was a team race, open to any four men of any county in Maryland; $35 to first, $15 to second. There was a gold medal for the high average of the two days' open events at targets, which was won by Dr. H. E. Lupus, of Baltimore, with the high average of 184 out of a possible 190. Yesterday his average was 175 out of 190. The third, fourth, fifth and seventh events he shot straight, and in the face of a strong wind shot the ninth, tenth and eleventh straight, making in all seven straight events.

A. H. Fox, of Philadelphia, broke 104 out of 105 to-day.

Possibly the event that caused the most interest was the county shoot, which was captured by Anne Arundel two teams, taking both first and second prizes.

The teams' membership were: Anne Arundel first team—Basil, Cantler, Tydings and J. A. Watts. Anne Arundel second team—Strange, Levy, Coffin, and Knackstedt. Prince George's County—Harrison, C. Watts, Baldwin and Cronmiller. Prospect Park Club, Baltimore County—Hart, Medinger, Brehm and Upton. Cecil County—Miller, Wilson, Jackson and Cole.

Basil was the only one in the county events who shot 25 straight. It was his shooting that gave the first Anne Arundel team the first prize of $35. Levy and Coffin did the best shooting for the second team of Anne Arundel county, which, until the last two events, were behind Baltimore county. The second prize was $15.

Master Jesse D. Poplar, the seven-old-shooter from Havre de Grace, eclipsed his record of yesterday.

The tournament was more largely attended to-day by spectators, among whom were many ladies. Scores:

Third Day, July 25.

The competition of the third and last day was at live birds. There were six events on the programme, of which four were miss-and-outs. The birds were fast. The unsettled look of the weather prevented a large attendance.

In the Bay Ridge Handicap of 20 birds, John J. Levy, of Annapolis, won the sterling silver trophy, valued at $50. There was the keenest competition in this event. Great credit is due Mr. Levy, who is a beginner. His pointing was excellent. While he used his second barrel occasionally to make it more than sure, it was but a few times necessary. For the 20 birds he tied straight with Ben Eick, of Chicago, and Ridgely B. Bond, of Jessups, Md., and on the shoot-off his fifth bird was a most difficult one and fell dead just out of bounds. Ben Eick had failed on his fourth bird and Bond failed on his fifth, Levy and he each shooting 24 straight. Bond winged his sixth bird with one barrel and failed, leaving Levy the winner of the trophy, while the three divided the first money, $50, less cost of birds. The second money, $30, was tied and divided between J. C. Hicks, of Baltimore; Millard Cantler, of Annapolis, and Capt. Malone, each killing 19 out of the 20 birds.

Hicks had the largest straight score of the day, killing 27 straight birds, and he, with Levy, had the best average for the day, the former killing 50 out of 52 birds, and the latter 25 out of 26 birds. Capt. Malone far surpassed the rest in pointing, for he killed 18 birds with only one barrel each. Ben Eick's shooting could not be called his usual form, for he has been shooting a Winchester gun for three years, and to-day was his first trial with a Parker.

A. R. Middleton, of Baltimore, and A. W. du Bray, of Cincinnati, tied for third money, $20, which was divided, each killing 18 out of the 20 birds.

Jesse D. Poplar, the seven-year-old shooter from Havre de Grace, Md., was not up to his usual form to-day, killing 15 out of the 20 birds trapped, but his pointing on those killed was excellent, as he only used one barrel. He complained that his arm troubled him from soreness on account of his recent shooting. He certainly is a wonder, and bids fair to be the coming crack shot of the world, for his eye and nerve are perfect, and his judgment excellent.

The live-bird events were handicaps, high guns. The scores:

Miss-and-out No. 1: Hicks 13, Eick 2, Bond 10, Malone 4, Arm 1, Fox 13, Du Bray 13, Nutting 12.

Miss-and-out No. 2: Hicks 9, Eick 8, Du Bray 2, Dr. Funk 7, Malone 9.

Miss-and-out No. 3: Hicks 4, Eick 3, Malone 4, Du Bray 4, Nutting 3, Dr. Funk 3.

Miss-and-out No. 4: Hicks 1, Eick 7, Malone 7, Du Bray 7, Nutting 6, Bond 4.

Miss-and-out No. 5: Du Bray 2, Eick 4, Malone 4, Nutting 4, Dr. Funk 3, Hicks 4.

Bay Ridge Handicap, 20 birds, entrance $10, birds included; three moneys, 50, 30 and 20. Besides first money, the winner received a sterling silver trophy, value $50:

Hicks, 31 .....2122202222222222222222—19

Arkansas State Shoot.

Again has Father Time made his circuit of the seasons, and the twelfth annual tournament of the Arkansas State Sportsmen's Association dwells with the pleasant memories of the past. This is the fifth in succession that the writer has attended. The shooters number about the same each year. While never a record-breaker in this respect, those who come almost all shoot the entire programme through.

The weather, while warm, was all that could be asked at the season, being bright, clear and generally calm. As on last year, the air and roads were full of dust. It is no trouble to dust one's pants at Pine Bluff in July.

Mr. De Long represented an automobile manufacturer. He treated a number of the visiting sportsmen to the delightful sensation that only riding in an auto can create.

In the absence of Taylor, Messrs. Hawkins and Elliott tried not to let the calm of nature be too placid. They succeeded very well indeed, considering the gigantic task of filling Taylor's place.

Mr. W. B. Powell, of English, is a royal good fellow, of the old school. Always shoots an average of 13, no matter what targets, good bad, fast, slow, high or low. If he gets 14 once, he is sure to get 12 next time. If a straight is made on 15, then an 11 must intervene to average 13.

I heard some remark that Farmer resembled Elmer Shaner somewhat, neither having but few gray hairs on top of his head. Pemberton shot a great race up until the individual medal race the last day. He then went all to pieces. I was just pointing him out to a few friends as the pride of Little Rock. In fact, explaining that he was the Rock, the rest being the Little. As John swung his artillery into action and missed 7 out of 9, the parties turned away in disgust, thinking I had been "stringing them." After this event no one saw him the remainder of the shoot. I presume he went straight to the train and home, or possibly he has never reached home, which papers please copy.

Coles certainly shot in remarkable form. He told me it was his brother who shot at Shreveport. As he said it, it is so, but they look more alike than twins.

How those two Tennesseeans, Brady and Joyner, did shoot! They kept it up continually. No one envied their good fortune, as both are gentlemen of the type it does one good to know. The meeting of such men is to me not only the best but the most enjoyable part of our tournaments. Both are amateurs, who have no thought of their winnings, yet strive hard to make a good score for the pleasure it gives. Abe Frank was sadly missed. Abe is no financial contributor, but his antics, tricks of ledgerdemain and general fund of good humor always preclude any stagnation of spirits. Messrs. Christian and Harris, scorer and referee, respectively, were quick, accurate, reliable, all the positions required. And the cashier, assisted by Hillman, left nothing to be desired in the box office.

In the individual medal contest the shooting was hard. De Long and Dr. Gallagher tied on 45 out of 50. As the tie was to be shot off, it was a foregone conclusion that De Long would win, as it was expert against amateur, experience against the lack of it. The Doctor shot a much better race than might have been expected. Twice he had the lead, but each time failed to hold it. His shooting was well timed and steady, and lacked nervousness. Once De Long took the lead, it was never relinquished. He shot a steady, winning gait, like the fine shot he undoubtedly is. Coles bitterly disappointed his admirers in the medal race. The fine form in which he had been shooting all day placed him as an odds-on favorite. He fell down badly, however, getting only 18. He at once resumed his regular work in the tournament by breaking 20 straight. I think Mr. Loyd is right when he says Coles is one of the very best tournament shots in the South, but a poor medal or individual match shooter. Sandy tried to give all kinds of excuses, such as wanting to cure his friends of betting on him, etc. The fact is, as Howells put it, "His sand run out." He is a good, big, whole-souled fellow, an enemy to himself, but a friend to everybody else. The same may be applied to Powell.

Lloyd was sadly out of form. Always one of the very first and a leader here. In this meet his shooting was a wreck of its former self. He is not "all in" yet by any means, and the future will yet record some of his achievements with the gun. Clements was not as great as formerly, but he did remarkably well, considering all he was engaged in. He was constantly fixing traps or pulling, selling shells or doing something for the shooters' welfare. Taking all in all, he stood well up in the race.

Speers shot his usual gait. He is a steady 85 per cent. shooter. He did one commendable thing in taking Farmer, Powell, Litzke and ye scribe out to the theater and giving them their first "pecan flappe." This is probably what Farmer thought of when he made his sudden exit.

Probably Howells and Arnold showed greatest improvement. Both did remarkably well. Howells is now a star and Arnold will be.

Conrey is a new man at the trap, as are Inman, Ambrose, Cook, Bunch and Mathews. They stood well up all the time, and are comers. Broadway, I mentioned last year; he did not shoot as well this, yet stood high in the average. He will show better speed next time at Jonesborough.

Mr. Litzke made the first straight of his life in this tournament. On the advice of John Pemberton, Paul cut off part of his "pull" and began at once to do better.

One peculiar feature was a squad from Little Rock, consisting of J. K. Thibeault, his two sons and nephew. They all could shoot, too, from senior to junior, all over 84 per cent. Three are beginners.

The grittiest shooters there were Lloyd, McKenzie, Cook, Sorrels and Inman. Though constantly shooting "out," they stayed in to the bitter end. This is the way to learn. Sorrels has only himself to blame, as he is now a good shot.

Vick was one time high man, another time low, and it was a penny's toss as to which it would be.

As to the visitors, I have already mentioned the very fine shooting of Joyner and Brady. Hawkins and Burke are two excellent fellows and good shots. In any shooting tournament they will be close to "shooter's row," while Avery will be "thar or tharabouts." This man well represents his company, as does Mr. D. Elliott. The latter did not shoot up to his record, but got going toward the last. He is a very graceful shot, and the ladies can't see any one else. In the Winchester trio, Franz, Hillman and Elliott, are a trinity that certainly coalesces well to the interests of the company. Elliott does the shooting and disturbance raising generally; Frenz, the quiet, suave, account keeping and mixing, while Hillman makes friends of every one he meets just because he can't help it. "There's not a better boy than that, sure," was often heard.

We like to see such men as Dr. Williams take part. He is as enthusiastically fond of it as a child of a new toy.

Association Meeting.

The Association met Tuesday night, with President J. B. Speers in the chair. Routine business was soon finished, and then the question of next tournament introduced. Three places were supported—Little Rock, Jonesborough, and Pine Bluff. The latter place wished it to be held in some other city if it could be properly handled. On a close vote of 6 to 5, Jonesborough was selected against Little Rock, time and manner to be decided by the home club.

The election of officers was then taken up. Mr. Gorden Mathews, of Jonesborough, was selected President. Mr. Mathews is quite a young man, and thought one older and more experienced would do better, but the Association ruled otherwise, so he will sustain the honors. Mr. W. B. Powell, of English, was unanimously elected Vice-President. Mr. Paul R. Litzke, of Little Rock, was elected Secretary. This is Mr. Litzke's seventh successive term in the same office, and this speaks more than words of his ability and labors for the interest he has in charge. In my report last year I remarked that it was like to becoming hereditary, Mr. Litzke seems now still nearer forming a dynasty.

A young man of sterling integrity, Mr. E. A. Howell, was re-elected Treasurer. One look into Ed's eyes of honest brown, would convince any one the funds are safe.

Pine Bluff Sportsmen.

The Pine Bluff boys are hard to excel as entertainers. They do all in their power to make the visitors feel at home. If an error is ever made, it is of the head, not of the heart. The sole aim was to do just what the shooters wished. Long may they live and prosper. If the writer may never again meet the boys of the City by the Bluff, here's to them and theirs in the toast of Rip Van Winkle, "May you live long un' been 'appy." May the sunshine and shadow of life so gently blend that when comes the final summons, may it be nature's low sweet whisper of love into the ears of a true sportsman, as she kindly draws the wanderer home.

First Day, July 8.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

The Hamilton Gun Club.

Hamilton, Can., July 21.—Appended please find Saturday's scores at Hamilton Gun Club traps. This was undoubtedly the worst day's shooting weather we have had for a long time, and the attendance was drowned out, only a few of the old ducks being web-footed.

Programmes for the D. T. and G. P. Association tournament will be ready in a week or ten days:

T Upton, 18	6	19	..	G Crawford, 15	7	8 ..
Dr Hunt, 18	5	17	..	Dr Wilson, 19	5	14 ..
W Work, 17	4	15	8	E A Clifford, 15	4	15 ..
J Hunter, 20	2	12	..	C Brigger, 22	8	15 ..
W Bowron, 15	6	17	..	Ben It, 18	..	15 ..

No self-respecting member put in an appearance, and the dead game sports shot it out alone.

Ben It.

Peters Cartridge Company Tournament.

Pensacola, Fla.—The two days' tournament of the Peters Cartridge Company, held here on July 17 and 18, was one of the most successful trapshooting events ever given here. Mr. Maurice Kaufman was the manager, energetic and genial always. Mr. John L. Saunders managed the office work.

Harold Money took first place among the professionals for the two days' average, breaking 316 bluerocks out of a possible 350. He was presented with a handsome gold locket. Bleeker Forbes won the gold medal offered by the Peters Cartridge Company for the highest average in the amateur class. He broke 312 out of a possible 350, falling only four behind Money, and leading all of the other professionals. Muldon was a close second to Forbes, and besides Money and Huff, he led the professionals as well as the amateurs.

First Day, July 17.

To the Maine Trapshooters.

Dunbarton, N. H., July 22.—When issuing a challenge for a match of any kind, the challenger usually has something to say as to conditions.

I will shoot the following match against any man in Maine who has been a legal resident of that State for six months prior to date, paid experts (if you have any) barred.

One hundred single bluerock targets per man at 16yds. rise, targets thrown from magautrap under American rules, both men up. This match to be for $100 a side, and to take place on grounds of Concord Gun Club, Concord, N. H.

Should I win, I will shoot a similar return match on the grounds of any gun club in Maine which my opponent may name, within two weeks' time after the first match. I have placed in the hands of F. W. Sanborn, secretary of Concord Gun Club, $25 forfeit to bind this match. Whosoever accepts must cover this amount. Balance of stakes to be put up on morning of match.

As soon as I am notified of the acceptance of my offer, I will name date and time of contest, and give my opponent not less than a week's notice.

Friend See E. See kicks at my calling him a stranger and says I can get better acquainted at the traps. Therefore, I would prefer See E. See as my opponent. Should he be inclined to squeal as to this manner of a better acquaintance, he can send some other representative of the Pine State.

Now, you Maine men, do not fall over each other in your rush as to who shall have the privilege of doing me up. The money is here, and all you have to do is come and win it. If the verbosity of my offer is beyond your comprehension, you must issue a challenge on your own account; make it broader if you will—open to all creation—and you may get such a flood of acceptances that you will all grow gray-headed before the end is reached.

If what I have said does not please the Maine men, and also my old-time Worcester friends, I give it up. There is no use trying to make them happy in this world.

C. M. Stark.

Concord, N. H., July 21.—I hold check for $25 on Mechanics' National Bank of Concord, as forfeit on above challenge.

Frank W. Sanborn, Sec'y C. G. C.

Watertown Gun Club.

Watertown, Mass.—The Watertown Gun Club will hold an all-day tournament Friday, Aug. 29, the day following the Interstate Association tournament at Haverhill. The programme consists of twelve events—six at 15, four at 20, two at 10 targets, with a total entrance of $11.40. Rose system to govern division of moneys. There will also be five average moneys, aggregating $20. Targets 2 cents each.

Manufacturers' agents are invited to display their goods and shoot for price of birds only, excepting in specified events.

Shooting on regular programme to commence at 9:30 sharp. Traps ready for practice at 9 o'clock. Lunch and ammunition obtainable on the grounds. To reach grounds take B. & M. R. R., or Boston elevated to Watertown; thence by Waltham line of electrics to Hersom street. Programmes will be issued this week, and further information may be obtained by addressing

Chas. H. Philbrook, Acting Sec'y.

In his book, "With Rimington," Mr. March-Phillips tells a couple of good stores of Tommy Atkins. One of them was getting out of range of a hot Mauser fire at his best pace, when his officer angrily called, "Why the devil are you running?" "Because I ain't got no wings," was the perfectly sincere answer. At another time a soldier was telling his comrades round the camp-fire of a particular engagement, painting it luridly, as Tommy often will: "The Boers was a rippin' into us, and rippin' into us, with Mausers." "But why didn't ye get behind a ant 'ill?" some one interrupted. "Ant 'll, he blowed!" said the story teller, "there wasn't enough ant 'lls for the orfficers!"—Shooting Times.

Scene in the Law Courts: Stout carman giving evidence—"Well, my lord, I was drivin' down Old street, when I see this er feller a-pullin' of 'is dray across the road. 'Get out o' the road, yer silly ass,' I calls out to 'im, easy like, same as I might to yer lordship there." (Sensation.)—Shooting Times.

Winnipeg Exposition Tournament.

WINNIPEG, Man., July 25.—A three-day target tournament was given here this week as one of the features of the annual Winnipeg Industrial Exhibition. The meet was nominally under the management of the local gun club, on whose grounds it was held. It was more than a success, and satisfactory from every point of view. There were more American visitors, more home shooters and a better atendance all through than ever before. In fact, the awakening of interest in trapshooting in this vicinity within the past few years it little less than wonderful, and this bids fair to become the center of activity along that line on the American continent.

W. R. Holland, of the Winnipeg Gun Club, managed the shoot, and H. C. Hirschy, of St. Paul, handled the office work, both acquitting themselves with such marked ability that they were presented on the last day with testimonials of appreciation from the club.

Targets were thrown from two magautraps and three expert traps. Liberal purses were added, and the Rose system of division prevailed. The weather was fine throughout, but this brought out a local condition in the famous midsummer mirage of the northwestern plains which set all the boys guessing on the flight of targets, and resulted in some very low averages by men who otherwise rarely drop below the 90 per cent. mark. Gilbert, Hirschy and Sprague won the top places and shot far ahead of all competitors, Messrs. Gilbert, Hirschy and Riehl being barred from participation in purses or prizes. The so-called sliding scale handicap system was used, and proved, I believe, entirely satisfactory.

Of special honors and prizes, T. H. Sprague, of Grafton, N. D., on the first day won the Smith gun event with a score of 50 straight. It was a splendid win, upon which he is to be congratulated.

The contest for the international championship was won by Harry Morrison, of Minnesota. He tied with O'Connor and Gilbert on a score of 49. Gilbert being barred, the remaining two shot a tie on 23, and on the third string Morrison won. Score 23 to 22.

The Western Canada championship at 50 targets was captured by W. G. Simpson, of Winnipeg; score 46. Mr. Simpson has thrice won this distinguished honor, and he is a gentleman upon whom honors rest easily.

The international team race for the possession of the flags of the two greatest powers on earth were for the third consecutive time carried away by the American team.

On the first evening of the meet a banquet was tendered at the exhibition grounds to the visiting shooters. Toasts were responded to by Messrs. Whitla, Putnam, Simpson, Holland, Dr. Ings and others for the Canadian side, and by Messrs. Sprague, Gilbert, Hirschy, Riehl, Hale, Duis and Seymour for the Americans. The keynote of the meeting was the better, broader, feeling of fellowship and international courtesy steadily growing between the people of the Anglo-Saxon race, and it was an altogether happy occasion.

In the matter of customs inspection and duty, everything possible was done to facilitate matters for the visitors from the States.

Detailed scores of the week's events follow:

First Day, July 21.

Gambell	23	16	39				

Dover Sportsmen's Association.

DOVER, N. H., July 25.—Only seven members of the Dov Sportsmen's Association showed up at the weekly shoot this aft noon. The scores were as follows:

	Shot at.	Broke.		Shot at.	Bro
F F Wentworth	70	60	Smart	50	2
St Evenes	75	42	Henry	20	1
N C Wentworth	90	46	E Wentworth	10	
Hallam	80	34			

PUBLISHERS' DEPARTMENT.

The Savage Arms Co., of Utica, N. Y., are now ready to s ply orders for the Savage Micrometer Wind Gauge Hunting a Target sight. It is a rear sight, simple of construction, capa of the most precise nicety in exact adjustments, and adap to all makes or rifles which have a rear slot in the barrel. T elevation is changed as desired by turning an elevating scr and allowances for windage, right or left, are made by turni a wind gauge screw. It is the invention of Mr. Arthur W. S age, who invented the Savage rifle.

Dr. H. E. Lupus, of Baltimore, Md., at Mr. J. R. Malon midsummer tournament, held at Bay Ridge, A. A. County, M July 23 to 25, won high average in the target competition, wh occupied the first two days. The first day he scored 184 out 190; the second day, 175 out of 190. He used U. M. C. ammu tion.

Guns, Revolvers, Ammunition, etc.

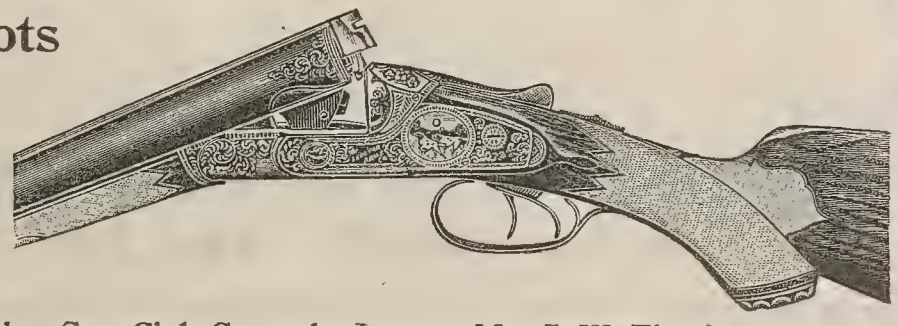
5532 out of 5765
TARGETS WITH
DUPONT SMOKELESS

Since Jan. 1st Fred Gilbert has broken 5532 OUT OF 5765 TARGETS—nearly 96 per cent.

Such continued good scores prove the reliability of DUPONT SMOKELESS POWDER.

E. I. DU PONT DE NEMOURS & CO.,
WILMINGTON, DEL.

UNV The MAN
Who Shoots The Lefever.



At the Brooklyn Gun Club Grounds, June 7, Mr. C. W. Floyd, an amateur of New York City, shooting his

Lefever Arms Co. Ejector Gun,
Broke 230 out of 240, making a run of 105 straight.

No gun, Foreign or American, will outshoot THE LEFEVER. It will please you. Send for Catalogue.

LEFEVER ARMS COMPANY, - - SYRACUSE, N. Y.

"MY TRAP SCORES"
WILL ENABLE YOU TO
Preserve Your Scores.

A POCKET trap score book containing 50 pages of score sheets and the Interstate Association rules for target and live bird shooting, and for shooting under the Sergeant system. The cover bears the title "My Trap Scores," and the pages, in number and form, are arranged to make a complete record of the shooter's doings at the traps. The pages are ruled to make a record of the place, date, weather conditions, number of traps, number of shooters, gun and load used, events, etc. The score sheets are ruled for 25 targets. Bound in leather. Price 50c. postpaid.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

When writing say you saw the ad. in the "Forest and Stream."

Guns, Revolvers, Ammunition, etc.

The World's Greatest
Shooting Record

Fred Gilbert, of Spirit Lake, Ia., since Jan. 1st, 1902, has shot in competition at 5765 targets, breaking 5532 or 95.9%, using a

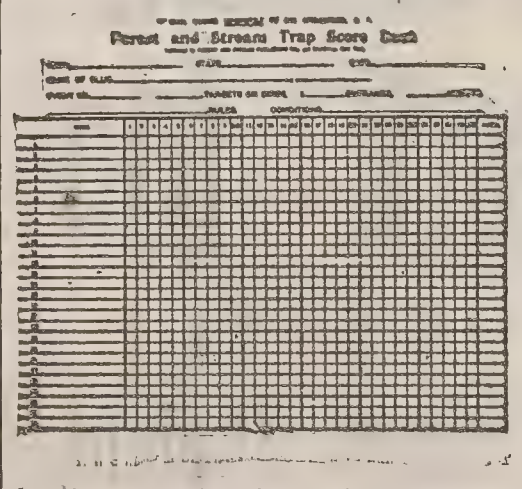
FOREST AND STREAM
Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1.

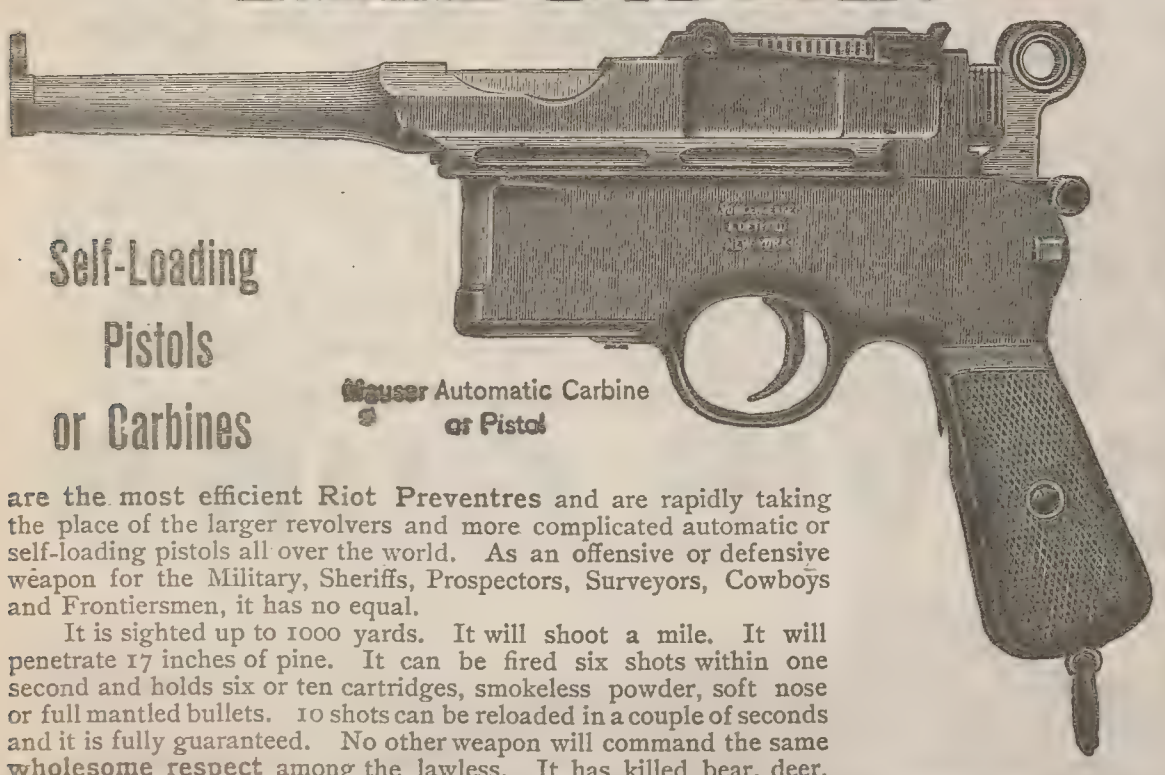
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same wholesome respect among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W. GREENER.

The UNION METALLIC CARTRIDGE CO.

313 Broadway, New York. BRIDGEPORT, CONN.

WINCHESTER

High Velocity Low Pressure Cartridges.

.45-70, .45-90 and .50-110 Calibers, Loaded with Smokeless Powder and Soft Point Metal Patched Bullets.

FOR BIG GAME SHOOTING AT DISTANCES UP TO 200 YARDS.

We are now able to furnish, through the regular trade channels, the above new Winchester High Velocity, large bore, cartridges for Winchester Model 1886, .45-70, .45-90 and .50-110 caliber rifles. These cartridges, although they give high velocity and great muzzle energy, develop only slightly increased initial pressure. By their use, owners of Winchester Model 1886 rifles of the calibers mentioned can greatly increase the power of their guns. For fine shooting, a slight alteration of sights may be necessary when these cartridges are used. When ordering new rifles in which it is intended to use these cartridges, it should be so stated in the order, so that the proper sights may be fitted.

The following table shows the muzzle velocity, penetration and trajectory of these High Velocity Low Pressure Cartridges:

Name of Cartridge.	Weight of Bullet, grains.	Velocity at Muzzle, Feet per second.	Penetration in ⅞ inch dry pine boards at 15ft. from muzzle. Soft point bullet.	Trajectory. 100 Yds. Height at 50 yds. Inches.	Trajectory. 200 yds. Height at 100 yds. Inches.
.45-70	300	1875	13	1.47	7.40
.45-90 Winchester	300	1980	14	1.41	6 63
.50-110 Express	300	2225	12	1.07	5.82

With the great increase in velocity which these cartridges have, their trajectory is proportionately flatter, and, at 200 yards, their remaining energies are practically the same as those of the small caliber high-power cartridges. It is a desirable feature of these cartridges that they can be used by persons who fear to use the high-power small caliber cartridges on account of their great range. These points considered, and the fact that the results are obtained with bullets of large cross section, make these cartridges unsurpassed for striking and killing power at the distances at which most big game is killed.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1902, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 9, 1902.

VOL. LIX.—No. 6. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Every believer in manliness, and therefore of manly sport, and every lover of nature, every man who appreciates the majesty and beauty of the wilderness and of wild life, should strike hands with the far-sighted men who wish to preserve our material resources, in the effort to keep our forests and our game beasts, game birds and game fish—indeed all the living creatures of prairie, and woodland, and seashore—from wanton destruction.—Theodore Roosevelt in "The Deer and Antelope of North America."

PLAY.

PLAY, amusing, exercising and recreative, is essential to the wellbeing and development of mankind, mentally and physically, from childhood to the years of senility. Indeed, of the phenomena of all animal life, none other is more conspicuously or more universally displayed. To the youth, in the formative stages of mind and body, it is a factor which is constant in activity and paramount in importance. It is a popular fiction that, with the advent of maturity, play should cease. It is not considered by the average man or woman that for every stage of life there is a befitting developmental diversion.

Adult men and women periodically need relaxation and recreation. In such manner do they best renew and repair their energies, dulled by workaday cares, or relieve the ennui of purposeless existence. To each stage of life there is some one or more forms of play best befitting it. Some of them are so well defined and established as to be considered as being conventionally standard. They may be obscured, in their play significance, by their nomenclature, though the golf and other games signify much the same to the adult that blind man's buff does to the child. One is recreative and diverting; the other is developmental and diverting. In each there is the dominant principle to excel one's fellows, to succeed better than one's opponents; to be distinguished as the conqueror among the conquered.

From the viewpoint of mature life, the play of children is commonly considered as being a frivolous and meaningless display of childish traits. That it is a wise and useful provision of nature for the development of the physical and mental powers of children is not commonly known. Yet by play, and play only, is the young of animals, man included, developed and educated by nature's most beneficent methods. A characteristic so universal cannot be meaningless.

Play, in most of its aspects, is mimetic of life's most serious activities. The play of puppies and kittens, while devoid of actual hostility, is a realistic counterpart of actual attack, defense and strategic maneuvering for advantage in destroying or capturing prey or enemy, such as is seriously applied in adult life. The play of the boy is similarly mimetic. The mass plays and individual plays of the football teams have all the elements of force and strategy, peacefully applied, that are used in actual combat.

Nearly every game that can be mentioned, if conceded to be a manly sport, has the dominating principle of competition, man against his fellows, which embodies the factors of greater physical force, greater mental resourcefulness, and a general manipulation of means to ends to insure success in life's struggle.

The playful competitions of childhood fit children for engaging in the actual competitions of youth. The playful competitions of youth in turn qualify for adult occupations. By engaging in competition with one's fellows, the limitations both of one's own powers and those of one's fellows, are learned; self-reliance and discipline are inculcated; the habit of initiative becomes characteristic; and respect is conceded and exacted when mingling with associates.

The best manhood is not attained where the powers and activities of youth are balked or entirely checked. In city streets, where boys are restricted in their natural inclination and opportunities to engage in wholesome play, their energies, so restricted, are sure to burst out in mischievous or lawless acts; or, if the restriction is passively accepted, the boy develops into a passive nonentity.

But the dormant, subserviently deferential boy, with no initiative or aggressiveness of his own, is not of the material of which the best men are made. The powers of mind and body are both developed by exercise. The best men and women are those who develop according to nature's own laws. No artificial system of mankind can improve on that of nature. Life is an endless competition. To engage in it at one's best, full capacity of mind and body should be secured. The play of the boy therefore is as importantly essential to him in his developmental life as the play of the man, be it termed golf, fishing, shooting, yachting, or what not, is to the recreative life of the adult.

THE TREE-PLANTING STATE.

THERE are not a few men who can remember the State of Nebraska when it was absolutely without timber, except in a few places along the streams. At that time, say thirty years ago, the wooded area of the State is estimated as having been only three per cent. of its area. The chief cause of this absence of timber is believed to have been the frequent prairie fires which swept over the land.

Not very long after the completion of the Union Pacific Railway settlements began to creep westward along the Platte Valley, and each farmer who made his home there planted a few trees, willows or cottonwoods. These trees acted as windbreaks, protecting from cold and snow in winter and from hot winds and consequent evaporation and injury to crops in summer. They were useful for shade, and after a few years began to yield more or less fuel to the land owner, a yield which in that treeless country was a matter of the very greatest interest to the settlers.

As settlements extended further and further, more and more trees were planted. Beside this, the prairie fires became constantly fewer; the tender seedlings were no longer destroyed in their first year, and from the stream valleys and the cañons which had long supported an ancient growth of trees and brush, this forest growth gradually began to extend itself up the sides of the ravines, and even to the prairie.

These conditions have been studied by Dr. Chas. E. Bessey, who, writing some years ago of the counties of eastern Nebraska, says: "In practically every case where one travels up the streams, passing out to the side branches, to the little temporary rills which water the upper basins, the trees are of smaller size and are much younger. It is a very rare occurrence to find large trees near the upper end of a forest belt. I have seen a few such cases, but their rarity is such that one is always surprised when they are found. The general rule is that near the upper limit of the tree area there are many shrubs, and mingled with them many young trees no larger than those which under cultivation are known to be not more than fifteen to twenty years old. * * * No one who has seen and studied the forest areas in eastern Nebraska will be able to doubt that they are spreading where they are given a fair opportunity, and are not prevented by man or his domestic animals."

At first practically all the planted timber of Nebraska was cottonwood, set out either for wind protection, shade or fuel, but in recent years many thousands of acres have been planted with orchards, and in not a few cases black walnut, black locust, red cedar, mulberry, and osage orange have been set out, to the great advantage of the land owner and the State.

In the northern and northwestern portions of Nebraska is the "sand hill" country, well known once as a hunting region, and later as a cattle country. Investigations made in the sand hills show that this barren region will support certain species of pine, which are doing well, and which will ultimately attain a size suitable for lumbering.

It is suggested that tree-planting reservations should be set apart in the sand hill region, and an extensive forest there would be likely to be of great value to the neighboring region, as modifying wind and temperature over a large part of western Nebraska. In the course of fifteen or twenty years such a forest would begin to yield a revenue from the sale of fuel and posts, and a little later it would furnish larger timber, and thereafter would be self-supporting.

LIVE QUAIL FOR STOCKING.

THE stocking of depleted covers with quail brought from other districts has been an important factor in restoring and maintaining the game supply in several States. Numerous individual owners of shooting grounds, game preserving clubs and State game commissions have in times past secured thousands of birds and put them out on private and public lands for private and public benefit. When the Lacey Act was adopted by Congress, it was hailed by many persons interested in this work of restocking as a measure which would enlist the co-operation of the Federal Government in the restoration of depleted game grounds. The text of the act declared: "The object and purpose of this act is to aid in the restoration of such birds in those parts of the United States adapted thereto, where the same have become scarce or extinct, and also to regulate the introduction of American or foreign birds or animals in localities where they have not heretofore existed."

But any notion that the restoration of the game supply would be advanced through the agency of the Department of Agriculture has by this time been dissipated. No game birds have been brought into the country from foreign lands by the Department, nor have any American game birds been transported from regions of abundance to those of scarcity. On the contrary, the Department has interfered in a manner which is claimed to be wholly arbitrary and without warrant of law in various private enterprises of live quail transportation for stocking purposes. By what those who feel themselves aggrieved characterize as a sheer assumption of an authorization which the Lacey law nowhere contains, it has interfered with a lawful traffic in live game, and by the seizure of such quail passing through the States has thwarted numerous attempts to restore shooting.

The business of transplanting quail has in past years been conducted on a large scale by a New York city dealer, who has acted as an agent for obtaining and forwarding live birds to a large number of clients, among them many well-known game associations and the New Jersey Commissioners. The birds have come from the Indian Territory, whence, under the existing United States statute relative to game, their export is not forbidden; but United States marshals, acting under the direction of the Department of Agriculture, have seized the birds en route, and practically broken up the business of quail transplanting. Now one of the dealers in live quail whose interests have been affected, has sent to the FOREST AND STREAM for publication an advertisement calling on the sportsmen of the country to secure an amendment to the Lacey Act, to permit the transportation of quail for stocking purposes. But if the Lacey Act now contains no provision respecting the transportation of live quail between the States, no amendment of it is required to permit such transportation. If the Department of Agriculture in its present interference with live quail transportation is acting without authority conferred by the Lacey Act, to amend the Act would not reach the Department, unless the amendment should be so worded as to prohibit interference by the Department.

On the other hand, if there is any provision of law under which the Department acts, this should be made patent to the understanding of the sportsmen who now feel aggrieved because they cannot obtain the birds they want for stocking.

The mosquito pest at a Long Island town bordering a salt marsh has been abated by a system of some five miles of shallow ditching, which by removing the standing water left from high tides has destroyed the breeding grounds. There are scores of places where some simple action like this would materially add to the comfort of living, to the value of real estate and to the prosperity of towns; and the public is gradually being educated to a point where mosquito-plagued places will work out their speedy salvation.

The Sportsman Tourist.

The Sea Ghost of the Catskills.

The sea ghost haunts the Catskills in the night
When to the surging pines the forests hark
And tides throb dimly in the pale moonlight
Up from the valley, fathoms deep in dark.
At morning on the hills the mists roll in—
White waves of gossamer, light crests flung free—
Deep as death is and as the air is thin,
Till all the world is in the phantom sea.

On rock-bound tablets is the record writ:
Once in the lowland was the ocean's bed,
Rose these sheer mountain steeps to limit it
With rugged shore lines in those æons dead;
And when the sea its mighty arm swept back
Down through the Palisades from these far hills,
Receding waters plowed the Hudson's track
And left a silver trail of lakes and kills.

In what dark kloofs the mermaids combed their locks
Who knows, who plucks the pale green maidenhair?
Their shells are fossils, bedded in the rocks,
And speckled trout leap in the brooklet there.
The laurel's rosy tips of light are born
Where branched the coral slowly in the dark;
In what far cavern Triton's wreathéd horn
Wound merrily, oh, ask the meadow lark!

Before there rose the Indian camp-fires' smoke,
Or Hendrick Hudson brought his Dutchman crew;
Before Pan played for fauns and forest folk,
Lo, Pagan Neptune and his nereids, too,
Danced in these spectre waves that billow white
Up to the mountains' topmost purple coast—
Oh, watch and you shall see, by day or night,
Shaped in the Catskill mists, the pale sea ghost!

Mary Worswick.

Yellowstone Park from a Car Window.

In Two Parts—Part II.

The animals in the Park show unmistakeably that they know you dare not shoot, and seem to have very little fear of tourists. The chipmunks do condescend to run away, but not until the stage is close upon them, and then with much vituperation and flirting of tails. There seem to be two kinds, one slightly larger than the other, and these likewise appear to be of several ages, for one specimen we saw madly carreering along the road did not seem much larger than a walnut plus a tail.

Passing the toe of an old moraine, I caught sight of an animal about the size of a rat, which ran toward us for some distance and then sat up like a prairie dog and said "E——e" at us, with a note like an old-fashioned penny trumpet. The driver said it was a young hare, but admitted that he had never seen the animal before. As I pointed out that its ears were hardly larger than those of a rat, he abandoned that idea.

After consulting the Kid's Natural History, I am of the opinion that it is a kind of marmot which frequents stony ground. That animal has a short tail, and this we saw seemed to have no more tail than a guinea pig, but distance may have caused us to miss the tail. The other parts of the description seemed to fit all right. We found none of them in the adjoining green spots, but when we came to another moraine, there were the "stone marmots" again. [No doubt a pika or little chief hare (*Lagomys*).]

We arrived in time for lunch at a station on the shore of the lake, where we were regaled not too sumptously in tents of various sizes and purposes. It was here after lunch that some of the party boarded a small steamer to make an excursion on the lake. This is a sort of side show, of which perhaps the less said the better.

The principal attractions here seem to be a beehive-shaped cone rising a couple of feet above the water of the lake, and full nearly to the brim of its orifice with boiling water. It is possible if you are a good fisherman, and the fish are blind, for you to stand on this cone and catch a fish from the lake, and without removing him from the hook or removing yourself from your stand, to cook him in the water at your feet. The other attraction is "paint pots," which are in great number hereabouts, and consist of pools of from five to twenty feet in diameter, filled to within one or two feet of the brim with what looks more like slowly boiling paint than anything else. Bubbles eight to ten inches in diameter grow on the surface, burst, emit a puff of steam and subside, while others immediately take their places. They are of course similar to the one we saw at the Fountain Hotel, but they are of different colors, some pots being pink, while others are more of a lead color, but all are hot and to two of them a melancholy interest attaches. They were, I should judge, about six or eight feet in diameter, and separated by a narrow path, rendered slippery by steam, and sloping on both sides to the pots. Two ladies, mother and daughter, attempted to pass along this division between the pots and the elder woman slipped and fell into the boiling mud. The younger clutched her clothing in an attempt to save her or drag her out, and the clothing giving way, she fell backward into the other pot. Both were got out as soon as possible, but not until the mother had been fatally injured and the daughter very seriously. I fear that greater precautious will have to be taken as the Park comes to be more generally visited, for it is full of dangers to the heedless and unwary. There was in this instance no necessity for going between the pots; the path has been blocked since the accident, yet as good a view can be obtained without any risk at all.

From this station the road lay for most of the distance either through the woods or along the shores of the lake, of which we had most gratifying views. It is incontestably a very beautiful lake, irregular in form and rimmed around with mountains. In fact it is so irregular in form that one cannot see more than half of it at once. It is almost as long and wide as Lake Tahoe, but with a much smaller area, and there are several islands breaking the surface, an advantage not possessed by Tahoe. In a short time it came on to rain with thunder and lightning, but we put off having the side curtains down, and very soon the shower passed away without doing us any damage. A doe and a young buck with antlers "in the velvet" crossed the road in front of the stage and stopped to gaze as we rode by. Misery and Mrs. *** wanted pictures of the buck, but he was too far off and too much in the shade to make that feasible, though not too far for us to see his big eyes with their expression of mild wonder.

On the other hand, when we left the wood and came out on the shore of the lake, we saw at close quarters several magnificent white pelicans. Pelicans and deer in such close proximity were something we had not expected to see; and there were seagulls also, almost two thousand miles from the nearest salt water.

Our driver had by this time become quite one of the family, and sang the most melancholy and moral songs in a "south-of-Market-street" voice—tenor, I believe. Then he spouted lurid passages from a "Morosco" drama in broken French-English, and informed us that he was an actor of some note, who when he was not driving the Yellowstone stage, trod the boards of that at Salt Lake and other centers of culture, in a number of dramas of which we had never heard even the names. He was an extremely patriotic American, because his father being English and his mother French, he naturally had to be something different from either. His songs were "gems," and I sometimes catch myself whistling the air of one of the longest and most lugubrious of them all.

He pointed out to us from a turn in the road, one of the best natural profiles I have ever seen. It was in the outline of the distant mountains, and was a most perfect and majestic profile of a sleeping giant.

Though this afternoon's drive was singularly devoid of discomfort or startling incident, the time passed very pleasantly away. In fact, it was something of a relief to have no wonders to be astonished at, and only beauties of nature to admire.

At dinner we all came together and had a jolly time comparing notes, though the others declined to believe that we had seen any deer with horns "in the velvet." After dinner we sat before a big fireplace, with a roaring fire of logs, smoking and talking until it was time for bed; and I was up betimes in the morning to get a view of the lake.

It was a beautiful morning, and had beside all the charm of novelty. I had not, of course, so far jeopardized my reputation as to see the sun rise, but it was still so early in the day, that I felt quite a virtuous glow as I gazed at him.

There was a boat house and it was full of boats, but they were not the boats of Bow River, and the oars were not "spoons" from Winnepeg; far from it, they were more like clubs from the wood pile. I think the man who kept the boat house built the boats and made the oars himself, and this and a lack of time determined me to forego a row on the lake. There were more fishing poles in racks around the room than I ever saw in one place in my life, for this is a great place for fish. Two of the members of the other party had a good deal to say at times about fishing, but the occasion never seemed exactly ripe and the fishing was for some reason always postponed for the morrow—always manyana. Leaving the Lake Hotel, the first "wonder" that we came to after a delightful drive through the woods over a smooth road was the "Mud Geyser." Now the Mud Geyser did really seem to satisfy the æsthetic longing. It was about the most infernal thing I ever saw. On the side of a steep mountain (a favorite location of geysers) was a hole about sixty feet in diameter and filled to within about ten feet of the lower side with water the color of lead. From it rose a cloud of steam so charged with earthy matter, for the very good reason I am going to state, that it too was colored like the water. The water itself was a seething mass of tumult, for from three openings in the side of the mountain three enormous jets of boiling spray were hurled at intervals of a few seconds each to the center of the pool, and as they gushed in rotation the water was never quiet for an instant, nor did the horrid grunting of these infernal pumps ever cease. The air was heavy with the clay-laden steam, and wherever it rested, on cameras, clothes or hat, it left its deposit of tiny specks. The Fountain was beautiful, and Old Faithful, both beautiful and grand, and the geysers big and little had each some claim to our attention and admiration; but the Mud Geyser was the most devilish nightmare of a thing I ever met in nature. What I can't understand is why somebody hasn't tumbled into it; I never saw a better chance. It actually seems as though it were expected that the Park would be visited only by people of sense; people with their eyes about them and accustomed to taking care of themselves. This is all very well, but it is possible to trust too much to the common sense even of the native, and beside the native there is the foreign contingent, which is accustomed to being taken care of. I say again I don't see why there are not more casualties.

Leaving the mud devil to its own devices, we followed a trail through some trees and came to another hole much smaller, where a single jet a couple of feet in diameter was thrown out into a similar pool at intervals of half a minute or so. I should judge that the water in this pool flowed back into the opening in the side, temporarily checking the escape of the steam, which presently gathering force, hurls the water out again into the pool in a never-ending succession of jets.

Regaining our "coach," we drove on, and after an interval of minutes, or hours, or something, came to the Sulphur Mountain, a hill of yellowish deposit on the mountain side, with a geyser boiling vigorously and throwing up clouds of the usual highly scented steam. The ground in the vicinity of the geyser is evidently hollow, and the team stopped some distance away, our footfalls sounding rather too sonorous for comfort as we approached it. The driver said somebody would go through the crust there some day, and we were very much inclined to agree with him; but it seemed to me that there were plenty more places of the same kind that he had not said anything about. For my part, I am afraid the bottom will drop out of the whole thing eventually, but I guess not in our time.

Our next stop was at the Cañon. This is one of the most curious freaks of nature in the world, and the road lies so near it that there are not only many fine views of it, but many opportunities to leave the coach and take one's stand on jutting points, like pulpits in a cathedral, where views such as no other section of the world can show are spread before and around one. One of the most striking features, the one which distinguishes it from almost everything else, is the wealth and variety of color. Nowhere in the world, save in the woods in autumn, can one see such gorgeous extravagance of color. Reds and yellows predominate, but most of the colors of the painter's palette are there. The Cañon lacks the massive and dignified grandeur of Yosemite, but its friable material on the other hand, has allowed the elements to sculpture at their will their most eccentric fancies. Pinnacle succeeds pinnacle in endless recession, all brilliant in the sunshine with the hues of the rainbow. Closer examination reveals a powdery waterworn surface which looks as though it would change its form with every shower—but why look closer? It is a picture which you need not approach too near.

The sides of the Cañon, which is something over a thousand feet deep, slope so rapidly as to make a descent to the stream at the bottom a matter of the greatest difficulty, probably an impossibility to the ordinary person. Slopes so smooth and unbroken hardly exist except in snow.

Our first real acquaintance with the Cañon was at a point where a series of steps and ladders led down to the Upper Yellowstone Fall. This is a fine fall of water, flowing in full volume over the edge of a cliff, and falling a hundred and nine feet. Not quite equal to Montmorencie in height, nor quite so wide, but a very beautiful fall. There are solid rocks and tall trees all about, for we are not yet really in the Cañon, and we stand and watch the rushing, tumbling waters until we are reminded that there are many other things to see, and that it will be a very good time to see them after lunch.

The Cañon as we take our seats in the coach shows by glimpses through the trees, and its varied coloring is heightened by the contrast with the dark green in the foreground, and we decide that it is not far from the greatest thing we have ever seen. Mrs. *** so far wavers in her allegience to Yosemite that she faintly admits that the Cañon is something finer than she has ever seen; but I in my obstinacy maintain that there is nothing on earth quite equal to Yosemite, though visions of Niagara and Banff both rise up to ask me if I am quite sure.

After lunch our wagon appeared again and took us for quite a drive along the brink of the Cañon, giving us ample opportunity to see it from every vantage point, and what is not always the case, time to photograph to our heart's content, with the result, I regret to say, that we got nothing that bore the faintest resemblance to the scene, the colors in the rocks being almost without exception non-actinic. The pictures hadn't even the merit of recalling anything we had seen.

As I am sometimes charged with an inclination to "kick," I would like at this point to record my satisfaction with the manner in which we were carried through the Park on this journey, and the efforts which were made by the stage company to give us a sight of everything possible under the circumstances.

The view up the Cañon was indescribable, for this gorge is most peculiar in its formation. The sides rising in steep slopes are cut into perpendicular ridges, and these again are worn by the elements into fantastic pinnacles which appear in series one behind the other, like the wing scenes in a theater, giving an amazing succession of varied forms, the effect being heightened to a marvelous degree by the lavish display of color. The scene is strikingly different from the ordinary, and excites the unbounded wonder and admiration of the average sightseer. While the Cañon as a whole appeared to me to lack something of perfection, there were points of view and special bits that called for nothing less than thorough admiration. One promontory in particular, which stood out from the side of the Cañon, like a gigantic pulpit of red stone, was large enough to hold a full convocation of preachers and gave a magnificent view of the Cañon both up and down, with the Lower Yellowstone Falls 308 feet high to hold the center of the stage.

At one point from the road was visible what one enthusiast christened the "Gate of Paradise." A sheer descent of ocherous yellow, too smooth for even a foothold, was terminated at the bottom by a transverse wall approximately a hundred feet high, broken by an opening opposite us which gave a view of the rushing river at the bottom of the Cañon, aqua marine and foamy white. The background of parti-colored cliffs rose towering to the skyline, terminating in a fringe of pines and cedars. This slope was bounded on either side by walls at right angles to the river, worn into varied outline and interspersed with occasional trees; and wherever the rock was visible it was of a brilliant reddish hue shaded with browns and darker red. Some of the rocks were even blue.

Perched on various pinnacles, but several hundred feet below where we stood, were the nests of eagles with the young ones clamoring for food as is their wont, and the old birds swinging in large circles far below us, few of them flying as high as our level. Looking down on eagles is a novel experience to most people.

We had spent a couple of hours very pleasantly driving along the brink of the Cañon, getting out at intervals to reach the various points from which the best views were to be obtained; when the driver drew up at the junction of two roads, telling us that we were close to the hotel and could either go back with him, or take a trail a little further down the road, and by its means reach the brink of the Lower, or Great Falls. We didn't find the right trail, of course, but all got safely at last to the railed platform at the edge of the fall.

The Great Fall pours over the brink in a solid sheet, filling the channel of the river completely, but just as it passes over the ledge it arranges itself in seven or eight flutings of different colors. One near the center, owing to a slight projection in the rock over which it passes, was

forced up into a sharp ridge, quite transparent, and the foaming edge of this ridge constantly fell over on itself in a lace-like fringe, ever changing, but never disappearing. This lace as the light passed through it looked like strung crystals, or the beautiful dew plant.

After dinner at the Cañon Hotel it was announced that numerous bears would be present in the gulch at the rear, and Mrs. *** and some other courageous amazons went out to beard them; but Mr. G., of the Chicagos, and I, held down a couple of chairs in the office, and left the more adventurous spirits to dally with danger in the immediate vicinity of wild bears. They returned after a short intervals with glowing accounts of numerous "silver-tips," which were "almost as dangerous as grizzlies, and nearly as big." Mr. G. and I congratulated ourselves on having escaped such dangerous acquaintances, but the ladies with great satisfaction announced that so far on the trip they had seen twenty-one bears. This idea of having the bears come to the second table at the hotel is all very well, but at a camp near the Lake Hotel a bear did not wait for the second table, but presented himself at the first, and, the campers having, as it were, absented themselves, ate up everything in sight, and broke most of what he couldn't eat. Therefore I maintain that a bear may become objectionable as a guest at a hotel, and unless something is done to dissuade him, may take possession of the establishment.

Our stop for lunch the next day was at the Norris Geyser Basin, and as soon as we arrived, or very shortly thereafter, the Chicagos were informed that owing to press of business and orders from headquarters, our coaches would have to turn back from that point, and all passengers proceed to Mammoth Hot Springs on regular stages. T. and G. kicked vigorously; they took a long walk in the blazing sun to interview the local agent, but he was too smart for anything of that sort, and knew nothing beyond his orders, which had reached him that morning. I think the telegraph was not available. At any rate, after some demur the Chicagos had to reconcile themselves. I was not particularly interested myself, as I had made no arrangement for a "private conveyance," and we had as it was fared much better than I expected. From incidental conversation and remarks overheard, I am of the opinion that this lunch station is the point of a general surrender of private rigs (so called), for unless I am mistaken, everybody who came had one, yet every one left on a regular stage. As it happened, it did not make the slightest difference to us, for the Chicagos, with whom we have to all intents and purposes been traveling since we entered the Park, and ourselves, just comfortably filled the stage alloted to us, and no stranger was added to the company.

The change to a new stage was not without its advantages. We had four horses and rolled along very pleasantly, the road perhaps not presenting any remarkable features, but shady and diversified and full of quiet interest. The first thing for which we stopped was to gather specimens from the foot of the Obsidian Cliff, a tall cliff of black volcanic glass towering at least 200 feet above the road. Fragments of all sizes have broken off and fallen from above, and a few of these we ventured to appropriate, there being no soldiers to prevent, and I think, by the way, though I am not sure, that this obsidian does not come under the prohibition. Anyhow, we got a piece, and this and a pebble from the lake shore, and a very small handful of "geyser eggs," are all we have to show as souvenirs of travel.

A mile or so further on we came to a turn in the road where it twists sharply past and around the base of a big boulder, which bears the appropriate title of the "Devil's Elbow." At this point the road is very narrow, and just clear of the narrowest places of all a wood team was stalled. We slipped through without difficulty, but the other stages some distance behind were not so fortunate. I think they were obliged to help the team out of its predicament before they could get by, and then, when all had passd but one belated one, the team started up, went a little way, and stalled again, this time effectually blocking the road. The passengers got through somehow, but only after a long delay. This, of course, we did not know at the time, but went gaily on our way unconscious of the misfortunes of our fellows.

Stopping for a few minutes at the Apollinaris Spring, we drove on to Rustic Fall, where Glen Creek crosses the road. Near this point the road has to be carried around a bluff on a series of concrete arches, making a view very much resembling scenes in the Tyrol. Soon after crossing these arches we passed between towering masses of rock sculptured by the elements in the prevailing "Yellowstone Order" through what is termed the Golden Gate, its brilliancy of color lending appropriateness to the name, and found ourselves in "Hoodoo Land."

I don't think I have ever seen nature in a comical mood before. I have seen her grand, weird, terrible, magnificent, gentle, smiling, beautiful or repelling; but never before did I experience as in Hoodoo Land, an irresistible impulse to smile, which grew and broadened into a hearty laugh.

Imagine a section of about half a mile square (it may be very much more or very much less) upon which a deposit of the "formation" has been laid to a depth of from ten to twenty feet. Imagine this crust blown up in its entire extent at one and the same moment, into fragments of every conceivable size and shape. These fragments have been thrown just far enough to disturb their continuity without breaking them into small pieces, and when they fell they simply placed themselves in the wildest, and at the same time most comical confusion. Fragments of every imaginable eccentricity of outline lay jumbled together, big rocks on top of little rocks, with apparently an utter disregard of the laws of gravitation. It is impossible to give in words a realization of the irresistibly comic aspect of the whole scene; there is nothing to describe, for everything was as nearly formless as possible, and nature in this square half-mile or so seemed to have bidden defiance to all her rules and committed every vagary her fancy had ever suggested. We left this "Witches' Playground" by what is called the Silver Gate, a portal similar to the one by which we had entered it.

A short distance from this point the driver stopped the stage, and suggested that we get out and walk across the "Terraces" and on down to the hotel. All got out except G. and myself, for having learned that sections in the Pullman could be secured at the Mammouth Springs Hotel, we thought it would be the part of wisdom to do it before the crowd on the stages behind arrived. We therefore stayed in and were driven to the hotel, passing on the way around the base of the finest of all the terraces, the Minerva, and getting a splendid view of it.

The formation of the Terraces is similar to that of the "quiet geysers" (which is a contradiction of terms, but will have to pass); a supply of hot water charged with silica, etc., finds a number of outlets in a small plain on the summit of a declicity. The water boiling up through these openings first forms a series of very shallow basins of considerable extent, varying from six to a hundred feet in diameter, and the silica and other minerals are deposited in lacelike patterns all over the bottom of these basins, while the margins are fluted in varied designs. These basins have in the course of time and by reason of the materials held in solution by the hot water, been formed all over the plain and at various levels, and many of them have evidently died of old age, their outlets being choked and their waters obliged to find another channel. My theory of Hoodoo Land is that it was a somewhat similar tract where all the outlets became stopped, and in consequence the steam lifted the whole thing at once, the material giving way with comparative ease, so that the fragments were not pulverized nor hurled any distance. I have seen a skillfully graduated blast work in the same way. But to return to the Terraces. The water in most of the basins wells up just fast enough to keep a constant series of small streams flowing through the flutings of the rims, and these streams cooling the more rapidly for their diffusion, deposit their burden as they flow along, the result being a series of terraces something like pulpits or the boxes in some theaters, arranged one above the other and apparently supported by clusters of columns. The further the water has to travel the less material it retains, so in the latter part of its course it forms long, smooth slopes which grow but slowly in comparison with the terraces above.

I should judge Minerva Terrace to be about a hundred feet above the road, and to extend over an arc some thousand feet or more long. It probably extended some distance below the road, but a ditch has been cut here, and all the water which flows down the slopes is caught in this ditch and conveyed away through a channel instead of flooding the whole space as it otherwise would. It is still hot enough to steam, as it flows along in this ditch. On the upper level I found it too hot for comfort, but unfortunately I had no means of testing the temperature accurately.

I enjoyed this view of the Terraces immensely, and am only sorry that circumstances did not limit me to a sight of the slope and prevent my exploring the level above. We drove slowly along, G. vowing vigorously that he would come back from the hotel for a picture of it. I was less enthusiastic on that score, for I knew that the lovely pearl hues, and the pinks, yellows and blues which made it so fascinating would fail utterly in the photograph, and I determined to refrain from perpetrating a caricature. G. did also, for circumstances so arranged themselves that he didn't go back there either.

On arriving at the hotel we were met by a placard to the effect that the Pullman office opened at 4:30. The driver had told us 2:30, so we had our hurry for our pains, and hadn't got a bit ahead of the people in the other stages, but we had seen the Minerva Terraces from the best point and to the best advantage. Finding that we had several hours on our hands, G. and I hadn't sense enough to sit down and keep quiet, but set out on what proved to be an extremely hot and rather uninteresting walk to rejoin the others of the party. On the way we passed the Pulpit and the Cleopatra Terraces, but they were by no means equal to the Minerva in size or coloring, and beside we could get too close to them.

The hotel at Mammoth Hot Springs is a tremendous wooden barrack, where we were treated very well, getting a very good dinner, but to my great disappointment they took away our tickets, instead of punching some more holes and leaving them with us as souvenirs, as I had hoped they would.

A ride of an hour or so brought us to Cinnabar, where we got our Pullmans, and a ride of another hour in the train found us at Livingstone, where some of the cars went east and some others were cut in to the west-bound train; and after a journey which carried us across the greater part of Montana, a little piece of Idaho, the length of Washington (or most of it), the breadth of Oregon, and half the length of California, we found ourselves at home once more without mishap.

There were a great many interesting incidents of this part of the journey, but only such as befall nearly every traveler, and this chronicle is probably already too long.

***

Two Glorious Fourths.—II.

The stars begin to pale above the eastern hills. There is a gentle rustling up in the pine tops. A faint chirp, here and there down the cañon, indicates that the winged heralds of the day are awaking. Up here, at the boundary line between the highest ranch in the valley and the untamed forest, I watch the day break. Dawn may come early, but the sun comes late between these narrow, steep, verdant walls. In the great valley eight miles distant, the sun has been shining for a couple of hours, and the busy farmers have stacked their first load of fragrant alfalfa, before the first bright ray glints upon my cabin roof. There is scarcely enough light to see what I am doing as I kindle my fire, put on the skillet and breakfast bacon and prepare the coffee. My noise has startled the little western house-wren that is raising a querulous brood under the protection of my eaves. She scolds me roundly for disturbing her rest at such an unearthly hour, for this house-wren is a sluggard among birds, and then concludes that it is too early to get breakfast for the birdlings, and settles back for a morning nap. But if she sleeps, other birds do not. The western yellow warbler is sending up his song from the hedge-fence just below, and a thrush and mountain song sparrow are caroling a duet in the timber back of the cabin. There is other music, too, that blends with the drowsy hum of the tea kettle. It is the silvery tinkle of a stream, trickling between mossy logs and splashing over slippery rocks. It is the song of a stream that is born of the melting snows of the Wasatch, a stream where the trout hide. I wonder if they know to what perils they will be subjected to-day, for the sportsmen will all be in the cañon. On the barley fields and in the hay stubble they will murder the innocent mourning dove. In the thickets by the brook, where the white blossoms are just beginning to turn into choke-cherries and service berries, they will unscrupulously break the law and decimate the broods of half-grown grouse. By the water they will try to inveigle the wily spotted ones with flies of every size and description, with worms, grasshoppers and what not. And the wily ones will swim under some black arching bank, or amid the submerged branches of some fallen tree, and laugh a fishy laugh at the fishermen, and only a few, young and foolish ones, will challenge the responsive reel, and eventually find their way to basket and creel. There will be picnic parties, and sparking bees, lumbering farm wagons and rubber-tired buggies, cold ham, salads, cheese, beer and champagne in the cañon to-day.

Thank the Lord, the good road ends at the ranch below, fourteen miles from the nearest settlement! Very few will come above that spot. The majority will halt miles below. The few who will come up to the narrows, to the mountains, will be sportsmen to the manor born. But, practically, the stream above the cabin will be my private preserve, and for to-day I shall make the best of it. I don't want to be at home if any straggling picnickers should happen to call. They would want to borrow the cook stove and the teakettle, to try my gun and bend my rod. More than all, they would drive away the songsters that, after a month's petting and feeding, I have coaxed into awakening me every morning.

What shall be the impedimenta for the day's tramp? Lunch is out of the question. It takes both room and time. First will be the rod and fly-book, with the accompanying creel. Next, and fully as essential for enjoyment as the tackle, a camera. Last of all the field glasses. The cabin has not been fastened since June 1, but on this particular morning it is locked and padlocked. The visitors will not bring letters of introduction, nor will they leave cards. I start on the trail up creek. Already I can hear guns cracking in the valley. I want to get out of their sound, before commencing to fish. Where the cañon is wide the path is arched with oak and maple. There are partridge tracks in the dust and chipmunks frisk about me in absolute indifference to my presence. Even the bushy-tailed ground squirrels sit up and watch me with much more curiosity than fear. The brook is fringed with willows, and as the sunlight comes down into the cañon, green-tailed towhees hop amid the shimmering leaves, and scores of black-chinned hummingbirds dart from flower to flower. The trail reminds me of a New England woodroad. It was built a generation ago, before the advent of railroads, by the soldiers, as a military highway from Fort Douglas to Fort Duchesne and the posts of Colorado. Now sheep herds, bands of cattle or a logging outfit are the only ones that make use of it.

The mountain walls draw closer together. The creek bed becomes more rocky. Pines take the place of oaks, and the little side cañons shine with the brighter green of aspens. The water no longer wanders peacefully between the willows. It dashes in cascades through granite walls and rests in long, deep, dark pools, where the trout lurk. Down the road toward me comes a coyote. We each respect the other's rights. He turns around and retraces his steps with as much dignity as he can command. I turn aside to an inviting pool and bring out my fly-book. For an hour it is enjoyable work—this casting and retrieving, this trial of cunning against the inherited instinct of ages. Sometimes the first cast over a pool or upon a riffle will bring a rise. More often I see the little trout dash away before me. It may have been my shadow on the water, the violent motion of a bough, the reflection of the polished reel, something scares them, and as I am not fishing for numbers, but only for a little mess, I do not care how many get away. There is a time in fishing when it takes one particular trout or salmon to put a sportsman on his mettle. These brook trout are little fellows, at best. They average scarcely a fourth of a pound dressed.

Again the cañon opens out and the water flows more gently. Here is the spot where I am to make the effort of the day. The creek is dammed by a huge, moss-grown, pine log and in the artificial pool lives the monarch of the upland waters. But willows and underbrush press close upon the tranquil stream, making a constant, cooling shade, also making it impossible to cast a line. Only the length of a leader can be dropped carefully over the log, and the plan of campaign must be well defined before commencing active operations. Day after day the experienced old fellow has eluded me. I have heard his splash, and once I had him hooked, but he knew enough to wrap the leader about a root and break away. Another time I was attracted by a magnificent clump of moss and liverworts that grew on the further side. Incautiously I raised my head, only to see a dark outline scurrying through the water to the protection of the cascade. Only one fly can be handled. The first trial is made with a cow-dung. Off comes my hat. I crouch beneath the shelter of the log and drop the fly, then carefully push out the rod and let the lure float gently on the water. There is a splash, but the trout jumped short. It is some satisfaction to know that he is still here. There will be no trouble with the small fry as they respect the king's domain. The cow-dung is worked for all that it is worth for a few minutes, but there is no second rise. Hot day, water clear as crystal; black gnat on No. 12 hook may fetch him! So I made the change. I did not hear the splash nor see the leap, but I did feel the sharp, nervous tug as the fly struck the water, and it was reflex action and no skill of mine that gave the wrist the proper turn at the very instant of fate. Glory! He was fairly hooked. Now to land him! No need of further concealment. I peer over the log and see the quarry struggling, fighting for liberty. He splashes the water, darts this way and that, and for a mere brook trout seems a monster. I can play the rod horizontally, but it is only six inches from the tip to the overhanging willows and a foul at this juncture would mean irreparable loss. The only thing possible is to work him down, around the lower end of the log, into rapid water and net him among

the rocks before the strength of the current adds to his own fury. All this is easier to plan than to accomplish. Now he sulks at the bottom, again he makes a break for the upper water and then, as he begins to tire, I gain on him, inch by inch. It is no longer a question of endurance, but will the tiny hook hold fast until I get him ten more feet? Slowly he follows, as I lead, along the log. Does he know that he is leaving forever the black pool under the willows that he is so loath to wander from its icy solitude? At length the end of the log is reached. He feels the thrill of the swirling, boiling torrent. He is not too exhausted for one final, desperate contest for life. He lashes his tail. The reel sings for an instant, then hushes responsive to a finger touch. Up flies the tip and the landing net is under him, just as the frayed leader snaps. The battle royal is ended. A two-pounder, the largest fish that I have taken from the stream in four years!

I may have spent ten minutes with him or I might have worked an hour. One takes no heed to the lapse of time; but it was high noon when I dressed him and put him in the basket. No more fishing to-day. The rod and creel are cached. Only the camera is needed on the old mountain road, that now strikes sharply upward toward the snowbanks under which are forests dense of pine, groves of quaking asp, and upland meadows, where the starting grass is but a background for blue lupines, scarlet paint-brush, golden poppies. Even now the air is chilled by the midsummer drifts. Little streams furrow their channels down the steep side hills, and the road, erstwhile a trifle dusty, turns dark and damp, and has a certain loamy, springlike fragrance of its own. Here, in the mud, I see the clear cut autograph of deer. Yonder the mother grouse has led her brood, and yet again some lynx or bob-cat, coming down with cautious step to stalk his prey, has left his padded imprint in the mould of clay.

Film after film is exposed amid these ever-changing scenes. At length a well-worn boulder, an arm chair in granite, invites rest. This is the limit of the day's excursion. Square in front of me, into the afternoon blue, rises a peak with naked crest. I have seen it hundreds of times before, but to-day it looks strangely new, strangely old. Yes, I know! It is old Graylock, reincarnated among the rugged fastnesses of the Wasatch. Old Graylock! Just twenty-one years ago to-day I saw him for the last time, as I went down the peaceful Housatonic Valley from North Adams to Pittsfield. So I sit and dream of every trout stream on both sides of the mountains from Rutland to Great Barrington; of the Deerfield massacre and childhood tales of the Green Mountain boys, until the lengthening shadows warn me that I am a long way from the cabin, and that an old man is invariably weary at the end of the day. Down hill I wander, light-hearted as a school-boy, down toward the glorious sunset. The one large trout and the eight little ones are an easy burden, and the camera and field glasses are unnoticed. In the gloaming I reach the clearing. The visitors, if there have been any, have departed. The damage that they have done will not be visible until morning. Soon the trout are frying in the pan and the teakettle is simmering over the coals. The door is wide open and I draw up my bed, so that I can look out into the starlight. The pine branches soothe me with their lullaby, and the whippoorwill sings "taps." I lie down devoutly thankful that from this Fourth I do not have to awaken in a Central American jungle.

SHOSHONE.

Natural History.

Nature Books Worth Reading.

Among the Waterfowl. By Herbert K. Job. Cloth, 224 pp. Profusely illustrated. Price, $1.35 net.

We are becoming so accustomed to the wonderful work done by photographers that the marvellous results which they attain no longer astonish us. The birds especially have been subjects for the photographer's skill, and within the past few years we have had many examples of the beautiful bird pictures that lens and dry plate will give.

Mr. H. K. Job's book, "Among the Water Fowl," possesses a singular interest to the sportsman and naturalist from the great number of its illustrations, all of which are photographs from life, and most of them by the author. The book is divided into five parts, whose happily chosen titles are: "The Submerged Tenth," treating of the grebes and loons; "Modern Cliff Dwellers," telling about gannets, guillemots, auks, puffins, kittiwakes, etc.; "Ocean Wanderer," the shearwaters, jaegers, petrels and phalaropes; "The White-Winged Fleet," that is gulls and terns, and last, "Wild Fowl of Wild Fowl,," treating of the true wildfowl, or the ducks and geese.

The volume, which is written in very pleasing style, tells the story of such adventures as were had in taking the 100 pictures which make the book so beautiful. The style is pleasing and will attract, but after all the great beauty of the book is found in the splendid photographs which illustrate it. An astonishing amount of time and labor must have been required to take these pictures, which unquestionably represent the trips of many years. The author very truly says: "Far more skill and resource are required to photograph a wild creature than to shoot it, and the picture when secured is ordinarily of far greater value than a few mouthful's of flesh. * * * Would it not be a wise policy to interest our boys in nature study and the camera as applied to it."

Mr. Job's bird studies cover a wide range of territory, extending from the great plains of the West to the bird rocks at the mouth of the St. Lawrence, and even still further out into the broad ocean. He tells his story entertainingly, and the volume ought to have a wide circulation, for it represents a side of bird life of which we know too little.

Nature Biographies. By Clarence Moores Weed. Cloth, 164 pp. Illustrated. Price, $1.50 net.

Another volume to which photography has contributed much to make plain many of the processes of nature is Mr. Clarence Moores Weed's "Nature Biographies," which tells us quite fully and very simply and plainly facts about the lives of some every-day butterflies, moths, grasshoppers and flies. Several of these brief chapters have appeared in current publications, and parts of two or three others in the Official Bulletin of the New Hampshire College Experiment Station. All deal with forms of life and objects which are familiar to persons who spend much of their time out of doors, and the information

given in text and illustration answers many questions that are constantly occurring to people who have made no study of entomology. Here are chapters on the making of a butterfly, the tent caterpillar, a rural imposter—the sweet fern caterpillar—the destructive forest tent caterpillar, the walking stick, the chokecherry tent maker, the

MURRES AND AUKS.
From "Among the Waterfowl."

work of photographing insects, studies of insect parasites and insects in winter. The volume is illustrated by 150 photographs by the author, and no single one of these photographs fails to have a distinct relation to the text or to illuminate it. Not one could have been omitted without lessening the book's usefulness. Thus in the

COMMON TERN ABOUT TO SETTLE UPON HER EGGS.
From "Among the Waterfowl."

chapter on the making of the butterfly there are just twelve admirable illustrations, which show the transformations gone through by the insect from the time the caterpillar begins to feed until the butterfly has been developed in all its perfection.

The volume abounds in information about the commonest things, yet things about which most outdoor people are quite ignorant. How many people, for example, know that many caterpillars only feed at night, remaining quiet during the day in order to avoid the attacks of birds. How many are aware that there is at least one caterpillar which so closely resembles a leaf of the plant on which it feeds that it is exceedingly difficult to find even by one who is carefully searching for the specimen.

It is not easy to appreciate the good that is done by books such as this, which aid us to comprehend the familiar objects seen in our daily walks through the country treating of them in so plain and simple a fashion that no effort is required to understand the fascinating story told of each object described.

The Brook Book. By Mary Rogers Miller. Cloth, 241 pp. Illustrated. Price, $1.35 net.

This is another attractive volume on the familiar things seen by the observant wanderer abroad. Taking for its title the brook, we are told of the different things seen along its course from spring through summer, autumn and winter. The book is illustrated by sixteen half-tone full-page engravings, beautifully printed in a soft brown ink, which gives a good effect, and by a multitude of line drawings of plants, insects, birds, fishes and many other things.

In a preface or foreword the author says: "Throughout the year the brook is captivating. It is as companionable as a child and as changeful. It hints at mysteries, but does it tell secrets other than its own? Does it tell where the wild things come down to drink? Does it tell where the birds take their baths, or where the choicest wild flowers lurk?" It was to learn all these things, we may imagine, that the author took her journeys at the different seasons of the year along the brook's course, and about these journeys and what she saw on them she tells us in most charming and discursive style. To some people the "Brook Book" will be more attractive than the "Nature Biographies," but it is written in an entirely different style, the information which it gives is far less directly presented, yet there is quite as much of it. Moreover, Miss Miller's book covers a far wider field than does Mr. Weed's. The two are not to be compared. Each in its own way is admirable, and each gives something that the other does not present. The two may well be read together. It is not only to the nature lover that Miss Miller's book appeals. Here the angler also may learn much of interest concerning those insects which dwell along the brook, many of which pass some stage of their existence under water, and either in the depths or above the surface become food for trout and other fish. A goodly measure of success is to be predicted for these three volumes, each most attractive and each covering a different field.

Tame Grouse.

Editor Forest and Stream:

Didymus says it's a mystery to him how Mrs. McKenna tamed the grouse. Others seem to think the grouse untameable, but this is not the fact.

When farming in Maine several times I placed grouse eggs under hens and the chicks were easily tamed.

I remember an even half-dozen that were brought up in a large hen house with a ground floor. The birds were not so wild as the hens confined with them, doubtless because they were petted and fed fruit and hemp seed. When about two-thirds grown, a weasel killed five before I succeeded in killing the "varmint." The remaining grouse wintered well, but developed a peculiarity. Whenever I, or my wife, entered the hen house the grouse would fly to the shoulder and utter the most heartrending lament that ever issued from the throat of a bird. It would not eat while we were present, but the little scamp the moment we were outside would eat with the hens, seemingly well content. In the spring I allowed the grouse the freedom of the dooryard with some black ducks. In June an Angora cat came into the kitchen one morning dragging the poor grouse, the life completely out of its little body.

Since I have lived in the woods of Cape Ann, I have tamed grouse that come to my dooryard, so that they will eat in my presence. One pair became very tame the second year, but in the fall a sportsman made a double on them, not over ten rods from my cabin. He was very sorry when I told him their history.

HERMIT.

Mr. Harland in his novel "The Lady Paramount," says: "There are very few birds that can't be tamed. You've only got to familiarize them with your presence at a certain spot, at a certain hour, and keep very still, and be very, very gentle in your movements, and croon to them and bring them food. I have tamed wilder birds than greenfinches, in Italy. I have tamed goldfinches, blackcaps, and even an oriole. And if you have once tamed a bird, and made him your friend, he never forgets you. Season after season, when he returns from his migration, he recognizes you, and takes up the friendship where it was put down—until at last there comes a season when he returns no more."

Golgas.

IN tropical America there are many varieties of insects capable of inflicting painful and sometimes even dangerous wounds. Of scorpions, centipedes and tarantulas one frequently hears, but other insects are rarely mentioned.

Returning from one of my explorations in Honduras and expecting to be in New York after a reasonable time, I was particularly anxious to secure a collection of orchids, and at one place saw what I thought a desirable specimen near the top of a tall tree. I bargained with a bright little Spanish boy, who agreed to climb after the orchid and bring it to me for ten cents. He went up lightly enough, and as he cut the plant from the tree, it suddenly swarmed with black insects. The people who were looking on shouted "golgas! golgas!" and called to the boy to come down. He knocked the plant off first and then slid rapidly down the slender tree to the ground, blood dripping from one hand. As he reached the ground he said proudly, "I got it and only one bit me." He had a deep cut in the fleshy part of his hand below the thumb, which we bound up carefully, the men explaining to me that the golga is a big ant capable of inflicting such a deep wound that a per-

son could be killed by them in a short time if a number should get under the clothes. Later, when I began to look over the plants, one of these fellows ran up my sleeve and started vigorous work at once. I caught him on the third bite, and I think his jaws must have been red hot, and were developing rapidly to a white heat by the time I killed him. From my own experience I shall always feel pretty well satisfied that a number of these cuts could do serious damage if they all got at it at once. FRANCIS C. NICHOLAS.

The Bobolink's Song.

PASSAIC, N. J.—*Editor Forest and Stream:* I am not all pleased with my version of the bobolink's song, as printed in a recent issue. It was my own blunder. Kindly reprint it as follows:

John Gillet, John Gillet,
Scour the skillet,
Scour the skillet,
Scour it clean,
Scour it clean.

H. H. THOMPSON.

Birds that Sing in the Night.

PERTH AMBOY, N. J., Aug. 2.—*Editor Forest and Stream:* About 12:30 last night a cuckoo in a maple tree near my bedroom window startled me with a loud tut, tut, tut, tut, cluck, cl-uck, cl-uck, cl-uck, cow, cow, cow, cow, cow, cow! Is it not unusual for this species to utter its notes at night? J. L. K.

A Turkey Buzzard Roost.

NEAR Brunswick, Md., on the B. & O. Railroad, is a famous buzzard "roost." On one of my trips west I saw several hundreds of the birds on trees or flying near. It would be hard to find a larger community of buzzards in the region. TARLETON H. BEAN.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

86

An Aug. 1 dispatch from Fresno, Cal., reports that what undoubtedly is the largest known tree in the world was recently discovered two and a half miles from the Sanger Lumber Co.'s mill, at Converse Basin, in the Sierras, in this county. The discovery was made by a party of hunters, but little credence was given to the report, as every one thought the description of this colossus of the forest was exaggerated, but it has since been visited by people who have verified the finders' statement.

The monster was measured six feet from the ground, and it took a line 154 feet and 8 inches long to encircle it, making it over 51 feet in diameter. The tree is a few rods from the company's boundary line and is on the Government reserve. It will therefore be of interest to sightseers and will escape the woodman's axe.

Game Bag and Gun.

NON-RESIDENT HUNTING LICENSES.

BY D. C. NOWLIN, STATE GAME WARDEN OF WYOMING.

"TARIFF for revenue" with incidental protection is probably a fair definition of the non-resident hunter's license law. Like all questions, it has two sides. While the constitutionality of the statute imposing this tax upon non-residents is beyond the aim or scope of this paper, the mere fact that the U. S. Supreme Court has held, in effect, that the State has absolute ownership and control of all the wild game within its borders, ought to be sufficient warrant for such legislation. As a financial expedient it has been fairly satisfactory in Wyoming, while as a protection measure it has been far more effective than many casual observers would be willing to admit. The true sportsman from the East (always a gentleman), who spends his money freely for guides and equipment, is a pleasant and profitable acquisition; he needs no supervision, and the law as it stands may seem to him unnecessary and oppressive.

Were all men upon the same moral plane, no restrictive legislation would be necessary. But it is a fact, well known to every sportsman, that many men, who, in ordinary transactions are honest, honorable and scrupulously observant of statutory law, will, if turned loose in the hills with a gun, ignore all laws, and develop into the worst species of the "game hog." This may be due to an inherent taint of savagery, common to all men; but whatever the reason, this tendency to "kill everything in sight" must be checked and controlled by law. If the non-resident license law needed any special defense or apology—which the writer will not for a moment admit—then the State of Wyoming is in a peculiarly favorable position to enter a plea of necessity.

Two sides of the National Park abut against territory controlled by the State. The Park (and the country south and east) is the natural home and breeding ground of vast numbers of elk. (It may be safely said that nine-tenths of the elk in Wyoming range in the territory now embraced in the Teton and Yellowstone Forest Reserve.) When these elk are not actually within the Park limits—and most of them are never there—where they are protected by Federal authority, they are convenient to the meat, head and tusk hunters, not only of our own State, but of Montana and Idaho as well.

Actual observation and experience qualifies the writer to assert that had it not been for the $40 tax upon non-residents (coupled with the statute prohibiting traffic in game) there would be not more than one elk, where we can count four to-day in Wyoming. The license is sufficiently high to practically bar from our State that class of hunters who kill for speculative purposes; it serves to identify those who hunt for sport and trophies, and enables the officers to locate and supervise hunting parties in general. With some necessary amendments, and with a more careful administration of the law, it would enable us to make a very close estimate of the number of game animals killed each season by non-resident hunters. The non-resident license law has been thoroughly tried in Wyoming. Originally $20 per season, it was deemed wise to double the amount four years ago. The revenue derived from this source during the past three seasons aggregates in round numbers, $20,000, every cent of which has been expended for game protection.

The Wyoming game laws can, and the writer trusts will be, amended to advantage; but it is not believed that any proposition looking to the repeal of the non-resident license law would meet with approval.

ABOLISHMENT OF SPRING SHOOTING.

BY JOHN SHARP, STATE FISH AND GAME COMMISSIONER OF UTAH.

"SPRING shooting" in the general meaning of the term applies strictly to the shooting and killing of wild waterfowl in the spring of the year, and the practice has been so generally and wantonly indulged in all over the Union in the past to such an extent that these birds are almost exterminated in most places throughout the land where their numbers at one time seemed countless, and the supply inexhaustible. As a general thing, the other varieties of game and upland birds have had some protection under the laws of the various States at this season of the year, but not so the wild waterfowl, until very recently in a few States. The reason for this lack of legal protection at a time when most needed is perhaps due to the migratory nature of this class of game birds, and the seemingly inexhaustible supply as they used to appear in their habitual migrations from their winter feeding grounds in the south to their breeding grounds in the north, returning again in the late fall and early winter with their broods to escape the rigorous cold of the northern latitudes, which they know from instinct and experience freezes up their food supply and compels them to seek the milder climate of the south for their winter feeding home. The half-yearly flights from south to north and from north to south again of the vast numbers of wild waterfowl, have probably led to the erroneous belief in the past that, the supply could never be lessened, and that it was not necessary to give them protection; and I have heard it argued by some market-shooters and pot-hunters in Utah that, if there were two or three hundred thousand ducks killed each season at Bear River Bay, there would be just as many as there were before. Profound reasoning this, but I have had to contend with it before a legislative committee, and it goes to show the dense ignorance and mercenary instincts engendered by avarice that game protectionists have to contend with in their efforts to secure the much-needed protective laws for our game and birds. When such ideas and sentiments prevail so largely, it is little wonder that our wild animal and bird life is disappearing so rapidly.

The springtime of the year being the breeding and propagating season of nearly all wild birds, and wild animals as well, it is a shame and disgrace in a highly civilized nation that they should be killed or destroyed by man at this season for sport, pleasure or any other purpose. It is a barbarous crime against nature's laws that should be prohibited by the most stringent legal enactments, and is worthy only of the dark ages and savage nations, at a time when they depended upon the results of the chase for a subsistence. There is no way more sure or quicker to exterminate any class of wild birds or animals, however numerous they may be, than to harry and disturb them by shooting during the propagating season. It is not alone the destruction of the parents that may be killed, but the loss of the young that would in few months later be as large and valuable as the parents; and in the case of most game birds the numbers would be increased from two to ten fold, and more in some cases. Furthermore, the birds, with very few exceptions, are not in a fit condition to be used as food, at this season being poor and ill fed, and lacking in the healthy, fat and plump condition in which they are found in the late summer and fall of the year after the young are all hatched and strong on the wing. There does not appear to be any valid reason or excuse for the improvident waste or thoughtless destruction of our wild waterfowl from spring shooting. It is not only a crime against nature that should be suppressed from a moral standpoint, but it is also a barbarous waste of nature's bounteous gifts that have been so lavishly showered upon us in the past, that should be prohibited from motives of economy, in the conservation of a natural supply that costs nothing, beside being the source of much pleasure and recreation to all classes of citizens who may have the desire and inclination to take them at reasonable times and in resonable ways; and taking a retrospective view of the conditions that have existed, and that exist at the present time, it is a matter of wonder and regret, and a doubtful commentary on our boasted civilization that such a cruel, wasteful and unnatural practice should have been permitted so long without restriction. It is true that a few States have recently enacted laws abolishing spring shooting. New Hampshire, Vermont, Michigan, Wisconsin, Minnesota, Utah and California have practically wiped spring shooting from their statute books by closing the season before Feb. 1. But just think of it, only seven out of forty-five great States of this Union have awakened to the shameful sense of abolishing a practice that should never have existed, and the other thirty-eight still in a lethargic slumber oblivious of their shame, while our wild animal and bird life continues to dwindle year by year, until there is hardly anything left for the true sportsman and lover of nature, but regretful memories and oft-told tales of the wonderful profuseness of the wild animal and bird life that once existed all over the continent of North America. We have glaring examples of the infamous treatment that has prevailed in the past regarding our wild animal and bird life, in the utter extinction of the great auk and the wild piegeon, together with the buffalo, excepting the pitiful remnant in this National Park; and but for the powerful arm of the United States Government, these would also have been completely annihilated. Two other grand game birds, the woodcock and wood duck, are reported as being so rare as to almost amount to extinction; and everything else in the shape of wild animal and bird life is following in the wake of these, and disappearing at a pace that is truly alarming, excepting perhaps a few species of carnivora like the universally despised coyote and cougar, that we out here in the West would be glad to be rid of, but which, like the English sparrow and the German carp, are with us, and likely to stay, in those places where they have been introduced.
